The *Mary Ann* had been out for a ten months' cruise on the whaling-ground which lies all round the great Southern Ocean. This time she had been unfortunate, and her crew were returning in disgust for a new supply of provisions and a few weeks' run on shore. They had reached Storm Bay, and expected within a few hours to anchor off Hobart-town. The wind had fallen, and the men were standing lazily about, looking out for any sign of its rising again. At last one of the sailors called attention to the fact that a boat was putting off from the land. In a few minutes, three men could be made out, and before very long the pilot was on board. It requires some experience of the sensation to understand how men who have been cut off from all human intercourse for many months welcome a new face. The pilot in this case was a very good fellow, talkative and good-natured, and ready to answer, to the best of his ability, all the questions which were showered upon him. But the one absorbing piece of news on which he always fell back, when he could get a moment's leisure from answering questions, was that Black Dick had escaped again, and had gathered round him a gang of the worst bush-rangers which the island had yet seen. Black Dick had robbed the mail. Black Dick had tied a dozen different men to trees; had stopped the coach going to Launceston, and, with the help of his companions, had relieved the passengers of everything which possessed sufficient value in his

Digitized by Google

eyes to be worth taking; had threatened that he would attack a man against whom he had a grudge in the very centre of Hobart-town; had been seen to go down the principal street in open day. With one man to help him, he had gone to a ball up the country, and had made his appearance in the midst of the festivity with a rifle at his shoulder; had then called for silence, a proceeding quite unnecessary; and had, after graciously promising not to harm anybody if they did not stir, sent the hat round, making a collection of involuntary offerings of money, watches, bracelets, brooches, watch-guards, and even rings. Lastly, the man had gathered together a number of ruffians, almost as bad as himself, and was known to have committed some terrible murders. Parties of police had been out after him for weeks, but they seemed to give him but little trouble. The convict servants scattered throughout the colony were known to give him assistance, and it was not at all unlikely that settlers in remote districts were ready to purchase their own security at the price of conniving at his presence. The government had offered a reward for him dead or alive. It was believed that he would make the attempt from the northern side of the island to escape over to the mainland; extra men had therefore been stationed at every likely spot on the north coast, and every ship leaving the colony was subjected to a stricter search. All these particulars the old pilot related while waiting on the poop of the *Mary Ann* for the approach of the sea-breeze, which, usually setting in about three o'clock in the afternoon, would, in the course of three or four hours, carry them easily to their anchorage.

Meantime, from the opposite side of the bay, a long whale-boat had put to sea, and was rapidly moving in the direction of the ship. The pilot was the first to notice her, and to wonder what she could be. She could not belong to any whaler, because none was in sight. She was not a Hobart-town boat, because she was coming from the opposite direction. Neither could she belong to Port Arthur, because from the convict settlement no boat belonging to the government would be allowed to make its way round, and there were no private boats. The pilot could only think of the boat belonging to the isthmus which separates Tasman's Peninsula from the mainland. At this isthmus, which is a low sandy neck from sea to sea, and only some three hundred yards wide, there were stations near to each other, with guards stationed day and night to prevent the escape of convicts from the peninsula. To help them, there were and are dogs kept at the public expense, and chained, so that it was impossible for a fugitive to make his escape without passing within reach of them. Should the runaway endeavour to swim round, he well knew that the bays were alive with sharks. There was a boat kept on the mainland side of the peninsula, but what could the police force stationed there want so far away? If the boat had been kept on the peninsula side of the isthmus, the pilot would have thought that it contained an escaped party of convicts. This view of the matter once suggested, made every one on the alert. Ships had been seized before, and the crews either murdered outright, or turned adrift to make their way back as they best could in a boat, or, as happened in the case of the *Lady Hobart*, had been compelled to work the ship under the guidance of the captors. The mate, however, soon made the matter clear. His telescope shewed that none of them wore either the bright yellow or the gray clothing in which runaways from Port Arthur would be clothed.

In a few minutes it became evident that the boat was making her way to the ship. As she drew near, she was carefully scanned, in order that some trace of her character might be discovered.

'They are not convicts by their dress,' said one.

'Two of them, at least, have blue shirts on like policemen,' said a Hobart-town lad.

'Can they be a shipwrecked crew?' asked another.

But before he could be answered, the captain noticed that there were only four men pulling, although eleven were in the boat.

Presently, they saw a white rag hoisted on the top of an oar, and the man who had suggested that they might be a shipwrecked crew gave himself credit for his sagacity.

'If they are shipwrecked men, they pull like landsmen.'

'But ships' crews don't all pull like whalers,' suggested the pilot.

'And ships' crews that don't belong to whalers don't carry whaling-boats such as that,' answered the captain.

Altogether, there were circumstances about the incident which would have created wonder, if not anxiety, at any time; but now, while the ship was lying becalmed, they naturally became an exciting topic.

Soon the boat could be made out clearly, and a fair notion obtained of the men in her. None of them were clothed in the least like convicts. *That*, at anyrate, was clear. Two had blue over-shirts; the rest had nothing particular in their dress to indicate who or what they were. They might be sailors, or they might be ordinary colonial labourers. As the boat drew near, it was seen that they only possessed four oars. Altogether there were eleven men in her. As soon as they got within speaking-distance, the captain shouted to ask them who they were, and what they wanted. His suspicions had been aroused, and he was just the man to make a hard fight rather than have his ship taken. But he felt half ashamed of himself as he shouted, because apparently there was only a boat of unarmed men approaching.

'We are the shipwrecked crew of the *Philadelphia*, American whaler,' shouted the man steering in the whale-boat.

'That boat never belonged to an American whaler,' said the captain to the pilot.

'She is the police-boat; I know her by the red line,' interrupted the pilot eagerly.

Digitized by Google

'Mr Smith,' the captain called quietly to the first mate, 'get your anchor on the bulwarks ready to drop over into that boat if there should be any need for it.'

Mr Smith thought the precaution a rather foolish one, but obeyed, as a matter of course.

'Now, boatswain, bring up your lances and harpoons.'

When the latter order had been obeyed, it was evident that it would have been an extremely dangerous thing to make an attack on the *Mary Ann*. The lance, as sharp as a razor, in the hands of a skilful whaler, would be a terrible weapon. But the captain had seen by the faces of the crew that they thought his precautions altogether unnecessary; and as he looked towards the boat, he felt inclined to agree with them. Almost the only circumstance of suspicion was the fact that they were in the police whale-boat.

By this time the boat was within easy speaking-distance of the ship, and the men could be readily seen from the deck.

'How do you come by that boat?' asked the pilot.

'The police have lent it to us to go to Hobart-town in. Our own was too much damaged to float any longer.'

'But this is not the way to Hobart-town.'

'No. We saw you, and thought you would give us a lift when the sea-breeze came up,' answered the man at the steering-oar.

The statement might possibly be true, and indeed the whole aspect of affairs looked so ordinary, that no one seemed to think of making any opposition to the approach of the boat. A rope-ladder was thrown over to them, and without more ado they made fast their boat, and followed each other closely on board.

And then there began a short tragedy, which lasted only three minutes. The boat's crew were runaway convicts, who had surprised the police, taken their boat, stolen their clothes, and had planned this attack upon the whaler, with the object of getting away from the island. Each man, at a signal given by a short active man, who acted as their leader, produced a pistol, and pointing it at the head of the whaler nearest him, intimated, in the plainest possible way, that death would be the doom of any one who should venture to resist. Nevertheless, the captain and two or three others, including the cabin-boy, did resist. A shot was fired at each. The captain was slightly wounded, and the boy overpowered. Two men who resisted were mortally wounded, and then the *Mary Ann* was in the possession of eleven of England's picked scoundrels. Her crew, with the exception of three men, were bound; the old pilot and captain were locked in a cabin, at the door of which a man stood sentry; and the ship's head was turned seaward. The convicts then held a short consultation, and the result was that they ordered four of the crew and the pilot to be brought on deck, to be lowered into the whale-boat by which they had themselves come to the ship, and turned adrift. When this was done, the captain and the remainder of his crew, now reduced to six, were brought together, and informed by Black Dick—for the leader of the ruffians was the notorious bushranger—that they were going to California, that resistance on the part of anybody would be punished by instant death, but that if these sailors would work willingly, they should be well treated. The same night the ship ran out of Storm Bay, and by daylight was out of sight of land. The poor sailors, who were expecting a run on land after their monotonous voyage, had a three months' journey before them, with the certainty of no pay at the end, and the probability of hard treatment in the meantime.

A week had passed by. The captain's wound almost completely disabled him. He was treated with the utmost harshness by Black Dick, and would in all probability have been knocked on the head, or thrown overboard, but for the fact that nobody else knew so thoroughly how to work the ship. The mate, a clever Yorkshireman, with very little to say, but that little always to the purpose, acquiesced apparently in what could not be helped. Black Dick even seemed to have taken a liking to him. The Hobart-town lad, who had a good word from every sailor on board, was, however, mortally hated by the convict leader, who resented every time he met him the lad's brave resistance to him on the day of capture. The lad could steer well, was particularly useful aloft, and was altogether much too valuable in helping the lazy rascals who had been deputed to do the work of the men turned adrift, to be murdered outright. Still he was terribly ill-used. He was called up at all times of the day and night to do the most difficult and dangerous work. If a sail wanted reefing, poor Charley had to go whether the summons were in his watch or not. While everybody else had a certain number of hours' sleep, he was pretty certain to be disturbed in his, and might think himself fortunate if he got half the allotted time. The convicts themselves followed their captain's example, and this the more readily, because they saw that the latter rather liked to see them ill-use the lad.

A fortnight more passed, and the ship had made good progress into the Pacific. She was reaching the latitude of the Fijis. Nothing of importance had occurred on board. Black Dick had chosen to torture poor Charley. One day he had him hoisted with a rope under his arms up to the cross-trees, and kept there until he fainted. At another time, he was sent aloft on a cold night, and kept there, just as he had turned out of his berth, until morning, when he was so cold that it was only with the aid of the mate, who got well cursed for his pains, that the lad reached the deck. Nobody else would have dared to give him a helping hand; but, as I have said, the mate had made himself rather a favourite with Black Dick. He had done what he could for poor Charley, had given him many an encouraging word, had warded off many a blow, but, as he brought the lad down the companion, it seemed that he too was deserting him; for he whispered into his ear, not words of consolation, but a command and a threat: 'You must not say anything about our relationship, or I shall let them do what they like with you.'

Charley was a distant connection of the mate's wife. What did the mate mean by thus wishing that all connection between them should be unknown?

And the captain all this time, what of him? He was at first gloomy and sulky: the pain from the wound, the loss of his ship, and the ill-treatment he received, seemed to leave him time for nothing else than grumbling. He was compelled

Digitized by Google

to assist the mate in taking the ship's latitude and longitude, and Black Dick was cunning enough to watch very jealously that there was no connivance between them which might run them into dangerous waters. And then, as the days drew on, the captain recovered to some extent his health and spirits. Night after night he saw the convicts take alternate rounds of carousing, until he sometimes believed and almost hoped that they would set the *Mary Ann* on fire. And then there would return the great hope of freedom; the desire to shake off these scoundrels, and, if possible, bring them to justice. He wished that they might meet with a man-of-war, English, French, or American, he did not care which. If they should board him, he would denounce the men, even though he should be shot that very moment. He hated them for the way they treated poor Charley. He wished that they would all get drunk together, and give him a chance of making off in a boat. But they were much too careful for that—would not even allow him to be too long with any of his old crew; and the mate, whom he saw necessarily a good deal every day, seemed to have quite gone over to the enemy. He was a rare hand at whale-fishing, but no match at plotting against Black Dick. He had made one or two suggestions to the mate, to seize the ship, to have a boat lowered under some easily feigned pretence, and to get away in the night. But the cold-hearted mate had only shaken his head, and said that it could not be done.

'Wait,' he had said; 'things may turn out right. Take it easy till they do.'

And meantime the mate himself, who seemed the friend of the bushranger, and was believed to be so by all on board except by the ship's carpenter, who had known him from his babyhood, was simply playing his own part. A day or two had convinced him that it was altogether useless to attempt anything like active opposition. It was doubtful whether all the six men who remained of the ship's crew could be trusted—even if they could, they were quite powerless against the suspicious and well-armed convicts. He knew quite well, from his Van Diemen's Land experience, that these bushrangers would not hesitate at the murder of them all, if they had anything to gain thereby. Nay, he believed that they would put such a design into execution immediately, but for the necessity they were under of having men to manage the ship. He saw, therefore, that the best course to pursue was to make himself necessary to them. Thus it was that within a week he had convinced Black Dick that they could do nothing without him, and that it was necessary to retain the captain, in order to do some of the calculation required for the navigation.

At last Black Dick told him his plans. They were to go to California, to sell the ship, and make off with the money. The Yorkshireman coolly turned round to the bushranger, looked him steadily in the face, and asked him how much he was to be paid for his trouble.

The bushranger was surprised, and, after a moment's pause, burst into a short laugh. 'That's what I call cool;' but he was pleased at the coolness nevertheless. When he named a sum, the mate stood out for a higher, until at length a bargain was struck.

The bargain having come to the ears of the captain, the latter resolved to denounce the mate as an accomplice whenever he should have the chance. The poor captain was much too simple and straightforward a sailor to make out what was going on in the brain of his mate.

California being the destination, the mate thought it best, after thinking the matter over, to persuade Black Dick that the likeliest way of evading suspicion was to go in with oil. But the *Mary Ann* was clean. The bushranger pointed out to the mate, when he suggested that they should try to catch a fish or two, that they had been returning to Hobart-town without oil, and naturally asked why they could not go in the same condition into San Francisco, the capital of California. The mate pointed out that the ship belonged to Hobart-town, that it was natural they should go there, in order to see their friends, and give an account to the owners of the ship; but that in California, the circumstance of a southern ship going so far out of her course would be suspicious. However, the mate did not press his point; he was not very certain that any good end could be gained by it. His moderation and want of eagerness made the bushranger think the more favourably of the plan, and at length determine that the advice should be taken.

When the captain learned that the ship was to be put a little out of her course in order that they might come upon whaling-ground, his spirits improved wonderfully. The old fisher's instinct awakened in him at once.

Everything was got ready for the purposes of the chase. The men were told that their best chance of getting safely into San Francisco was to take with them a cargo which should give them the appearance of having been about a lawful pursuit. I don't know what was in the mate's head at the time he made the suggestion which had been adopted, or whether he had formed any definite plan. I am inclined to think he had not. Possibly he thought that the great point to be aimed at was the gaining of time. He knew that the colonial government would be quite certain to send a man-of-war after them, and that the pursuer would most likely think California was the proposed destination of the runaways. On the other hand, to meet with whales they would have to go somewhat out of the ordinary course to California, because, though landsmen are generally unaware of the fact, ships usually keep within very narrow tracks, and very seldom strike out a new course for themselves.

As a set-off to the disadvantage of leaving the ordinary track, the mate considered it probable that on the whaling-ground they might meet with other vessels, by the help of which he might get a chance of sending a message to an English man-of-war.

The captain was in high glee at the prospect of sport. The mate took everything very easily, as everybody thought, and meantime was puzzling his brains as to what course he should adopt to make other people aware of the true state of affairs on board the *Mary Ann*.

In a few days, the joyful cry was heard announcing that a fish was in sight. A boat was lowered; the captain was placed in it, with an equal number of ex-convicts and ordinary sailors as his crew. The convicts, however, carried pistols; for they were by no means inclined to trust the rest. I need not describe the chase.

Digitized by Google

Melville has done it so well, that it is almost presumption in any one else to attempt it. They were successful. The convicts soon became enamoured of its excitement, its fine sport, and the risk. It was as exciting as bushranging, and quite as dangerous. Then, too, they had from one day's work obtained three hundred pounds' worth of oil. A few such days' work, and they would have something to sell when they reached California. The latter was the argument which told most on some of the men; but Black Dick shook his head. He wanted to be in port before it was at all likely that any news of their capture of the vessel had preceded them.

A day or two more of such sport as they had had, and they could go into California with a good pretence.

The next day, as an observation shewing their position had been entered, while the captain was marking their latitude and longitude on the chart, according to the daily custom on board ship, the mate took advantage of the momentary absence of the bushranger—who, although he put more trust in the mate than in anybody else, yet never allowed the observations to be taken, or the entries in the log or on the chart to be entered, out of his presence—to make him notice how near they would be to a certain island, which was then one of the naval stations of Her Majesty in the South Pacific.

The poor lad Charley continued to be ill-treated. Every kind of petty oppression which the ill-will of bad men could suggest was heaped upon him. His life was a long misery. He had insufficient food and insufficient rest; he was rope's-ended without the smallest compunction; he was exposed to all weathers, and was at every ruffian's beck and call.

Next day, another whale was sighted. The boat was lowered, a similar crew placed in her, and the pursuit began. The fish (as the whale—in defiance of naturalists—is called by sailors) led them a long chase; so long that they lost sight of the ship altogether, and but for the fact that the *Mary Ann* followed in the direction which they had taken, they would have had great difficulty in finding their way back.

The late return, however, suggested a plan to the mate which he thought might be put into execution. If the captain, when steering the whaler, could again manage to get out of sight of the ship, he might contrive not to be seen again, and to make his way to that island, where, as we have seen, he was pretty sure to find an English man-of-war.

There were many difficulties in the way. The captain was not the man who could readily take a hint; he must be directly communicated with. Accordingly, as the ship's calculations were being made next day, when the mate was asked by the captain to check his working, the former wrote upon the slate: 'Lose yourself, and make off for the island.' The captain had the sense, after reading the message, to turn the slate, and take the opportunity of afterwards rubbing out the writing without arousing the suspicion of the convict captain, who had been seated at the opposite side of the cabin table while this had been going on.

When the ship's position was marked on the chart, the mate laid his rule quite naturally on the course which would lead from the spot the ship then occupied to the island. 'West-by-north exactly,' was the involuntary remark of the captain.

That same day the boat was manned again. The crew was composed of three convicts—who, according to custom and for fear of an attack, were armed—and five of the crew of the *Mary Ann*. Charley was put in, in order to take the place of the harpoon-thrower at the oar, when the whale had been reached.

From the moment they left the ship, the mate determined that he would do his utmost to get the *Mary Ann* under the notice of the man-of-war on the station. He went below, leaving the bushranger in charge, in order that he might have the sleep to which, in the ordinary routine of the ship's work, he was entitled. Before getting into his berth he gave one more look seaward, and though he could not by this time see the boat, he saw something else which he thought would favour his purpose. The boat had started to go in a westerly direction, that, of course, being the direction in which the whale had been seen; the mate, however, saw now, what perhaps no one else observed—certainly none of the convicts—that the school of whales had turned south, and must have long since caused the men in the boat, which could not be seen from the ship's deck, to alter her course. Ordinarily, the ship, instead of being allowed to follow gently to the west, so as to aid the boat, would have altered her course, and gone where occasional clouds of spray shewed that the whales had gone. The mate, however, did not want the ship's course altered, and so went to sleep with a contented mind. Two hours later he came on deck, asked Black Dick—who had constituted himself captain in the meantime—whether anything had been seen of the boat; learned that no one had observed her, but that she was supposed to be but a little way ahead; and then expressed his fear that, from a slight change which had occurred in the wind, the whales might have led the boat in another direction. The bushranger was a little alarmed at the suggestion, because he could not afford to lose the boat's crew, inasmuch as it was almost necessary to have some of the five seamen who were in her to manage the vessel. The day drew to a close, and no signs of the boat were to be seen. A man was sent to the mast-head to keep a look-out, but he could see nothing of her. The mate advised that they should lie to for the night, and keep lights burning at the mast-head. He felt that this could safely be done for his purpose, as he believed the boat to be considerably distant from them. One suggestion was so reasonable that it covered the other. Accordingly, the ship lay to. The crew felt pretty sure that the boat would be with them by morning. Morning came, and there was no sign of her. Black Dick grew anxious; so, too, did the mate. A consultation was held, and it was agreed that the best thing to do was to cruise about during the day, and keep a look-out for the missing boat. The mate took good care that they should make long tacks northward, and very short ones southward. The landsmen were quite unable to see anything suspicious in what was being done; and the sailors were quite content, as they generally are, to trust undoubtingly the management of the ship to their superior officer. Apparently, the ship was making a series of irregular circles round a given point; really, she was making a series of ellipses round a

Digitized by Google

point, which was moving at each ellipse more to the north. Ellipse after ellipse was made, and as the hours passed away, looks more and more anxious were cast round the horizon: still the boat was not to be seen.

THE REGALIA.

The Regalia, or crown jewels, valued at three million pounds, form one of the most interesting features of the Tower. In former times, they were generally kept in the Treasury of the Temple, or in that of Westminster Abbey, and first in the Tower in the reign of Henry III. They were frequently pledged as security for loans from rich merchants in the city. The office of Keeper of the Regalia became, in the reigns of the Tudors, a post of great emolument and dignity, and 'the Master of the Jewel-house' took rank as the first Knight Bachelor of England. In 1649, a complete inventory was made out of the Regalia, a copy of which may be seen in Taylor's *Glory of Regality*, 1820. Subsequently, it is stated that the crowns, according to order of parliament, were 'totallie broken and defaced.' The state crown of Charles I. contained seven pounds seven ounces of gold, and in one of the *fleurs de lis* was 'a picture of the Virgin Mary.' At the Restoration, new insignia were made, costing L.21,978, 9s. 11d., paid to the king's goldsmith, Sir Henry Vyner, in 1662. On May 9, 1671, Colonel Blood made his daring attempt to carry off the crown, globe, and sceptre. Thomas Blood was an Irishman, whose father had gained property as an iron-master in the reign of Charles I. He seems to have been famous for daring plots, for, in 1663, he formed one for surprising Dublin Castle, and made two attempts on the life of the Duke of Ormond. An aged man, named Talbot Edwards, kept the Regalia, and Blood managed so to ingratiate himself with him, that he proposed a match between his nephew and Edwards's daughter; and stated that he would bring him and two friends on the 9th of May to be introduced to the daughter, and see the Regalia. The four came accordingly, went into the jewel-room, and gagged the old man, who cried out and struggled, so that they stabbed him, and beat him on the head with a wooden mallet. Blood placed the crown under his cloak, and two of the others seized the globe and sceptre, but the latter was left behind as too long, for the fourth man gave an alarm, and the ruffians fled. It appears that a son of Mr Edwards just then arrived from Flanders with his brother-in-law, Captain Beckman. The villains got past them; but old Edwards calling out, his son and Beckman pursued them to the drawbridge, where Blood fired at the warder, and got through the iron gate to St Katherine's. They had nearly got to the place where horses were waiting for them, when Beckman, who was a fast runner, overtook them, and seized Blood, who remarked: 'It was a gallant attempt, however unsuccessful, for it was for a crown!' A pearl and large diamond fell out on the pavement, as well as other stones, but these were nearly all recovered.

Blood and Parrot were ordered to be brought to Whitehall, and examined in the presence of Charles II. Here he behaved with the greatest impudence, and avowed the part he had taken in the attempt on the life of the Duke of Ormond, and also stated that he had on another occasion hid himself in the reeds at Battersea with others to shoot the king as he passed in his barge, but that 'his heart was checked by an awe of majesty, which caused him not only to spare the king's life, but to induce his associates to abandon any further attempts at his assassination.' He said 'he had a large number of friends bound together by the most solemn oaths to revenge each other's death, on whoever should bring them to justice.' The king actually pardoned him, and Blood became a sort of hanger-on at Whitehall, received a pension, and land in Ireland. He is said to have lived in an old mansion forming the corner of Peter and Tupton Streets, and to have been a Quaker. Evelyn speaks of meeting him in good society, but remarks his 'villainous, unmerciful look; a false countenance, but very well spoken, and dangerously insinuating.' He died in 1680.

Poor Edwards never entirely recovered from the injuries received in his brave defence of the Regalia, and died in 1674, and was buried under the floor of the Tower Chapel, with a small tablet over his grave. This was found in a heap of rubbish, and is now fixed against the south wall. The only rewards Edwards and his son received were grants on the exchequer of two hundred pounds to the old man, and one hundred pounds to his son. These, through the difficulty in obtaining payment, they were obliged to sell for half their value.

At the time of Blood's attempt, the Regalia were kept in a strong vaulted chamber of the Martin Tower, hence called the Jewel Tower. They were shewn behind strong bars, but a woman, in 1815, managed to force her hands through, and tore the royal crown to pieces. The present Jewel-house was built in 1842, in the late Tudor style, south of the Martin Tower.

The first kind of crown worn by kings was the diadem, which was no other than a fillet of silk, or like material. It was considered the proper ensign of a king, and therefore was not generally worn among the Romans till the time of Aurelian. Constantine the Great first used a diadem of pearls and rich stones, and soon after a hoop was added over the head, which made it more like the modern close crown. The first crown, properly so called, is that which appears upon a coin of Ædred, son of Edward the Elder (about 946); it has the fillet and cap, with rays and pearls on the points, like our earls' coronets; but his two successors had plain diadems. Edward the Confessor has on some of his coins the close or arched crown, and sometimes one like a high pointed helmet. Upon his great seal he has a kind of cap with a crown to it. When the chest containing the body of Edward the Confessor was opened during the reign of James II., the skull was encircled by a band or diadem of gold one inch in breadth. At this period, the crown was kept steady on the head by an *annula*, or clasp, fastened under the chin, of which the two ends hang down on coins like lappets.

William the Conqueror, in the manuscript by William, Abbot of Jumiegès, in the library at Rouen, is represented with a combination of cap and crown. The Saxon Chronicle describes William as wearing the regal *helmet* 'thrice every year when he was in England. At Easter, he wore it at Winchester; on Pentecost, at Westminster; and in mid-winter, at

Digitized by Google

Gloucester.' Upon his great seal it appears as a circle and three rays raised very high, their points terminating in crosses, having a pearl or pellet at each point of the cross, and two fleurs de lis between the rays. William Rufus has a radiated or eastern crown, with pearls on the points. Henry I. has the open crown fleury with three fleurs de lis. Curiously enough, Selden tells us that in some volumes written as early as the time of King Edgar, that monarch is pictured with a rude fleur-de-lis crown. Some think Stephen used the arched crown, but this is doubtful. John was first crowned Duke of Normandy at Rouen, and Matthew Paris says with a golden circle or coronet, adorned all round with roses curiously wrought. On his effigy at Worcester he is represented with a crown composed of leaves close together. This was, however, erected in the reign of Henry III. The last-named monarch, upon his first great seal, has the open crown and plain diadem; his effigy at Westminster has fleurs de lis. Edward III. has the coronet and cap on his first great seal, with the three leaves or flowers and lesser fleurs de lis between; but his second great seal has the open crown with three fleurs de lis. Edward II. had given the crown jewels, with the crown of his father, to his favourite Gaveston, and he carried it at his coronation—an honour that, by ancient custom, belonged to the princes of the blood only. In the Westminster portrait of Richard II., 'the unhappy beautiful prince' has a crown with two tiers of gracefully painted foliage growing naturally out of the jewelled circlet on the brow. According to Rymer, the previous king, Edward III., frequently pawned his crown, on one occasion to the Archbishop of Treves, for 25,000 florins. Henry V., in the third year of his reign, did the same. It was an imperial or arched crown, with the orb and cross at the top, and composed of crosses pattée and fleurs de lis. The crown of Edward IV. is the first instance of an arched crown upon the great seal. Henry VIII. has the arched crown with crosses and fleurs de lis, as his father; and Edward VI., Mary, and Elizabeth, all had like crowns. On the first seal of Charles I. he has the triple arch. Charles II.'s crown we shall describe further on. S. M. Leake, Esq., Garter, mentions that there was, besides the royal or imperial crown, an ancient one, called St Edward's crown, being that of Edward the Confessor. When King John was crowned, they used a plain circle or chaplet of gold, for his was lost in crossing the Well stream from Lynn into Lincolnshire, and he was not crowned with St Edward's crown, because the royal regalia were at Westminster. The first mention of St Edward's crown is at the coronation of King Edward II., before mentioned. Henry VI. was crowned first with that of St Edward, and then with the imperial crown. Anne Boleyn was crowned with St Edward's crown, and Edward VI. was crowned with three, and so was Queen Mary.

According to the *Liber Regalis*, the regalia were granted to the church of Westminster, to be 'locus institutionis et coronationis regiæ et repositorium regalium insignium in perpetuum.' From this time (that of the Confessor) all our kings have been crowned at Westminster Abbey, except Henry III., and Edward V., who was never crowned. The regalia were kept in an arched room in the cloisters, in an iron chest. Henry Martyn, in 1642, broke open the chest, and sold St Edward's crown and sceptre. After the Restoration, another crown and sceptre were made, and called St Edward's.

Having thus introduced our subject, we have to describe the regalia now to be seen in the Tower.

St Edward's crown was made *temp.* Charles II., to replace that said to have been worn by Edward the Confessor.* The sovereign is crowned at the altar with this crown, and this is the one Blood attempted to steal. The arches, flowers, and fillets are covered with jewels, and the purple cap is faced with ermine. The crown of James I. had eight crosses and eight fleurs de lis, without any roses; but Charles II. reduced both crosses and fleurs de lis to four—the same numbers as the arches. The four pearl-studded arches rise from the crosses, and carry at their intersection the mound and cross.

The state crown of Her Majesty was made for her coronation. It differs from that just described rather in enrichment than in arrangement. There is, however, a decided difference in the contour of the arches, which rise almost perpendicularly from within the crosses pattée, and instead of being depressed, are elevated at their intersection. Professor Tennant, F.G.S., in a paper read before the London and Middlesex Archæological Society, states that this crown was made by Messrs Rundell and Bridge, in the year 1838, with jewels taken from old crowns. Its gross weight is 39 ounces 5 dwts. troy. 'The lower part of the band, above the ermine border, consists of a row of one hundred and twenty-nine pearls, and the upper part of the band of a row of one hundred and twelve pearls, between which, in front of the crown, is a large sapphire (partly drilled), purchased for the crown by His Majesty King George IV.† At the back are a sapphire of smaller size and six other sapphires, between which are eight emeralds. Above and below the seven sapphires are fourteen diamonds, and around the eight emeralds, one hundred and twenty-eight diamonds. Between the emeralds and the sapphires are sixteen trefoil ornaments, containing one hundred and sixty diamonds. Above the band are eight sapphires, surmounted by eight diamonds, between which are eight festoons, consisting of one hundred and forty-eight diamonds.' In the centre of a diamond Maltese cross is the famous ruby said to have been given to Edward Prince of Wales, son of Edward III., called the Black Prince, by Don Pedro, King of Castile, after

* This crown was probably made after the fashion of the old one. Stephen Martin Leake, Garter, remarks, that as the fashion of the present crown of St Edward differs not in form from the imperial crown of state, therefore that ancient crown before the Rebellion could not by the fashion of it be older than Edward IV. Edward II. was crowned with the Confessor's own crown, but of its fashion we have no memorial, unless it is like that on his great seal. It must have disappeared long before the time of Edward IV., because the crown made to supply the place of it bore no resemblance to the ancient one, which it certainly would have done had the particular form been remembered.

† Mr King says there is a tradition that this sapphire came out of the famous ring of Edward the Confessor, so long treasured up on his shrine, and the heritage of which gave his successors the miraculous power of blessing the *cramp-rings*. If so, the stone must have been re-cut for Charles II. In the list of Henry III.'s gems, collected for the shrine, is entered a sapphire of 52 dwts. = 313 carats. Henry collected more than eighty camei for this shrine—one 'in a gold setting, with a chain to it,' is valued at two hundred pounds—an immense sum in those days.

Digitized by Google

the battle of Najera, near Vitoria, in 1367. It was worn by Henry V. in his helmet at the battle of Agincourt in 1415. According to the eastern custom, it is pierced quite through, the upper part of the piercing being filled with a small ruby. The fleurs de lis between the crosses contain rose diamonds, each flower having a ruby in the centre. The four arches are composed of oak leaves and acorns, with leaves of rose, table, and brilliant diamonds; the arches, &c. containing nearly eight hundred diamonds. Four large pear-shaped pearls are suspended from the upper part of the arches.

The jewels in the crown are thus summed up by Professor Tennant: '1 large ruby, irregularly polished, 1 large broad-spread sapphire, 16 sapphires, 11 emeralds, 4 rubies, 1363 brilliant diamonds, 1273 rose diamonds, 147 table diamonds, 4 drop-shaped pearls, 273 pearls.' Barbot estimates the total value of the stones at 3,000,000 francs, or L.120,000. Correct woodcuts of the crown will be found in Britton's *Dictionary of Architecture* and Sharp's *Peerage*.

The Prince of Wales's Crown is of pure gold, plain, without jewels, is placed upon a velvet cushion in the House of Lords, before his seat, when Her Majesty opens or prorogues parliament.

The Queen-consort's Crown is of gold, set with diamonds, pearls, and other jewels, and was made for the queen of William III. The queen-consort is always crowned by the Archbishop of York.

The Queen's Diadem, or Circlet of Gold, made for the coronation of Maria d'Este, consort of James II., at a cost of L.110,000.

Before describing the sceptres, we will take the Koh-i-noor diamond, exhibited with the Regalia, set as a bracelet. As Professor Maskeleyne observes, its history 'is one long romance; but it is well authenticated at every step, as history seems never to have lost sight of this stone of fate from the days when Ala-ud-deen took it from the rajahs of Malwah, five centuries and a half ago, to the day when it became a crown jewel of England.' Baber says it came into the Delhi treasury from the conquest of Malwah by Ala-ud-deen in 1304. It was seen by Tavernier among the jewels of Aurungzebe, but had been reduced by the unskilfulness of Hortensio Borgis from 793 carats to 186 carats—the weight it possessed at the Exhibition of 1851. Nadir Shah obtained possession of this celebrated diamond by an artful trick. He gave back the prostrate empire of India to his Tartar 'kinsman,' and exchanged turbans with him, according to oriental custom, in token of amity; but unfortunately for his vassal, the *Mountain of Light* was in his cap, and so was gained by his suzerain. At last it came into the hands of Runjeet Singh; and after the capture of Lahore, at the time of the Sikh mutiny, it was presented by Lord Dalhousie, in the name of the East India Company, to the Queen in 1850. In 1862, at a cost of L.8000, it was recut as a brilliant, and reduced from 186 to 106$\frac{1}{16}$ carats. In place of the most ancient gem in the history of the world, we get a modern brilliant, a mere lady's bauble, of but second water, for it has a grayish tinge, and besides this, inferior in weight to several. It was re-cut in about thirty-eight days, as a small steam-engine had been erected for the purpose; but the Pitt Diamond, by the old hand process, occupied two years. The Brahmin sages have an hereditary superstition touching the malign powers of this stone, and the Russian war and the sepoy mutiny will not dispossess them of it.

St Edward's Staff (weight nine pounds) is of beaten gold, four feet seven inches in length, surmounted by an orb (said to contain a fragment of the true cross) and cross, and shod with a steel spike. St Edward's staff is mentioned as used at the coronation of Edward VI., and at that of Mary. At the latter, the paten of St Edward's chalice was used; it is likewise mentioned under Henry VI. and VIII., being a holy relic of great antiquity. In the account of the coronation of Queen Elinor, wife of Henry III. (about 1236), it is called a jewel of the king's treasury of great antiquity.

At the coronation of Charles II., this was borne by the Earl of Sandwich.

The Royal Sceptre, or Sceptre with the Cross*, is of gold, set with rubies, emeralds, and diamonds; the rose, shamrock, and thistle have taken the place of the fleurs de lis.

The Rod of Equity, or Sceptre with the Dove, is of gold, three feet seven inches long, surmounted with an orb, cross, and dove, ornamented with diamonds. The Duke of Albemarle bore it at the coronation of Charles II.; and the archbishop, when delivering it to the king, charged him to 'learn to make much of the godly, and to terrify the wicked; shew the way to those that go astray, offer thy hand to those that fall, repress the proud, lift up the *lowly*.'

Besides the above, we have an ancient sceptre found in the wainscot of the old Jewel-house in 1814, and supposed to have belonged to Mary, queen of William III.; also one of gold, ornamented with large diamonds, and made for the coronation of the last-named queen; and a third of ivory, mounted in gold, with gold cross and dove of white onyx, made for Maria d'Este, though often called Queen Anne Boleyn's.

The Orb is of gold, six inches in diameter, with bands set with diamonds and pearls; the gold cross is supported by a very large amethyst. Another orb, called the Queen's, is very like this, but smaller. The globe and cross, as a symbol of dominion, is very common on the imperial coins. Bromley says that Constantine fixed them in the right hand of the Apollo of Phidias. In our own country, its use is ascribed to King Alfred, but it certainly has been used from the time of the Confessor.

The Curtana, or Pointless Sword of Mercy, also called the Sword of King Edward the Confessor. It is mentioned by both these names in Matthew Paris, under the year 1236, when detailing the marriage ceremonial of Henry III. In ancient times, it was the privilege of the Earls of Chester to bear this sword before the king. The Earl of Oxford carried it at the coronation of Charles II.

The Sword of Justice, temporal and ecclesiastical, borne before the sovereigns at coronations. Of this in the 'Inventory of the Regalia of King

* The sceptre was originally a mere walking staff. Achilles swears by his staff or sceptre (*Iliad*, i. 246), 1193 B.C. Cyrus, according to Xenophon, was always attended by three hundred sceptre-bearers, 401 B.C. It was first assumed by the elder Tarquin (621 B.C.), among the Romans. The sceptre of the Merovingian kings of France, in 448, was a golden rod of the same height as the monarch himself. The chanter's baton of St Denis, now in the Louvre, was carried by Napoleon I., and the French kings before him, at their coronation, as 'the golden sceptre of Charlemagne,' from a seated figure of that monarch on the top: it is dated 1384.

James the secrete Jewel-house within the Tower of London,' printed in *Kalendars and Inventories of the Exchequer*, it is written: 'Item, one greate Two-handed Sworde, garnyshed with sylver and guylte, presented to King Henry VIII. by the Pope.' The two-handed sword was in great favour in the sixteenth century, but is rarely seen after the close of the century, being superseded by the rapier. The *Spadone*, as it was called, could be only wielded by men of great strength and agility.

The Armillæ, or Coronation Bracelets, are of gold, chased with the rose, fleur de lis, and harp, and edged with pearls.

The Royal Spurs are of curiously wrought gold, and are used at coronations. At that of Charles II., according to Baker's *Chronicles of the Kings of England*, folio, 1674, pages 760—768, before quoted, we read that the dean took the spurs from off the altar, and delivered them to the Lord Great Chamberlain, who touched the king's heels therewith, and forthwith sent them back to the altar.

We now come to a very interesting (though not intrinsically valuable) portion of the Regalia—namely, the *ampulla*,* or eagle of pure gold, used at coronations for the holy oil, which is poured from the beak into the *gold anointing spoon*, which we shall notice presently. This ampulla is said to have been brought from Sens Abbey in France by Thomas à Becket. It will be remembered that, in 1164, after the quarrel of Becket and Henry II., the former fled to Sens, where he met the pope. He resided afterwards at the Abbey of Pontigny, but at the former place some of his vestments are preserved. At the coronation of Charles II., the king was anointed by the archbishop (the Dean of Westminster holding the ampulla, and pouring oil into the spoon), first in the palms of both his hands, in manner of a cross. The king was anointed on his breast, between his shoulders, on both his shoulders, the two bowings of his arms, and on the crown of his head. The anointing was dried up with fine linen, and the loops of his shirt closed up by the Dean of Westminster.

The Spoon (figured in Shaw's *Dresses and Decorations of the Middle Ages*) has been probably used in the coronation of our monarchs since the twelfth century. It is of pure gold, with four pearls in the broadest part of the handle, and the bowl has an elegant arabesque pattern engraved on it. The handle was originally decorated with enamel; but this has been destroyed, leaving an uneven surface.

The Gold Salt-cellar of State is set with jewels chased with grotesque figures in the form of a round castle, said, but erroneously, to be a model of the White Tower. The tops of the five turrets are for the salt. It was presented to the crown by the city of Exeter, and was last used at the coronation banquet of George IV. Then we have an elaborately chased *Baptismal Font*, formerly used at the christening of the royal family; and a large silver *Wine Fountain*, presented by the corporation of Plymouth to Charles II.; a service of sacramental plate, golden salt-cellars, coronation tankards, gold spoons, and a fine banqueting dish.

* According to Pugin, a vial containing sacred balm that was used in anointing the kings of France at their coronation was found at Rheims, in the custody of the grand-prior of the monastery of St Remi, and known as the *Sainte Ampoule*. It was composed of antique glass, about one and a half inches high, seven-eighths of an inch in circumference at the neck. In 1760, the vessel appeared about two-thirds full of a reddish balm. When a king of France was to be crowned, a small portion was extracted on the point of a golden pin, and mixed with the holy chrism. This vial was enclosed in a reliquary in the form of a dove attached to a silver chain, and so suspended round the neck of the prior when carried in procession. Soon after the execution of Louis XVI., this interesting relic was destroyed by a republican named Ruhl.—*Glossary of Ecc. Ornament.*

A DOOMED PEOPLE.

FAR away in the Pacific lies a land under a mysterious curse. Once fair to look upon, and fertile enough to support its thousands in comfort, sterility now marks it for its own, and denies the ever-dwindling population aught but the scantiest sustenance.

The island of Rapanui was discovered by Davis; discovered, and that was all. Thirty-six years afterwards, the Dutch admiral, Roggewein, endeavouring to make Davis's Land, found, as he thought, an unknown island, and unaware that it was the very land he sought, named it Easter Island, because he sighted it upon Easter-day. While he was looking for an advantageous harbour, his reconnoitring ship was boarded by one of the natives—a tall, strong, robust fellow, whose naked body was a very network of painted patterns, and whose prepossessing countenance was spoiled by a pair of ears hanging nearly down to his shoulders. This strange visitor astonished his new acquaintances by throwing the wine they proffered into his eyes instead of putting it to its proper use, but was so much at his ease among them that they found it a difficult matter to get rid of him. When the fleet anchored in the bay, thousands of natives crowded the shore, some lighting fires before their idols, at whose feet they had been seen prostrating themselves at sunrise, while others ran to and fro like so many wild creatures.

Some hundred and fifty Dutchmen landed. Finding the curious crowd pressing rather closely around them, these brave Hollanders, although they could not descry a single armed man in the throng, cleared the way with a discharge of musketry; after which the islanders 'became more civilised.' Loud wailings and distressful cries told that the volley had carried death with it; but even the murder of their brethren failed to rouse the uncivilised natives to retaliate. They hastened to lay peace-offerings in the shape of nuts, sugar-canes, fowls, and roots before their slaughterers, and carrying palm-branches and red and white flags, in token of amity, acted as pioneers for them. Afterwards, in exchange for some beads, looking-glasses, and painted cloth, they supplied the fleet with five hundred live fowls, plenty of white and red roots, plantains and potatoes, respecting the last of which the chronicler of Roggewein's voyage remarks that they taste 'almost like bread, and the Indians use them instead thereof.'

The same authority describes the people as being very tall, strong, well made, and remarkably swift of foot; resembling one another more in these qualities than in the colour of their skins, which varied from white to red, and from brown to black. The women were decorated with a very bright red paint, some of them wearing red and white garments of a soft silky material, and small straw hats; but, as a rule, the ladies were not burdened

Digitized by Google

with more clothing than modesty. Men and women alike were notable for long hanging ears, from which depended ear-rings with pendants as large as a man's fist. So far as time gave them the opportunity of judging, the Dutch found the islanders of a very unwarlike disposition, and supposed they relied for protection upon their stone idols—long-eared giants—ranged in great numbers along the coast. Several of the natives were observed to be particularly attentive to these grim monsters, and were therefore set down for priests with the greater confidence from the fact of their having shaven crowns, and wearing head-dresses of black and white feathers exactly like the plumage of the stork. The homes of the people were huts from forty to sixty feet long, by six or eight in breadth, formed of poles cemented together with mud, and roofed with palm-leaves. Although a pig seemed to be a familiar animal to the islanders generally, neither pigs nor any other four-footed creatures were seen by the Hollanders during their short stay; but the island was so well wooded and cultivated that they left it unexplored with regret, believing that if they could have looked for them, they might have found plenty of good things.

The men of the land of dikes are not supposed to be too imaginative, but either Roggewein's followers were exceptions to the rule, or else Easter Island must have gone to the bad at a rapid pace during the succeeding fifty years, for Captain Cook was anything but pleased with it when he visited it in 1774, although he did think he had come to a land of plenty when a couple of natives met the ship half a mile from the shore and flung a bunch of plantains on the deck—an idea soon dispelled when a landing was effected on the morrow. There was a goodly assemblage awaiting the new-comers, but Roggewein's thousands were represented but by hundreds. After some expressive pantomime on both sides, the natives produced a few potatoes, canes, and plantains, which they were ready to barter for nails, cloths, and the usual articles carried by ships visiting the Pacific islands on trading intent. The Englishmen soon discovered that the Easter Islanders were as expert at thieving and as tricky in their dealings as any people they had yet met. They could scarcely keep their hats upon their heads; and as to effectually guarding their pockets, that was impossible. The things acquired one moment by barter disappeared the next, and sometimes they bought the same things three times over without getting them after all. A very brisk trade was carried on for some time in the potato line, on a plantation close at hand, until the proprietor himself put in an appearance, and stopped further traffic on the part of his light-fingered brethren, by driving them off the land with which they were making so free.

A party despatched to survey the island was aided by a native, whose face was painted white, apparently for the occasion, and who, before starting, fastened a piece of white cloth at the head of a spear, which he carried in advance of the procession. Few signs of fertility gladdened the eyes of the explorers. One portion alone of the island appeared tolerably cultivated, the crops raised consisting of sugar-canes, yams, plantains, and sweet potatoes. Live-stock was scarce—a few small tame fowls, fewer still wild birds, and some rats, seemingly serving as supplies for the scantily provided tables of the islanders, being all that was seen; while, if there were fish in the sea, they were proof against every effort to lure them out of their element. Water, even brackish and stinking, was rarely found, and the only well of fresh water was rendered undrinkable to folks at all nice, by reason of the filthy cleanliness of the people, who never went to quench their thirst at the well without also performing their ablutions at the same time by jumping into the middle and giving themselves a thorough washing. Trees were scarcer still than springs; and for lack of wood, vegetable refuse was used to heat the earth-ovens in which the islanders cooked what meat they managed to get—their only utensils being gourds and cocoa-nut shells, the lucky possessors of the last-named considering themselves rich indeed. No wonder the famous circumnavigator was disgusted with the place, and voted it best avoided, as containing no safe anchorage, no wood for fuel, nor any fresh water worth taking on board. He estimated the population at this time at seven hundred, two-thirds being males—explaining the sexual discrepancy by supposing that many women might have been restrained from shewing themselves; an explanation that somewhat invalidates his rough census. If Roggewein's account was correct, the islanders had not only marvellously decreased in their numbers, but also dwindled very much in stature, for, instead of being a race of giants, there was not a single six-footer among them. In other respects, that is as regards their peaceable dispositions, agreeable features, and active natures, both Hollander and Englishman are agreed. The latter found the dwelling-places of these amiable savages mere miserable huts, constructed by setting poles upright in the ground, six or eight feet apart, then bending them towards each other, and tying the tops together; the domicile being made comparatively high and broad in the middle, and lowering and narrowing towards each end. Poles laid across, and covered with leaves, formed the roof; while entrance was effected by a low porch-fashioned doorway, just admitting the householder to pass through on all-fours.

The eastern coast of the island was notable for the number of its giant statues, or rather busts; some standing in groups on platforms of masonry, beautifully joined, but uncemented; others, generally the larger ones, placed singly in the earth. One was found to be twenty-seven feet high, and eight feet across the chest; but this was not the largest, for the shadow of another afforded shade for thirty men. Most noticeable among these mysterious relics of a bygone time, and probably of an extinct race, were three platforms of stone, once supporting half-a-dozen figures each: two were empty, and the third only boasted two figures. The workmanship of these was very rude, but the features were pretty well formed, except that the ears were long beyond all proportion—but then so were the ears of the men around, although they were so nicely wrapped up by means of the gristles being removed, that they appeared like small 'flatted chitterlings,' until they were unfolded, when they measured five inches and a half in length. Cook saw nothing to justify the idea that the statues represented the gods of the land; he took them to be monuments marking the burial-places of certain families or tribes. As regards his unfavourable picture of Easter Island, we must note that a fellow-voyager, who saw with other eyes, describes the country as

Digitized by Google

highly cultivated, and interspersed with evergreen and fruit-bearing shrubs, presenting the most beautiful prospect that fancy could conceive.

The ill-fated Frenchman, La Perouse, who visited Easter Island in 1785, attributes Cook's evil report to his having arrived there after a tedious voyage, eaten up with scurvy, and in want of everything. He considered the Easter Islanders numbered at the least two thousand souls, for while he saw some twelve hundred, his coadjutor, M. De Langle, found the interior well peopled, plenty of women and children about, and house-building going on to such an extent as shewed the people themselves believed they were increasing and multiplying. Scarcely a tenth part of the land was under cultivation, while what was cultivated was fertile enough for La Perouse to be persuaded that three days' labour was sufficient to provide a native with food for twelve months, and that the islanders were quite as well off as their neighbours, except, perhaps, that they suffered more inconvenience from drought—the bequest of their tree-destroying ancestors; but then they could drink sea-water like the albatross of Cape Horn. Trees they had, however, in the shape of a few paper-mulberry trees, but these they had to shelter from the winds by building walls round them. The captain found no trace of any religious worship among the people at all. Their houses seemed to be in common, and no individual appeared to have the authority of a husband over any one woman; at anyrate, he observes, 'if women are individual property, their masters are very prodigal of their rights.' Some of them lived in subterranean dwellings, and some in houses constructed of rushes on a base of solid lava. At the southernmost extremity of the island the explorers came upon the crater of an extinct volcano, of eight hundred feet in depth. Father Recevreur descended into it, and reported that the marsh was surrounded by fine plantations of mulberries and bananas; and that there had been a considerable falling away of the land on the sea-side, causing a great breach in the crater; while the grass on the sides of the cone, the marsh at its base, and the fertility of the adjacent land, told that the volcano had been extinct for a long period. At the bottom of the crater were found some water-swallows, the only birds they saw during their perambulation. La Perouse examined the statuary minutely, and discovered that they were cut out of a friable, light, porous lava. On several of the platform stones were rude sketches of skeletons, and human bones were seen in the neighbourhood both of the statues and of sundry pyramids of stones arranged like cannon-balls in a park of artillery. Near one of the figures was found a curious effigy, made of reeds, representing a man ten feet high, with a head of the natural size, a thin body, and proportionable legs; by its side was the figure of a child with arms crossed and legs hanging down. La Perouse was very well satisfied with what he saw of Easter Island and its inhabitants, and did something towards improving the condition of the latter, by leaving them some goats, sheep, and pigs, and planting oranges, lemons, cotton, cabbages, carrots, maize, and anything he thought likely to thrive in the place.

Could La Perouse, whose own fate is a mystery, see Easter Island now, he would scarcely recognise it. The stone monsters still indeed are there, silent remembrancers of the good old times of Rapanui, but Rapanui itself is little better than a great rock. Where pleasant meadows once gladdened the sight, salt marshes mock the eyes of hungry men. Not a tree now exists. Birds, always few, have become such rarities, that a sea-bird's egg is looked upon as a godsend. If the fish have not deserted the coasts, the people cannot catch them: not a boat, raft, or canoe, do they own, for they have no timber whereof to build them. The pigs and goats have long since vanished; the fowls bid fair soon to become as extinct. The natives themselves have learned industry and honesty from the missionaries, but have small scope for the exercise of either virtue. Within the last few years, their numbers have decreased one half, still the land that once supported three thousand inhabitants refuses a subsistence to eight hundred, and where one is born, three die. War has not desolated the island, fire-water has not decimated its people. Some have been kidnapped, and after a slavery under the Peruvian guano-owners, returned only to introduce disease among their countrymen, who needed no such infliction to thin their numbers. In fact, the race is being swiftly and surely starved off the face of the earth: there is no hope for them in the future, which is dreary and desolate as the island itself. It is a sad thing to contemplate, this inevitable perishing of a patient harmless people, a people with no enemies, but lacking likewise friends able and willing to rescue them from their deplorable fate. Only one thing can save them—emigration from the cruel land they call their own.

BETTER RAILWAY CARRIAGES.

Yes; better railway carriages. We have good reason to ask for them. The fares paid in England are higher than those in any other country, with some very few exceptions; and this liberality of payment ought to be met by a larger amount of accommodation in the carriages provided—especially in the third class. Out of something over three hundred million persons who travelled by railway in the United Kingdom last year, one hundred and eighty millions travelled third class, not because they liked it, but because first and second class fares are too high. A third-class carriage brings far more money to the company in the course of a year than any other class, and ought to be a matter of more solicitude than it usually is. Some of the companies are improving, but the rate of improvement is too slow. Then, again, in regard to ease, refreshments, and sleeping, we could learn much from the continent and from America, if the railway directors would allow us. Many facts relating to royal and luxurious carriages, sleeping and luncheon carriages, and, above all, respecting comfortable vehicles for third class, are little known amongst us.

The most right-royal production in the world in this way, so far as we are aware, is the imperial train of France. It may be that each of the great French companies has a similar train of its own; but at anyrate the one which we select as an example is on the Paris and Orleans line—the highway to Biarritz. It is a veritable train, not merely one carriage in a train. First, after the engine and tender, comes a luggage-carriage—not an uninhabitable van, but a structure which, besides ordinary luggage, contains pantry arrangements for refreshments, and accommodation for

Digitized by Google

some of the company's and imperial servants. Next is a carriage adapted as a dining-room—or at least as a refreshment room—with a centre table, arm-chairs, and hinged seats; and when, at night, the seats are drawn away from the wall, they fall back so as to form bedsteads for the attendants. Third in the list stands an open or platform carriage which may be opened or closed at the sides at pleasure, and used either as an open-air look-out or as a refreshment room. Then comes the grand carriage, the imperial saloon, with a retiring-room attached, and doors at the sides and ends. All that luxury can do is here done in the provision of couches, arm-chairs, folding-chairs, movable chairs, small tables and stands, curtains, wire-gauze blinds to exclude dust when the windows are open, a timepiece, pendent lamps, and mirrors. The fifth is a sleeping-carriage, divided off into seven distinct compartments; these comprise a sleeping-chamber or bedroom, two dressing-rooms, two rooms for the empress's ladies, one for the emperor's valet, and a retiring-room. The sleeping-chamber contains two beds, on opposite sides of a compartment nine feet wide. Next to the sanctum of the imperial papa and mamma is a carriage for the Prince Imperial, with numerous snuggeries for sleeping, dressing, and attendants. Lastly, there is a luggage-carriage, the counterpart of the one at the head of the train. All the carriages have doors at the ends, and platforms which make a convenient gangway from carriage to carriage; and there are electric bells from the imperial saloon to all the other carriages and to the engine-driver and guards.

The Czar of all the Russias should by rights have everything as grand as the Emperor of the French; but we do not hear of an imperial *train*, only of an imperial *carriage*. Such a carriage, however—no less than eighty-five feet long! The saloon for the emperor and empress, in the centre of the carriage, has all the luxuries which curtains and carpets, sofas and settees, timepieces and chandeliers, can give it; the emperor's study is a little more like a gentleman's own room, while the empress's boudoir is all that a boudoir should be; and beyond that are rooms for attendants—gentlemen next to the emperor's study, ladies next to the empress's boudoir—with all the knick-knackeries and comforts to make a journey go smoothly. As this carriage is made for comparatively short lines of railway near St Petersburg, there is no provision for sleeping or night-journeys.

Compare the above with what we know of the accommodation supplied to our own royal family in the formidable ride from Windsor to Balmoral, and the difference is sufficiently striking. No doubt her Majesty fares better than most of her subjects, in the size of the saloon set apart for her use; and there is equally little reason to doubt that the cushions are all very soft and the appointments elegant; but there is nothing parallel to the palace-like carriages at the service of the two emperors.

This, however, is not the important part of the matter; it is simply a difference in the degree of goodness in that which is very good. Let us come to the general passengers. Some of our railway companies furnish saloon-carriages, obtainable on the payment of eight first-class fares, and suitable for a family with attendants. There is a saloon, with sofa-seats so arranged that four persons can recline at full length; there is a lobby, to separate this saloon from the other parts of the carriage, and having the entrance-doors to the saloon; there is a little retiring-room, with wash-stand, a looking-glass, &c.; and there is a second-class compartment for attendants or servants. This is a kind of luxury which ordinary passengers know very little about; but it is only obtainable by hiring the entire carriage, and there are no arrangements either for bedroom or refreshment room—accommodations of which we shall now have something to say elsewhere.

Some of the railway distances in America are so immense that flesh and blood, bone and muscle, could not withstand the fatigue unless something more were supplied in the shape of comfort than we are accustomed to in England. From Euston Square to Golspie in Sutherland, near the ducal castle of Dunrobin, about seven hundred miles, is our maximum—a maximum which the United States have far exceeded, and which they now exceed four-fold since the Atlantic at New York is connected with the Pacific at San Francisco by rail. Oh, the misery of sitting bolt upright during such a journey! Our American friends know better, as we will proceed to shew by a few illustrative instances.

The sleeping-cars on many of the American railways are managed on a very peculiar plan. They belong, not to the railway companies, but to a distinct company or firm, and are the subject of well-defined agreements. The passengers pay an extra fare for the use of these carriages, and the proprietors are in some way paid out of this surplus, aided perhaps by a royalty or percentage from the railway company. The special servants employed are paid by the proprietors of the cars. Some of these cars are of such enormous size and such massive construction as to weigh thirty tons each, and extend sixty-five feet in length. They are known far and wide over the American continent by distinctive names, such as the *Viceroy*, the *Pacific*, &c., or by such a collective name as *Pullman's sleeping-cars*—referring to the name of the chief proprietor. One of these, the *Viceroy*, cost three thousand pounds in mere building, irrespective of carpets, curtains, china, glass, bedding, and electro-plated appointments. Having the surprising width of eleven feet, there is a roominess which makes us sigh for envy. At each end there is a platform and a door; the door opens into a lobby with polished walnut walls, matted floor, stained-glass windows, curtains, steward's room, lavatory, marble washstands, &c. From this lobby a glazed door gives admission to the main saloon, having a richly carpeted passage two feet wide along the centre. On each side of the passage are seats to hold two persons each; and these seats are arranged *vis-à-vis* and *dos-à-dos* alternately, not on the *char-à-banc* plan. The spaces between the *vis-à-vis* seats are large enough to admit a table each, for the convenience of reading, card-playing, or refreshments. All this is very nice; but we are bidden to remember that 'it is at night that a handsomely equipped sleeping-car should be seen. By day it appears at best a nondescript vehicle, monstrously heavy, extravagant in its appointments, and with a heap of contrivances and little dodges the uses of which are not apparent till passengers are ready to turn in.' This 'turning-in' is a very welcome process; for some of the railway journeys in America occupy two or more days consecutively,

Digitized by Google

and others are already much more prolonged. The operation of bed-making is certainly managed in a very ingenious way. Where two seats are back to back, there is one inch space between them, and up this space is drawn a panel, reaching to the ceiling; when all these panels are drawn up, the compartments are cut off into separate berths. The seats draw out and turn up in such a way as to form two tiers of berths, one over the other; and then it is seen that the cunning artificers have packed away a goodly supply of spring-mattresses, blankets, and clean sheets beneath the seats. Sometimes only a berth, sometimes a section of two berths, is taken by a passenger, according as he is willing to pay for privacy by a higher tariff. Where a train is travelling during the whole or the greater part of a night, the extra charge for a sleeping-car varies from half a dollar to one dollar per berth, and one to two dollars per section. Knowing what most of us do know of hotel charges for one night, this fee will appear by no means unreasonable. As most people require more elbow-room when in bed than when sitting up—and decidedly more longitudino-horizontal room—a car for sixty-four day-passengers accommodates only thirty-two at night; but then the day-passengers will naturally be more numerous than those who travel all night. There is probably a certain hour in the morning when every one is expected to turn out, to enable the servants to draw back curtains, stow away bedding, push back seats, slide down panels, open windows, and rearrange tables. Are we afraid that the bed-linen would not have the nicety of that at a good hotel? We are told that none of the sheets are used twice without washing; and that the Pullman Company have a laundry at Chicago where they wash two hundred thousand pieces per month. Some of the carriages have two tiers, some only one, of berths; and this of course affords means for varying the luxury and comfort, and varying the extra charge made.

The Russians have adopted sleeping-cars on the Nicolai Railway, though much plainer in style than those of the United States. A carriage about fifty feet long by ten feet wide is divided into six compartments, having two seats for three persons each. At night, by manipulating the backs and fronts of the seats, two of them make bedsteads for four persons; because the legs of the seats are so turned up as to act as brackets to support an upper berth: the space beneath the seat being now available as a lower berth, and each berth accommodating two persons. Sliding-doors shut off the several compartments from the central passage; and a passenger can have the whole, or one half, or one quarter of a compartment, according as he is willing to pay liberally or frugally. There are lavatories, &c. at the two ends of the carriage; and in some instances there is a second story over the central compartments, accessible by staircases.

On some parts of the through-route from Susa to Brindisi, in Italy, family carriages are provided for those who choose to pay for them. There is first an ante-room for servants; then a sitting-room with four sofas; then a bedroom with a bed for two, with lavatory, &c. In the daytime, all symptoms of sleeping arrangements are removed, and the carriage is a well-to-do first and second class composite.

Some of the American day-cars resemble the sleeping-cars in this, that they belong to proprietors other than the railway companies, and that a small extra charge is made for their use. The Americans do not take kindly to our division into classes, but they realise something of the same kind in the way here indicated. On some of the lines there is a long carriage fitted up as a saloon or divan, with snug recesses, a sofa-stall in each, handsome carpets, and—spittoons. On one of the railways, a special carriage is divided off into separate compartments, each kept well warmed in winter. On the Chicago and Cleveland line, there are day-carriages known by such names as *Garden City* and *Forest City*—immense structures nearly sixty feet long. Doors at each end open into a central passage two feet wide; and this passage leads to parlours or rooms varying from eight feet by six to eleven feet by ten, well provided with sofas, easy-chairs, movable chairs, centre-tables, small side-tables, whatnot racks, rich carpets, and a recess well supplied with the newspapers of the day! One small compartment serves for a ladies' toilet, and there are retiring-rooms near the ends of the carriage. Any one compartment or room may be taken for a family, and may be cut off from the rest of the structure by sliding doors or panels. There is one of these grandiose carriages (or cars, as the Americans prefer to call them) so exceedingly rich and costly in all its features, both constructive and decorative, that the outlay is said to have amounted to twenty-eight thousand dollars: as there are about five dollars to a sovereign, here is a nice little rule-of-three sum for those who like it. This car, called the *Omaha*, carries luxury to the extent of a small organ in the middle of the chief saloon; whereby a passenger, whether or not he has rings on his finger or bells on his toes, can at least have music wherever he goes.

In Germany, some of the railway carriages are very convenient. Each carriage has one first and three second class compartments, with a lavatory, &c. somewhere near the centre. They are entered at the two ends, on the American plan, and there are neat panelled doors to separate the first class from the second.

The important question of refreshments, about which railway travellers are quite as sensitive as other people, is in almost a hopeless state in England. The scramble at the stations for very third-rate food is too familiarly known to need much comment here; and as to the bringing of simple and acceptable refreshments to the carriages at the station-platforms, on the continental plan, our railway directors offer very little encouragement to it. Some of the roomy American cars have luncheon-bars; nay, we believe there is a *Delmonico* car which advances to the completeness of an actual dinner.

There is an arrangement of *two-storied* carriages of which we know nothing in England. Some of them are in use on the Bombay and Central India Railway; constructed to hold a hundred and twenty passengers each—seventy on the lower story, and fifty on the upper. As nineteen out of every twenty railway passengers in India are third class (they would travel fourth, fifth, or any other class if cheapness could be thereby obtained), these two-storied carriages are crammed with Hindus of all castes (for the Brahmin and the Rajpoot may be poor as well as the Pariah), who squat on their hams as a compact mass of humanity; seeing that

Digitized by Google

some of the carriages, like the third class originally used on our Greenwich line, are without seats. On the western and eastern railways of France (Paris to Brest, and Paris to Strasbourg), two-storied carriages are used on some of the branches, where slow speed would render loftiness possible without danger. Some of these carriages are composite, the lower story having first and second class compartments, and the upper third class; some are third class throughout, the upper having open sides, and the lower closed with windows and glazed panels. These carriages accommodate about eighty passengers each. They are nearly fourteen feet in height by nine broad, and would therefore be unavailable under low-crowned arches and bridges.

We might say something about the means of communication between passengers and guard, the locking of carriage-doors, and the carrying of explosive substances (such as the paraffine oil at Abergele) by railway; but as we do not want to growl too much, we will content ourselves with the above gossip concerning continental and American passenger accommodation as compared with our own.

T. P.

Almost the last words spoken by the good old lady who left me four thousand pound consols and a house in Kensington were: 'Don't let it, John—live in it: it has been my home for fifty years and more: your uncle died in it, and my poor girl. I can't bear the thought of strangers coming and ill-treating the furniture. Chambers are dear and unwholesome, and I always think they tempt young men to keep late hours; and as for lodgings, you will be skinned in them. You will not desert the old place, will you, John?' The house is not a large one, but absurdly big for a bachelor with my small income to inhabit, nevertheless. If I and my servant Betty were marionnettes, with the power of shooting off our members and resetting them at pleasure, we might lodge a head in one room, an arm in another, and so make a decent attempt at general occupation; but being ordinary mortals, we can only manage two rooms apiece. Now, to live in the midst of furnished solitude is melancholy, and I should certainly feel strongly tempted to disregard my poor dear relative's dying injunctions, were it not for the hope of speedily increasing my income and relinquishing my bachelorhood.

Betty, let me hasten to observe, is a confessed forty-five, was chosen for me by the mother of my intended, and is a salad of the virtues; industry, honesty, and respectability forming the principal ingredients. She is a widow, with one son, a sergeant, who returned to Plymouth from China last August, just as I was going abroad for a couple of months' holidays. So I thought that Betty might as well go and see her son at the same time, a proposition at which she fairly cried with pleasure. I took her address, saying that I would write her word a week before I returned (so that she might come first and get the house ready for me); engaged a charwoman to sleep on the premises during our absence, and started for Switzerland. Only, in passing through Paris, I stuck there, as I always do.

At the end of the third week I found a letter at the *Poste Restants* marked 'Immediate:' it was from Kramme, and ran thus:

'Dear Penyolin—*I have got an order for an historical work; one of those things which Mudie's subscribers who call novels trash think improving, you know. Such a title we have hit on: "War, Women, and Wine!" Now, will you take War? You will give an account of all the principal wars that have ever been waged. Sacred wars; Siege of Troy, Helen, Wooden Horse; Wars of the Roses, &c., down to Prussia versus Austria. There must be plenty of thrill and romance. You can have the use of three encyclopædias, Hume, Grant, and Napier. As the book must be out soon after Christmas, perhaps you had better come back to London, and set to work at once.*'

I sent off three letters immediately: one to the charwoman in charge of my house; one to Betty; one to Kramme, accepting his offer, and promising to return in a week; and nine days afterwards, I was sitting in my study, fenced about with gigantic encyclopædias, working at my strange hash with the vigour which a spell of idleness imparts.

Betty put her head in at the door, and said that a lady wanted to see me, and my engaged heart jumped; but remembering that Betty knew my Lucy and her mother, and would not announce either so vaguely, it subsided again. Perhaps it was a partner in *War, Women, and Wine*, come to make arrangements about the division of labour.

'Leastways,' said Betty, 'she asked for T. P.; and as thems your initials, and she come to this house, I suppose she mean you.'

'All right, Betty; shew her in,' said I, sure now that she had come on business; for I sign all my work T. P.

There entered a tall lady, with a great deal of bone about her, appareled wonderfully. She must have had bonnets and dresses enough to last her life made when she was about fifteen, for I am sure she could not get them cut like that now, unless she went to China, and gave the native tailors old ones for patterns. She carried a large bag on one arm, and a tent, ingeniously contrived to open and shut like an umbrella, in the other hand. I rose, bowed, and offered her a chair; she stared at me, as though she wanted to send me off into mesmeric slumber, and proceeded to remove her roof, for to call her top covering a bonnet would be really too absurd.

'Where's the other?' she suddenly asked.

The other? That must probably be Kramme: she had evidently had an interview with him on the subject of the work, and expected to find him with me that morning. I explained to her that Kramme was probably at home, working away at his section.

'What is the use of talking to me, when you know that I am stone deaf?' she growled.

I had not known it; I had not heard of her existence even. It was very remiss of Kramme not to tell me of this fellow-labourer, and her peculiarities. After trying in vain to communicate with her by signs, I wrote: 'In what way can I be of service to you?' on a bit of paper, and handed it to her.

'Ah,' said she, 'I cannot read it without spectacles, and I have left mine at home; but it does not matter. The lotion should be applied with a syringe, as before?'

Lotion! Syringe! Oh, her deafness. No doubt Kramme had given her some nostrum for it, and she had better go on doing what he advised; she could not get worse. So I nodded.

'The last did no good to my hearing, but the

Digitized by Google

pills did to my health. I have taken them all. You have not got any more here, handy, have you?'

I always take dinner-pills with me when I go abroad, and the last box happened to be in my table-drawer, I having fortunately forgotten to throw it away; so I took it out, and offered it to my visitor, who pounced upon it with the avidity of a child upon sugar-plums, swallowed two pills then and there, and rose to go without saying a word upon business. Only, on leaving the room, she gave me an envelope, which I opened directly the door closed upon her, expecting to find some direction from the publisher or Kramme. But there was nothing but a five-pound note! What was this for? A sort of retaining fee? A small payment on account? A soothing theory then insinuated itself into my mind: no doubt this eccentric but extremely sensible lady had reaped much comfort, improvement, and delight from certain articles signed T. P.; had called at the office of one of the journals thus enriched for T. P.'s address, and had expressed her admiration and gratitude in this delicate but practical manner. The compliment would perhaps have been higher if she had not been so very fond of pills; but I had no time for minute analysis. I took the number of the note, and locked it up in a drawer, and went in at War again. In an hour or so I was again disturbed.

'Here's another for T. P.; a man this time, all on wires.' A flop was heard in the hall. 'There, that is the third time as he's dropped his hat since I let him in!' said Betty.

Was this rush upon my signature a practical joke? No; practical jokes never result in five-pound notes to the butt. At anyrate, I would not risk the loss of contributions so substantial, though so flimsy, by refusing to see any one who desired an interview with my initials. A middle-aged man with light prominent eyes, tow-coloured hair, smooth face, retreating chin, and spare figure, the joints of which seemed to have been stretched on the rack, came into the room at something between a trot and a shuffle, tumbled over a chair, begged its pardon, and sat on the edge of it.

'I've seen what you say in the p-p-paper, Mr T. P., and I thought you might do my nerves good; so I—I called: I am so very nervous, and the doctors can't do anything,' he said.

It so happened that I *had* written about Timidity a short time before. Here was another reader who had taken the trouble to discover my address! It was flattering, but puzzling.

'I am very glad,' said I, 'if any little hints of mine should prove of service to you, but I fear that I cannot add anything to what has appeared in print.'

'Oh,' he cried, 'I beg pardon, I am sure; I see you are very b-b-busy. I only thought—— But perhaps I had better buy your book.'

How on earth the perusal of *The Poisoner of the Pyreneas* should in any way brace his nervous system, I could not divine; but as it was published on the half-profit agreement, it was not for me to point out the improbability of such a result. So I smiled, and said that on the whole it would be better; and he shuffle-trotted away, dropping his hat and stick all about the passage, and apologising profusely. I sat down to my desk again, and wrote a memorandum for my future biographer —'He returned from Paris, and found himself famous;' and then took a mental header into the war-chariots of the ancient Britons.

'Well, what is it now, Betty?' I asked, when, a couple of hours later, she made her third appearance. 'Not another for T. P.?'

'Indeed, but it is, and a young lady. Perhaps I had better say you are busy?'

'O no; ask her to come in. What is she like?'

'I don't know; she's all wale,' replied Betty.—'Walk in, please, miss.'

The young lady came in precipitately, raising the 'wale,' and exclaiming: 'O Tim, how could you? If you knew'——

Her feet and her tongue were alike arrested when she saw me; and indeed I was slightly dumfoundered myself. For a good-looking young woman, with really a splendid figure, to rush into your study, and address you by somebody else's Christian name, is most startling. She was the first to recover from the surprise which she seemed to feel at finding me in my own room.

'Where is my husband?' she asked.

'Really, madam, I have not the remotest idea,' I replied.

'Oh, do not trifle with me!' she exclaimed. 'Do you fear lest I should betray him? O sir, there is no danger of that. I am his wife, and I love him though he has deserted me, because I know the reason; his letter told it me. He fancied that I should spurn him and cast him off when I learned his misconduct. He was ashamed to face me; he thought that the prospect of poverty would make me shrink. Ah, he little knew me! Surely he must have spoken to you of me?'

'I assure you that I cannot believe in the possibility of any husband leaving you of his own free choice,' said I gallantly. 'But there is some mistake here. May I ask his name?'

'Why, Timothy Porter, of course, sir!'

'I really do not know any one of that name, madam.'

'Oh, you are playing upon words, and trifling with me! But after the trouble I have had to trace him to this house, and the many weary miles I have travelled to reach it, I am not to be lightly turned away. I will search every corner; yes, sir, every corner.'

It was beautiful to see how the expression of her features passed from softness to extreme firmness, and I gazed on her with an admiration not unmixed with apprehensive awe. Was this injured lady exceptional or typical? Was it within the bounds of probability that my dearest Lucy would ever assume that tone after the boats were burned behind us?

'I should not wonder if he were in this very next room,' continued my fair visitor, going to the folding-door which separated my study from the unused dining-room.—'Ah, locked! That is suspicious. We shall soon see.'

She took the key from a nail close by, and let herself into the dining-room. It seemed useless to talk to her, so I sat despairingly down in my chair, awaiting the result of her investigations in bewildered silence. Her dining-room search proved a blank; and she went up-stairs. Presently afterwards, I heard the front-door bell, and Betty came again.

'Another for T. P., Betty? Send him or her away. I'll see no more!'

Before Betty could reply, a well-known voice exclaimed: 'No, Mr Penyolin; not another for T. P.; but one who has called to ask why you

Digitized by Google

have adopted those initials, and what is the meaning of this advertisement?' And the imposing form of the mother of my intended swept into the room, holding a newspaper in its hand.

'Oh, my dear madam, I am so glad to see you!' cried I. 'I thought you were at Scarborough.'

'We were at Scarborough, but have returned sooner than I expected. But that has nothing to do with the explanation I demand. What is the meaning of this advertisement?'

I declared with truth that I had never advertised in my life, and had not the remotest notion what she meant. Her only reply was to place her newspaper in my hand. A pen-and-ink mark in the margin directed my attention to the following:

'The licensed homicides who decimate the nation under the titles of Physician, Surgeon, or General Practitioner, arrogantly call all those Professors of the Art of Healing who refuse to conform to their antiquated and inefficacious rules, Quacks. Yet, a traveller, who has lately returned from the wilds of Crim Tartary, where he has learned the marvellous curative lore of the Boshes, possesses some miraculous secrets for the cure of all diseases arising from disorganisation of the reticular interlineation of the Nerves. What is Blindness? Paralysation of the Optic Nerve. What is Deafness? Prostration of the Nerves of the Ear. This benefactor of Europe has cured thousands of the blind and deaf whose cases have been declared Hopeless by the Faculty. As for Neuralgia, Tic Douloureux, Rheumatism, St Vitus's Dance, Winking, Starting at sudden Noises, &c., he is ready to guarantee the restoration of all persons so afflicted to the healthy nervous status of the ploughman and the milkmaid. Address, T. P., 1 Blank Terrace, Kensington.—*N.B.* T. P.'s invaluable work, *The Nerves and their Victims*, is now ready. To be had of all Booksellers, price half-a-crown; or, direct from the Author, by sending thirty-six stamps to his address.'

I rubbed my eyes, and stared in wonder at my proposed mother-in-law, who stood in a judicial attitude.

'Well?' said she.

'It is an absurd hoax!' cried I. 'And now I understand why I have been pestered all day with callers demanding to see T. P.'

'Then you have not turned quack doctor? I thought such a thing impossible. Of course, however, I could intrust the happiness of my daughter to no such fraudulent impostor; and the initials being yours, as well as the address, I determined to call at once, and see what it all meant. Of course, my dear Tom, I am overjoyed to find that you are merely the victim of a silly trick—— What!'

The exclamation was caused by the entrance, at that moment, of the fair deserted. The elder lady drew herself up to her full height, and then stiffened into live marble.

'Oh, I see,' she said, and her accent was freezing; 'you thought we were safe at Scarborough. A fortunate visit of mine was this! A narrow escape my poor girl has had. Good-morning, Sir.'

'But, madam,' I began.

'Enough, sir; not a word! Permit me to withdraw. I am not used to such company!'

'But you are mistaken,' I cried. 'This is Mrs T. P.; she has not been in the house five minutes, and I never saw her before.'

Before I could get any farther in my explanation Mrs T. P. struck in. 'Oh, madam, how can you treat with such cruelty a poor distressed woman, who has been left by her husband, and'——

'Enough,' said Lucy's mother. 'Doubtless, your story is very romantic, but it has no interest for me.' And she moved haughtily to the door, where she found herself confronted by a couple of policemen in uniform, and one out.

'Sorry to distress you, ladies,' said the latter, 'but duty, you know, is duty, and must be performed. Mr Timothy Porter, you are wanted.—Holloa! This is not our man.—Slip into the hall, you two, and see that he does not get out of the house.'

'There is no one in it but ourselves and my servant Betty,' said I.

There was a fruitless search, and a partial explanation, which so far satisfied the detective that he made a sort of apology for the intrusion. 'But, sir,' he said in conclusion, 'if you are so careless as to let your house to a swindler, who joins his better-paying tricks to quack-doctoring, what can you expect?'

'I never let the house,' I replied. 'I went abroad for a holiday, sent my servant away, and put in a charwoman.'

'What is her name and address?'

I gave both; and the policemen went away, followed by Mrs T. P., who thanked Heaven that her rascal husband had escaped.

Of course, Mrs Grimes, the charwoman, had been tempted to let Timothy Porter occupy my house in my absence; and I was pestered for months with indignant letters from persons who had sent postage stamps for copies of *The Nerves and their Victims*, and had received nothing in return.

THE EVENING SEA.

Dim sheet of lucid splendour, seen afar,
What mem'ries bring'st thou of that happy past,
When on thy brink we children pebbles cast,
Or reared our sand-tow'rs for thy waves to mar!
Mysterious to us men thy beauties are;
Fair hopes, unutterable types thou hast
Of higher, nobler aims, long to outlast
Earth's mean ambitions. Now, a lonely star
Floats through the deep'ning azure, as 'twould guide
Vague human longings to a Better Land.
Sparkles the sea beneath in joyous pride,
And all my pulses spurn this mortal strand.
But night draws nigh—what life-work can I shew?
Hopeful, contented, humble home, I go.

THE SECRETARY BIRD.

A CONTRIBUTION TO THE UN-NATURAL HISTORY OF COMMERCE.

THERE is a tall bird known to naturalists by the name of the Secretary Bird. Its classical name is the *Gypogéranus*, or vulture-crane. It is, in fact, about the size of a stork, to which it is nearly allied by nature and in its voracious propensities. In digestive power, it is hardly inferior to the ostrich. The proper food of the Secretary Bird is reptiles, especially serpents; but, when domesticated, every kind of nourishment agrees with it; and if it be permitted to suffer from hunger, it will fall upon ducks, chickens, goslings, and fish. Its gait and figure are elegant and imposing. It walks like a king's secretary. Its eye has a quick, dazzling, predaceous glance. A beautiful tuft of feathers, which it can erect at pleasure, inclines backwards from its head, exactly resembling a fine feathery goose-quill stuck behind the ear of a secretary. Hence its name. In hot climates, where reptiles abound, this bird is carefully preserved. It is felony to kill one, but the public appreciate its uses too well to destroy it wantonly.

I do not know if there be a specimen in the Zoological Gardens at the present moment, but there was lately a very fine one in solitary confinement in the Jardin des Plantes at Paris. It is, however, unnecessary to go so far to see it, for there are vast numbers in this country, though not so many in confinement as could be wished. In London, especially, there are many fine specimens of the true breed, and not a few beautiful varieties and hybrids. For instance, we have the Actuary Bird, the Agency Bird, the Director Bird, and the Manager Bird. The name of the last is a corruption from the French *manger*, 'to eat;' the 'a' having been probably inserted from the creature being observed to ejaculate 'Ah!' in token of enjoyment, in the midst of eating. To these may be added the Solicitor Bird, with which the above named are known to cross freely; and the variety is instantly recognised by its bill, which is often of portentous dimensions. Finally, there is the Great Liquidator, whose voracity is too well known to the public to need description. A fine specimen of it was recently caught in Lincoln's Inn Fields, whilst in the act of swallowing, in one gulp, myriads of pounds of prey. In fact, this variety is supposed by Professor Owing to be the veritable *Dinornis* of New Zealand, and to have been hatched in the Eccaleobion, from one of the fossil eggs brought over to this country by way of Hindustan.

All varieties of the Secretary Bird, except perhaps the one last spoken of, are very gregarious in the domesticated state, and live together in great harmony; in fact, they form *Companies*. In this way, they are enabled to gratify to their fullest extent their predaceous habits, and indulge their voracious appetites. But in birds, as in men, indulgence beyond certain limits sows the seeds of disease; constitutional maladies become developed, and at last prevail; the Secretary Bird succumbs. Then the Great Liquidator, if not prevented, steps in, and performs the half-friendly, half-cannibal office of gobbling it up. The way to prevent such a catastrophe is to supply the poor Secretary Birds with some light nutritious diet, such as poultry or *fish*. As they are unable at such a time to cater entirely for themselves, it is necessary for the fish to be drawn together in small separate pools, where they can be easily caught in quantities not too large at a time. If the crisis be thus averted, the Secretary Birds, which have something of the Phœnix in them, will revive, recover their plumage, and be as active and voracious as ever. It is, however, to be noted, that no Secretary Bird which has been so unfortunate as to lose the tuft on its head, has ever been known to recover.

It need hardly be observed that this crisis in the life of a company of Secretary Birds is also a very critical time for the fish, which, for the most part, have themselves to blame for what happens. These foolish little creatures are easily got together by the jingle and glitter of a little tin, and the very plumage, especially the tuft, of their deadly enemies, the Secretary Birds, is known to attract them.

Digitized by Google

Sometimes, however, the Great Liquidator drives away the Secretary Birds; but it is only to make both them and the fish its own exclusive prey. It is only a choice of evils for the fish. They are sure to be caught at last, they are so exceedingly silly.

The English, like the tropical Secretary Bird, has, however, its uses, and needs to be preserved; it is, in fact, as above described, a *tropical* species. The native bird is perfectly harmless; it is the *tropical* one only that needs to be guarded against. This is not very difficult, if it be properly watched. The Auditor Bird, though vastly inferior in size, will, if properly trained after the manner of a falcon, prevent the species we have been describing from becoming dangerous. There is, however, this peculiarity to be guarded against in the Auditor. His sense of hearing is, as his name implies, very acute, and he is apt to trust to that rather than to his sight, which, as he is of the Nocturn class, ought principally to guide him in hunting in the dark. The consequence is, that he listens too often to the cry of the Secretaries, and picks up their note. When this happens, the Auditor becomes worse than useless for the purpose intended; and it is therefore advisable to change the Bird employed. The Actuary Bird also (only it must be of the solitary, not the gregarious variety) will, if reclaimed in time, save multitudes of fish. Nothing, however, is more effectual than vigilance on the part of the fish themselves; and, on the part of the public, an elementary acquaintance with Cocker.

THE ADVENTURE OF THE *MARY ANN*.

IN TWO PARTS.—PART II.

THE boat, on leaving the ship, had made off rapidly towards the whales; but she had had a long chase, and the captain had not attempted to shorten it. In the end, they were successful. A whale was harpooned, lanced, and killed, and then for the first time the men became clearly conscious that the ship was not in sight. They concluded, of course, that they had come a long way; but the whalers had been placed in a similar difficulty before, and were certain that the morning would shew them the *Mary Ann* in sight. They had a stock of provisions which would last them three or four days, and therefore made themselves as comfortable as they could, keeping watch in turns.

The night passed pleasantly enough. In such latitudes, sleep in the open air is the pleasantest kind of sleep, and but for the slightly cramped positions in which they had to lie, they had little cause to regret that they were not on board ship.

Morning came; but, to their astonishment and disappointment, the ship was not in sight. Still, it was probable that she would cruise about during the day, and before night would sight them. The day passed wearily; all the men keeping an anxious look-out, and none more anxious than the captain. They hoped, he feared, that the *Mary Ann* would be sighted. As the day wore on, and no signs appeared, the men, and especially the ex-bushrangers, began to be seriously uneasy. The captain was shrewd enough to do nothing to make them less uneasy. At night, he told them that he must take charge of the small cask of water and the little stock of provisions. 'Because,' said he, 'if the *Mary Ann* is not in sight to-morrow, we must make for land.'

The three convicts were suspicious at once. Suspicion is about the only quality which men of this class have in common. Forty soldiers will overawe four thousand convicts. The reason is, that there is not a convict who does not believe that if he were to propound any scheme of resistance to his fellow, the plot would be instantly revealed. The convict suspects everybody; his fellows, perhaps, worse than all others. The instant, therefore, the captain mentioned his proposal, they suspected treachery. In truth, the matter was much more serious to them than to the sailors. If by chance they fell in with an English man-of-war, although at present no one but the captain had the most remote notion that there was any possibility of such an occurrence, and it became known that they were ex-convicts, they would be put in irons, and at once sent back to Van Diemen's Land, where death would be the penalty of their offences. The rest of the boat's crew, however, agreed with the captain. High words ensued. The three convicts were armed, and the five sailors unarmed; but the captain had near him the ship's lances, and the convicts must have felt that a conflict would be a hazardous thing.

Night came, and no sign of the ship. Suspicion was now in every one's breast. There was no sleep that night for any one except poor Charley, who, worn out by the hard work he had had on the first day, and less influenced by suspicion than the rest, slept as soundly as if in his berth.

Morning came—the second morning—and no signs were yet visible. The sailors advised that they should make at once for land, but the convicts opposed. Wearily the hours passed away. Half-provisions were served out: the convicts proposed that half even of that amount only should be given to Charley, but the others stood by him.

Night approached, and with the same tale: no ship in sight. Even the convicts began to see that the best thing to do was to make for land. If there were the choice of two deaths, any would be better than starvation. Besides, they might meet with some other ship, or with their own; or even on land they might, and probably would, be perfectly safe. They agreed to take turns in watching during this night, two being always on watch, a convict and a sailor. The rest slept.

When morning came, they were all of one mind: they must now aim at land. The captain *thought* he could hit it. The best thing they could do at anyrate was to try; all agreed in that.

So the boat's head was put landwards, and the men pulled with a will. By night, however, they were nearly worn out. They had gone, according to the captain's calculation, about one-third of the distance.

The quantity of provisions distributed was reduced again. The reduction told on their labours next day: they dragged wearily at their oars: their strength was failing them for want of food.

The next day and the fifth passed, and on each succeeding one the distance got over was smaller than on the preceding. Some of the men could take very short spells at the oar; Charley, shorter than any of the rest. The captain took his turn, and managed so well that but for the fact that

Digitized by Google

each one lived in view of the rest, they would have suspected him of having a secret supply of food.

On the night of the fifth day, the convicts made a rush at the food, and a fight took place. No one, however, was wounded severely. The sailors were unwilling to shed blood; the convicts were afraid to make open war. They knew that without the help of the captain at anyrate, they could never hope to reach land. On the morning of the sixth day, one man, a sailor, and Charley were so far useless that they could only lie in the bottom of the boat. Charley was quite senseless, almost lifeless. The convicts would probably have made open war but for the absolute necessity of not losing the captain.

Noon came. Land was sighted—land, land! Land where water could be had—land where food might be procured! Franticly they expended their failing strength in endeavours to reach it suddenly. Gradually they could distinguish the low line of green, and beneath it a strip of yellow sand, becoming more and more distinct. No houses could be made out. The men were in raptures; the captain, however, was disappointed, although he did his best not to shew his disappointment. What he had looked out most anxiously for was a ship: that he could not see. There was just one hope for him: there might be one on the opposite side of the island.

Then one of the convicts drew his pistol, and swore with a great oath that they should not go a boat's length farther until he knew what was going to be done. 'Were they going to split? He wasn't going to be sent back to Australia; he might as well fight it out there. If they won, well, they could tell their own tale: they could be a whaler's crew that had lost their ship; and if they lost, they could only be killed.'

The other convicts joined with him, and there was every probability of a terrible fight.

The danger was put an end to by a sailor. 'He did not want to split. They had all shared alike in the boat, and they might as well keep their tongues still.' They were now sufficiently strong to dictate their own terms. The other two sailors at once promised not to mention to any Europeans that they were runaways. Charley was too exhausted to be capable of understanding what was going on. Once or twice the captain had looked anxiously to see whether he still breathed. Extreme exhaustion had followed his hard work and rough usage, and he lay like one dead.

The captain only remained. At first, he would not consent to make any promise. Angry words passed; pistols were cocked; but all were against him. They talked of throwing him overboard, since his knowledge was no longer indispensable. At last, under heavy threats, he consented to be silent so long as he should be on the island they were approaching. No threats could extort any promise beyond that. Perhaps the captain consented the more readily because he saw no sign of European civilisation. He was afraid he had missed the island he was aiming at.

By sunset the men were near the shore. Native canoes pulled off in wonder at the visitors arriving in so small a ship. Soon food and water were procured, and the men stood once again on land. The visitors were made to understand that there were white men on the island, though a few miles away. The gentle Polynesians treated the hungry fellows well. Two small huts were set aside for their use. Two days passed, and then all were sufficiently recovered, with the exception of the boy, to prepare for their journey across the island. They had found a native who could speak a little English: he told them that there were only two or three small vessels at the island, and that the big ships were all at sea. This, of course, was excellent news for the convicts, but dismal enough for the captain.

We may hasten over the journey across the island. The boy Charley was not strong enough to accompany the rest. The old captain determined that he would send help to him as soon as ever he should meet with Europeans.

They reached the small English settlement. There were a few English sailors who had been left on shore in the hospital, a small body of marines, and one or two merchant-settlers with their families. They welcomed the shipwrecked crew, as they believed them to be, as Englishmen in such circumstances always do.

A small sandal-wood vessel was going to leave the island in a day or two for Honolulu. The convicts were glad of the chance of going with her, since it would be easy enough probably to find a ship from that port to California, and the Australians believed they would have a good chance of getting a passage to Van Diemen's Land. They accordingly were all ready to take the passage which was offered them.

Charley was left to the care of the Europeans. Before the little vessel weighed anchor, he was sufficiently recovered to have started on his journey across the island; but she had sailed before he reached the settlement. The captain had at first determined to remain behind, on the chance of the arrival of a man-of-war which might go in chase of the *Mary Ann*.

He concluded it would be better to go with the rest. If he could get a quick sailer at Honolulu, he might still reach California before the *Mary Ann*—would be able to give notice to the authorities, and to be prepared to apprehend the runaways when his own slow-sailing ship arrived. Then, too, if he had remained behind, the convicts would at once have suspected him, and might have persuaded the captain of the little schooner to change his plans.

The little vessel sailed, well stocked with provisions, and the shipwrecked crew especially well fitted out by the kindly hands of their countrymen.

On the same day, the sick boy Charley was brought into the settlement by the men who had been sent over for him. He had not been in the settlement one hour before every one in it knew the character of the men by whom the *Mary Ann* had been seized, the particulars of her seizure, the real story of the whaling crew, and every particular about the voyage, with the exception of his own ill-treatment.

The reader may judge how much the inhabitants of the little settlement were excited by what the boy had to tell. They had given their hospitality to scoundrels of the worst type. The more fully they learned the details of the capture, of the ill-treatment to which the captain had been subjected, and little by little of his own ill-treatment, the more eagerly they desired to bring the offenders to justice, and to punish the men who had, as they considered, violated their hospitality.

A consultation was held at once. The inhabitants did what Englishmen always do in cases of difficulty—they called a public meeting. Thirty Europeans were got together, the lieutenant in charge, who was acting-governor, was put in the chair; and then, after the manner of their fathers, at any time during the last fifteen hundred years, probably longer, if we are to believe Tacitus, they sought wisdom in the multitude of counsellors.

The problem to be solved was, how to catch, first, the boat; secondly, the *Mary Ann*. Some suggested a search for the man-of-war, which had but recently left the station, to be made by despatching canoes to the islands where she was likeliest to have called. This design, however, had to be abandoned. It was doubtful whether the man-of-war would have called at any of the islands lying near; and, even if she had, much valuable time would be lost, during which both vessels would be making their way to their destinations. The suggestion finally hit upon was to send a small schooner which was in the harbour in pursuit. She was to carry as many men as could be spared from the settlement, so that they might be prepared for a fight with the convicts if they should come up with them. It was soon found that, from the sailors who had been left in hospital, added to more belonging to the schooner, a crew could be obtained of a dozen men. Half-a-dozen marines volunteered to go likewise. The night was spent in preparations. Provisions were taken on board in quantities sufficiently large to accommodate her large crew. A gun which had been left on shore by a man-of-war was placed on board. The little settlement was alive with preparations during the whole of the following day. In the evening, her crew went on board, taking with them, at his own desire, Charley.

As the land-breeze began to blow, she weighed anchor, and with the good wishes of all commenced the chase.

On board the *Sandal-wood*, as the little trader sent in pursuit was called, there was all the excitement of a long chase. Every eye searched the horizon carefully during each successive day, with the view of catching sight of the *Mary Ann;* and when at the end of the long week she was seen, every one felt as much delight as the hunter feels when he has sighted his prey. The gun had been prepared, so as to be of use if needed in attacking. The decks of the whaler were three or four feet at least higher out of the water than those of the *Sandal-wood*, so that boarding would be extremely dangerous. It was considered that the best way would be to manœuvre the little vessel, bring the gun to bear, and fire away until the enemy surrendered, and sent their men on board in their own boat. The lieutenant who commanded the little vessel determined that if this failed, he would then risk boarding.

And now, we must transfer ourselves to the *Mary Ann*. From the day on which the leader of the escaped convicts had concluded that the boat was lost, he began to be suspicious of the mate. The missing boat might have gone to the bottom; but then, on the other hand, she might have met with some other ship, or possibly even have reached land. If she had fallen in with another whaler or merchant-ship, or, as was possible, with a man-of-war, or if she had reached land, one of two things was pretty certain to happen—either that men-of-war would be quickly in pursuit, or that they would be on their way to intercept them on the American coast. Black Dick examined the mate very closely, and it required all that officer's ability not to shew that he knew more of the incident than he chose to tell. Six days had been lost in waiting about in vain endeavours to find the missing boat. At length, fearful of being intercepted off the Californian coast, the ship's head was turned towards that coast, and the *Mary Ann* resumed her voyage. But the winds were light, and the heavy, slow-sailing whaler—a capital ship for rough Antarctic seas—made very slow progress over the calm waters, scarcely ruffled by the light breezes, of the Pacific.

The bushrangers grew more and more impatient. For three days the ship lay becalmed. In the Atlantic there is always a long swell in the sea, even when in the air the calm is perfect; but in the Pacific, the water is absolutely and completely motionless. The calm fretted the men; they chafed under the inaction; they could bear anything but rest. They wanted to travel at the most rapid pace possible to man, and here they were kept idle, motionless. They cursed the calm in language which in the perfect stillness—the stillness which may be felt of a tropical calm—even occasionally appalled themselves. And when the wind did at last come to put an end to this wearisome and anxious suspense, it blew so lightly, and the ship travelled so slowly, that the men's anxiety was scarcely relieved. Their captain, meantime, had been thinking what was best to be done, and had secretly made up his mind that almost their only chance of outstripping the pursuers who were probably after them was to abandon the *Mary Ann* altogether, and gain possession of a vessel which could sail quicker. Hitherto, they had carefully kept out of the way of the few vessels which they had sighted. They determined now to make an attack on the first suitable to their purposes which they should see. Black Dick would add piracy to the list of his qualifications for the hempen cord.

The first vessel sighted after the calm by the *Mary Ann* was the little *Sandal-wood*. She was seen at the stern of the *Mary Ann* in early morning, and as the day advanced, became more and more distinct. This alone was proof that she was a quicker sailer than the whaler. She was gaining on them greatly. She was a small schooner, very fleet, lightly built, carrying a large spread of sail, and evidently constructed for speed in tropical seas.

The mate, who had learned the plans of the convicts, was in fear. His plan of capture by a man-of-war was at an end; his delays of the *Mary Ann* were fruitless. The captors of the whaler were going to escape by means of another unpunished piece of villainy. As he saw the schooner approaching, he recognised only too well that she was exactly suited to their purpose.

Black Dick called the five convicts around him, and the men arranged for the capture of the vessel. They would make signals to her, man a whale-boat, and, adopting the ruse which they had already found to be successful in the capture of the whaler, take possession of her.

The mate was compelled to admit that it was unlikely there would be more than four or five men on board. But he was puzzled to make out what the schooner was doing. Little details

Digitized by Google

connected with the way in which the ship was managed put him on the alert. Clearly she was well handled. Could there be any hope of——? No; she had answered the signals in the usual way.

A slight movement in her sails shewed him that she was, for some strange purpose or other, going to tack. In truth, she was preparing to tack, in order that she might come round so as to bring her gun to bear.

Just then the whaler's boat was lowered. The mate, who was, of course, to be left on board the *Mary Ann*, looking towards the schooner, observed that there had been a change of purpose.

The lieutenant on board the *Sandal-wood* had been surprised at the lowering of the whale-boat. Possibly they were out of provisions. But in such cases signals are usually made. Charley suggested to him that they were going to attempt a capture. The lieutenant prepared to receive them. Every man was armed; the marines were sent below. All but four were ordered to hide themselves behind the bulwarks. The four or five left on deck shewed no arms, but lounged about lazily after the manner of the men whom they wished to imitate.

As the whale-boat approached, the hopes of the bushrangers ran high. This was exactly the vessel they wanted. A quiet pull to her side, a haul to her deck; at the most, a short, easy fight with unprepared men, throwing one or two overboard, and she would be theirs, and then let English men-of-war do their worst.

They were within hailing-distance.

'What ship is that?' cried the convict leader.

'The *Sandal-wood*.'

'Throw us a rope; we are coming on board.'

A rope was lowered; the boat made fast alongside. One after another the men swung themselves on board. They stood together for an instant, and Black Dick cried: 'Now for it!' and knocked one of the seamen down, while he and the rest produced pistols, and made a rush at the rest.

But at that moment there was another rush. Men armed with the queen's weapons came from under the shelter of the little boat which was placed on deck, from the shelter of the bulwarks, and from the cabin. For an instant there was a panic. The convicts had never thought of the possibility of catching a Tartar. Cutlasses gleamed before them. A short, fierce struggle, one man after another belonging to the boat's crew disabled, a desperate tussle with the convict captain, whose pistol was literally cut out of his hand, and the convicts were overpowered. They were placed in irons, and carefully guarded. We may pass over the scene which took place when the men saw Charley. The leaders of the gang were secured. All that remained to be done was to catch up with the little vessel in which the captain of the whaler and the whale-boat's crew had taken their passage to Honolulu, and then to deliver the whole of the prisoners to the first man-of-war they could find, to be sent back to Van Diemen's Land. In this the *Sandal-wood* was fortunate: in two days, she fell in with a man-of-war. Her Majesty's ship had chosen to board the vessel bound for Honolulu, and the captain had, in spite of threats from the men, boldly denounced his three fellow-passengers. He and the rest of the whale-boat's crew were accordingly transferred to the man-of-war, the captain as a free man who had been ill-used; the three convicts as prisoners. She then made a search for the whaler, and came up with her as we have seen in charge of a British officer.

The whole of the prisoners were taken off to Australia, where they paid full penalty for their misdeeds. The captain and his crew were again in sole possession of the *Mary Ann;* and the mate and Charley found themselves, on their return to Hobart-town, the heroes of the hour.

BYRON AT WORK.

No man of letters has been oftener criticised than Byron. Every incident in his life, every flaw in his character, all his vices (and more), all his affectations, have been stereotyped in print by a hundred pens. There is one point of view, and one only, I believe, from which Byron has not yet been sketched, and that is as a literary workman. It is from that point of view that I propose to add a few touches to his portrait.

It is but candid at the outset to say that this is the character that Byron abhorred of all others. To be a poet and to be nothing else was, in his opinion, to be one of the most useless, and therefore one of the most contemptible of men. 'If one's years cannot be better employed than in sweating poetry,' he said, 'a man had better be a ditcher;' to the last he thought far more in his heart of his escutcheon, and of the deeds of arms that were associated with it, than he thought of the laurels of *Childe Harold;* and to have died sword in hand storming the fortress of Lepanto, as one of the heroes of Greece, he would, without a moment's hesitation, have consigned all his rhymes to the flames. He refused at first to accept a guinea for his works; and when the bailiffs were in his house, scattering his household gods around him, and selling even his books, he presented his copyrights to any of his friends who had the courage to ask for them or would take them as a gift. Yet these despised copyrights are, after all, his best and indeed his only title-deeds to fame; and it is as a man of letters (and of gallantry) only, that posterity will trouble itself to give a second thought to the poor peer who ended a career of turbulence and vice in the camp of a horde of Greek bandits at Missolonghi. He made but one speech in the House of Lords, and that might have been made by any of the lords in waiting to be found under the table of the Prince Regent. His military picnic in Greece was a fiasco. The years that intervened between these two events, the commencement and the end of his career, were spent either in vice or in the pursuits of literature; and it was simply as a man of genius and a man of pleasure that any one ever spoke or thought of Lord Byron.

Byron as a poet and Byron as an artist were a contradiction and a paradox. The poet despised the artist; the artist sneered at the poet. Byron hardly ever spoke of his own works, when he spoke of them critically, except in the language of depreciation. His genius as a poet was the genius of

Digitized by Google

Wordsworth; but his taste as a critic was the taste of Pope. Pen in hand, he never for a moment, except when translating his *Hints from Horace*, permitted his critical tastes to interfere with the free play of his genius. But these tastes, after all, were more deeply rooted in his nature than his genius. He never spoke of Wordsworth but with aversion, and he never spoke of Pope but with what most people now think preposterous adulation. He set Pope even above Shakspeare and Milton. 'I have always regarded him,' he says in a letter to Moore, 'as the greatest name in our poetry. The rest are barbarians.'

Yet, with all these stiff and starch notions of versification, Byron forgot all about his model, Pope, and his own indignant strictures upon 'the atrocious bad taste of the times' and all that, the moment that he took up his gray goose quill; when the fit was on, he wrote as it was natural that a man of his bold and passionate genius should write—wrote, that is, in the spirit of Scott and Coleridge and Wordsworth, and resented almost as an insult to his genius any compliments that were paid to his poems as works of art, any suggestion in the way of criticism that seemed to imply that his poems, like Pope's, owed anything of their beauty and finish to the skill or labour of the workman instead of the inspiration of the poet. He hated to be thought a literary workman; and nothing annoyed him more in the criticism of the *Edinburgh* and *Quarterly Reviews* than to find his poems spoken of as works of art. He got into a passion with Jeffrey and Gifford for speaking of *Cain* and *Lara* as elaborate. 'Elaborate! What do they mean?' he asks in a note to Murray acknowledging a packet of criticisms and compliments. 'You know the volume was written as fast as I could put pen to paper, printed from the *original* manuscripts, and never revised but in the proofs.' 'Of all the works I have ever written, these,' he says in a subsequent letter to Moore, harping on this word elaborate, 'are the most carelessly composed, and their faults, whatever they may be, are those of negligence, and not of labour;' and their beauties, of course, for this is what Byron is suggesting, the result of inspiration. He is fond of comparing himself (in poesy) to the tiger. 'If I miss the first spring,' he says, 'I go growling back to my jungles. There is no second; I can't correct; I can't, and I won't.'

This was his theory, and his practice very closely corresponded with his theory. Most of his works were written in heats, dashed off, that is, at the rate of fifty or sixty stanzas at a sitting over a bottle of Hollands or Burgundy. He is never tired of boasting of this in his correspondence with Moore and Murray. 'This is the work of a week,' he says, speaking of the *Bride of Abydos;* and in his Diary he explains with more precision that 'it was written in four nights to distract his dreams. Were it not thus,' he adds, 'it had never been composed; and had I not done something at that time I must have gone mad, by eating my own heart.' The *Corsair* was written in ten days, at the rate, that is, of two hundred lines a day; Pulci he translated at the rate of two octaves a night, 'the same allowance as at Venice.' *Lara* was written 'in the summer of the sovereigns' (1814), 'amidst balls and fooleries, when undressing,' he says, 'after coming home from balls and masquerades;' and the *Vision of Dante*—'the best thing I ever wrote, if it be not unintelligible'—was written at the request of Madame Guiccioli, most of it by the side of her couch, with what that lady calls 'his usual facility and rapidity.'

It is no part of my business to reconcile the poet and the artist; perhaps, however, it may be as well to point out that though Byron wrote most of his works under the influence of what is called inspiration, and therefore with remarkable fluency and rapidity, he nursed his genius as carefully as Pope when he was making preparations for any of his works; and with the exception of the *Corsair*, of *Lara*, and of *Cain*, most of these rough sketches were afterwards revised and polished in the keenest spirit of criticism, carefully copied out, and frequently revised and re-revised in the proof. Take the *Bride of Abydos*, for example. In its original form, it was the work of a week; but as it now stands it is much longer and far more beautiful than when it left the desk of the poet in its first rough manuscript. Moore traced out two hundred fresh lines interpolated in the proof, and, 'as usual, among the passages thus added were some of the happiest and most brilliant in the whole poem.' The *Corsair*, and the *Corsair* only, I believe, stands as it was originally written. It sprang from his brain perfect, and, taking into account the surpassing beauty of the work, it is, as Moore says, perhaps wholly without a parallel in the history of genius.

What, however, looks like inspiration even in the *Corsair* may be, after all, only the result of profound thought and meditation, for popularity was the passion of Byron's life, and poetry the only means that he possessed of gratifying his passion. He was hardly ever without a poem on hand, and frequently had hints or sketches for five or six in his desk; and from the moment that he had fixed his mind upon the title and plan of a piece till the poem was published, it was never out of his thoughts. He was always making additions to it, altering and correcting. You may find traces of this everywhere in his diaries and correspondence. 'Wrote down an additional stanza for canto five of *Don Juan*, which I composed in bed this morning,' is the first entry in his Diary that strikes me on opening Moore's Life at random; and a few pages further on is a note to Murray: 'After the stanza on Grattan, add the following addenda, which I dreamed of during to-day's siesta.'

His muse was always at work. Riding in the woods of Ravenna, or on the sands of the Adriatic; standing, like Lara, by a pillar, and watching the dancers at a ball; listening to the story of the Prisoner of Chillon, from the lips of 'a corporal as drunk as Blücher, and, to my mind, as great a soldier too;' boating on the Lake of Lucerne, or strolling with Shelley through the vineyards that were once 'the bosquet de Julie,' with the Heloise before him, Byron was generally surrendering himself up in silence to the pleasant task of moulding his thoughts into shape, avoiding conversation by leaning abstractedly over the side of the boat, or loitering behind his companions; and when he sat down at the end of the day after dinner, or on his return from balls and masquerades, it was not to think, but to pour out all that was in his mind.

Digitized by Google

To Byron this sort of dreaming was what it is, I suppose, to most men of Byron's genius, an intellectual pleasure of the highest order. Moore calls it a delicious fool's paradise. Coleridge spent half his life in the clouds; and Alfieri tells us that, before his dramatic genius had unfolded itself, he used to pass hours in this state of—what shall I call it?—intellectual somnolence, gazing upon the sea. Byron's love of solitude took the form of Alfieri's, and the pleasure that he refers to in his lines—

> To sit on rocks, to muse o'er flood and fell,
> To slowly trace the forest's shady scene,
> Where things that own not man's dominion dwell,
> And mortal foot hath ne'er or rarely been;
> To climb the trackless mountain all unseen,
> Alone o'er steeps and foaming falls to lean,

was a pleasure that he spoke of from personal experience; for it was his habit, when in Greece and Italy, to swim out to sea, to perch himself on the top of a high rock overlooking the sea, and there to pass hour after hour, 'in that sort of vague reverie which, however formless and indistinct at the moment, settled afterwards in his pages into those clear bright pictures which will endure for ever.' This love of solitude and meditation characterised him even as a boy at Harrow, where he was in the habit of withdrawing himself from his playmates, and giving himself up to what Keats, I think, calls 'the silent session of sweet thoughts,' sitting alone upon a tomb in the churchyard. It grew with the growth of his genius, and it was this tendency to meditate, combined with his love of wild and picturesque scenery, that led him first to Greece and then to Italy, and which, but for Madame Guiccioli, might have taken him in the end from even Italy and Greece to 'the land of Bolivar.'

Knowing when and how Byron's works were written, any man who knows Italy or Greece might, I believe, trace out most of the spots where Byron spent these leisure hours; for his pictures of scenery, even when only touched off by two or three dashes of the pen, are as vivid and as true to nature as photographs. *Manfred* is a chart to the Bernese Alps; and *Childe Harold's Pilgrimage* is, to my thinking, quite as interesting and suggestive a guide-book to the tourist who wishes to see all that is worth seeing in Europe, apart from the people and the theatres, as Murray's *Handbook*.

Byron's sketches of scenery are unrivalled. They stand alone; and their terseness, vigour, and beauty illustrate the strength, the flexibility, and the varied hues of the English tongue more vividly than any other writings that I know in our language. What without his travels in Greece, in the Alps, and in Italy, Byron might have been as a poet, it is, of course, impossible to say, because it is impossible to tell what a mind like Byron's, thrown back upon itself, might dare, and daring accomplish. But taking his works as they stand, comparing *Sardanapalus* with *Don Juan*, and *Cain* with *Manfred*, it is hard to picture Byron as a great poet, hardly indeed as a poet at all, without his travels; for Byron only really possessed one power in anything like an eminent degree, and that was his power of description. Of constructive genius he had not a spark. All he knew of the drama was through the Greek, and all his attempts to imitate his Greek models are, to speak mildly, failures. He tried his hand at a novel, after reading German ghost-stories for a week with Mr and Mrs Shelley, and agreed with them to write something after the same style. He put together a skeleton; but he never got beyond the skeleton; and if Polidore's story is, as it is said to be, founded on Byron's sketch, Mrs Shelley might well have hesitated to risk her reputation as an authoress by publishing *Frankenstein* between the covers of Byron's novel.

The plan and even most of the ideas of Byron's works were, to use an ugly word to express a commonplace fact, plagiarisms. Byron's powers of imitation were developed in an unusual degree. His powers of invention were, in comparison, slight. When, therefore, he ceased to read, he ceased to write; and after reading, it was next to impossible for him not to write. So strong, in fact, was this passion of imitation, that I have no doubt what Byron said of two or three of his poems, 'If I had not written this, I should have gone mad,' is the literal interpretation of what he felt. His writing fits came over him like a rage, and when this rage was on, writing was not only a relief, but a necessity. When, however, this writing fit was over—when, to use his own words, 'he had emptied his mind'—he sank back into that state of lethargy and indifference which frequently led him to doubt the powers, and sometimes the existence of his own genius, once or twice to make up his mind that literature was not his vocation, and to announce to Murray that the days of his authorship were ended. His mind, after most of his efforts, was a blank; and he sought in travel, in dissipation, too often in vice, the relief that every mind must have after a great effort. But the first book he took up after 'repeopling his mind with Nature,' set him off again; and in his Diary you may generally trace every phase in the period of his intellectual gestation, from the first conception of a poem till its birth, and from its birth through that period of puberty which is represented by printer's proofs scrawled all over with corrections and additions, till the day when it was put to press and ushered into the world with all its blushing honours thick upon it. Most, if not perhaps all of Byron's poems are thus at once the reflex of his reading and of his travels. If it were necessary, I could cite a dozen illustrations of this; two or three will, however, be sufficient for my purpose. Take *Manfred*. I have referred to this poem in a previous paragraph to shew how closely Byron reproduced the recollection of his wanderings in his descriptions of scenery. It supplies us with an equally striking illustration of his habit of reproducing the recollections of his reading. *Manfred* is *Faust* in an English dress. The opening scenes of Goethe's poem and the opening scenes of Byron's are identical. Byron was quite unconscious of this resemblance, and resented the charge when it was first put forth by Goethe; but it turned out, upon second thoughts, that Monk Lewis had translated most of *Faust* to Byron *vivâ voce* at Coligny. This, however, was enough for Byron. *English Bards and Scotch Reviewers* was modelled upon the *Dunciad*. The Paraphrase of the *Art of Poetry* is worked out upon a suggestion of Dr Johnson's. Sardanapalus is the shadow of the portrait of Otho in Juvenal; and Don Juan is a copy of the Page in the *Marriage of Figaro*.

Byron tells us himself how he disciplined his

Digitized by Google

mind by draughts of Pope and Milton to write his satire; and Moore relates a suggestive conversation that passed between him and his friend at Venice. Byron was then at work upon *Don Juan*. 'On the day preceding that of my departure from Venice'—I quote Moore's own words—'my noble host, on arriving from La Mira to dinner, told me, with all the glee of a schoolboy who had been just granted a holiday, that, as this was my last evening, the Contessa had given him leave to "make a night of it," and that accordingly he would not only accompany me to the opera, but we should sup together at some café (as in the old times) afterwards. Observing a volume in his gondola with a number of paper-marks between the leaves, I inquired of him what it was.

"Only a book," he answered, "from which I am trying to *crib*, as I do wherever I can; and that's the way I get the character of an original poet."

'On taking it up, and looking into it, I exclaimed: "Ah, my old friend Agathon!"

"What!" he cried archly, "you have been beforehand with me there, have you?"'

I do not know a better illustration of Byron's mode of working than *Sardanapalus*. The history of that is complete. The grim thought of the tragedy is, as I have said, to be found in Juvenal's description of Otho. Sardanapalus is but Otho under another name. The portrait is etched by the Roman poet; Byron adds nothing but the colour; and with this key in one's hand you may trace the progress of the work step by step in Byron's Diary. Here are a few extracts:

'*January* 13, 1821, *Saturday*.—Sketched the outline and *drams. pers.* of an intended tragedy of *Sardanapalus*, which I have for some time meditated. Took the names from Diodorus Siculus (I know the history of Sardanapalus, and have known it since I was twelve years old); and read over a passage in the ninth volume octavo of Mitford's *Greece*, where he rather vindicates the memory of this last of the Assyrians.'

'*January* 14, 1821.—Turned over Seneca's tragedies. Wrote the opening lines of the intended tragedy of *Sardanapalus*. Rode out some miles into the forest. Misty and rainy. Returned—dined—wrote some more of my tragedy. Read Diodorus Siculus—turned over Seneca, and some other books. Wrote some more of the tragedy. Took a glass of grog. After having ridden hard in rainy weather, and scribbled, and scribbled again, the spirits (at least mine) need a little exhilaration, and I don't like laudanum now as I used to do. So I have mixed a glass of strong waters and single waters, which I shall now proceed to empty. Therefore and thereunto I conclude this day's diary.'

'*February* 15, 1821.—Last night finished the first act of *Sardanapalus*. To-night, or to-morrow, I ought to answer letters.'

'Ravenna, *May* 28, 1821.—Since my last of the 26th or 25th, I have dashed off my fifth act of the tragedy called *Sardanapalus*. But now comes the copying over, which may prove heavy work—heavy to the writer as to the reader.'

To talk of inspiration after confessions like these, of the necessity of a man of poetical temperament possessing a strong passion of some kind, and to call poetry the dream of the sleeping passions, is, at the first blush, a little startling to people who can only pretend to comprehend the intellectual operations of genius from the autobiographies of poets themselves.

Yet, in the main, the history of *Sardanapalus* is, I believe, the history of most of Byron's works. They were the result partly of reading, partly of original thought; partly, that is, of memory, and partly of imagination. Take the *Corsair*, the *Prisoner of Chillon*, the *Bride of Abydos*, the *Lament of Tasso*, *Don Juan*, or any of Byron's works—trace its history by the light of his Diary and correspondence, or by the recollections of his friends, and you must be a particularly inapt scholar if you cannot discover its germ thought either in an after-dinner conversation with Shelley or Moore—in the legend of an old ruin—in Goethe, Rousseau, or Schiller—in an incident of Lord Byron's own life—in a satire of Juvenal, or in the traditions of the scenes through which he had recently passed. Lord Byron's mind was like an Æolian harp; the gentlest breeze, the slightest hint, was sufficient to evoke its music; but without this breeze, without this hint, it was silent. Looking through an old romance picked up at a roadside inn, listening to the song of a Swiss maid in the mountains, reading the letters of Catharine de' Medici, visiting the cell of Tasso, and turning over the manuscript of his *Jerusalem*—any trifle of this kind was sufficient to fire Byron's imagination; and when once his faculties had been put in motion, when the chords of the Æolian harp had been touched, a host of associations at once crowded into his mind; all the recollections of his travels—Greece, with her heroes, and her temples in shattered splendour; the Ægean, with its glittering waters and its pirates; Calypso's Isles, with all their mantling traditions; Albania, with its castled crags, and the pale crescent sparkling in its glens; the Rhine, with its streams and dells,

> Fruit, foliage, crag, wood, cornfield, mountain, vine,
> And chiefless castles breathing stern farewells
> From gray but leafy walls;

the Bernese Alps, with their glaciers and their torrents; and then Byron must, as he said, empty his mind, or go mad.

Any one who will take the trouble to go through Byron with a microscope may trace out many of his thoughts, many of his expressions, many of his finest illustrations, in his diaries and correspondence, hastily and roughly jotted down, perhaps, for the eye of his sister, of Moore, or of Murray, and then probably forgotten, but recalled the moment they were needed, even though it might be years after, and worked up afresh in his poetry as vividly as if they were only the impressions of yesterday, or the impromptus of the moment.

This is what the world calls genius. To understand its working, says Ruskin, we must picture to ourselves 'all that men of genius have seen and heard in the whole course of their lives laid up accurately in their memory, as in storehouses, extending with the poets even to the slightest intonations of syllables heard in the beginning of their lives, and with painters down to the minutest folds of drapery and shapes of leaves and stones; and over all this unindexed and immeasurable mass of treasure, the imagination, brooding and wandering, but dream-gifted, so as to summon at a moment exactly such a group of ideas as shall justly fit each other.'

What Byron called his 'estro' was this intense

Digitized by Google

exercise of all the faculties of his mind, of his imagination and memory, of his wit and fancy; and it was the concentration of all his faculties upon the accomplishment of his work, and their concentration in what I may call a state of preternatural excitement, that made him describe a man's poetry as a distinct faculty or soul—a faculty that had no more to do with the everyday individual than inspiration with the Pythoness when removed from her tripod. Consistently with this notion, Byron calls his poetry sometimes a dream of the sleeping passions, and sometimes the expression of excited passion. I should prefer to vary the terms of his description, and to call it the expression of excited thought—reproducing the dreams of the passions. The difference is but trifling; but in the altered form this is an apt description of the spirit in which Byron generally sat down to work. All his poems were written, in the first instance, by fits and starts, roughened off, to use his own expression, after reading and cogitation for half the day, written, that is, as fast as their author could put pen to paper, and generally, I may add, written at night, frequently after two o'clock in the morning.

These were Byron's favourite hours of work. All *Don Juan* and most of *Childe Harold* were roughened off by the lamp; but with the striking exception of the *Corsair* and *Lara*, none of these drafts were passed into the hands of the printer without careful and elaborate revision and correction. Most of them were copied out again stanza by stanza. This was the heaviest part of Byron's work at the desk. It was the only part that he thoroughly detested. He complains of it again and again; and speaking of *Don Juan*, he says: 'I loathe this task of copying so much, that if there was a human being who could copy my blotted manuscripts, he should have all they can ever bring for his trouble.' Several of these original drafts of Byron's poems are in the possession of Mr Murray; and they amply bear out all that Byron says of them. They are as illegible as careless and hasty writing, and still hastier corrections, could possibly make them. Byron wrote with remarkable fluency and rapidity. His thoughts, when he had once got into a writing vein, never moved sluggishly. They were generally far ahead of his pen; and dashing off his verses as he did, partly under the inspiration of genius, and partly under that of strong waters, one may easily conceive what sort of copy Byron sent to the printer. Even when writing at leisure, his hand was, as he said, as bad as his character—even as that character was painted by himself.

Yet this was a case where an amanuensis, even if he could have deciphered Byron's blurred and blotted manuscripts, could have been of no possible service; for it was not simply a fair copy of his verses that Byron wanted. When Byron sat down to copy out his rough drafts, he sat down with books of reference and a Dictionary of Rhymes at his elbow; and much as he professed to despise the file, few men of his genius have altered and corrected and furbished up their poems more than Byron did. Moore took the trouble to go through the original drafts of some of Byron's poems, and to compare them with the finished copy. His comparisons are striking and suggestive. In the original draft of *Childe Harold*, the little Page and the Yeoman were referred to in five or six lines of little or no beauty. The light and sparkling lyric which now relieves the gloom of the first canto, like a moonbeam, is an after-thought. It was, as Byron acknowledges in his preface, suggested by a song in Sir Walter Scott's *Minstrelsy*. The *Song to Inez*, too, is anything but an 'unpremeditated lay.' In the original manuscript, it was a mere bit of singsong:

O never tell again to me
Of southern climes and British ladies;
It has not been your lot to see,
Like me, the lovely girl of Cadiz.

What it is now, all the world knows. The *Bride of Abydos* originally began with the second stanza; the first, as it now stands, 'Know ye the land,' &c. was added in copying. These beautiful lines are said to have been suggested by a song of Goethe's.

At the outset of his career, Byron found considerable difficulty in arranging his thoughts; and he tried a plan then very prevalent in Germany, and still practised, I believe, by the poet-laureate, of having his manuscript set up in type, and of correcting and re-arranging it in proofs. *English Bards and Scotch Reviewers* was set up in this way by a printer at Newark. This, however, was impossible when Byron was abroad; and the poet had thus to copy them out with his own hand. But even after copying out a poem in this way, and correcting it in manuscript, Byron scrawled corrections in the margin of his proof, till Murray and his printers were almost out of their senses. Take the *Giaour*, for instance. In its original form—in the form, that is, in which the manuscript left Byron's desk—the *Giaour* was only a poem of four hundred lines. It is now one thousand four hundred, and many of the most striking and beautiful passages that distinguish the poem were added in the proof. That exquisite bit of description which now forms the second paragraph in the opening lines of the *Giaour*, 'Fair clime where every season smiles,' &c., is not in the manuscript: it was added in the first proof; and when the revise with this addition came into Byron's hands, he superadded twenty or thirty more lines to carry out his vein, starting with the line:

For there, the rose o'er crag or vale,
Sultana of the nightingale, &c.

The third paragraph, comparing the desolation of Greece to the loveliness of death—

Before Decay's effacing fingers
Have swept the lines where Beauty lingers;

the impassioned verses opening with, 'My memory now is but the tomb,' and the lines, 'The cygnet proudly walks the waters,' were all proof corrections—'bits of purple' patched into the poem; and in most cases the piecing is obvious to those who know Byron's habits of composition. His verbal alterations were endless; and they were all marked by the delicate touch of the scholar and the poet.

With respect to recent aspersions upon his memory, we have, for our part, nothing to say, save that the present Laureate being dowered with the gift of prophecy, as a poet should be, has well anticipated the 'orgies' which knave and clown are now holding at Byron's tomb.

For now the poet cannot die
Nor leave his music as of old,
But round him, ere he scarce be cold,
Begins the scandal and the cry:

Digitized by Google

Proclaim the faults he would not shew:
Break lock and seal: betray the trust:
Keep nothing sacred: 'tis but just
The many-headed beast should know.

'The carrion vulture' has, and with a vengeance, torn Byron's 'heart before the crowd.'

NED WHISTON'S SWEETHEART.

CHAPTER I.—HEARTS AND TARTS.

HAVE you never observed that certain shops seem to have been taken at a long lease by Failure, and underlet to unfortunate speculators, who struggle for a little while to establish a business, and then suddenly vanish? No. 10 Dreary Street, Bedford Square, held this unsatisfactory position in the world of trade. It had been a grocery for three months, when creditors came and removed the stores, leaving nothing behind but a mixed smell of tallow and molasses. A watchmaker had tried to establish himself there, but his strongest magnifying glass, though ever glued to his eye, failed to detect a customer, and no sound was ever heard in his shop but the tic—the tic douloureux—of his merchandise. Of course his affairs were soon wound up. Then a crinoline merchant made an indelicate exhibition of feminine under-garments, without, however, adding to the bustle of the establishment. It was now devoted to refreshment, but stomachic puffs tempted the passers-by as little as the dorsal had done; ginger-beer ruled flat, lemonade was a drug, buns were heavy, and poor Annie Johnstone found the problem of keeping the wolf from the door—the wolf which no king or parliament can extirpate—more difficult to solve daily. She sat behind her little dingy counter writing a letter, with but small chance of a customer coming in to interfere with the work of composition.

MY DEAR UNCLE WILLIAM—Papa told me I was never to apply to you, because you had helped him once, and had refused to do so again, and you were displeased because we tried to keep a shop, which indeed has been a very lame attempt, for there is no chance of the shop's keeping us. I disobey him now, because I do not know what else to do. I have not seen or heard of papa for five days, and almost fear that something may have happened to him, though he often has to hide for a little time, because of creditors; for he has not been much more successful in getting to sell coal or wine on commission, or as an agent for insurance companies, than I have been as a confectioner, and he has not brought me any money now for a long time. He hinted to me that he might go abroad, but I hardly think he would have done that without letting me know; and yet he was always so afraid of his letters being stopped, and helping people to trace him, that he may have done it. If the rent is not paid by Monday, I shall be turned out of the house, and then what *am* I to do? You see, dear Uncle William, I am *obliged* to write to you, because I have no one else to ask; and if you will not put me in the way of earning my living somehow, I must positively beg, and that would be even more discreditable than selling, or trying to sell, pastry, wouldn't it? It really is not my fault; I have tried my best, and dined on stale buns for days and days.—Your affectionate niece,

ANNIE JOHNSTONE.

She directed this letter to 'William Johnstone, Esq., Joss-house Villa, Southend,' and laid it on the counter before her just as a customer came in—a very young man, with very shiny boots and hat, brilliant gloves, and a natty umbrella, who saluted on entering in a manner not customary amongst Englishmen, who generally remain covered in a shop, however attractive the mistress of it may be.

'Good-morning, Miss Johnstone,' said he, in an embarrassed way; 'I have come for my luncheon.'

If the youth looked embarrassed, the girl looked vexed. She coloured over her forehead, and knit her brows strangely, considering how few customers she had, and how great was her need of them. Her reply, too, was as impolitic as the expression of her countenance, being an intimation that she was afraid she had nothing to offer him.

'Oh,' he replied, 'I never eat heavy luncheons; just a basin of soup and a glass of sherry.'

'I have no soup, and the sherry is out.'

'Well, now I think of it, I am tired of soup; I had sooner have a sandwich and a pint bottle of Bass.'

'I cannot give you those either,' said she.

'Oh, well,' he persisted, 'it 's of no consequence. Here is some pastry, and I am very fond of pastry; and that, with a bottle of ginger-beer'——

The girl, who had been constraining herself with difficulty, now broke out: 'You can get a good luncheon at a dozen places close by!' she exclaimed with uncalled-for vehemence; 'why do you not go to one of them?'

'I—I like this best,' he stammered. 'Your pastry, though not, perhaps, quite what you might call new, seems to agree with me better; or I mean, you know'——

'You come here out of charity!' cried the girl, bursting into tears. 'You think I am poor and want custom, and so you come here and try to eat—stuff; and I am sure you go where you can get proper food afterwards somewhere else. It is not my fault if I can't have things nice!'

'Oh, for goodness' sake!—oh, don't cry! Oh, my pretty—I mean to say, I don't know what I am saying,' cried the youth in great distress. 'Well, if you must have the truth, I do *not* come here for your stale tarts, but because I fell in love with you through the window one day; and every time I have come here I have fallen more and more in love with you; and if you will not love me back, and promise to marry me, I'll—I don't know what I won't do: there!'

Seeing that his charmer did not give any signs of being further offended, but only left off crying, and looked down in confusion, the youth took courage, dropped his gloves into his hat, and his hat on a little round table, and leaned his elbows on the counter over against Annie, who did not draw back; and thus the young people's heads were not separated by any very cruel distance.

'What nonsense,' she murmured.

'It may be nonsense to expect you will ever like me,' replied the youth; 'but it is serious earnest that I have not been able to get you out of my head all this month, try what I would; and all my friends are wondering what is the matter with me. If I have not the chance of getting you for my wife, I do not care whether I pass my examination or not. That is sense, I hope.'

'But you are so young.'

'I'll bet I am older than you!'

Digitized by Google

'Oh, but that is nothing. And then—you are a gentleman.'

'And so are you a lady,' said the youth. 'Oh, I learned all about you from your father. I saw him leaving this house one day, and a little while afterwards I met him in a smoking-room, and we happened to get into conversation. He told me how he had lost his property in unfortunate speculations—on the turf and otherwise—and how, instead of sitting down helplessly, as so many young ladies who have been brought up in luxury would do, you tried to earn a living so pluckily. And that made me love you still more.'

'Did you tell my father you knew the shop, and had seen me?'

'Why, no; I did not like to do that.'

'Why?—Ah! I know the reason: he borrowed money of you!' cried Annie, colouring with vexation.

'Only a trifle—the veriest trifle.'

'And I cannot even repay that! You see how hopeless and foolish an engagement between us would be.'

'No, I don't.'

'I have nothing in the world, and no expectations.'

'No more have I,' cried the lad with exultation. '*I* have nothing in the world, and *I* have no expectations. Why, we were ordained for each other!'

In the course of further parley, it transpired that the young man's name was Edward Whiston; that he was articled to a solicitor, and had just served his time; also, that he had gained applause in private theatricals, and had an idea that his real vocation was the stage—an evident resource in case Mr Johnstone, the father, did not turn up, and Mr Johnstone, the uncle, refused to receive his niece, a state of affairs which would render an immediate marriage prudent. Annie did not quite see the logic of this, but owned that her distress at seeing Mr Edward Whiston (well, N—ned) come in for a bad lunch every other day, was caused by a peculiar objection to receive charity from him, which would not have occurred to her in the case of any other human being. Smith, Brown, Jones, or Robinson might have killed themselves with bad pie-crust, and while wondering at their taste, she would have pocketed their shillings with rejoicing.

Finally, it occurred to Ned Whiston to look at his watch, and the position of the hands drew a whistle of dismay from his lips. 'Nearly three!' he cried; 'and Jenkins is waiting for my return to go and get his dinner.' And with a hurried hand-squeeze he took his departure.

Next day at 1.10 he reappeared, followed by a man bearing a tray, which contained oysters, stout, and slices of cold beef.

'Since it hurts your feelings to feed me with your wares, I have brought my own luncheon,' said Ned, when he and Annie were alone again. 'There is double what I can eat, I see, will you not help me out with it?'

I had always a better opinion of Ned Whiston for divining that Annie's larder might be understocked, and providing her with a meal in this diplomatic matter; and Annie, who was faint as well as anxious, appreciated it too. It sounds shockingly unromantic to suppose that eating and drinking can have any connection with the affections, yet there seems an incompleteness about either the friendship or the love upon which the digestive organs have not set their seal. I do not deny that the more ethereal kiss may be the correct *sigillum amoris*, but every corner of the shop was visible from the street, and as for asking her lover into the back-parlour while her father was absent, Annie was far too correct a young lady to think of such a thing, and, indeed, Master Ned had not the impudence to hint at an invitation of the kind being welcome. So they ratified their engagement with oysters and porter, seated opposite to each other at a little round marble-topped table; and when the meal was concluded, they felt as if they had been acquainted for months.

On returning so late to the office the day before, Ned Whiston had been subjected to troublesome questioning as to what he had been doing with himself all the time; so he took care to leave early to-day, announcing his intention of returning at the same hour on the morrow.

But on the following morning he was sent off to Chester with certain important deeds. That was on the Thursday, and he did not get back till Saturday night; and as he lived at home, some fifteen miles out of town, with observant relatives, he could not get away on the Sunday without exciting awkward curiosity; so that it was not till luncheon-time on Monday that he entered Dreary Street with a throbbing heart. The shutters were up at No. 10. Poor Ned felt for a moment as if his heart and lungs had struck work. Was she dead? No, no; impossible. Her father, perhaps; he had disappeared suddenly, and might have committed suicide. The idea of disturbing a recent sorrow made him drop the bell-handle without ringing, and look round for a likely place for information. There was a brush-shop immediately opposite, and the portly dame who kept it was standing in the doorway, eyeing him with a certain curiosity. She had a good-natured look about her, so he crossed the road, and asked her if she knew what was the matter.

'Lor!' exclaimed the woman; 'and I who thought you would perhaps tell *me*: sure you were a friend or relative, or something, I thought, going there most days the last month and more!' And she seemed quite injured.

'I only went as a—a customer,' said Ned; 'but I have got to take a sort of interest, and so, seeing the shop shut up'——

'I see, I see; you look quite pale: come in and sit down. Lor! I've been a young girl myself, and I remember hearing how Jim was took when he first heard I had the measles.—No, it's nothing of that sort; she went away quite well, as far as I could see, only crying.'

'She has gone away, then?'

'Bless you, yes; didn't I say so? A gentleman, not her father, came in a cab at twenty-five minutes past ten yesterday morning, or perhaps it might be a little nearer the half-hour; I saw him, because my room looks out on the street, and I was before the glass putting on my bonnet for church. My husband used to go to chapel, and, I believe, prefers it now, only I won't put up with nothing so vulgar. What gentle-folks do you see at chapel? I say to him. Why, look at the carriage company as goes to church, compared to'——

'What aged gentleman?' interrupted Ned.

'Well, middle-aged; or, as he was got up

Digitized by Google

youthful, perhaps we might say elderly. A fine man, though, tall and stoutish, with a light-brown wig, and whiskers dyed to match. Wig and dye I know not natural, because of the crow's-feet; no man ever had such crow's-feet as them without a bit of gray. Well, he got out, and went into the house, leaving the cab waiting; and as I felt a sort of interest in that Miss Johnstone, poor thing, her father being such a regular bad un, I waited too, and gave up my church for once; not but what I hold that it brings luck to'——

'Exactly; I agree with you. And how long did the gentleman stop?'

'Till twelve o'clock, keeping the cab waiting; which would have been much cheaper to have paid the first off, and taken another. And then he came out, followed by Miss Johnstone, who had a box, which the cabman took and put on the roof; and a bandbox and umbrella, which she took inside with her. But first she locked the house-door and took the key out, and, as she turned to get into the cab, I saw that she was crying.'

That was all the information Ned Whiston could get at the time; but when he revisited the spot later in the day, he found a weazened man with a very sour expression on his face coming out of No. 10, and asked him if he knew what had happened.

'Yes,' replied the man: 'the father 's drowned, and the daughter 's hooked it, and I am done out of my rent—that 's what has happened.'

CHAPTER II.—JOSS-HOUSE VILLA.

You are probably under the impression that no one has ever yet adopted the Pavilion at Brighton as an architectural model, and if that is the case, I must request you to dispel the false idea, for Joss-house Villa, near Southend, was a reproduction in miniature of that remarkable edifice. When Mr William Johnstone was a young man and a nominal barrister, it was considered that he bore some resemblance in face and figure to the Prince Regent; and, since nature had moulded him after the fashion of the first gentleman in Europe, he considered it his duty to act conformably; so he dressed himself hideously, attended prize-fights and cock-pits, intrigued, played high, got frequently intoxicated, stuffed his head with a prodigious quantity of scented snuff, and imitated his royal prototype in every other way that his constitution and purse would allow. By the time he was thirty, however, both began to give out, so he wisely determined to retire into the country with a rich wife. Dissolute men are very fond of falling back upon the latter plan for retrieving their broken fortunes, but women are not quite so foolish as satirists make out, and do not always fall in with these prudent little arrangements. Mr Johnstone, however, was more fortunate; the royal resemblance which had been his bane now proved his remedy, and, coupled with an insinuation that perhaps there might be a natural reason for it, proved too much for the loyal heart of a drysalter's widow, who was not, as scandal reported, quite double her second husband's age, and whose temper was therefore naturally soured by the persistency with which people whom they met on their wedding tour would mistake them for mother and son. After his marriage, Mr Johnstone happily refrained from assimilating his domestic arrangements to those of his royal prototype, but the ruling passion broke out when he came to build a home for himself on a small estate belonging to his wife near the mouth of the Thames, and resulted in the model of the Pavilion alluded to: a style of architecture which suited Mrs Johnstone also well enough, as, in addition to the associations, more than half the rooms in the building could be used for nothing but the storing up of jams and pickles, the concoction of which articles was the delight of her life.

She managed to preserve herself—whether with sugar or vinegar, I decline to state—for fifteen years after marriage, and then she turned to mould, leaving her husband in a position to set up a grocery, had he been so minded. He was not; neither did he relapse into the sowing of wild-oats, perhaps because his morals had improved, but also because it was doubtful whether the soil would stand a second crop. He only visited London occasionally, and then his flag was pulled down. Hoisting and lowering that flag was his morning and evening amusement. On royal birthdays and coronation days he fired twenty-one small cannons, going from one to another with a red-hot poker, which was quite a sight. Otherwise he vegetated, and differed from a turnip principally in being occasionally bored, and entertaining vague wishes that some eligible woman would look him up and marry him. But the years passed away; George the Fourth became the prey of worms and satirists; a generation sprang up which knew little of that model gentleman, and had the bad taste to dislike that little. Mr Johnstone could not now have gone about with ten yards of tablecloth round his neck, and coat buttons between his shoulder-blades, without causing the very sheep to baa at him. He modified his apparel, therefore; but his heart clung to the old times, and hugged the old resemblance; so he still had his wig made up in exact imitation of the ex-dandy's hair, still adopted his favourite attitudes, still took scented snuff. With his elder and only brother he had not, of late years, been on good terms. He owed him no grudge for having been born first; he forgave him for selling the small landed estate which had been in the family for a respectable number of years; but when he disgraced the name, by a succession of petty tricks and contrivances for raising a few pounds, and especially when he tried to make a milch cow of *him*, he quarrelled with him. His enmity dissolved, however, in the news of his death by drowning while crossing over to Jersey, and he hurried to London at once, and brought Annie to his Chinese home with dispatch and secrecy. 'I am glad to adopt you, my dear,' he said; 'but I do not want to adopt all your creditors.'

It had been a struggle to Mr Johnstone to break up the ordinary routine of his existence by establishing his niece as mistress of what had now for years been a bachelor home; but it almost always pays to do the right thing, and he was rewarded for his conquest of habit and indolence by being released from the thrall of his housekeeper, a tyrannical, stupid, pilfering, tippling dame, to whom he had not dared to mention his intentions with respect to Annie, which indeed had from the circumstances of the case been necessarily conceived and executed very suddenly, and upon whom this niece of her *master's* (term of courtesy) burst therefore like a thunderbolt from a clear sky. As Annie was very young and quiet in manner,

Digitized by Google

Mrs Gobble hoped at first, indeed, to overawe her, but soon finding that she had met her match, her emotions became too much for her, and, combined perhaps with an injudicious amount of nourishment, brought her gout to such a climax, that she could not even play at doing her work, and had to retire.

Annie's society had one curious effect upon her uncle: it resuscitated all his hankerings after a second marriage. For if he was to have a lady at the head of his house, why, he reasoned with himself, should it not be a wife? So a flirtation which had been budding between Mr Johnstone and Miss Plumptree of Southend for the last three years began to throw out decided shoots. It was not so very absurd. Mr Johnstone was a little over sixty, and Miss Plumptree was a little over forty. Both were comfortably off, and had calm and sober leanings towards matrimony. Miss Plumptree was not only forty, but fair and fat—just such a figure as the monarch of Mr Johnstone's soul would have admired; and this fact tended greatly to feed the mature flame. Then there was increased intimacy, for whereas he had only met her occasionally before his niece came to live with him, he now saw her almost daily, a fervent friendship having sprung up between her and Annie.

They were sitting together now in a willow-pattern summer-house, on the brink of a small pond, the lair of a dragon who was supposed to spout, but who followed the example of many gentlemen who are elected into a certain House for a similar purpose, and didn't. It was in the strawberry season, and a fine dish of the fruit stood on the table between them, with which, needlework, and confidential chat, they were beguiling the morning hours not unpleasantly.

'And so you have never heard of him since?' said Miss Plumptree.

'Never,' replied Annie.

'Just like all the men, dear: "Out of sight, out of mind."'

'Nay, I do not blame him, poor fellow. I do not see how he could have found me out, if he tried ever so, I left so suddenly, so mysteriously.'

'Oh, well,' sighed Miss Plumptree, 'if he had been his great-grandfather, he would have discovered you somehow; but young men are not what they were; they are so selfish, so listless, everything is too much trouble to them.—And you never hinted anything about it to your uncle?'

'O no,' said Annie; 'besides, he does not take hints: you must speak out plainly if you want him to understand your wishes.'

'Hum,' said Miss Plumptree.

'And then,' continued Annie, 'he was so young, and not in a position to marry for ever so long; and the acquaintanceship was so short; and his friends would be sure to disapprove; so that altogether, perhaps, it is better as it is.'

'And do you love him still, dear?'

'I think I do; he was kind, you see, when I had no one else, and'——

'There, don't cry, dear. Have a strawberry.'

Annie recovered her equilibrium, and turned the subject.

'I can't think what has happened to Uncle William,' she said; 'he does take such a funny interest in how I look all of a sudden. He takes in a paper with the fashions in it, and stands looking critically at me with his head on one side, and his eyes screwed up, for minutes together; and then he walks round me gravely, as if I were a horse; indeed, I expect him to say: "Come up; tuck, tuck; come over!" every moment, or to look in my mouth. And if my hair is not done, or my dress cut according to the fashion-plates, he scolds me. And then he takes me over to Southend whenever he hears that a packet is coming in, and walks me up and down that long pier. And he is always on the look-out for concerts or entertainments of any kind we can go to. Can you explain it?'

'I think I can give a guess,' said Miss Plumptree; 'in fact, I expect that my influence may have something to do with it. The plain truth is, my dear, that he wants to get you married.'

'No!' cried Annie with a jump. 'But he told me distinctly, when I first came here, that, though I might expect to be provided for in his will, I must not look for any dowry, or even much of a trousseau, in case I were to marry; and that did not look much like great anxiety on the subject.'

'No, dear; but his views have undergone a change. The fact is that he does your humble servant the honour to wish'——

'Oh, and you will take him, won't you? It will be so nice to call you aunt, and have you living in the house!' cried Annie enthusiastically.

'Well, dear,' continued Miss Plumptree, 'it seemed to me that the opportunity was a good one for advancing your interests, so I refused to give him a definite answer while you were unsettled; not but what I would sooner have you for a companion, of course, but it does not do to be selfish; and as your uncle is inclined to be what we may call careful in his money matters, which is often the case with those who have been somewhat extravagant in youth, I thought a little stimulant to his generosity would be beneficial.—Hush! here he comes. Can anything be the matter?'

This possibility was suggested by Mr Johnstone's face and manner, the former being bewildered, the latter hurried and excited, as he came towards them from his Joss-house with an open letter in his hand.

Something the matter? Indeed there was; nothing less than a threat of losing his late wife's property, and being reduced once more to the straits which had driven him into premature matrimony thirty years before. One of those Doctors' Commons grubbers who live by holding out that they have discovered something to somebody's advantage, which generally turns out to be a fraudulent mare's nest, but every now and then—just often enough to tempt fresh flocks of gulls—proves to be a discovery of real importance, had fished up evidence that the late Mrs Johnstone had by rights only a life-interest in her first husband's property; and having thereupon discovered the person who under such circumstances would be the claimant, he had put himself into communication with him. Said claimant proved indeed to be in the legal profession, which was a disappointment for the grubber; but as there was really something in the evidence he had lit upon, his time was not entirely thrown away.

This was the startling information which was conveyed to Mr Johnstone in the hard sharp words of a lawyer's letter, and which he now communicated in his distress to Miss Plumptree and Annie. They cheered him with sanguine speeches; and

Digitized by Google

when he had gathered his wits together, he started for London, to seek an interview with his solicitor.

That acute gentleman informed him that there seemed to be really something in the claim which was set up, but that it would take a deal of legislation to prove it, and, so far as he could see, it was odds on the man in possession eventually winning the day. But still, if an advantageous compromise were to be suggested, it might be as well to take it into consideration.

So Mr Johnstone took to walking for hours about the garden of Joss-house Villa with his eyes bent on his toes, and his hands clasped behind his back, lost in thought, and muttering at intervals: 'Advantageous compromise.'

He was accustomed to spread a silk pocket-handkerchief over his head after dinner, and take forty winks—at the rate of one wink to two minutes; but his slumbers now were strangely disturbed. He would turn and mutter, and his mutterings, to the excitement of Annie's curiosity, invariably formed some part of the words 'Advantageous compromise!'

CHAPTER III.—THE ADVANTAGEOUS COMPROMISE.

Miss Plumptree and Annie Johnstone sat in the same queer summer-house overlooking the dragon in the chickweed, employed in the same description of needlework, the advance of the year being shewn by a basket of apricots which stood in the place of the strawberries. Mr Johnstone sat near them in silent abstraction. At intervals, indeed, he would tilt his chair forward to bring his hand within range of the mellow fruit, of which he was devouring a choleraic quantity; but he seemed to do so mechanically, as if he did not quite know what he was about; and indeed, while his palate was engaged with the apricots, his mind was absorbed in contemplation of his position.

'That fine, that remarkably fine woman,' he said to himself, as his eyes rested admiringly on Miss Plumptree, 'will not marry me until that girl is off my hands, which is less likely to happen than ever, now that it is doubtful if I can give her, or even leave her a penny. And yet, if these fellows really manage to take away my money—and there is no knowing what lawyers may not do in that way—it will be an extra reason why I should marry a woman with a nice competence to make up. I wonder how George the Fourth would have acted under similar circumstances? But bah! how could he possibly have been placed in them? When a king has his property taken from him, he does not go to law; he fights, or rather other people fight, which is better still, and settle the matter that way.'

His meditations were interrupted by a servant bearing a card, who told him that a gentleman wished to see him.

'Where have you shewn him?'

'Into the grand music-hall,' replied the girl.

Too much flurried to say a word to either of the ladies, Mr Johnstone hastened to the grand music-hall, an apartment fifteen feet by thirteen, where he found a young man.

'The—ah!—the claimant, I believe?' said Mr Johnstone, glancing from his visitor to the card he held in his hand.

'Yes,' replied the other. 'The course which I have taken, in calling upon you personally, may seem somewhat strange, especially for a lawyer; but there has been some mention of the possibility of a compromise; and to tell the simple truth, you have been in possession so long, and the information which enables me to contest your rights has come from so disreputable a quarter, that I am rather ashamed of my position, and would prefer settling the matter amicably to commencing a long course of litigation. A very unprofessional view of the case, I own, but I beg you to believe that I should have no such scruples if I were acting for a client. It is a delicate matter, however, to make the first approaches towards a compromise in writing, because, if your opponent is unwilling to entertain it, he may take it as an acknowledgment of weakness, and become confirmed in the strength of his case; or he may find a weapon in some sentence of your letter which may be turned against you. So I have determined to sink the lawyer. I am only a very young one, and call upon you personally to talk the matter over quietly, and see if you are inclined to meet me half-way. Of course, you will commit yourself to nothing without consulting your solicitor.'

'I am no great friend to litigation myself,' said Mr Johnstone; 'and if you can shew me that your claim is really a good one, I am ready to listen to what you have to propose.'

The young man then commenced translating the case from jargon into English; and when his auditor seemed to have a pretty clear idea of it in all its bearings, he told him that he had sooner the first sketch of a compromise should come from him.

'Are you married?' cried Mr Johnstone, his eyes brightening with a sudden idea.

'No.'

'Then, by George!' slapping his thigh, 'why not marry my niece?'

'You do me great honour, I am sure,' stammered the young man. 'So unexpected! so sudden! No idea of marrying, unless—— Besides, I have not the pleasure of knowing the lady; in fact, was not aware you had a niece.'

'Oh, you shall soon know her,' cried Mr Johnstone; 'she is in the garden. Come, and be introduced.' And he led the way towards the summer-house, his visitor following with a face of comic perplexity.

'Marry another; perhaps afterwards to find *her*—never!' he said to himself.

'Annie,' said Mr Johnstone, 'let me introduce you to—— Holloa!'

No wonder he, as well as Miss Plumptree, was astonished, for the stranger cried out: 'Annie, my Annie, is it possible!' and rushed forward to seize her hand, which she gave him with a little cry of: 'Ned!'

'Why, Annie, have you met Mr Whiston before?'

'Yes, uncle.'

'O yes, sir,' said Ned Whiston; 'and when she disappeared from Dreary Street so mysteriously and suddenly, I was in despair. I have looked for her everywhere; I advertised in the sensation column of the *Times*, not by name, of course, but so that she might understand.'

'We have it sent the second day, and the supplement does not come with it.'

Well, I expect that you do not want the whole story over again, so we may omit the rest of the conversation. Everything was arranged

Digitized by Google

satisfactorily. Ned Whiston, who was doing a respectable and yearly increasing business, married Annie when the peaches came in; a nice sum was paid down on their marriage, and the remainder of the property secured to them on Mr Johnstone's death, subject to an annuity to be paid to his widow, if he left one.

A month after the young people had been settled in their new home, Mr Johnstone and Miss Plumptree were quietly tied together; and the first thing the former did, after returning to Joss-house Villa, was to walk into the kitchen and put the poker in the fire.

'What *are* you about, dear?' inquired his bride.

'I am going to fire a wedding salute; twenty-one guns,' replied her husband. And he did.

OUR LADY-BIRD FRIENDS.

The unsummerly summer of eighteen sixty-nine will be memorable in entomological annals for the commotion created by the appearance of the pretty little beetles known as May-bugs, lady-bugs, lady-cows, or lady-birds in

> Continuous clouds
> Of congregated myriads numberless,

disputing the possession of our watering-places with the holiday-makers, astonishing town-bred throngers of the public parks, delighting the proprietors of suburban gardens, and decking even London tombstones in unwonted splendours.

Insect invasions usually come in the category of plagues—plagues bringing dearth and famine in their wake. 'The land is as the garden of Eden before them, and behind them a desolate wilderness,' says the poet-prophet, warning his countrymen of impending foes coming upon the land to waste its fields and make its husbandmen ashamed. 'As horsemen shall they run; like the noise of chariots on the tops of mountains shall they leap, like the noise of a flame of fire that devoureth the stubble, as a strong people in battle-array. They shall run like mighty men, they shall climb the wall like men of war; and they shall march every one on his ways, and shall not break their ranks. They shall run to and fro in the city; they shall run upon the wall; they shall enter in at the windows like a thief. The earth shall quake before them; the heavens shall tremble; the sun and moon shall be dark, and the stars withdraw their shining!' We are not, happily, liable to be frighted by such terrible visitations as that depicted by the seer of Israel; although at times the foes of vegetation muster strongly enough to fill our cultivators with dismay. The extraordinary influx of lady-birds, however it might alarm some weak-minded folks, who fancy anything unusual the forerunner of pestilence, was not a calamity to be deplored, but rather a blessing to be rejoiced over. The bright-coated bands were but the battalions of an army of deliverers bent on exterminating the legions of aphides that had quartered themselves in our fields, hop-grounds, and gardens.

The past summer has been prolific of these pests, as every hop-grower knows to his cost, and every floriculturist to his grief. Now, to 'the fly'—whether it be red, black, or green—lady-birds are determined, remorseless enemies; and doubtless the only reason our visitors had for coming in such extraordinary numbers was, because they were wanted; and they certainly did not come a day too soon. Any one possessed of a garden, even if only what goes by that name in the suburbs of a large town, knows too well how the fly plays havoc with his pet flowers, and defies his desperate attempts to get rid of it. This year the aphides have been particularly abundant. Clear them out of a bed one day, and thousands—who had apparently been waiting for accommodation—might be found there next day, the powers of these destructive mites, in the way of increasing and multiplying, being beyond all calculation. And when we have myriads of them driving their beaks into the tenderest tissues of the plants they favour with their unkind attentions, developing their bladdery bodies upon the juices intended for the development of leaves and flowers, we need not be surprised at witnessing the amount of mischief they work in a very short time. Entomologists tell us that the female lady-bird deposits her amber-coloured eggs in the midst of the marauding crew. Out of these yellow eggs soon crawl certain six-footed flat worms, of a dirty green colour, ornamented with a few yellow spots. As soon as hatched, the worm begins to feed upon the game around, eating some hundreds a day, until it arrives at the proper dimensions to fit it for its transformation; when fastening itself upon a leaf by the end of its tail, it waits in abstinence until the larval skin splits, and the worm comes forth a perfect lady-bird—its dull hue changed for a spotted coat of orange, yellow, scarlet, or black. Here, according to Mr Wood, its good offices end; that enthusiastic naturalist, while admitting that the presence of the lady-bird in the garden is an unmitigated benefit, and that in its larval state it is one of man's best friends, qualifying his praise by saying that, in its perfect state, it is 'almost neutral.' We should be sorry to set our limited experience against the observation of so good an authority; but, in justice to our pretty helper, we must state that our verbena-beds, which, spite of syringing and tobacco-water, remained things to shudder at, within a week of the irruption of lady-birds became pictures of healthy vigour. It was just the same with other plants; and instead of it being hard to find a plant in our garden that was not more or less infested with aphides, it was exactly the reverse, notwithstanding that we could not find any deposits of lady-birds' eggs, neither in out-of-the-way places, nor where we had noticed the insects most actively employed in performing perambulations over the plants.

Lady-birds are found in Asia and Africa, and in all parts of the European continent. There are said to be more than fifty kinds, mostly distinguished by the number of spots they bear and the colour of their wing-cases. Entomologists, like botanists, are deplorably fond of bewildering themselves and everybody interested in the study of their so-called science, by making every little difference an excuse for creating a new species. Lady-birds are, however, very intractable subjects, revelling as much as other ladies in variety of costume, so that they set their would-be classifiers at defiance; although it must be owned the blame of the consequent confusion rests quite as much with their scientific sponsors, for it is palpably absurd to make such trivialities as the number of spots an insect may happen to sport the basis of

Digitized by Google

distinction. The number of these spots varies from two up to twenty-two, while some bear squares instead of spots, and others are content without any markings at all. The value of the method of distinction adopted may be judged from the fact, that a writer on the matter says: 'Whenever the entomologist finds a lady-bird which he does not know, he is mostly safe in putting it down as a variety of the Two-spot.' Entomology owes much to the lady-bird, since it owes the pleasantest expositor of its mysteries to our little friend; Kirby being impelled to study the tricks and manners of the members of the insect world by having his notice attracted to a brilliant and lively specimen, that recovered its freedom after twenty-four hours' immersion in a spirit-bath. The lady-bird does not seem to be provided with any weapon for defending itself against its enemies, unless its power of exuding an acrid yellow fluid, resembling opium in its odour, from its legs answers the purpose. 'It is doubtless to this fluid,' says Mr Phipson in his *Utilisation of Minute Life*, 'that they owe their property of curing the most violent toothache when they are placed alive in the hollow part of the tooth.' Smashed lady-birds were once in repute for curing colic and measles.

Like the swallow, martin, redbreast, wren, and cricket, the lady-bird has the benefit of a long-standing belief that any one wilfully killing it will infallibly break a bone or meet with some equally troublesome punishment before the year is out—a notion probably springing out of its being supposed to be under the special protection of the Virgin Mary—to which it of course owes its most popular name. In Suffolk and Norfolk, it goes by the name of Bishop Barnaby (why or wherefore, none can tell), and instead of the couplet—

> Lady-bird, lady-bird, fly away home;
> Your house is on fire, your children all gone—

is addressed with:

> Bishop, Bishop Barnabee,
> Tell me when your wedding be;
> If it be to-morrow day,
> Take your wings and fly away.

Or, as a Norfolk version has it:

> Bishop, Bishop Barnabee,
> Tell me when my wedding be;
> If it be to-morrow day,
> Take your wings and fly away.
> Fly to the east, fly to the west,
> Fly to them that I love best.

Forby says some obscurity hangs over this popular name, which has certainly no more relation to the companion of Saint Paul than to drunken Barnaby. It is sometimes called Benebee, which may possibly have been intended to mean the blessed bee; sometimes Bishop Benetree—of which it is impossible to make anything. The name has probably been derived from the Barn Bishop; whether in scorn of that silly and profane mockery, or in pious commemoration of it, must depend upon whether it was adopted before or since the Reformation. The bishops of old wore scarlet and black in their robes, which may account for the episcopal dignity conferred on the scarlet and black beetle; while it may perhaps take the rest of its title from its appearing in the month in which the festival of Saint Barnabas occurs.

In 1807, a correspondent of the *Annual Register* writes to say that the immense flights of lady-birds which have recently appeared in Kent have caused some alarm to the superstitious of both the small and great vulgar who frequent the watering-places, where the streets have been literally covered with lady-birds; whereas, instead of being looked upon as foreboders of pestilence, they ought to be hailed as soldiers returning from a glorious victory, seeing that through their agency the hop-growers may rejoice in half a crop, where they would have had no crop at all, besides enjoying a fair prospect of an abundant harvest in the following year. Kirby saw the banks of the Humber so thickly strewed with the common lady-bird that it was difficult to walk without destroying them, and at another time saw a vast number of various species on the sand-hills at the northmost extremity of the Norfolk coast. In 1835, the wiseacres of Berkshire actually called out the public fire-engines and charged them with tobacco-water, in order to destroy the hosts of lady-birds they fancied threatened their crops with annihilation. We fear there is a good deal to be learned in this way yet; agriculturists and gardeners are too ready to destroy their best friends: a little encouragement of nature's police would pay them better than all their pottering with expensive and troublesome nostrums, which seldom achieve the purpose of their being.

IN SORROW.

When thou art sorrowful, and cares around
Crowd fast upon the steps of happier days;
When thou believ'st e'en brightest things can lend
The saddest echo to the gayest lays—
As men of old were fed with angels' food,
Go, seek thy remedy in doing good.

When those to thee the dearest shall have died,
And each fresh day grow weary to thine eyes;
When every hope that others build upon
Comes to thy senses with a sad surprise—
Take up the burden of another's grief;
Learn from another's pain thy woe's relief.

Mourner, believe that sorrow may be bribed
With tribute from the heart, not sighs nor tears,
But nobler sacrifice—of helping hands,
Of cheering smiles, of sympathetic ears.
Oft have the saddest words the sweeter strain;
In angels' music let thy soul complain.

Then Grief shall stand with half-averted foot
Upon the threshold of a brighter day;
And Hope shall take her sweetly by the hand,
And both kneel down with Faith to meekly pray.
Lifted from earth, Peace shall immortalise
The heart that its own anguish purifies.

POPULAR

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 303. SATURDAY, OCTOBER 16, 1869. PRICE 1½d.

A GROUP OF ARTISTS.

IT is curious how many odd corners of humanity there are, and how well they are worth peering into. In some, we may find (metaphorically, like the old woman) a silver penny; in others, we may even have the luck to light upon a pearl. Going the other day among some photographists, this truth was illustrated charmingly.

'Taken like life!' a tall, thin, soft-spoken man accosted me with, at the threshold of the first studio I visited. 'Wait on you in a minute. Better walk in.'

My addresser had not done all his part by simply getting me to walk in. His higher duty was to induce me to double my bargained outlay by having my portrait coloured, and he set about this with skill.

'You sat beautifully!' he cried, holding the portrait so that I could not catch a glimpse of it. 'It's positively perfect! I need not ask whether you'll have it coloured?'

No, I said—no. That would do nicely.

'Not coloured!' he cried, being too much astonished to credit what he had heard. 'You wanted a portrait, and this is not a portrait as it is! You have a colour, and this is pale.'

It would do nicely, I said. I was quite satisfied.

'But you are spoiling it,' he said, as though it was a Titian, and I a Goth and Vandal both, in monstrous combination. 'You cannot know what colouring will do. You should *not* let it be as it is; you should not, really!'

I still fought the battle (the battle for an extra sixpence), and stood my ground.

Then my friend brought out his last shot. 'Come,' he said; 'I'll tell you what; I cannot spoil a picture for the sake of a few pence.' I'll colour it for you for half what I would charge any one else. There! I can't say more than that! Come!' After which, when my armour remained still unpenetrated, he never said a word. I was below a parley; and, completing his bargain with lofty dignity, he allowed me to go my way.

In five minutes, I was inside another studio, and in communication with Artist Number Two. I was thrust into him. I say *thrust* in, because it was literally so. An eloquent man outside had opened a rattling door the moment I had addressed him, had given me an appreciative slap upon the back, popped me inside, and taken himself off again, chuckling loudly at the speed and success of his manœuvre. I was shot and bagged with a sort of first-of-September rapidity, very invigorating to his sense of self-approval; and sharper and truer would be his aim for the next half-hour from mere relish of his victory.

I was a sad interruption to his assistant; that is, I was a member of the De Trop family, who was quickly made to feel myself so, for I came into the midst of busy talk with a tall acquaintance. I was addressed with suave politeness, and then familiarly there was laughed out a gay supplement to some former remark; I was asked deferentially the style of portrait I required, and the next breath of the speaker was devoted to verbal fence and parry; I was told courteously to keep my eyes fixed, and a merry reminiscence succeeded so quickly to the order, there was not a comma to keep them apart; finally, as a further proof of the little consequence I was, when the artist had retired to the dark closet to complete his work, the tall acquaintance walked up to the camera he had left, and deliberately bent down and peeped at me as I sat.

I endeavoured to take the undue examination as easily as I could. 'An interesting sight, no doubt,' I said; and smiled, and arranged myself more comfortably, to try to look as if I didn't care.

But I *did* care very much. Had the fellow taken a peep and gone, it would have been nothing; I might have concluded he had a taste for scientific investigation; and we might have fallen into conversation as deep as our ignorance allowed. But he kept on looking, and would not say a word. I tried him with a remark about photography in general; I spoke of the weather and the neighbourhood; I alluded—as off-handedly as I could—to the study afforded to photographers by the people they see in shoals, and there was no more

Digitized by Google

sound in answer to me than if my tormentor had had but one faculty left him—gigantic concentrative Gaze.

'At anyrate,' I cried at last, goaded to the sudden recollection of a fact that gratified my spite, 'you can only see me standing on my head!'

And this finished my odd inquisition! A lady entered at the moment, in greasy short hair and a dirty long skirt, who was very fine and glaring, and whose duty, like that of my first friend, was to coax me to have my portrait coloured. Like him, she set about it gallantly.

She began by smiling fascinatingly right up into my face. 'Ah,' she cried, 'it *will* look nice when it's coloured! How *well* you have sat! Pictures *never* look well in their own black and white; do they? I *can't* like them till they have the colour. You will be *surprised* what a difference I shall make!'

'I think them much better as they are,' I said. 'I would rather have this just as it is.'

'Ah,' cried the lady, 'that depends on how the colouring is done. You have seen it done anyhow; *I* should do it properly. And I should just gild your ring and chain, and everything! You 'll be surprised!'

This was all as though I really *meant* to have it, and the lady's hands were absolutely getting ready her materials as she sweetly spoke; but *diminuendo* went her winning ecstasy when I adhered to my No. Never, evidently, had she experienced defeat before; and no more blandishments were given me; they were all lavished on the tall acquaintance. The lady's hands were nimble in varnishing the back of the little image of me that had just been taken: her mind and tongue were with the long man who stood beside her.

'No, I won't,' she said to him, holding me—that is, of course, my image—over a candle, as if it were congenial to her to give me a scorch. 'I won't, indeed. The last was quite enough!'

'Do!' urged the tall friend, finding a monosyllable for her, though he had not even that for me.

'Oh, I daresay,' laughed out the lady, twisting me into a tinsel frame.

'You'd better,' the tall friend gaily persuaded. 'Do.'

Have what? I wondered, as I saw my small self folded and pinched, and papered and pressed down; and then the last pinch was administered to me, and I said 'Good-day.'

'A Doorman Wanted' was pasted upon the show-case of the next studio I entered; and this brought to light the fact that being doorman to a photographer is a distinct 'line.'

The opposite is operator. This I learned when I had penetrated to my third studio, and was chatting to the owner.

'Trust no one to be your operator,' was his sage warning. 'Do your operatin' yourself. *They* only care how quick they gets it done, and don't think if they pleases at all.—It made me take to my own operatin' myself,' added the artist, a burly, labourer-looking personage in very greasy clothes. 'I *must* turn pictures out so that people will come again.'

His was a wretched place—so thoroughly irregular and unsavoury indeed, that the artist's wife thought it incumbent on her to push her small self to the front to offer me an explanation.

'We have the bricklayers all over the house,' she said in a thin treble that assured me of the sort of *agitato* melody she would be able to pipe upon it when things 'crossed' her. 'We ain't got a decent place nowhere to put a thing in. The mess is awful!'

Truly, as I saw; and truly, as I thought, it would have been, if no workmen had been busy, and all had been at its best. The aspect of my small Xantippe herself gave me this conviction. The bricklayers were not at work on *her;* so she need not have had ladders about her, so to speak, or have been mortar-sprinkled, or strewn with shavings. But this was a reflection I kept to myself. I only answered the little woman with an assurance that she need not trouble herself about me in the least.

'But it *looks* so,' Xantippe continued to apologise, with an air that seemed as if she thought she ought to blush. 'One can't be tidy, nor clean, nor nothing.'

I felt for her, I assured her; and said that, to *my* mind, it was so inconvenient to have workmen about a house, I thought there never ought to be anything to pay at the end of it.

Xantippe revived. 'You may well say that,' she chirped out. 'Why, the money this 'll cost is dreadful. There 's twelve rooms in the house, there is, and workmen in every one!'

I was properly impressed. And then, it being time that I should take my seat, I took it; and Xantippe's husband, emerging smilingly from the dark cupboard in which he had temporarily been immured, threw his loud voice into the conversation again, and formed a very sounding bass.

'You can't help dirt in photography,' he said for a first plunge; and it made his small wife look more revived still, and glance down at her gown and stroke it, as if every sin it had were now accounted for, and she could not have made it different if she had tried. 'Spoils!' went on the man—'why, it spoils everything we have!'

'That 's a pity,' I said, 'for portrait-taking is very interesting. 'So many people pass before you, I would very willingly change places with you—for a day or two, at anyrate.'

This was seized by the burly fellow in a business spirit at once. 'I've taught a many in my time, I have,' he said. 'For you see,' he continued, as he focused me through the camera, 'photography 's wanted so much now for gover'ment. Most of those I've taught has been for the surveyin', engineerin', and artchitex—they all want it now. Why, I've taught so many down at Woolwich, I've been offered a gover'ment place myself!'

'Really!' I said. And that was all I *could* say, for the appreciated gentleman signed to me at this moment to be dumb, and look where he had placed his finger; and, after flinging his black cloth upon the camera, and extracting something from it with the *aplomb* of a dentist pulling a tooth, he hid himself hurriedly in the cupboard. I rose to go towards Xantippe's table, but her husband's ears were open, though the chemistry he was engaged in was supposed to be all-absorbing, and he stopped me before I had gone a step.

'Don't move!' was his sharp order, rumbling out of his shut-up cupboard like the beat of drums. 'Don't move yet! I 'll take another of you first.'

Very conscientious of him, I thought, as I retook my seat. And then—The good people want new

Digitized by Google

portraits for their newly arranged show-case after their alterations, and this is only a *ruse* to reserve a copy of mine! And as this new reading came to me, I sat much more imposingly on the chair, and posed my head as attractively as it would go. Since they wished to have my portrait, for *their* sake it should be as good as I could make it.

'Yes,' the big operator resumed, once more at his camera, taking in and out his plates; 'I was offered a gover'ment place myself, I was; but I didn't take it—I staid where I am—the pay wasn't enough. They'd only give five guineas a week, and I was paying my operator two guineas myself. then.—And what's five guineas a week, you know! Why, I should be wanted to travel about—to Scotland, and the Ilerwight, and all manner of places; and a sovereign don't go very fur, you know, when you come to go them long distances by train!'

I accepted the good man's position, when I had been again taken, and was once more free; and no one, surely, could have negatived it.

'And now,' he began, emerging once more from his wee laboratory, and coming to where I was watching Xantippe's pasting, 'you shall see both the portraits, and have which one you like. This one—this is the last—is a capital one, and when it's coloured, it'll look fine.'

Ha, ha! I thought—the old battle about the tinting. Well, I have faith in my now twice-tried resolution; so for a little dalliance before we begin.

'I am watching your wife,' I remarked easily, feigning I did not hear. 'How clever she seems at all this sort of work.'

'She wouldn't do for a photographer's wife if she warn't,' blurted out the operator, as though he could change his wife as easily as his doorman, if she didn't suit.

'She must do pretty nearly as well as you,' I said again, still feigning to overlook the photograph held out to me, and only taking notice of Xantippe's smiling face. 'How useful she must be.'

'Ah!' the man said, led to explanation by interest in his art, 'there's a many things a female can do in photography, there is; but there's one part she ought never to go into—she ain't fit for it.—The dark closet! Too much work for the 'ead!'

As Xantippe acquiesced with a look and a good many nods in this Blue-Beard arrangement of her husband's, I had only suppressed amusement to give to it, and passed on to discharging the first shot in the little forthcoming war.

'Oh, thank you,' I cried, as if at that moment conscious of the portrait being thrust under my eyes—'thank you. That will do nicely. I am much obliged.'

The operator, however, was equally on the alert as I. 'You shall see the two,' he parried—'the first *and* this. And'—to prepare me before the disappointing exhibition—'you know, of course, how badly they look before they're coloured?'

'No, I don't,' I answered. 'I think they look badly *after* they are coloured;' and I put down my money as though the thing were quite decided.

Xantippe laid her hand upon the money with queer avidity (it was exactly the price of *two* portraits), and her husband took up arms.

'You'll be very sorry,' the man argued. 'And what's the expense? why, a mere nothin'!'

'Really, I *prefer* it as it is,' I said. 'I am saying exactly what I mean.'

'Ah!' Xantippe put in here glibly, abetting her husband with a repetition of her nods and smiles, 'you don't know how *nice* they look with a little tint on 'em! You can't tell!'

'O yes,' I answered, smiling with benignant unsuspicion at this feminine pertinacity, 'I *do* know, and I *can* tell, nicely.'

'Look there, then!' cried Xantippe, executing as sudden a manœuvre as ever won *bonâ fide* battle; and she pushed into my hands the first portrait her diplomatic husband had taken of me, all framed, and gilt, and coloured, so that, for mere shame, I *must* have it, whether I would or not! And the little shrew positively chuckled. She overran with rapid little nods and smiles.

'Ha, ha, ha!' I laughed out heartily.

No wonder the man had given me the second sitting! The two had plotted this waylaying, had entertained me during its short hatching, and here was I, the conqueror conquered, in such amusement at the duet of business dexterity, I had not the heart to say it should not win!

'You are wonderfully clever,' I exclaimed, going on with my laughter still. 'Really, I don't know which is the cleverer of the two!'

Small Xantippe, woman as she was, thought I was captured by her singularly akilful colouring; and her little head rose, and her smiles came, and her hands stroked her sides with pride. 'It *do* look nice, don't it?' she gloried. 'There's the laylock there, and the dark-brown here, like life to a pin!' And I did not undeceive her, but, still laughing, went away.

It was a singular door through which I arrived at the next studio. It was a hole in the ceiling of a cheap confectioner's shop, through which one went up and up like a tremulous 'property' in a play. And it was singular how I was prevailed upon to go there. I was deeply studying the show-case appertaining to it, when the owner accepted the challenge my looking was to him, and approached me.

'You are the worst side of the case,' he said, in a nice fluent voice, and very politely. 'Would you do me the favour, if it is not too much trouble to you, to come round this other side?'

He was a real cavalier. Dingy, of course—a cavalier, perhaps, when his party had been discomfited; but a regular Prince Rupert man for all that. And he was tall, and bronzed, and handsome, with a red-brown moustache; and he wore a soft hat, that sat on him in seventeenth century fashion, and only wanted a plume and glittering buckle to make it the thing itself.

'This side, if you will be so good,' he repeated. 'Pray, do me the favour to look this way.'

'There is a beautiful thing there,' he announced, pointing to the portrait occupying the *place d'honneur*. 'We are particularly successful in *cartes—and* in vignettes;' for my eyes had fallen on one of these last, instead of implicitly following the direction he indicated, and he had wisdom enough to care only for the making of a breach—not which way it was effected. 'Vignettes are the best of photographs, in *my* opinion; and it is a style that *you* would do in beautifully. I am so convinced of this,' continued the cavalier, coming out with his masterpiece of insinuation, 'that if you can spare the time to sit, and will allow me, I will take a portrait of you, just to keep for myself!'

I was thrown right over by this, of course; and vanquished, I went in.

The next artist I visited was fat, aged, and frowning, in his shirt-sleeves, and on a wooden leg.

'Can you take my picture at once?' I asked him.

I was favoured with a sharp sour look and a testy scowl.

'I am in a hurry,' I explained; 'I have no time to wait.'

'I can take you,' gruffed out the old lameter, his voice as surly as his look. 'Go up!'

'If I am incom'—— I began.

'I can do you,' repeated the lameter as surlily as before. 'Go up!'

And when I *was* up, the old fellow stumped himself to me, and began to screw my head into the iron rest with considerably more than necessary force.

'I can sit still,' I said, hating the imprisonment: 'I don't want this!'

'What?' screamed the old man, deafened by the clatter of his wooden leg upon the floor—'what? Eh?'

'I don't want *this!*' I shouted: 'I can sit still!'

'You *can't* sit still?' screamed the old man interrogatively.

'I *can* sit still!' I repeated: 'I can do without this rest!'

'Oh!' yielded the old fellow. 'Do without it then.'

I did; and was that much more comfortable. But every other little word I had with my *vis-à-vis* was in the same quarrelsome style.

'Put your head more to the right!' he cried, when, after much clatter and fussiness, his plates were prepared. 'Look out there!'

'So?' I asked, turning, as I thought, the way he indicated—'so?'

'No!' he roared; 'to the right! There!'

'So?' I asked again, with, possibly, an aggravating smile.

'No!' he roared once more; and he made right at me with his stump, stump, stump, and seized my head and twisted it, and would have liked to wrench it off, I am sure.

A different character entirely was revealed to me by Photographer Number Six. In person, this gentleman was short, and round, and young; in manners, he was peevish and desponding.

'You lean too backward,' he cried, in a pining voice, from behind the camera when he was operating: 'sit straighter up.'

I stiffened my back as well as fatigue would let me, and altered the position of my eyes.

'Now you've got your eyes higher than your head,' was his peevish complaint.

I laughed. 'How *can* they be?' I asked. And the young man laughed faintly with me, and put his remark in less equivocal terms.

'You're shewing your teeth,' was his next accusation, before my smile had quite died away.

'No wonder!' I reminded him; 'besides,' I added, 'I generally do!'

'Then,' conceded the artist, 'shew them now. I don't hold with people going again' nature. Stick to nature.'

My next 'subject' was his near neighbour—a handsome woman, young, and a widow. She had a firm voice, and a rapid, busy way of doing her work, that shewed her evident conviction that if it were to be done, then 'twas far best it should be done quickly. She might have been tender and down-eyed enough once; but now she had the 'operating' branch of a brisk photographic trade to carry on; she had children to keep, and rent to pay; and what was there for her but to turn tigress, and clutch at what was needful for her with vivid paw? Room was scarce with her too; so her children, having no definite place in which to play, obtruded themselves into her business precincts, and thereby taxed her patience. One of them came tumbling out into a near passage, hushing an empty hat and shawl in baby-fashion; but this poor mother had no time or temper for a smile at the pretty mimicry. Vexation bristled from her instead.

'Be off!' she harried out, with hand and voice both upraised. 'Play with that best hat again, and *I'll* be after you!'

Then the woman who was her helper made more of her hot words fly. She was a pallid dawdling creature—a widow too!—who only par-cleaned the little squares of glass given her, and returned them so that specks and streaks could still be damagingly seen.

'*This* won't do!' cried the superior soul. '*This* won't get your living. You must work hard, my good woman—as hard as we all have to do for everything!'

Severe philosophy this; and severer still to have been forced to live the life that led to it. There were two women, too, in the room, whose lines had fallen in such different places. They were loose red-haired hoydens, who had bounced up into the studio, dragging with them a gallant as boisterous as themselves, and him they had just succeeded in coaxing to sit, and to treat them each to a sitting. The only anxiety of the girls was for each to outvie the other, and get all favours for herself alone.

'Give it me when it 's done,' lured one of them. 'Do; there 's a dear!'

'Aw,' cried the other, 'that 's a shame. It ought to be for me. You like me best, dear, don't you?' and her wide arms were about the lover's neck, with a close hug.

'What a lark!' was the man's cry, chuckling at the rivalry, and shrewdly avoiding saying which way his vote should go. 'I see. Let 's all be took in a mob!'

They were harmless, all. It was only their hilarity and irresponsibility that made them noticeable. There was serious life in store for them, of course, even as there were sunny spots lighting up the struggle of the artist-widow. *She* had a large jug of the pretty Rhine pottery on her window-sill, sent her, she said, from Germany full of butter; and *they* had let their lover go from them, to call together some other *convives* to add to his promised 'mob;' and I saw him, a street or two further on, revelling in a noisy public-house, with perfect oblivion of the quest on which he had gone. Things are balanced more evenly than, at first sight, could be supposed.

A singular scene was enacted before me in the rooms of photographer the last. In common with all my artists, he was only rich enough to occupy a small part of a house; and in one of the many homes a roving life had led him into, a fellow-lodger had incessantly aggravated him by putting a certain door wide open, when he had been equally determined that it should be shut. A petty thing this;

Digitized by Google

but the annoyance had so galled and worried our photographer, that the memory of it rushed upon him green and sapful when the woman who had been his antagonist presented herself, during my visit, to make his wife a friendly call.

He came face to face on her, as he emerged from his dark cupboard; and because he only looked from under his thick eyebrows, and did not speak, his wife asked if he had forgotten who it was.

He merely looked again—being a broad black-whiskered fellow, seemingly mighty strong. But he growled an answer out at last. It was 'No. I know the sulky thing. I ain't likely to forget.'

The woman had no resentment for this. She folded her hands on a heavy basket of vegetables she had rested on the table; she shrugged her shoulders a little; looked down; grinned; and was dumb.

'I know her,' the man cried again, taking the smiles and silence (as they were meant) as so much confession and repentance. 'She blackguarded me once for an hour, *I* remember.'

The woman gave a downright laugh then. She had come off conqueror from this long vituperation, it was clear, and she knew how hard to be forgiven was such vanquishing; but she had not miscalculated when she had thought the olive branch would now be accepted.

The man held his hand out for it in his own rough way. It was only by a kindly question, but that was quite enough. 'How's Mat a poddlin' on now?' he asked. 'Pretty square?'

After which, the big fellow opened his breast quite. 'I'm a precious rough customer, I am, you know,' he said. 'Precious rough if I'm treated to a bit of tongue! I'd be gentle if folks would let me; but I think nothin' of chuckin' a fellow out of winder when I'm riled!'

So, speaking of his passions as of something over which he had no control, as of a sort of whirligig firework that *would* go off if anybody touched it, the woman accepted his position thoroughly, and the *amende* was made. I did not wait for the smoking of the pipe of peace; it was enough for me to have seen it produced, and I walked away.

WRECKS.

The old English law relating to wrecks was founded upon principles analogous to those by which the seaman who fell overboard was punished by his captain for being out of the ship without leave. If a merchant was so unfortunate as to lose his ship, and the wreck was cast upon the shore, it was claimed by the king, as the ultimate owner of everything in his kingdom, on the ground, that the merchant had evidently parted with his property. It made no difference if the merchant was known, or if he came ashore himself out of the wreck; the law completed the ruin which the elements had hesitated to finish; and the poor wretch was obliged to submit to a spoliation which must have made him regret his advent to the inhospitable shore.

This was considered to be too 'hard lines,' even in feudal days; and Henry I. decreed that if any man escaped alive from the ship, it should not be deemed 'wreck,' in the sense of giving the king ownership in it. Henry II. enlarged the terms of this order by saying, that if man or beast remained alive, it should not be king's wreck; but the law continued to give the king ownership where all the voyagers were drowned, even though it might be known who was the rightful owner of the lost ship. Richard I., on his way to Palestine in the year 1190, granted a charter, 'for the love of God, and the health of his own soul, and the souls of his ancestors and successors, kings of England,' by which he relinquished all claim to wreck throughout his dominions, and declared that every shipwrecked person escaping alive should retain his goods; and that if any one died in the ship, his sons or daughters, brothers or sisters, as they might be his heirs, should have his property; but if he had no such relations, the king should have his chattels.

Edward I., 'the English Justinian,' first reduced into the shape of a positive law the principles concerning wreck which had been enunciated by Henry I. and II., and by King Richard. By the fourth chapter of a statute passed in the third year of his reign, it was agreed 'that where a man, a dog, or a cat escape quick out of the ship, that such ship nor barge, nor anything within them, shall be adjudged wreck.' Goods saved from wrecks were ordered to be in the custody of the town nearest the scene of the disaster; and if any man could prove within a year and a day that they belonged to him, he was to have them: if not claimed, the goods, or the proceeds of the sale of them, were to belong to the king. Any one doing contrary to this was to be 'awarded to prison, and make fine at the king's will, and yield damages also.' This good law was the foundation of all subsequent legislation on the subject, though, as time went on, it was found necessary to particularise a little more what was and what was not wreck, and to define more exactly the obligations of those who might 'assist,' as the French have it, at shipwrecks and misadventures by the sea.

Disputes appear to have arisen at various times as to the title to wrecked goods for which no owner appeared. They of the household quarrelled amongst themselves when it came to a division of the spoil, and a law was needed to settle the question. It was ordered by a statute of Edward II., confirmed by other statutes since made, that 'the king shall have wreck of the sea throughout the realm,' whenever the real owner or his representatives cannot be found. The same statute gave him ownership in all whales and sturgeons caught within the kingdom.

This was the law applicable to wrecks until quite modern times—the king was owner of shipwrecked vessels or goods for which no owner appeared; his right was set aside on the appearance of the owner or his representatives within a year and a day; and those who were instrumental in saving the wreck were to be paid for their trouble a reasonable sum, which was called 'salvage.' For the wrecks themselves, there is reason to think they were many and disastrous, in days when men navigated by sight, that is, by headlands and landmarks, and not scientifically, by means of compass and a reckoning, and when the appliances which now exist for saving life and property imperilled by the sea had not any being, even in the thoughts of man. Questions must constantly have arisen respecting the right to shipwrecked goods, and the amounts which should be paid for salvage; and it is to be feared there was a continuous necessity for enforcing the king's ultimate right to wreck of the sea, in order to prevent the tendency there was in the coast-

Digitized by Google

dwelling people to insure, by processes more or less nefarious, the wreck coming within the definition laid down by Henry I. and Edward I. There is reason to think that the practice was not an uncommon one for the survivors of a ship's crew to be made away with by the coast-men, on the principle of dead men telling no tales, and because it was hoped that a large share of plunder might be obtained and secreted before the royal officers or the agents of the owners could put in an appearance upon the scene. It is right to notice here that the evil reputation for wrecking which at no distant date was monopolised by the Cornish coast-men, was at one time the common property of all dwellers on the English coasts, for there is abundant proof that it was only because of the means of repression which existed in other parts, and which could not, by reason of the wildness of the country, be introduced into Cornwall, that the men of north, south, and east were more virtuous than their brethren in the west.

The notion which existed, that wrecks were the natural property of whosoever could come at them, was not, after all, very extravagant; and this notion being once entertained, there were not many steps between it and a system by which that natural property was secured to the finders. In out-of-the-way places without ready communication with the interior, wrecks might occur, and no one be any the wiser, but for the tell-tale evidence of one or two half-drowned wretches who might survive the assaults of the ocean. Why not prevent the evidence? The temptation was very great. If the evidence was suppressed, there was a fine harvest to be made; if allowed to be given, there might be but a poor salvage allowance to recompense for all the trouble and risk of saving the goods. It was in cases where this temptation was powerful above the virtue of the people to withstand it, that such things were heard of as 'fettling the head with a brick,' interments of half-dead bodies, and other means of getting rid of uncomfortable proofs. A system which admitted of such things as these, admitted, after a short education, of positive acts calculated to bring about shipwrecks; and the wreckers advanced from the position of negative agents in the destruction of life and property, to that of active destroyers. They hung out false lights, concealed known beacons, and 'hobbled the white horse.' The last-named process consisted of tying a lantern on to the tail of a horse, which was led up and down the shore: the light from the lantern shone out seaward, and moving irregularly, and swaying to and fro with the motion of the horse, deceived mariners with the idea that it was a ship's light at sea. The vessels were intended to stand on and to take the ground at a spot convenient to the wreckers.

If precedents were wanted as warrants for such behaviour, it seems they might have been found in plenty. Wrecking is a sin older than the first maritime code of laws which Richard I. drew up and published under the title of the Laws of Oléron. These laws, consisting of forty-seven articles, are said to have been matured by Richard on his return from one of his Palestine trips, and to have been promulgated at the Isle of Oléron, from which they are named. From two of the articles, it appears that by 'an accursed custom,' prevailing, it is assumed, in the king's continental dominions, the third or fourth part of ships that were lost belonged to the lord of the place on which the wreck occurred; and that pilots willing to ingratiate themselves with these lords, purposely, 'like faithless and treacherous villains,' ran the ships they had in charge on the rocks. The code declared that the lords, and all who assisted in plundering the wreck, should be accursed, excommunicated, and punished as robbers; that 'all false and treacherous pilots should suffer a most rigorous and merciless death,' and be hung up on high gibbets on the spot, as a warning to others. The wicked lords were to be tied to a post in the middle of their own houses, which were to be set on fire at the four corners, and burned with all therein. The sites of the houses were to be converted into a market-place for the sale of hogs and swine; and all the goods of the offender were to be confiscated to the use of the aggrieved persons. If 'people more barbarous, cruel, and inhuman than mad dogs,' murdered shipwrecked folk, they were to be plunged into the sea till they were half dead, and then drawn out and stoned to death. It was also provided by the Laws of Oléron, as a check upon pilots, that a pilot who damaged ship of cargo through negligence or other cause should make good the loss, if he had means to do so; if he had not, he was to lose his head. It was, however, ordered that before proceeding to cut off the pilot's head, the master and mariners 'must be sure he had not wherewith to make satisfaction.'

These Laws of Oléron were the model upon which all maritime codes were formed in Europe; and they remained in force, supplemented by a few explanatory statutes, till quite modern times. In George II.'s reign it was found to be necessary to remodel the law of wreck in very many particulars. The morality of pilots had not increased materially since Richard I.'s time, and the wrecking propensities of the people generally had grown apace, while the punishments provided by the old code were so much at variance with the spirit of the time, that they were inoperative, and no longer a terror to evil-doers. An act of George II.'s recites, that notwithstanding 'the good and salutary laws now in being against plundering and destroying vessels in distress, and against taking away shipwrecked, lost, or stranded goods, many wicked enormities have been committed, to the disgrace of the nation;' and proceeds to lay down very stringent rules applicable to wreck and to wreckers. Death was the punishment prescribed for those who stole things from a wreck ('whether any living creature be on board such vessel or not'), and for *those who killed or prevented the escape of shipwrecked persons*, or hung out false lights, with intention to bring any ship or vessel into danger. This law, which was the foundation of the existing Merchant Shipping Act, provided that justices of the peace should have power to search places and people suspected of harbouring goods stolen from wrecks, and to send to jail persons who could not give a satisfactory account of shipwrecked goods in their possession. Salvage was settled, and a tribunal was appointed to arrange any disputes concerning it, and other regulations were made for more thoroughly protecting the interests of shipowners, ship-insurers, and ships' crews. When this act expired, many of its provisions were re-enacted in somewhat different shapes; the punishment of death was commuted for a sentence of less severity in cases of theft, and additions were made to the old

Digitized by Google

law, so as to punish with life-long penal servitude the new crime of wilfully firing, scuttling, or casting away a ship, for the purpose of cheating owners or insurers. By a salutary law which struck at the root of systematic wrecking, the hundred or district in which the wrecking took place was made liable to pay the value of the property plundered.

The existing law of wreck is to be found in the Merchant Shipping Act of 1854 and its supplements. By them, the supervision of wreck, all over the kingdom, is given to the Board of Trade, whose officers are empowered to take charge of a wreck, to exercise magisterial powers in protecting it, to press into their service for the purposes of the wreck both men and carts and horses, to trespass if need be on private property, and to receive as owners all pieces of ship or cargo that may be cast on shore. In case of suspicion of foul play, the justices may hold a sort of inquest on the wreck; and machinery is provided for securing the fullest investigation into the circumstances attending the loss. The question of salvage is exhaustively dealt with, and order is taken for the due custody of wrecked goods, the return of them to the owners on payment of salvage, and the sale of them by public auction if not claimed within a year and a day. Wreckers and their accomplices are provided for with fines, imprisonment, penal servitude, according to the degree of their offence; but the case of 'fettling the head with a brick,' preventing a man's escape so that he dies, and killing shipwrecked people, is dealt with by the general law of murder, and no longer by any special statutes.

Now, as formerly, the sovereign, or the lord of a manor to whom a grant of wreck has been made, is the ultimate owner of lost property; and if after being in custody of the receiver of wrecks for a year and a day, the shipwrecked goods are not claimed, the proceeds of the sale, less the amount of the salvage, are paid to the crown or to the lord of a manor, as the case may be.

STUBBS'S LUCK.

IN EIGHT CHAPTERS.—CHAPTER I.

Less than kin, and more than kind.

'WHEN are you going down, Stubbs?'

'I don't know: not just yet, at anyrate, and perhaps not at all.'

'Not go down at all! Why, my dear fellow, you couldn't spend Christmas in this place: you'd drown yourself in Barnwell Pool.'

'I spent last Christmas here, anyhow; and it was not so very stupid after all. I skated down to Ely, and stopped on my way back at that queer inn called *Five-miles-from—anywhere* at Upware; had some fun in the fen, shooting and so on; and when the frost broke up, I got plenty of sculling without being obliged to twist my neck off looking out for muff-boats. Then the billiard-rooms were pretty well deserted, so that I was able to practise on nearly every table, and I improved my game immensely (as you know, old fellow). Besides which, I went to town once or twice, to see a pantomime or so; and, moreover, I did a good stroke of reading.'

'Ah! that's the way you get the pull of us, and beat us at billiards as well as "book-learning." I can't say, however, that your picture has made me envious.'

So talked Laurence Horton and William Stubbs, as they walked arm in arm down Trumpington Street from Unity College, Cambridge, to the railway station. Horton had left his luggage to follow by 'bus, preferring to go afoot, for the pleasure of Stubbs's company, and for the circulation of the blood. They went swinging along at a very fair pace; the snow was scrunched noisily beneath their feet; the icicles glittered like barley-sugar in the rays of the wintry sun; the sky was clear and blue above their heads; and they gloried in the freshness of the eager air. For the date of their walk was many years ago; there were frost and snow at Christmas then; and December and May had not changed months.

Of the two young men, Horton was considerably the taller: he had dark curly hair, friendly looking gray eyes, a pale face, a slight figure, and an air of easy self-possession, which neither rudeness nor haughtiness could easily ruffle. Stubbs's hair was light brown; his eyes were of a soft, deep, melting blue; his face was fresh-coloured, and his figure particularly graceful; but he walked with just the slightest approach to a swagger, and his expression, had not the softness of his eyes been remarkable, would have struck a stranger as being full of defiance. The explanation was not difficult. Stubbs was one of those of whom it might have been said: 'Hit him hard; he has no friends.' Not that he was unpopular in his college; indeed, there was not a greater favourite. It was certainly a very small college, but there was not a man in it who did not know and like Stubbs, who was captain of their boat, their best bowler, their second-best billiard-player, and one of their best scholars. But then these are not generally the friends who can push you on in the world; they are your rivals and opponents, not your patrons and helpers. And Stubbs had become early acquainted with grief. Death had hob-and-nobbed with him when he was but a babe. At eight years of age, he became an only child. At nine, Death found him out again; and even strangers were moved to tears as the little chief-mourner, with streaming eyes and a child's frank sobs, his footsteps cumbered by his long black cloak, stumbled weeping towards his father's grave. There was after this a respite of six years, during which Death was busy with other prey; and then the Devourer returned to his favourite quarry. Mrs Stubbs was reunited to the Rev. William Stubbs beneath the communion-table of the church he had died in serving; and William Stubbs, junior, was relationless and alone. And the little money which had come to him was just enough, in addition to the exhibition he had won at a public school, to keep him on an equality with his comrades during the usual university career.

Now Horton had heard at odd times scraps of Stubbs's personal history, and it struck a chill to his kindly heart to think that Stubbs should spend in solitary isolation the season which to Laurence was a time of multitudinous merriment and continual gaiety. And theirs was no common friendship; they had been together in many a well-contested boat-race, when Stubbs's voice had cheered on the crew, and his 'Now for it!' had preceded a spurt which had drawn shrieks of admiration from the red-shirted, blue-shirted, pink-shirted, and striped-shirted demons who ran and leaped and yelled upon the bank. They had ridden side by side and fence for fence when the jumps

Digitized by Google

were stiff and the pace alarming, and each, as he recovered from a stunning fall, had seen the face of the other bending anxiously over him. They had spun, stroke for stroke, down the ice-bound Cam to the island famed for its abundant eels. On Barton Ponds, their burnished skates had flashed and whirred and droned in unison as they challenged each other to a trial of skill on inside edge and outside edge, in 'circle' and 'spread-eagle,' and 'Dutch roll,' and 'flying Mercury,' and 'bunch of currants.' They had played famous matches at billiards; and they had read together the gems of Greek and the flowers of Latin. And so it came into Horton's mind that this man Stubbs was more his brother than his acquaintance; that his father's house had a void which Stubbs could supply; that his own double-bedded room demanded Stubbs to make it symmetrical. As, therefore, the friends were preparing to shake hands and part, says Horton abruptly: 'Look here, old fellow; you say you've no engagement for Christmas: come and stay with us—come to-morrow.'

Stubbs looked blank as he answered: 'I'd stay with *you* with pleasure, but—but'——

'Oh!' broke in Horton, 'you're afraid my people might object. I can only tell you the governor will be delighted. But I know you're awfully proud, so I'll get you a formal invitation from him. There, the train's just off.—Good-bye, old boy.'

CHAPTER II.—STUBBS'S LUCK.

As Stubbs walked home to college, he began to ponder upon the subject of Christmas. How would he like the Hortons and their fashion of spending Christmas-day? The last time he could recollect spending Christmas-day in a family, it had nearly been the death of him. It was a very religious family, and they observed the festal day religiously—that is to say, they went to church morning and afternoon, and afterwards gave themselves up to such serious eating and drinking that it was clear the seniors must be ill the next day, and the juniors most likely before morning. There was a general interdiction of all amusements except 'cross questions and crooked answers,' if that—even when it is a game, and not a domestic habit—can be called an amusement (which Stubbs denied). And when Stubbs had inveigled one of the daughters, whilst mamma was out of the room, to play and sing with him a lively song, the other members of the family had looked undigested pudding at him; and mamma, hurrying back at the hateful sounds of joy, had asked: 'Whatever is the meaning of this? Isabella playing profane music! Can that be *my* Isabella?'

And Isabella had answered sulkily: 'You ought to know best, mamma; I haven't altered much since you left the room, I imagine.'

Then mamma had asked poor Stubbs: 'What *would* your poor mother have said, Mr Stubbs?'

And Stubbs had replied: 'I really can't say for certain; but I think she would have waited until we had quite finished, and then would have said: "Thank you, dears;" at least that is what she usually said.'

So Stubbs had registered a vow in—well, the place where he always registered his vows—that he would never spend another Christmas-day with Isabella's family. From that time to the present, Christmas-day had been to him a day of solitary confinement: he had shut himself up in his own rooms and read hard; he had gone to bed early; and a sense of void had come over him as his sleep went from him at the sound of distant merriment, and the silver voice of laughing maid caused bitter thoughts to the friendless man. He had never owned to anybody how lonely and sad he had been; but now all he had suffered in his loneliness came back to him, and he was glad that Horton had thought of him. It is true that he was unaccustomed to society; that he knew scarcely half-a-dozen families; and that he heartily disliked 'going out;' but he 'believed in' Horton (as the saying is), and was convinced that all would be right with the Hortons. It was, therefore, with no small pleasure that he received from Horton the following note:

GROVE HOUSE, HIGH BECKHAM, *December 22.*

DEAR STUBBS—The governor, who hopes you will excuse him for not writing in person, bids me to say that he will be really grateful to you if you will condescend to share my double-bedded room during our Christmas vacation, as I am such a bore, and annoy everybody so awfully when I have no suitable companion, that I make the house intolerable. (You will understand that I am writing to dictation and under compulsion). So I shall expect you by the train which leaves Cambridge at 2 P.M. on the 24th. You must get out at the Reddenham Station, and I will drive over in the pony-chaise to meet you. Mind you come.—Yours always, LAURENCE HORTON.

If you refer to the guide (not yet published) to country-places which do not exist, you will observe that both Reddenham and High Beckham are in the county of Missex, not far from the river Spree, and that Reddenham Station is between Broxbourne and London. Now, not every train stops at Reddenham; Stubbs, therefore, with the usual thoughtfulness which characterises Cambridge men, intrusted his luggage to a porter, telling the place to which he wished to go, and asking whether there would be any change of carriages. The porter answered 'No,' and received a shilling for his trouble, or, more correctly speaking, for releasing Stubbs from possible trouble. But Stubbs would have done better to refer to a time-table, or to ask his question of the guard of the train, for at Broxbourne a voice was heard jumbling together (as only railway officials can jumble) the names of certain places, and adjuring passengers, who wished to get out at the places (the names of which it was impossible to make out), to descend forthwith and wait for a coming train. Stubbs considered that after his satisfactory interview with the porter he was absolved from all further bother, and travelled on contentedly until the train stopped again.

'Tickets, please,' said the collector.

'I want to get out at Reddenham,' remarked Stubbs affably.

'Reddenham! Lord bless you, sir, you've passed it ever so far. This is London, this is. You ought to have changed at Broxbourne. Didn't they holler out?'

'O yes,' said Stubbs; 'they holler'd out enough to split themselves, but I couldn't make out a word they said; and the porter I gave my luggage to at Cambridge assured me I shouldn't have to change.'

'Where did you take your ticket to, sir?'

'To Reddenham.'

Digitized by Google

'Let me look at it, please?—Oh, all right—there's one-and-fourpence to pay.'

'Come, that's rather too bad: I'm taken to a place I don't want to go to, and I'm to pay extra for it!'

'I can't help it, sir; you'll have to pay.'

'There's your one-and-fourpence, then; but how am I to get to High Beckham?'

The ticket-collector, having got his money, retired, as people usually do under the circumstances, and muttered something unintelligible; but an antediluvian old lady, taking an interest in Stubbs's youth and soft blue eyes, remarked: 'There's a coach from the *Black Bull* in Aldgate every Saturday at three o'clock.'

'Thank you,' replied Stubbs; 'but I want to be there by six o'clock this evening, and it is only Wednesday.'

The old lady had no further suggestion to make; so Stubbs was obliged to take a cab all the way, and, during his drive, had leisure to reflect upon the dismay he must have caused Horton, who he felt sure would have waited for him in the biting frost, and would chaff him terribly upon his usual luck; for 'Stubbs's luck' was a by-word at Unity.

CHAPTER III.—GROVE HOUSE.

A drive of more than an hour and a half (for the roads were slippery, though the horse was 'roughed') brought Stubbs to the door of Grove House. It was a house which stood in its own grounds, and entrance was effected through a high wall towards the road, so that Stubbs could not see what the place was like. But a vigorous ring at the bell brought out a ruddy maid, who shrieked out immediately: 'Oh, Mister Laurence, here's the missin' gentleman!' And the cry brought Laurence himself to the gate.

'Your usual luck, eh, Stubbs?' said Laurence, shaking his friend by the hand. 'I saw you pass in the train, and wasn't fool enough to wait; so you needn't apologise.—Come in, old boy, come in; you're just in time: old cook has been ringing the dinner-bell like mad, and the governor has just gone up to his room.'

Stubbs's luggage was left in the hall, and himself ushered into the drawing-room. There was no up-stairs drawing-room in cosy Grove House; dining-room and drawing-room were both on one floor, on the same side of the ample hall; and on the opposite side of the hall was the comfortable study, which served on occasion as breakfast-room.

'Come along, old fellow; I'll just introduce you to my sister, and then you can go and wash your hands,' cried Laurence, preceding his friend to the drawing-room.—'Ellen, this is my friend Stubbs.'

The most elegant figure Stubbs had ever seen faced about at these words, and the owner, coming forward from the fire-place, held out her hand without ceremony, and with a frank, beaming smile, saying in a voice which thrilled Stubbs with pleasure: 'I'm very glad to see you, Mr Stubbs. We were quite prepared for some misadventure, for the fame of your ill luck preceded you.'

And now entered Mr Horton, senior, who was Mr Horton, junior, with the inevitable changes wrought by age; perhaps, also, he had a little more urbanity in his manner, and a little less self-contentedness in appearance.

'How do you do, Mr Stubbs?' said he heartily. 'I am very glad indeed to see you.—Late! O dear no, not at all: I have only just come in myself.—Confound that woman; she'll pull the bell down.'

'It is the third time, papa,' said Miss Horton laughing, 'and you know cook gets frantic then.'

'O well, just take Mr Stubbs into your room, Laurence.—There's hot water, Ellen?'

'Yes, papa. At least it *was* hot,' added Ellen slily, when cook first began to ring the bell: 'I had it taken up at once.'

'Come along, Stubbs,' cried hungry Laurence; 'I'm almost famished;' and in three minutes cook was appeased, the soup was served, and conversation was fitful and monosyllabic. But when the inner man had been solaced with soup, and old Mr Horton had said: 'A glass of wine with you, Mr Stubbs; I'm very glad you've come,' and Laurence and Ellen had 'joined them,' and Laurence had laughed boisterously at the elaborate bow with which Stubbs (in honour, of course, of Ellen's presence) had responded to Laurence's careless nod, and had been duly reproved by Stubbs (supported by Ellen) for introducing college brusqueness into the family circle, the talking assumed a continuous flow. At length Ellen rose to leave the room, and Stubbs was not a little astonished at the coolness of Laurence, who shouted to his sister, as she went down the hall: 'I say, Ellen, I'm going to leave this door open, and you leave the drawing-room door open, and play lots of waltzes, and sing lots of songs: it will be cheerful for Stubbs over his wine.'

Stubbs was about to protest; but Laurence said: 'Pooh! she likes it; don't you, Ellen?'

And a laughing voice answered: 'Oh, very much. You must let me know when you are stunned, Mr Stubbs, or I may go on too long—for sheer pleasure.'

Old Mr Horton chuckled with amusement; and it was plain that the only son reigned lord-paramount over Grove House.

Stubbs had never felt so serenely happy in his life as upon that Christmas Eve, when he sat listening to the sweet, clear notes of Ellen Horton. But compliant Ellen was not tried very long. Laurence soon bade Stubbs to a pipe up-stairs (for the double-bedded room was not only a sleeping-chamber, but also a sort of study and divan), leaving old Mr Horton to his *Quarterly* and consequent nap, and dispensing with his sister's services in the gracious words: 'Shut up now, if you like, Ellen; Stubbs and I are going up-stairs to have a pipe.'

'Thy servant heareth,' replied Ellen with a laugh, but continued to carol for her own entertainment; and it is my private opinion that Stubbs, had he been asked, would rather have gone into the drawing-room to Ellen than have followed Laurence into the atmosphere of tobacco. But he was not asked. He was offered a pipe, and Stubbs had never been known to refuse that offer. When the two friends had imbibed sufficient nicotine, and acquired sufficient disagreeableness of odour, they descended to the drawing-room for a cup of tea. This was followed by a game of chess, another song or two from Ellen, and a display of frightful yawns from Laurence Horton, who, saying he had been skating all day, and was dog-tired, demanded

Digitized by Google

Stubbs's opinion about going to bed. It was past ten; they could have another pipe over the bedroom fire; and it wouldn't hurt either of them to go to bed early, as they had late hours enough at Unity. Stubbs was also tired, and ready for sleep; so, with a salutation to Ellen, and a smile at old Mr Horton, who was napping in his chair, they took their candle and retired.

CHAPTER IV.—AN APPARITION.

Stubbs had hardly fallen asleep that night when he awoke with a sound of bell-ringing in his ears. Half-asleep, half-awake, he fancied he could hear the opening and shutting of an outer door, then the whispering of soft voices on the stairs, and the subdued sounds of silver laughter at the entrance to the opposite chamber. But he was soon asleep again, and in the morning had nearly forgotten all about it, when, having interchanged at the breakfast-table 'Merry Christmas' with his friends, he observed Laurence's eyes fixed upon a plate, egg-cup, and cup and saucer, which had all of them evidently been already used.

'Oh, Lucy didn't stay at Mrs Kershaw's, then?' remarked Laurence.

'No,' said Ellen; 'Mr Kershaw brought her home late last night, and she was afraid she would disturb your Highness's rest, for she was merrier than ever.'

'*I* didn't hear anything,' said Laurence.—'Did you, Stubbs?'

'I've a dim recollection,' answered Stubbs, 'of hearing something very pleasant, like the tinkle of a silver bell; and though I wished to hear more, I grieve to say that I was too sleepy to'——

'That is fortunate,' interrupted Ellen, 'or you would have heard something very like the roar of two madcaps. I am sure poor papa must have heard us down-stairs.'

Papa, trying to look severe, admitted that he did, and that he thought it very unseemly conduct; against which charge Ellen made no further defence than to put her arm round his neck, and kiss his cheek, as she left the room on household affairs.

Laurence and Stubbs strolled out into the garden, for the sun was bright though the frost was keen, to smoke the after-breakfast pipe; and whilst the former went to speak to the gardener, whose cottage stood hard by the garden end, the latter had time to make his observations on the place, and puzzle his brains in guessing who was Lucy. He paced up and down, and round and round, gradually increasing his speed, for it was a nipping air, and he was chafing with the enigma, when, after one of the turns which set his back to the house, he heard a peculiar clatter on the path behind him. It came patter, patter, closer and closer, and it sounded like the tap of a dainty boot lightly struck on the frozen ground. He turned slowly round, and saw an apparition which startled his hat from his head, and his pipe from his mouth. The apparition was young and short, and wore a bonnet of the prevailing mode, but without a veil; so that the delicate skin, just stimulated by the frost; and the smooth black hair, hiding the tops of the ears; and the high, broad forehead; and the deep-blue eyes, and the well-formed nose, and the rich red lips, and the teeth that seemed made for nothing coarser than smiles, and the dimpled chin, and the oval face, were all revealed to the naked eye. The apparition, moreover, held in one hand a black muff, and with the other lifted a black dress, over which was a hooded gray cloak, so as to shew just a few inches of red petticoat and white stockings sprouting out of tiny black kid boots. The latter hand the apparition, having dropped the dress, stretched forth to the grateful Stubbs with modest unconstraint, and just the faintest blush, saying in tones which made his very heart to laugh: 'How do you do, Mr Stubbs? I'm so glad you have come.'

Stubbs was disposed to answer that he had never felt so well in his life, barring a slight tremor about the region of the heart and knees; but he resisted, and replied simply: 'You are very kind. Yes; I came last evening.'

'And you and Laurence were so fatigued that you had gone to bed before I came home; I heard'——

'I assure you I had no notion you were expected, or—or'——

'Oh, don't say anything polite, please; I was only afraid I disturbed you.—But where is Laurence? I want to wish him a "Merry Christmas."—By the way, I wish you one, Mr Stubbs.—To the gardener's, you say? Let us walk there; I'm so cold.—Where is your pipe? You were smoking a pipe when I first saw you.'

Stubbs had ignominiously thrust it up his sleeve, and now produced it ruefully.

'Pray, go on,' said the apparition; 'at least, if it is not out; and if it is, I daresay you have a match. I don't mind it in the least; Laurence has drilled me too well for that.'

But who was she? She was not a bit like Laurence, or Ellen, or old Mr Horton.

'Ah, Lu—glad to see you,' said Laurence with a salute, the cold fraternal style of which seemed to solve Stubbs's problem as she sprang forward with a 'Merry Christmas, Laurie, dear.'

'Same to you, Lu,' replied his worship coldly.—'So you've made acquaintance with my friend Stubbs.'

'Yes; Ellen told me I should find you both in the garden, and as you were not there to introduce me, I—I—no; I declare, I never said who I am. It never struck me you wouldn't know who I am, Mr Stubbs. I beg your pardon; I'm'——

'I ought to have known,' interrupted Stubbs, 'that you are Laurence's sister.'

'Oh, what fun!' said she laughing: 'and I'm not; and yet my name is Lucy Horton. I'm Laurence's first-cousin. My father and mother both died when I was quite a baby, and I have lived here ever since with my uncle, who is my father's brother; and I always call Uncle Horton papa, and he considers me his daughter.'

'Well, Lu,' resumed Laurence, 'have you been to the school this morning?'

'Yes, of course I have; that is why we didn't meet at breakfast—you know that.'

'Look here, Stubbs,' said Laurence smiling; 'Lucy goes out at unearthly hours on Sundays and Christmas-day, and all days of that sort, and teaches all the dirty little brats they can bribe to go to the Sunday school.'

Lucy looked grave and sad.

'Don't talk of them like that, Laurie,' she said gently. 'Very few of them are dirty, and nearly all of them are so thankful for every little attention;

Digitized by Google

or if *they* are not, poor little things, their parents are for them.'

Laurence laughed; and 'What do *you* say about it, Stubbs?' he asked.

'I should like to inquire whether it is not—on the Sabbath, at anyrate—breaking the fourth commandment,' replied Stubbs smiling.

Again Lucy looked grave and sad; and 'Please, don't joke about it, Mr Stubbs,' she said so earnestly, that Stubbs swore inwardly he would lose his right hand first.

And now the Christmas chimes pealed forth, calling Christian men to prayer; and a cheerful party were the Hortons and their guest, as they walked briskly along to the taper-spired, ivy-covered, simple-looking little church, not far from the ice-bound river. There was a cordial greeting for many a friend, a Christmas-box for the blue-nosed sweeper; and Lucy's little pupils, in quaint red cloaks, bobbed generally to the party, and smiled affectionately at the teacher herself. Some of the smaller ones ran confidingly up to her, and had a playful pinch of the cheek and a 'Merry Christmas, dear,' for their pains; whilst the elder ones said: 'Servant, miss,' not at all with a look of menial subservience, but with glances of love, as of those who frankly acknowledged obligations by no means humiliating. Stubbs experienced an unwonted sensation of peaceful content and devotional gratitude as he sat by Lucy in the ample pew, and as he listened to her voice, and joined his own with unusual fervour, and gladdened his eyes with the holly-twined pillars and the holly-formed letters above the altar, which had been carefully arranged in a segment of a circle, whereof the curve said: 'Glory be to God on high,' and the straight line: 'Peace on earth, good-will towards men.'

CHAPTER V.—A FAMILY GATHERING.

There was a joyous luncheon soon after church, for two carriages had arrived with welcome visitors. There were Uncle Tom and Aunt Maria, and Sister Mary with her husband James, and others not so closely related, and they all held out their hands to Stubbs, as if they had known him for many a year; and Stubbs felt, more than he had thought he could, that he was a link in the society of kindly men. And after luncheon, the hats sallied forth for a long walk, and the bonnets staid at home for exercise in the garden, or for womanly converse by the blazing hearth.

After the bracing walk came the Christmas cheer; and happy Stubbs sat next to Lucy. The talk flowed freely on with many an anecdote and many a jest; and when at last the drawing-room was reached, they sat in semicircle round the fire, and spoke of Christmas reminiscences: how one had been there who was now with the dead; how another would be thinking of them in a foreign land; how another was absent by reason of feud; and how good it is that enmities should cease at such a time. Then the strain grew more cheerful; and they conversed of love, and marriage, and children, as they wandered to the scenes of New-year's Day and the dancing delights of gay Twelfth-night. Each could remember how at such a time symptoms had shewn themselves in Jack and Gill which had betrayed their secret to observant folk, and had resulted in a trip by gray-horsed chariot to a fashionable church for change of name. Isabella's mother, Stubbs thought, should have been there to see how a Christmas evening could pass without profane music, and without 'cross questions and crooked answers;' for the questions were pleasant and straightforward, and the answers of a similar character. But inexorable time brought round eleven o'clock, and with it came the clatter of hoofs and the drawing up of carriages at the door. Then the time-honoured butler of the house appeared with a two-handled cup upon a silver salver; he placed it upon the table and retired, and Mr Horton whispered something to Laurence, who laughed aloud, and approaching Stubbs, said, with as much seriousness as he could assume: 'I must beg you, old fellow, to shift your quarters, and sit next to me; an ancient ceremony is about to be performed.'

So Stubbs, who had been sitting between Ellen and Lucy, reluctantly left his place, and formed one extreme of the semicircle, of which old Mr Horton formed the other. Then the senior, taking the cup in his hands, turned to Aunt Maria, who was his next neighbour, kissed her affectionately, took a sip, and passed the cup to her; and so it went round with kiss and sip until it came to Laurence, who, having received it from Lucy, and having glanced slily at Stubbs, whispered to her something which caused her to bite her lip, and look steadfastly at the fire. He then, having handed the cup to Stubbs with the recommendation to 'take a good swig—it's rare stuff,' walked across and saluted his father, saying, on his return, to Stubbs: 'By the way, you might have liked to kiss the governor; I daresay *he* wouldn't mind.'

But old Mr Horton relieved Stubbs by shaking his fist at Laurence, and shouting: 'You're an impudent young puppy, sir.—If I were you, I'd kick him, Stubbs.' And so with general laughter the guests departed, each having some invitation to impress upon the family, and each taking care to say to Stubbs: 'You'll come, of course, Mr Stubbs; you'll not expect any formal asking?'

CHAPTER VI.—SLIPPERY GROUND.

The Christmas vacation was passing joyously with Stubbs: there were skating, sleighing, billiards, dinner-parties, and dances with Ellen and Lucy for frequent partners. They were both beautiful dancers; but there was about Lucy's movements a grace which struck even the most unobservant; she moved with the ease of a gossamer on the gale. Stubbs had been the pupil of both; for he had confessed his inability to waltz. He could shuffle through a quadrille, he had said, and could shamble through a polka, but waltzes and that sort of thing were beyond him. So Ellen and Lucy had taken him in hand; and it must not be considered sheer stupidity on Stubbs's part, if, when Lucy drew her dress aside to more conveniently shew him the steps, he was very slow to learn, and required a great deal of that elementary instruction (for she had the prettiest foot and ankle imaginable). Moreover, Lucy skated exquisitely; and, though Laurence was fond of long excursions to distant spots when the river was frozen, Stubbs was more pleased when his friend was lazy, and would stay at home to skate upon the garden-pond; for then Lucy (who, of course, could not go everywhere)

Digitized by Google

would join them, and Stubbs had the privilege of taking off and putting on Lucy's skates. On such an occasion, Lucy had said with a laugh: 'Thank you, Mr Stubbs. Laurence says I ought to give you a copper.'

'We always give the lads coppers for putting our skates on,' said Laurence.

'But I have no coppers,' rejoined Lucy demurely.

'They pay in different coin in Holland,' remarked Stubbs tremulously.

'Oh, do they?' asked Lucy. 'Pray, how do they pay?'

'With the lips,' answered Stubbs boldly.

'They speak their thanks, I suppose you mean,' said Lucy archly.

'No; I do not: they—they—you can read all about it in books on Holland,' stammered Stubbs.

'Ah! but this is not Holland, you know: I must take care to have coppers another time;' and away flew Lucy on the outer edge.

And Stubbs said to his own heart: 'Here, by God's grace, is the one maid for me.'

At length the vacation was over, and Cambridge life began again. But Stubbs went back a new man. There was now a name which he blest when he rose in the morning, and when he lay down to rest at night. He had been objectless before, but now he would work with a view to an end. He had supposed he would glide naturally into holy orders; he would now aim to be worthy of his vocation, and of her whose religion was no sham. He would also strive for high honours, that he might have a reasonable chance of clerical preferment. Was it possible that Lucy guessed his feelings? Others certainly had; for once at a dance, as he stood talking to pretty Emily Field, whilst his looks kept wandering to where Lucy was dancing, Emily had said abruptly: 'I think Lucy the prettiest girl in the room.'

'So do I—by far,' poor Stubbs had admitted with more honesty than gallantry; but Emily had only laughed good-naturedly, and said: 'It is no use fishing for compliments from you, and I shouldn't have believed you if you had said anything else,' for Emily Field was as candid as she was pretty; and besides, there was some one, as she knew very well, who did not at all agree with Stubbs.

CHAPTER VII.—WHAT THE STARS SAW.

On flew hours, and days, and weeks, and then the Easter vacation came, and old Mr Horton gave Stubbs to understand that he and Laurence would be expected together. So he basked once more in Lucy's smiles, which were banished only once through him. It was on Easter Sunday, and Lucy had put on a new bonnet. She had been quizzed about it by Laurence, and had acknowledged that she always made a point of putting on something new on so notable a day; and then: 'Have you put on anything new, Mr Stubbs?' she asked innocently.

'Nothing but a new spirit,' answered Stubbs irreverently.

Then the sad, grave look came over Lucy's face, and Stubbs felt stabbed to the heart, for he fancied her eyes grew dim with tears; but she turned her head away hastily, so that he could not see; so hurt was she by the slightest irreverence.

On sped the weeks once more, and the May term brought plenteous leaves to the beautiful limes at the backs of the colleges, and cricket-matches and boat-races. And the Horton family went to Cambridge to see a boat-race, and the Unity boat made a splendid 'bump,' and Stubbs pulled stroke, and Lucy saw him. And when the Hortons departed, old Mr Horton said: 'Well, Mr Stubbs, you're one of us now, you know; you must come to us with Laurence for the Long Vacation, if you've no other engagement.'

And Stubbs replied: 'Upon my word, sir, you are very good, and I wish I could. But you see I go in for my degree next time, and I am going to read with a private tutor this Long.'

'Well, well,' said Mr Horton, 'at anyrate you can come to us for a week or ten days before you join your reading-party.' And so it was arranged.

Now, before the term was over, Laurence Horton and Stubbs had stumbled upon a topic of conversation which will crop up occasionally amongst young men at the universities and elsewhere. It was eyes—ladies' eyes; and Stubbs had maintained with considerable warmth that Lucy Horton had the most beautiful eyes in the world. Laurence had replied indifferently that it might be so, but that as he had always regarded Lucy as a younger sister, he had taken very little notice of them. They went on to noses, and it appeared that Stubbs had never seen any nose he liked so well as that which stood above the chin of Lucy Horton. Laurence whistled, and proceeded to mouths, when the mouth of Lucy Horton was pronounced by Stubbs the mouth of mouths. Hereupon, Laurence said abruptly: 'Stubbs, my boy, you are spoony on Lucy.'

This very common but very disagreeable language applied to 'the maiden passion for a maid' is usually considered tantamount to a criminal charge, and the person to whom it is addressed is popularly regarded as being 'taxed' with an offence, and it was therefore not without a slight blush that Stubbs replied defiantly: 'I know I am—what then?'

'Oh, nothing,' said Laurence; '*I'll* give you a testimonial.'

And as Laurence was lord-paramount over Grove House, Stubbs should, in Laurence's opinion, have considered the matter settled—but he didn't.

'You see, old fellow,' said Stubbs anxiously, 'I'm doubtful about my circumstances.'

'Pooh!' replied Laurence; 'you'll get a fellowship.'

'And if I do,' observed Stubbs, 'I shall have to give it up when I marry. The only way I can see is this: I believe I shall take a very fair degree, and so I may get a good mastership in a crack school, and take boarders. I confess I don't quite like the notion; but do you think Lucy would object?'

'Object!' echoed Laurence; 'it's just what she would like—a spotless parson and lots of children to look after.'

'Ah! but think of the details. Think of little Jones, please, sir, as the housekeeper would say, with the stomach-ache, and little Thompson with the mumps, and all sorts of miserable little Christians with all sorts of horrible complaints.'

'My dear boy, it's just what Lucy would be great in; she'd be like a mother to the whole lot.'

And so Stubbs determined that he would take the earliest opportunity of finding out how Lucy

Digitized by Google

was minded towards him. It happened, therefore, on a certain evening in early June, when he was paying his short visit at Grove House, he said to Lucy, as they sat in the drawing-room: 'I wish you would sing me a favourite song.'

'What is it?' asked she.

'*Il segreto per esse felice*'——

'And pray, what does that mean in plain English?' growled old Mr Horton, who disliked 'outlandish' words, as he called them.

'*The receipt for being happy*, dear papa,' said Lucy.—'I'll sing it with pleasure, Mr Stubbs, on condition that you afterwards sing *La Donna è mobile*.'

'I'll not sing *that*,' blurted Stubbs decisively.

'And pray, why not?' growled old Horton again. 'What does *that* mean in plain English?'

'*Woman is changeable*, dear papa,' answered Lucy. 'Why will you not sing it, Mr Stubbs?'

'I would rather not,' said Stubbs a little sulkily. 'I will sing *Com' è gentil*, or, *Oh! summer night* (to give the first words of the English version, Mr Horton), if that will do.'

'Oh, certainly, Mr Stubbs; it will do very well,' answered Lucy, looking just the least bit in the world annoyed.

The songs were ended, and, the evening being close, every one strolled into the garden for air. There was summer lightning playing about, and Stubbs and Lucy sat watching it after the others had gone indoors again. Stubbs suddenly drew his chair near Lucy's, and said with some confusion: 'Do you know why I asked you to sing that particular song?'

'Oh, was not that a beautiful flash?' asked Lucy evasively.

'I think I know "the receipt for being happy,"' continued Stubbs, moving his chair still nearer to Lucy's.

'There's another beautiful flash,' was Lucy's only remark; and Stubbs asked somewhat angrily: 'Can you guess why I wouldn't sing that *woman is changeable?*'

'Because you are wilful, sir,' answered Lucy archly.

'Indeed,' said Stubbs, 'that is not the reason.—Have you read the German poems I gave you?'

'Some of them; and I think them charming.'

'Do you recollect *The Three Students?*'

'O yes; it is beautiful—so simple, and so pathetic.'

'Did you see,' Stubbs went on, 'some pencil-marks against the words spoken by the third student? Did you notice that I had translated them to the best of my ability: *Thee I loved from the first, thee I love to-day; and I'll love thee when all things have passed away?* And did you know, Lucy, it was you that I meant?'

Lucy turned away her head and said nothing, but slid her fingers into Stubbs's hand.

What scene the sheet-lightning afterwards illuminated was witnessed by the stars alone; and they winked upon it after their fashion.

The consequence was that next morning Stubbs was closeted some time with old Mr Horton, and came from the interview with a smile of triumph.

CHAPTER VIII.—STUBBS 'PASSES,' AND PASSES AWAY.

The reading-party broke up at the beginning of October, and each member of it went whither he listed until the day arrived when he must return to college. What need to mention that Stubbs went to Grove House? There was all he prized on earth; and there he was proud to confess to himself that 'Stubbs's luck' was not so bad after all.

At last the cruel day arrived when he and Laurence must return to college. And once more time flew, and Christmas was drawing near again.

But Stubbs was not destined to pass it at High Beckham. The mathematical examination was coming on in January; and mathematics and 'rheumatics' were almost equally disabling to Stubbs. Fears were expressed even by his private tutor that he would not manage to 'pass;' and if he failed to 'pass,' he could not try for classical honours. Great, therefore, was the consternation at Grove House. All his future depended upon his 'passing;' a 'pluck' looked like utter ruin for him. Every effort, therefore, must be made; nothing must occur to disturb his mind. It was proposed, then, by old Mr Horton, seconded by Laurence, supported by Ellen, and acquiesced in by conscientious Lucy, that correspondence between her and Stubbs should cease till the dreadful examination was over. She should indulge him with one long letter on Christmas-day, and, with that exception, he must try to forget that pens, ink, and paper were used for anything but mathematics.

So Stubbs staid 'up' another Christmas, whilst Laurence went home to High Beckham; for Stubbs was Laurence's senior by a year. But Stubbs and I were in the same year; so we dined together on Christmas-day, and made moan together over our fate, and read together until the awful morning broke, when the doors of the Senate-house, at nine A.M., opened wide, and swallowed us up.

Upon leaving the Senate-house, on the last day of the examination, Stubbs rushed like a madman to college, called at his tutor's, obtained his *exeat*, or 'leave to go away,' and then flew to his rooms to strip off his cap and gown. To his astonishment, the outer door was open. It must be that his bed-maker was putting things to rights. He hastily opened the inner door, and by the dim firelight saw a sombre figure seated in his chair. The figure turned its head round—it was Laurence Horton.

'Horton!' cried Stubbs in amazement.

'Stubbs, old boy!' said Laurence in a low voice; and as he rose from the chair and stood by the fire, Stubbs saw with a shudder that he was dressed in black.

'Stubbs, old boy, I've some very bad news,' said Horton sadly.

The other turned pale and trembled, but said not a word.

'It's about Lucy, Stubbs. Do you think you can bear it?'

Stubbs simply nodded, sank into a chair, folded his arms upon the table, and buried his face in them.

Horton laid a hand gently on Stubbs's shoulder, bent down, and whispered.

There was silence for the space of ten minutes, whilst Horton stood with his hands before his face, and Stubbs gave no outward sign of consciousness, save a heaving motion of the back and shoulders.

At length, Stubbs looked up an older man, and said softly: 'When—when—when?'—— He couldn't complete the sentence.

Digitized by Google

'This morning at six,' said Laurence, knowing what the question should have been.

There was another long silence, and then Stubbs said faintly: 'I shall go at once—there is time to catch the train. Are you coming?'

Laurence nodded. A fly was brought, and the two friends went away together. As they travelled in the train Stubbs commanded himself sufficiently to ask for an account of what had befallen Lucy, and why they had not sent for him. She had been on the ice, Laurence said, on Christmas-day, after she had written her last letter to Stubbs; the ice had given way, and before she could be got out she had been thoroughly drenched. No bad effects shewed themselves immediately, but when a day had passed she became alarmingly ill. She grew better, and then worse, and that morning she had sunk rapidly. 'And why we did not let you know anything about it,' said Laurence in conclusion, 'you will learn best when you reach home. We had no fear at first, and at last we had good reason for silence.'

Ellen would fain have accompanied Stubbs into the chamber of death, but he begged that he might enter alone; so his grief was hidden from mortal eye. Clasped in one hand of the dead was a prayer-book which he had given her, and in the other was a paper, on which was written in pencil: 'Good-bye, dearest Willie, till we meet again. It was at my request that you were told nothing: it could have done me no good, and it would have injured you. Forgive me if it *seems* unkind; I could not *be* unkind to you. Papa promised you should take this from my own hand.'

So there was bitter mourning in Grove House, and the hearts of the red-cloaked pupils were heavy.

Stubbs 'passed,' but his performance in the classical examination was not equal to expectation. The examiners, of course, could not know that over all the papers they set hovered a sweet little face, and that all the words were turned to 'Lucy.' They put his name low down in the list; and his comrades talked of 'Stubbs's luck.'

But Stubbs cared little where the examiners put him. He had made up his mind for a different life from that which Lucy would have shared with him. He was only one-and-twenty, and Mr Horton's influence was sufficient to procure him a cadetship. So he departed for active life in India. He devoted himself to the practice of the sabre, and his swordsmanship was a matter of talk. In many a dangerous affair, with the once ruddy face begrimed with powder, and the soft blue eyes darting out fierce fire, he had plied his sword to terrible purpose, as he charged with his troop of irregular horse. And when Indian hate—whether called forth by greased cartridges, or long-borne tyranny, or natural malignity—broke out in open mutiny and murder, Stubbs and his troop did good service. Their Rhakee tunics, scarlet sashes, and picturesque turbans were regarded by the rebels as the outward garb of avenging furies. And thus it happened that on a day Stubbs came upon a party of rebel horse, commanded by the notorious Rumbeer Singh, who was commonly called, from his bravery, 'The Lion.'

'Remember, lads, the Lion is mine,' cried Stubbs, as they galloped down upon the enemy; and in a few seconds he and the Lion were hand to hand. Then Stubbs's swordsmanship stood him in good stead, for he had no mean antagonist opposed to him.

'That was well meant,' said Stubbs coolly, as he parried a vicious cut; but the Lion only grinned with rage.

At it again they went, cutting and thrusting, and wheeling their well-trained horses. At last, the Lion left an opening, Stubbs gave point, and the Lion fell. A loud cheer rose from Stubbs's men, but at that very moment a ping was heard, and Stubbs's saddle was emptied of its rider.

Over the Hortons' pew, in High Beckham Church, is a marble slab with this inscription: 'Sacred to the Memory of WILLIAM STUBBS, late Captain, S—— Irregular Horse, who fell gallantly fighting against the Indian Mutineers, January 7, 1858.' And under a glass cover in Laurence Horton's study at Grove House lies a little prayer-book, wrapped in a piece of paper. Pencil-marks are still faintly visible upon the paper, on which, as well as on the prayer-book, are stains as of blood; for Stubbs had carried prayer-book and paper close to his heart; and the Hortons had regarded Stubbs as their relation.

FRENCH BANK-NOTES.

THE French adopt a very elaborate plan of lettering and figuring their bank-notes, as a security against forgery. The notes are issued in groups called *alphabets*, of 25,000 each, comprising 25 *letters* of 1000 each; and the successive issues or alphabets are numbered in regular order. Not only is every note different from every other, in some of the symbols which it bears, but it tells how many notes of that particular denomination have been issued. M. Maxime Du Camp gives a particular instance, of a 1000-franc bank-note; it tells the date of issue at full, 25th May 1868; at two of the corners, the number 32 denotes the 32d alphabet, while a T denotes the particular letter of that alphabet; in two other corners, 369 denotes the 369th note in the series or letter T; while 0,793,369 denotes that there have been done to that date 793,369 notes, of 1000 francs each, printed and issued. Every note, in fact, has a kind of surname which assigns it to a particular family, and a kind of baptismal name which belongs individually to itself alone. From the mode in which they are printed, it is absolutely impossible that two notes can be *quite* alike; and this offers a powerful check to forgers. The system adopted at the Bank of England is different in its symbolic arrangement; but we have no reason to believe that it is less effective.

Everything connected with the manufacture of the notes is managed with extraordinary care. The paper is made near Coulommiers, in an establishment expressly reserved for this purpose. A commissioner, appointed by the bank, resides constantly at the mill. The paper is made by the hand method, in very small sheets for one note each. Each note bears a water-mark, which is changed according to a certain system. All the pieces of paper are closely examined in relation to their strength, dimensions, and purity; and so severe is the test, that sixty out of every hundred are rejected, and consigned to the pulp vat. The perfect sheets are packed in iron boxes, locked, sealed by the commissioner, and transmitted to the bank at Paris, where another

Digitized by Google

searching examination is made. The notes are packed in another and a larger receptacle, of which two high officials—the secretary-general and the comptroller—retain two keys; and without the concurrence of these two officials, the precious (though unprinted) bits of paper cannot be taken out of the strong box.

So much for the paper. Now for the plates. Taking the 1000-franc note as a specimen, the steel plate for it cost M. Barre three years of labour; electrotypes are taken from this plate, for printing from; and as 50,000 impressions can be taken before the electrotype is worn out, a succession of such casts will render it unnecessary to print from the steel plate itself. For notes of other and lower denominations, photographic as well as electrical agency is brought into requisition. An elaborate design is drawn on a large scale; a reduced photograph is obtained from this; a plate is engraved from the photograph; and electrotype casts are obtained from the plate. This intervention of photographic aid is said to render the processes more rapid, more sure, and less costly. The plate for the 100-franc note is so exquisitely engraved that it took five years to prepare.

When a new batch of notes is to be printed, an equivalent number of the choicely prepared and preserved sheets of paper is handed over to the superintendent of the printing-office. This office is among the inner buildings of the Bank of France, and is governed by very rigorous rules in all things. The operatives are all picked men, skilful, active—and silent. The sheets, the ink, and the matrixes of the plates are kept securely under lock and key until actually wanted. The printing is effected by steam-worked presses. The ink is blue, and its composition known to only a few of the authorities. An inspector goes his rounds during the continuance of the operations, watching every press, every workman, every process. A beautiful machine, distinct from the press, is employed to print the variable numbers on the note; fed with sheets of paper, it will number a thousand of them in succession, changing the digits each time, and scarcely requiring to be touched meanwhile; even the removal of one note and the placing of another are effected by automatic agency. At every successive stage, the note is examined. So complete is the registration of everything, that a record is always at hand of the number of sheets rejected ever since the Bank of France was established, be it for defects in the paper, the printing, or the numbering. When the master printer has delivered up his packets of printed and numbered sheets, each note is stamped with the signatures of the secretary-general and the comptroller. This completes the *creation* of notes. The notes so created are kept in a strong box, of which the secretary-general and the comptroller have keys, and are retained until the day of *issue*. The chief cashier tells the governor that he wants a new supply of a particular denomination of notes, the governor tells the council, the council tell the secretary-general and the comptroller, and these two functionaries open their strong box, and hand over the notes demanded. The notes at this time are not really money; they do not become so until the chief cashier has put his signature to each, and registered its number in a book.

The life of a French bank-note is said to average two or three years, and does not terminate until the condition is very shaky indeed—crimpled, pierced with pin-holes, corner creases torn, soft, tarnished, decrepit while yet young. Some have been half-burned; one has been found half-digested in the stomach of a goat, and one boiled in a waistcoat-pocket by a laundress. No matter; the cashier at the bank will do his best to decipher it; he will indeed take an infinity of trouble to put together the ashes of a burned note, and will give the owner a new note or the value in coin, if satisfied of the integrity of the old one. The bank authorities preserve specimens of this kind as curiosities, minute fragments gummed in their proper position on a sheet of paper. Very few of the notes are actually and irrecoverably lost. During the last sixty-seven years, 24,000 bank-notes of 1000 francs each have been issued, and of this number 23,958 had been returned to the bank by the month of January last: leaving only 42 unaccounted for. Whether these 42 are still in existence, or have been burned into uncollected ashes, or are at the bottom of the sea, or elsewhere, is not known. Of 500-franc notes, 24,935 have been returned out of 25,000. The bank holds itself morally and financially responsible for the small number of notes unreturned, ready to cash them if at any time presented.

The bank sends the old notes again and again into circulation, if verified and usable; but they are examined first, and any that are too defective are cancelled by stamping a hole in them. These cancelled notes pass from one official to another, and are grouped in classified bundles; the book that records the birth of each note now receives a notification of its civil death; and after three years' incarceration in a great oak chest, a grand conflagration takes place. A huge fire is kindled in an open court; the defunct notes are thrown into a sort of revolving wire-cage over the fire; the cage is kept rotating; and the minute fragments of ash, whirled out of the cage through the meshes, take their flight into infinite space—no one knows whither. The Bank of France prints a certain number of notes per day, and destroys a smaller number, so as to have always in reserve a sufficient supply of new notes to meet any emergency; but the actual burning, the grand flare-up, takes place only about once a month, when perhaps 150,000 will be burned at once. The French go down to lower denominations than the Bank of England—having notes of 100 francs and 50 francs, equivalent to L.4 and L.2. There must be a great deal of printing always going on in the Bank of France, seeing that, in 1868, they issued 2,711,000 notes, of an aggregate value of 904,750,000 francs (averaging about L.13 each), and burned 1,927,192, value 768,854,900 francs.

It *sounds* a very dreadful thing, for 30,000,000 sterling in bank-notes to be wilfully burned in one year! But there is always a phœnix to rise from the ashes: the bank can regenerate as fast as it kills. The Bank of France, in 1846, put in circulation a beautiful crimson-printed note for 5000 francs; but the French people did not like notes of so high a denomination, and all but a very few of this kind have been returned and cancelled. On one occasion, a superb individual, wishing to pay a dowry in handsome style, obtained twelve notes of 5000 francs each for the purpose; but they were returned the very next day by a banker, who much preferred smaller notes for his general

Digitized by Google

purposes. The notes now regularly kept in circulation in France are those of 1000, 500, 100, and 50 francs.

When photography became established as a practical art, it was found that bank-notes printed with black ink lent themselves too readily to the machinations of the forger. Thereupon, the Bank of France determined to employ blue ink, which baffles the photographic imitator, and to have some engraved device or other on both surfaces. This plan has been completely successful. In regard to other modes of falsification, an experienced chemist is constantly employed in studying all new discoveries that may perchance be brought into requisition, in order to devise means of averting roguery. Forgery of the notes is now extremely rare. On one occasion, three persons attached to a deposed royal prince were found to have been concerned in a deep-laid scheme of note-forgery; a packet containing twelve false notes of 1000 francs each was presented to be cashed, but the fraud was detected in time to avert loss. About 1853, a more determined attempt upon the bank was made. False 100-franc notes came to the bank with great rapidity and regularity. They were so admirably executed that no banker, money-changer, or trader could detect the fraud, and therefore no reason presented itself for refusing to take them in the ordinary way of trade. The experts at the bank alone detected them by means of a tiny black spot near the figure of Mercury. For eight years continuously did these notes make their appearance, defying all endeavours on the part of the authorities to discover the malefactors. The bank did not like to make the fraud known, lest it should shake the confidence of the public in the 100-franc notes generally. At last the clever scoundrel was discovered; he was an engraver, and it was found that he had successfully put into circulation false notes to the value of nearly 200,000 francs. His end was strange and horrible. Transported to Cayenne in 1862, he tried to escape into the Dutch settlements; faint and exhausted, he became fast embedded in the thick slimy mud of a river, and was there *eaten alive by crabs!*

The Bank of France makes all its payments in notes, with the necessary exception of sums under 50 francs; but as these notes can be immediately cashed in an adjoining office, the claimant has at all times virtually the command of specie payment. In 1868, there were 722 million francs' worth of notes exchanged at the counter for gold. One million of francs in the larger denomination of notes will only weigh 1644 grammes, and can be packed into the size of a large octavo volume. M. Maxime Du Camp states that he one day saw notes to the value of 105 million francs (L.4,000,000) spread out on one table. Nevertheless, these notes *do* make a formidable pile when assembled in great number. He relates an anecdote of a tanner at Dijon who declared publicly that the annual budget of France (about 2000 million francs) would reach in bank-notes to the top of the steeple at St Bénigne Church: a busybody took the tanner up before the police for having said something seditious. The tanner proved his case, with abundance to spare; for it was shewn in evidence that 2,000,000 notes of 1000 francs each would make a pile 200 mètres high—a height which certainly no steeple at present reaches, whatever may be said of the Tower of Babel.

The approach to the vaults of the Bank of France is by a descending stone staircase, the masonry of which would defy the pick, and so narrow that two persons cannot pass it abreast. Four iron doors present themselves, each secured by three locks; and two keys kept by two officials must be used before any of the locks can be opened. Within the vaults are ranged leaden chests, containing bags each filled with 10,000 francs in silver; whereas the smaller bags of gold, also containing the value of 10,000 francs each, are heaped up in piles. Silver ingots, deposited by bankers and money-changers as security for advances, are ranged symmetrically in masses; but the ingots of gold, by their yellow brilliancy, are more suggestive of exhaustless and most tempting riches. When our authority visited the place on a recent occasion, the vaults contained—in leaden chests of silver coin, bags of gold coin, and ingots of the two metals—the prodigious value of 726,275,666 francs 68 centimes (let us give the odd centimes, by all means). This sum approaches very nearly to 30,000,000 sterling.

WALLIS'S PICTURE OF CHATTERTON.

On his truckle-bed outstretchèd, heedless now of smile or frown,
Half-undressed the poet lieth, with his white arm dangling down:
From his cold and clammy forehead fall his rich, sweat-matted locks;
And the dear dead face's calmness human pity courts and mocks.

In the cold air of the attic, by the stripling's fragile frame,
Just a puff of smoke ascendeth from the taper's dying flame;
And the floor is strewn with papers, lying torn in tattered slips,
With the curse on Bristol, breathèd by the poor, pale, poisoned lips.

Through the half-oped garret casement dreamily the dawn creeps in,
Touching tenderly the sleeper—child of Sorrow, and of Sin:
Soon the world without will waken, poorer by a poet heart,
And all heedless underneath him, crowds will press unto the mart.

Oh, the magic powers of genius! oh, the painter's potent spell!
Praise be to thy pencil, Wallis; thou hast done thy brave work well;
And the tragedy enacted on that memorable day
Lives to us in all its horror, preaching to our hearts for aye.

WAS SHE WORTH IT?

CHAPTER I.—THE ASSEMBLY-ROOMS OF BARNCOTE IN 1847.

THE Upper Ten Thousand of Barncote are gathered together at one of their monthly assemblies. It is the 31st of December, and in consequence, the ball is a more brilliant and 'dressy' affair than usual. As a rule, the Barncotians, in those days, set their faces against any sumptuary extravagance, and the monthly assemblies usually entailed on Paterfamilias only the expense of a few yards of ribbon and a bit of white muslin.

This is an exceptional occasion: the officers from the barracks are present *en masse*, and, by special request, in uniform; the band of the 4th Bays is also in attendance, and relieves the cornet-à-piston and three fiddles with a strident galop or rattling polka. The female Barncotians were arrayed in great splendour, and in all the bravery of diaphanous muslins, shimmering satins, and other millinery properties. The black coats present were rather at a discount; not that the young ladies were not fully aware of the temporary character of a flirtation with the 'Bays,' and the much higher chances of a satisfactory settlement with the young native lawyers, brewers, maltsters; but that, round dances not having been long in vogue in the county, the natives, as a rule, could not or would not dance them; so that when the brass band struck up a lively polka, there was a general move on the part of the civilians to the card-rooms adjoining for a little loo.

There were two card-rooms, one leading out of the other. In the first were a couple of whist-tables. At one of these sat Colonel Poyser of the Bays, a gray-haired old soldier; Callum, the Barncote brewer; Mrs Poyser, the colonel's wife, a clever meek old lady, whose silver hair was done up in rolls on the top of her head; and Lady Whittaker, the relict of a city grandee. Leaning over her father's shoulder, her curls getting in the old man's way as he sorted his cards, and causing him to puff and snort, and wave his hands impatiently in the air, stood Lucy Callum, as fair a vision as ever maddened the heart of a susceptible Barncotian. Sweet Lucy Callum, pen and ink can't picture thy charms, dear fair Saxon maiden! That her hair was nut-brown—*not* shot with gold or tinged with red, but of the extinct good old-fashioned russet brown; that her skin was as fair and pure as the white lip of a sea-shell, tinged with the hue of youth and health, and her rosy lips just parted, shewed the dearest little teeth in the world; that her eyes were of a deep lucid gray, fringed with long lashes a shade darker than her hair: to tell you all this is only waste of time; you would fail to realise the sweetness of Lucy Callum. And yet I wish I could paint her for you. She is of a type of womanhood now extinct, of a simpler, easier world, of a more quiet and faithful time. —*Forty-seven*, ah me, since then, the world has changed from an old respectable, staid, and proper world, to a raddled old harridan dancing the Cancan!

There stood by the vicar's wife at the second card-table, pretending to look over her cards, but in reality drawing long draughts of love from the contemplation of Lucy Callum, a young and handsome fellow of some twenty years of age. This was Tom Bellamy, a distant relative and ward of John Callum the brewer.

The entrance of the young men from the ball-room disturbed the whist-players, and the game was suspended for a moment, as they passed through into the inner room.

Colonel Poyser looked anxiously from under his bushy eyebrows, but none of his youngsters were of the party; only Captain Prodder and Major Bond, who could take care of themselves. The Bays was a quiet, gentlemanly regiment, and old Poyser was like a father to his youngsters, and kept them away as far as he could from the temptations of unlimited loo. Whist the old man encouraged, and didn't mind what the points were, but 'those gambling games' he set his face against most sternly.

Tom Bellamy made a move as though to pass between the red curtains into the inner room.

Callum looked up over his gold eye-glasses: 'No loo to-night, Tom.'

'Well, I'll just take a hand, uncle,' said Tom carelessly.

Old Callum was wonderfully fond of a little quiet gambling himself, and report said that at the private card-club at the *White Hart* a thousand or two would sometimes change hands on a single night; report said also that the change had frequently been unfavourable to Mr Callum. His nephew therefore felt as though Satan were reproving sin, when his uncle (titular: he was only a distant cousin really) admonished him for losing twenty pounds or so at loo.

But Lucy left her father's side, and took Tom by the arm: 'Dance this polka with me, Tom. I've refused half-a-dozen, to keep a dance for you, and then you've never asked me once.'

'Well, you know,' said Tom, 'I ain't much good at the polka; and as for asking you, there's been no getting near you all the evening, for these soldier fellows.'

You see Tom, though tremendously in love, was but a young cub. A long-legged young cornet here entered, and carried off Miss Callum. Tom had missed his chance, and was as sulky as a bear. He walked into the next room. Some sweet little cherub, however, sitting up aloft, had determined that Tom should not drop his money that night. Young Winter, a cool and cautious hand, who never continued playing when the cards were against him, and who, having been twice looed for five pounds, had resigned his seat, on the pretence of going to find a partner for the Lancers—young Winter caught hold of Tom by the arm: 'Come with me, Tom; I have something to say to you of importance.'

Archibald Winter was a few years older than his friend. He was now a junior partner in the firm of Winter, Boothby, and Winter, Solicitors, of Pump Street. His female friends called him ugly. He was short and thick-set; his dark hair hung down to the velvet collar of his coat: a projecting forehead and heavy brows shadowed a pair of keen and piercing eyes. He was not prepossessing, but powerful-looking. Not popular with the youth of Barncote, he was reputed 'near,' and a keen hand; but he didn't consort much with young men, and the only friend he had was Tom Bellamy.

'I want to have a long talk with you, Tommy; and we'll go across to the billiard-room, and have a smoke: there'll be nobody there to-night, and the marker's got a holiday, so we'll have a quiet chat all to ourselves.'

Tom walked out rather unwillingly; he didn't like leaving the game in the hands of the long-legged cornet, although he didn't know how to play his cards when he had them.

The billiard-room was a subscription affair. It was on the ground-floor of a house, the upper rooms of which were occupied for offices. A deaf old woman lived in the basement, and looked after the rooms. Winter closed the outside door, and bolted the latch. There was a good fire burning in the room; he turned up the gas, and pulled off the linen cover of the table: 'Tom, I'll play you a level fifty, and take eight to five in half-crowns.'

You see Archibald was a canny youth, and liked to be paid for his time even when counselling a friend.

'I can't do it, Archie; but I suppose I must try.'

Winter gave a miss in balk, and Tom twisted in off the spot, brought the red over the middle pocket, scored up to forty, and muffed a cannon a baby couldn't have missed. Tom made a face, and looked at the end of his cue.

'It isn't chalk that's wanting, it's caution,' said Winter, proceeding to make half-a-dozen easy little cannons; and then holding the red, and finding his opponent under the cushion, he gave another safe miss; and Tom failing to get in again, he won the game in a succession of easy breaks.

'Trouble you for a sov., Tommy. And now, let's sit down, and have a chat and a pipe. Tommy, you'll be of age in a week.'

'Did you bring me here to tell me that?' said Tom sulkily. The loss of his loo, of his Lucy, and of his sovereign, had rather soured the youth's temper.

'Now, Tom, I want to know what you're going to do?'

'As to what?'

'As to making a start in the world.'

'Well, that's pretty well decided for me. I'm to go into my uncle's business.'

'What! brewing?'

'Yes.'

'Then why did your uncle incur the expense of making you a scientific farmer?'

'Five years ago, when I went to old Scrumble to learn farming, my uncle didn't intend to make me a brewer.'

'Oh! two years ago, then, when you went to Barber, to learn surveying and agency-work?'

'Two years ago, my uncle told me he couldn't take me into his business.'

'Ah! Then how is it the old chap has changed his mind?'

'He told me this morning. He has had such good accounts of me, that he thinks he shall be safe in taking me into the business.'

Winter grinned. He got up and opened the door, looked out into the passage, closed the door carefully, sat down, and whispered: 'Do you believe him?'

'Why shouldn't I?'

'Look here, Tommy. Five years ago, your uncle was a rich man, and the brewery bringing him a fortune. Two years ago, the brewery was flourishing, and your uncle firm on his legs. Now—listen, Tommy—he isn't worth a penny!'

Tom jumped on to his feet as white as a sheet: 'Nonsense, Archie.'

'I know it, Tommy. He's lost five thousand each year for the last two years on the hop-duty.* He's been buying up hops for a rise for the last two years, and they've been going down ever since. He's lost fifty thou. at least by that; and he's been going on awful at loo too. I tell you, Tom, and I know it, he can't hold out another six months. It is Birkin's bank that keeps him up: he owes them so much, they're afraid to stop him. Where's *your* five thousand, Tommy?'

'In consols, I know: he told me so.'

'*He told you so*,' said Winter scornfully. 'Look here; unless you act at once, that'll go too, if it hasn't gone already.'

* In 1847, there was a duty on hops, and large sums were wagered on the probable amount.

Digitized by Google

'That can't be, Winter. Birkin the banker is the other trustee, and the stock couldn't be sold without his sanction.'

'Well, you're so far right. If you insist on having the stock transferred to you when you come of age, they'll find either the stock or the cash. But Tommy, boy, keep it out of your uncle's clutches, or you'll lose it all, stock, lock, and barrel.—Now, look here, old fellow; Lord Theynam was at our office to-day.'

'Well, what of that?'

'He came to ask the governor—you know we are his local solicitors—if he knew of a clever young fellow to take his agency here. He's going to pension off old Birks. The salary ain't much—one hundred and fifty pounds a year—but it's fair to start with. His head man, you know, gets twelve hundred pounds a year. The governor called me in; and I mentioned your name, and his lordship knew it at once; said your father had been of great service to him; and, in fact, he'd have sent for you then and there, but I told him you weren't in the town; and he's coming in again on Saturday.'

'I don't care much about lords,' said Tom ungraciously, 'and I'd rather not be a flunky.'

'Dash it, man! the money don't smell. Tommy, my dear old boy, here are two roads in life: one leads to a competency and a sure and respectable position in life; the other, to bankruptcy, ruin, death! Tell me now, before you go, you'll ask Lord Theynam for this agency?'

Tom took up a cue and began knocking the balls about. Just at the moment, the band in the assembly-rooms struck up. The band and the dancers had come in refreshed from supper. It was a joyous galop, and the quick beat of eager feet shook the room in which they stood.

Tom caught the impulse of the moment. 'Come along, Archie; let's look up some partners. I'll see you about business in the morning.'

Winter followed with a grunt of dissatisfaction.

Pretty Lucy was very angry with Tom for playing truant, and would hardly speak to him till the party broke up. It was a lovely night, the full moon throwing a golden band of light over the rippling waves; each tiny ripple, as it sped on to the shore, carried the glory with it, and shattered it on the shingle. The beat of the waves seemed to make a harmony with the beat of two human hearts. Anyhow, before they reached No. 1 Montgolfier Terrace, Tommy and Lucy had made it up.

CHAPTER II.—NO. 1 MONTGOLFIER TERRACE IN 1847.

Tom Bellamy found his way to his uncle's house as soon as he decently could, on the morning after the ball. He wanted to assure himself that the episode of the night before wasn't only a delightful dream. When Lucy Callum appeared in a pink morning wrapper, looking pale and sorrowful, his heart gave a mighty throb as he thought: 'She has changed her mind!' But Lucy set his fears at rest, nestling in his arms for a moment, and allowing him to take two or three little kisses. But she looked up into his face with such wistful eyes: 'O Tom, poor papa is *so* ill!'

'Why, what's the matter? He looked so well last night.'

'Yes; but he was taken ill this morning: the doctor says it's paralysis; he has been insensible for a long time, and Dr James says—— O poor papa!' And here Miss Lucy broke down, and sobbed her heart out against Tom's waistcoat.

Tom didn't know exactly how to comfort her. He was fond of his uncle, and shocked at the idea of his death; but he couldn't hit on anything likely to console his sweetheart. 'These trials, you know,' he began—'it's all for the best, dear: there's a brighter world.' And then it struck him that a world without short whist, unlimited loo, old port, and brandy and water, however bright it might be, wouldn't suit the old gentleman; and so he took to kissing the poor damp salt cheeks that were turned up to him for sympathy; and by-and-by the great soft-hearted boy began to blubber too; and that seemed to do her good, for she stopped crying, and began to comfort Tom, stroking his hair off his forehead, and calling him all sorts of pet names; and then, when Tom had mopped himself up, and was thinking what a great booby he was, she ran away to look after her papa.

After a while she came back. 'He's sensible now, and asking for you.' Tom crept up-stairs, and stood by his uncle's bedside. The old man had the mark of death on him. 'Tom,' he whispered in a hoarse voice that seemed to come from a long way off—'Tom, look after Lucy, and stick to the business, for better or worse.'

'By God's assistance, I will!'

You see Tom's feelings had been wrought up a good deal; especially seeing that he was thinking more of Lucy than the business, which the old man had coupled with her.

The dying man took Tom's hand and pressed it: it wasn't the sort of hand-clasp that a father would give who has just bestowed a beautiful daughter and a large fortune on a suitor, but an appealing, clinging, deprecating squeeze; at least so Tom felt it; and perhaps he was right.

Well, John Callum died and was buried; and after the funeral came the reading of the will. It happened also that the day of the funeral was Tom Bellamy's birthday. The will was dated a week before the old man's death. It was short and to the purpose. He bequeathed everything of which he died possessed, after paying his just debts and funeral expenses, to his daughter; and appointed Thomas Bellamy sole trustee and executor. It was his wish, he had added to his will, that his daughter should marry his ward and kinsman, if, as he believed, there was a mutual attachment between them; but in any case he was satisfied to intrust his daughter's welfare to Thomas Bellamy. There were present at the reading of the will, Winter, father and son (the former officiating); Mrs Drux, Callum's widowed sister; old Birkin, the banker; Lucy and Tom. As nobody except the two lovers had any expectations from the will, there was a general grunt of approval. Winter, having folded up the will, looked round on the company, and said: 'I believe I, ahem, violate no, ahem, secrets, when I inform you that there is, ahem, every prospect that our esteemed and, ahem, departed friend's wishes will be fulfilled. On this, ahem, sad and, ahem, trying occasion, it is perhaps not, ahem, seemly to enter into, ahem, congratulatory matter, but we all wish 'em well, and God bless 'em.'

Lucy came over to Tom's side, and put her hand

Digitized by Google

into his. It was a pretty little hand; and Tom, who didn't know exactly what to do with it, had almost made up his mind to have another cry—he was a soft-hearted fellow, and his heart was very full—when he caught sight of Archibald Winter's face in the pier-glass. It was so wild-looking and livid, that he hardly recognised it as his friend's. He turned quickly round; but Archie had recovered himself, although he was still white in the face. This little incident quite put Tom into spirits. His love-affair had been almost too quietly and quickly arranged; but to find that there was a jealous rival in the field, and that rival his best friend, why, it was quite thrilling; and now, too, he remembered the conversation of the other night. 'So that was your little game, Master Archie, was it, to put me off the scent, eh?' said Tom to himself; and he began to fancy that he should find his uncle's affairs in better order than that sly fox had led him to expect. I don't think he was a bit angry with his friend, but rather flattered and proud at the tribute paid to the value of the prize he had secured so easily.

The guests went out; the banker taking young Tom by the hand, whispered: 'Call at the bank to-morrow, Tom, about eleven.'

Tom and Lucy and Mrs Drux sat over the fire to talk about the future. Tom, you see, was master of the house now, and of all within it, of the big brewery in Albany Street, of the drays, and wagons, and horses, and men, and all things thereunto pertaining; and he was a little bit set up by his importance.

Mrs Drux was a comely old dame, portly and dignified. She would tell you that she came of the first families of Wessex, and so indeed she did; although her forbears were but bankers and brewers and farmers, and such-like. For the men of Wessex have not faded (or had not then faded) in the shadows of great houses. The land was held not by great territorial lords, but by yeomen and squires. Lords there were, and big houses and great parks; but their big houses were but county villas, in the estimation of the Wessex men. They did not dominate the county, and shut out the sunlight from the plain county-folk. These Wessex people were narrow and exclusive too in their society. Trade did not disqualify; but it must be carried on by a Callum, a Poyser, a Birkin, or a Sponge. Their cliques and coteries, their circles and assemblies, are all dead and withered up; their people have worshipped strange idols, and bowed the knee to Baal.

'Now, my dears,' said Mrs Drux, beaming amiably on the two sweethearts, 'I'm an old woman, and can speak my mind, and there's no use in shilly-shallying. I know it was poor dear John's wish that you should be married at once, and I don't see why not. The business wants looking after, and Tom can manage it much better as owner and master, than as executor to his poor uncle. Here's the house all ready for you, and wanting a master; and I daresay you won't turn your old aunt out of doors just yet. You know, Tom, dear, that I've got ten thousand pounds of my own, which John invested in the business, and gave me five per cent. for; and I paid him two hundred and fifty pounds a year for my keep, and so on; and we can go on in the same way for a while, till you find the old woman a nuisance. So, Tom and Lucy, I say this day month for the wedding-day. No fuss, but just slip out and get married; and then take a week at Boolong or the Isle of Wight, and come home to business again.'

Lucy knelt down by her aunt, and hid her face amongst her voluminous skirts. 'O aunt,' she whispered, 'it can't be so soon.'

'Dear heart alive, and why not? La! your poor dear papa, that's in heaven now, will be rejoiced at it; but there—I shall leave you and Tom to talk it over.'

And so they settled it.

Tom's interview with the banker was protracted. Archie Winter had been right so far—the bank had made heavy advances to his uncle. But the old banker spoke so quietly and kindly, shewed such confidence in Tom's prospects, so flattered his self-love, that Tom found that, almost before he knew it, he had undertaken to take over the business, with its liabilities, on his approaching marriage—a step which the old banker cordially and warmly approved. He was a kindly old soul, poor Birkin, and honestly desirous to do the best for everybody, consistently with the interests of the 'bank.'

'And now, my boy, about this little fund of yours—the five thousand pounds, you'll bring that into the business, of course?' Why, yes, of course, Tom would. 'Well, brewing does pay better than consols, eh, Tom? You must sign a power of attorney before you leave, and we'll sell them out for you.'

It wasn't till Tom had got to his own lodgings, and was smoking a pipe, that the thought struck him: 'Where's Mother Drux's ten thousand pounds? Ah! it's in the business somewhere; and my five thousand pounds is going to join it.'

He started off to the brewery, to look over the books; but he couldn't make head or tail of them. Panks, the book-keeper, had been keeping the books for the last thirty years on the same principle, and *he* couldn't make head or tail of them. Tom made up his mind to have an alteration here, and walked off to see his lawyer, after signing a few cheques from a brand-new cheque-book, which Tom took a little pride in. It was something to have a banking-account in those days. *Now*, every man who has cash or credit to the tune of twenty pounds, may have his account, and draw his cheques just like a millionaire.

Winter senior was at the office, and glad to see his young client. Tom explained his wants, and his dissatisfaction with the state of the brewery books. 'If you'll take my advice, Tom, I wouldn't make any change at present; keep things going for a time, till you feel qualified to take the management yourself.'

'Oh, as for the books,' said Tom, 'I'll square them up soon enough. I'm not going to have a lot of idle fellows eating up the business. There's Panks the book-keeper, and two clerks, and two travellers, and a collector, and a boy, and an old man to take care of the office, and an old woman to take care of the old man. I'll do the whole lot myself, and make a clearance of the crew.'

'Gently, Tom, gently; these things mustn't be done in a hurry. Leave things alone, and learn the business, Tom.'

'Well, that's just what's troubling me,' said Tom: 'I know nothing of brewing.'

'You don't want to, Tom; you don't want to. What's required is management, Tom,

Digitized by Google

management, and keeping the connection together. Your name stands high here, Tom: all the magistrates know you, and knew your father before you. We 'll have you on the borough bench, Tom, the next batch that 's made.'

'Thankee,' said Tom; 'but still, don't you think if I'm to brew good beer, I ought to know something about the way?'

'Listen, Tom. It isn't by brewing good beer you 'll keep up the business. You don't suppose anybody will drink your beer who has the choice of Bass or Allsopp, do you? Management, Tom; management—that 's everything! To buy up all the little public-houses, and advance money to the big ones; to open new houses, and get licenses for your own men, and keep Humby's people out. Then you 'll have to sweeten the police; that you 'll have to do through your subs; and the worst of that is, that it 's wasteful, such a lot of money sticks in the way. Then there 's a good deal of trouble in getting hold of public-houses. Why, I know lots of houses your poor uncle has taken on lease for thirty, forty, and sixty pounds a year, and lets again at ten, or fifteen, or twenty pounds.'

'I wonder,' thought Tom, 'if Mrs Drux's ten thousand pounds is invested in that sort of property?'—'That don't seem a profitable way of investing money—does it, sir?' he said aloud.

'*Profitable*, bless me! all that comes out of the beer.'

'And out of the pockets of the clodhoppers who drink our beer, sir.'

Winter looked up sharply—he didn't approve of that way of handling topics. 'Well, Tom, I 'm rather busy just now; but let me advise you at once to call on all the gentry of the county, and solicit their patronage. You won't get anything out of it at first; but they 'll like it, and it 'll be remembered at licensing-time; and don't go in a stuck-up sort of way, but just as a tradesman, and have a big card printed "Mr Thomas Bellamy, Common Brewer, solicits the favour of the continuance of the gracious patronage accorded to his deceased uncle." There—something of that sort. And, Tom, put on a black dress-coat; it looks humble and unassuming, and they *do* like it so. And you must be friendly with the butlers, Tom, and tip them well; they 've often saved money, and are looking out for public-houses. They won't drink your beer, Tom; but for harvest-homes and tenants' dinners, and that sort of thing, Tom, you may get some good orders from them.'

'I 'm dashed if I think I shall like the business: there seems to be a great deal of flunkyism in this brewing.'

'Silly boy, silly boy! you 'll never get on without it.—Well, good-bye, Tom. Wedding-day fixed, eh? Wish you joy—wish you joy.'

The wedding-day was fixed, and the wedding came off at the appointed time. Mr Birkin gave the bride away, and joined the family over the cold fowl and bottle of sherry which did duty for a wedding-breakfast. Whilst the bride was changing her coloured dress for a black travelling one, old Birkin drew Tom into the little breakfast-parlour.

'Tom, I 'll get you to write your name across these bills; they represent the amount of our advances to your firm. We shall renew them, of course, from time to time, and we shall only charge you for the stamps and the ordinary current interest.'

'Now, suppose,' said Tom, 'just for the sake of argument, that I *won't* accept these bills.'

'Well, in that case,' said Birkin, 'we should have to realise our collateral securities.'

'And what does that mean?'

'Selling the brew-house, and this house and the furniture, and the public-houses, and disposing of the business to the best advantage; or perhaps we might carry it on ourselves.'

'Well, that 's candid,' said Tom. 'Perhaps I 'd better sign! It was only my joke, you know, Mr Birkin.'

Mr Birkin smiled grimly. 'Ah, Tom, you must get out of the way of joking in business.'

After that, Tom's faculties became confused, for Mrs Tom made her appearance, and they drove off to the station. Happy Tom!

CHAPTER III.—No. 1 MONTGOLFIER TERRACE IN 1857.

Ten years have made many alterations in Barncote. It is the close of a November day—the sun is going down into the sea in a gold and purple haze. The esplanade is crowded; fair girls are dashing past on horseback; carriages are rolling by; and yet with all there is a hush and a calm, that may be felt. You hear the ringing laughter of light-hearted girls, the beat of the horses' hoofs, the jingling of the harness, and the rattle of the wheels; but between all you can catch the measured plash of the waves, the thud of the oars in the rowlocks of the boat in which the fisherman stands throwing out his nets, and the hail of his comrade on shore.

Ten years have prospered well with Barncote. In '47, only a provincial bathing-town; in '57, a 'queen amongst watering-places.'

Montgolfier Terrace has shared in the general advance. No. 3, where Mr Hanks lived, is now occupied by the Countess Bigaroon, family, and suite. Admiral Bobbin, the sea-lord, lives in No. 4. By-and-by, when the daylight is altogether gone, and the tattoo is sounded at the barracks, and the picket is tramping along, turning our gallant defenders out of the public-houses, where they have been stupefying themselves with Bellamy & Co.'s Entire, if you stroll up Montgolfier Terrace, you will see through the windows on the ground floor, wide open, although in November, men and women in evening dress, and dinner-tables loaded with crystal and flowers and sparkling lights; and you shall hear the band in the enclosure playing selections from *Fra Diavolo*, and through the din the susurrus of the surges, and the creaking of the capstan, and the 'Heave oh!' of the fishers, hauling up the *Mary Jane* out of the reach of the advancing spring-tide.

No. 1, however, has not shared in the general advance. No. 1 still dines at one, and has tea at seven, and sups at nine, for No. 1 does not affect the mode, but is only the residence of Alderman and ex-Mayor Bellamy, a mere local magnate.

On this night in November, the worthy alderman is enjoying his tea in his drawing-room, and we will look in upon him, and see how the past ten years have affected him and his fair partner.

Lucy Bellamy is as beautiful as ever, a charming

Digitized by Google

model of an English matron. Still of the placid forehead, the limpid eyes, and flowing lines of figure, which mature age has only developed and rounded to perfection.

Happy Tom! A little girl of eight is climbing about his knees, and claiming a share of the tea-cake he is consuming. But Tom hasn't worn so well. There are wrinkles enough about *his* forehead, and round his eyes; when his mouth is at rest, it is a little drawn down at the corners. Seen now as he leans back and shuts his eyes, it is a sad and weary face; but it brightens up into life and love as his wife leans over his chair, and pushes the hair off his forehead in the old caressing way.

'You look so worn out, Tom, dear; it must have been a very trying day for you, poor fellow! Mr Birkin was such a kind friend, wasn't he, Tom?'

Tom grunted some unintelligible answer, which his wife took for assent, and went on: 'You mustn't grieve, Tom, dear. He lived his appointed time, and he 's now reaping the reward of his long life of good deeds.'

You see Mrs Tom was rather given to preaching; but then she was so good and devout herself, that her only grief almost was that her dear, good Tom didn't seem to think so much of spiritual things as he ought.

'Yes,' said Tom; 'he lived his appointed time; but for all that, I wish he 'd lived a little longer.'

'Ah, Tom, we mustn't repine,' said the sweet homilist. 'Didn't Arthur Birkin feel it very much?'

'By Jove!' said Tom, 'I wish I 'd felt it the same way. The old boy left every penny to Arthur.'

'Oh, I 'm so glad, Tom! I was afraid he didn't like Arthur, and that he 'd leave his money away to the Burgesses: he was so fond of the Burgesses.'

'Tell you what, Lu; what old Birkin was fondest of was the bank: he worshipped the bank. Do you think he 'd leave his money to be squandered by those dashing Burgesses? No. He saw what a hard skinflint Arthur was, and he didn't like him, for the old man wasn't a bad sort himself; but for all that, he knew that Arthur would keep up the bank; and that 's the secret of it.'

'Do you know, Tom, I thought perhaps he 'd leave you something?'

'Well, he didn't; that 's all,' said Tom roughly; and Lucy retreated to her own seat, rather offended. Tom shut his eyes again, and leaned wearily back in his chair. Mrs Tom softened again as she watched his pale face.

'Tom, dear, I 'm afraid you 're worrying.'

'Well, I 've had a good deal to try me lately.'

'In business you mean, Tom?'

'Well, yes.'

'But Tom, dear, you shouldn't let your mind dwell so much upon business. Think, dear, that you should lean upon a Higher Power, who orders everything as He wills.'

'Ah!' said Tom with a sigh that came from the bottom of his heart.

For the last ten years, Tom's religion had been this—to clear the firm with Birkin's bank. For this he had risen early, and late taken rest, and eaten the bread of carefulness. This accomplished, he would live his life in peace and thankfulness. The load he had heaped upon his own back had been very heavy upon him. At first, the consciousness that he had done his duty bore him up on his uphill way. That he had fulfilled his uncle's dying wish; that he had kept his memory from reproach; that he had saved Lucy and her aunt from destitution, and borne up the credit of the old firm: these were thoughts that sustained and comforted him. And then he knew full well that this was the price he had paid for his wife, for Lucy would never have married the man who had refused to carry out his solemn promise, made on his uncle's death-bed. But as years rolled on, and Tom's mind cleared itself from the mists of boyish enthusiasm, he took a very different view of the matter.

Tom's troubles came upon him with redoubled force this night. He had struggled so hard the last ten years; and he had so nearly succeeded—so nearly succeeded! But Birkin's death would probably ruin him; he would go down within reach of land. He had left home that morning with a hopeful heart.

The old man had been so kind to him in his lifetime; not a wicked old man of the sea, choking the life out of his slave, but a kind, considerate old man, driving him quietly, and letting him take breath ever and again. Surely he would leave him something: he might even leave him the amount of his indebtedness, for the bank had, after all, been paid nearly all the original debt, and the estate could so well afford it; for Birkins & Co. were shaky no longer. The waste of building-land, and the shells of tenantless houses, on which the firm had made such large advances, which, on the failure of the land-jobbers, and the building-jobbers, and the working-builders, the bank had been obliged to take possession of, and which had caused such a lock-up of capital: this piece of marsh by the seaside was now covered by aristocratic mansions, gorgeous squares, and noble terraces, and had proved a perfect Pactolus, streaming gold into the coffers of the bank. 'Oh!' thought Tom, 'if I can come back to my wife a free man to-night, there won't be a happier dog in England than I!' But it wasn't to be. As Tom sat by the fire that night, he felt tightening round his neck the wretched burden of his life.

As Tom sat by the fire, he looked at his wife, busy with some feminine work, one shapely hand holding the thread, whilst the other drove a tiny shuttle to and fro. Gracie sat coiled on the floor, leaning against her mother's knee, absorbed in a story-book, her lips just parted, and one little hand playing with a straggling curl. And then the thought came into his mind—it had been there often before, but unacknowledged, driven away, before it took shape; but now he took it up, and handled and examined it—the thought was a question: 'Was she worth it?'

'Yes; by Heaven!' was Tom's exclamation. It broke out unawares; it frightened his wife out of her wits, and made Gracie jump on to her feet.

'Papa!' said Lucy; and there was a world of mild reproach in her voice.

'Mamma,' said Gracie, a little casuist, deeply read in all the lore of catechism and commandment, 'wasn't that taking the name of God's holy dwelling in vain?'

'No, not in vain, my darling,' said Tom, drawing her to him, and giving her a long lingering kiss—'not in vain.'

Digitized by Google

Next morning at breakfast Mr Bellamy told his wife that he had made up his mind to insure his life.

'But why, Tom?'

'I think it only prudent, my dear; so much of the business depends on my own work, that I ought to take care of your future, in case anything should happen to me.'

Mrs Tom put down the coffee-pot, and looked at her husband with suffused eyes. That anything should happen to Tom! 'But, Tom, dear, you don't feel ill, or anything?'

'The insurance doctors will take care of that, Lucy: they won't insure my life if there's any prospect of my premature death.'

'But, Tom, isn't there Aunt Drux's ten thousand pounds? Poor aunt! she told me just before she died what a comfort it was to her that we were so well provided for; and I was so pleased, Tom, that she left it to you, instead of settling it, or anything—it shewed such confidence in you, dear Tom.'

'Delightful!' said Tom, who didn't know exactly what he was saying.

'Well, then, Tom, if anything should happen, we should have enough to live upon; and just what would keep Gracie and me, would be all we should want without you, Tom.'

'Ah, the ten thousand your aunt left is in the business. But I shall never make you understand, Lucy. I can only say that I think it necessary to insure my life.'

Tom went to Mr Winter's office—Winter senior was dead, and Archibald ruled in his stead. He was agent for the 'Legal Luminary,' the 'Dubious and Disputable,' and one or two other life offices.

'Want to insure your life, Tom? Of course; what every prudent man ought to do. I told you long ago you should do it. What amount do you intend to propose for?'

'Ten thousand pounds.'

The last ten years have not made much change in Archie Winter. Except that he has had his hair cut—that instead of displaying a whole bosomfull of shirt-front, he is buttoned tightly up to his chin, in an Oxford Mixture suit, you wouldn't notice any alteration in him.

He cast a quick look at Tom from under his bushy eyebrows.

'Biggish sum, isn't it?'

'Not more than it ought to be,' said Tom. 'Nobody but myself could work the business so economically. Were I to die, it would be necessary to have a manager at five hundred pounds a year or so, besides a clerk or two: I don't want my wife to suffer pecuniarily by my death.'

'Still, after all, Tom, there would be a good income left for your widow.'

'Archie, I don't mind telling you, what I daresay you know; I've got borrowed capital in the business. Now, if I were to die, that would probably be called in. Well, this insurance would replace it.'

'Just so,' said Winter; 'I quite see your motives. Well, I shall be very glad to take your proposals. Suppose we say three thousand pounds in the Legal, three thousand in the Dubious, and two thousand each in the Highland Husbands and Scotch Veritable? Well, it's easily arranged. You'll fill up these forms: they're much about the same; some of 'em want to know if your grandmother wore false teeth, and some of 'em only ask if your father was troubled with corns.' Mr Winter here enjoyed a hearty laugh at his own joke. I fancy Artemus Ward borrowed this joke, but he didn't acknowledge it.

Tom had to go up to London, the assurance being a heavy one; and was poked about by the united doctors of the four companies, and questioned most minutely as to all his habits. He had frequent interviews with four boards of directors and four secretaries. The result was satisfactory. The united doctors could find no fault with Tom's constitution or physique. The united boards could find no flaw in Tom's reasons for insuring so heavily. There was no agent for whom the societies had a higher regard than Mr Archibald Winter. *He* was perfectly satisfied. The directors were perfectly satisfied. The proposals were accepted; and Tom had to draw a cheque for three hundred and sixty-seven pounds, the amount of the united premiums.

THE HILL-TRIBES OF CHITTAGONG.

Rising from the rice-swamps and level land of the Chittagong district, in the presidency of Bengal, a vast extent of mountainous country, inhabited by various tribes, covering an area of 6796 miles, is known as the Chittagong Hill-tracts, and is subjected to British rule. The eastern frontier of this strange and distant country is but three hundred miles from the western boundary of China, so that our ideas are at once transported far and wide when we begin to learn what Captain Lewin has to tell us concerning our fellow-subjects there.* It is an interesting country; and they are a strange people, separated from our general and vague notions of 'Indians' by their habits, their speech, and their traditions—resembling not at all 'the mild Hindu,' with whom we have been considerably disenchanted of late years, and as unlike the dwellers in tropical regions of the other continents. The landscape is for the most part sombre, with its traces of volcanic action, its long reaches of still water, and its walls of dark-green verdure; but there are occasional glimpses of wonderful beauty, when 'dark cliffs of a brown vitreous rock, patched and mottled with lichens and mosses of various colours, tower up on either side, while on the right or left shoots back a dark gorge of impenetrable jungle.' Here is a picture of the strange and lavish handiwork of Nature in her remote recesses. 'I remember,' says Captain Lewin, 'once going up the Twine Khyoung, a tributary of the Matamoree, whose stream ran briskly in a narrow pebbly bed, between banks that rose almost perpendicularly, and so high that the sun only came down to us by glints here and there. Enormous tree-ferns hung over our heads, some fifty feet up; while the straight stems of the "gurjun" tree shot up without a branch, like white pillars in a temple; plantains, with their broad drooping fronds of transparent emerald, broke at intervals the dark-green wall of jungle

* *The Hill-tracts of Chittagong, and the Dwellers therein.* By Captain T. H. Lewin, Deputy-commissioner of Hill-tracts. Calcutta.

Digitized by Google

that towered up in the background; and from some gnarled old forest giant here and there the long curving creepers threw across the stream a bridge of Nature's own making. Sometimes we came upon a recess in the bank of verdure which rose on either hand, and there the tinkling of a cascade would be heard behind the veil, its entry into the stream being marked by a great gray heap of rounded rocks and boulders, toppled and tossed about in a way that shewed with what a sweep the water came down in the rains. Scarlet dragon-flies, and butterflies of purple, gold, and azure, flitted like jewels across our path; while silvery fish, streaked with dark-blue bands, flew up the stream before us like flashes of light as we poled along.'

Large and richly alluvial plains, covered with forest trees, are found in many parts of the district, which, if cleared, would be admirably adapted for plough-cultivation; and far in the jungle are tanks, fruit-trees, and the remains of masonry buildings—evidence that in some bygone time the land was cultivated and inhabited by men of the plains. They never come there now; the climate sets an insuperable barrier between them: it is innocuous to the hill-men, but deadly to those of the plains, with its tremendous rains and dense fogs. There are no hot winds, and the hottest part of the year is tempered by cool sea-breezes, so that Europeans might bear a residence in the Hill-tracts very well. It is the custom of the people to remain in their villages until the cultivation season commences in May, and then the whole country-side moves up, every man to his patch of cultivation on some lofty hill. In this custom Captain Lewin traces their comparative immunity from sickness, 'for,' he says, 'hill-men, on abandoning their usual mode of life, and taking to other occupations not involving the periodical move to the hill-tops, are nearly as much subject to fever as the people of the plains.' Theirs is a strange, self-contained, isolated life, with a periodic state of siege by the weather, as, during the rainy season, it is almost impossible to move about the country, which has no roads, on account of the rising of the hill-streams. Before the setting in of the rains, the hill-people lay in a stock of provisions, as at that season of the year the bazaars are abandoned by the men of the plains, and trade almost entirely ceases. The system of commerce is very primitive: its centres are four bazaars, to which the hill-people resort for salt, spices, dried fish, tobacco, and other necessaries only procurable from the plains. They bring down for sale cotton and timber, the oil-bearing seeds of a certain tree which grows in the jungle, and small quantities of ivory and wax. The Hill-tracts are peculiarly well suited for the production of cotton; and measures have been taken to introduce improved varieties of the plant among the hill-tribes. Throughout the whole district, large tracts of valuable forest trees are found. The fir-tree and the caoutchouc abound in the lofty hills in the east; but the 'unsatisfactory relations' which exist between the hill-tribes under English rule and those more remote, prevent any use being made of these valuable forest products.

In the wilder parts of the district, a curious natural product is found, which reminds one of the wondrous 'travellers' tree' of the Malay forests. Captain Lewin describes it thus: 'The forest trees are festooned with numerous creepers (*phytocrene*), hanging in a labyrinth of coils from every tree: some are as thick as a man's arm. On cutting one of these, water is obtained; and as they grow on the loftiest hill, where water is often not obtainable, this property of theirs is most useful. The most curious thing is, that should the coil be cut in one place only, so as to leave two pendent ends, no water issues. It is necessary to cut a piece clean out of the creeper with two quick consecutive strokes, before water is obtained. If, with an unskilled hand, three or four hacks are made before severing it, the only result is a dry stick. Two speedy cuts, however, and from the piece of creeper trickles out about half a tumblerful of clear cool water. The hill-men explain this by saying that when the stem is cut, the water tries to run away upward.'

In every country there is some one gift of Nature of supreme value and importance, the central object of the life of the people. The Arctic seal, the African plantain, the Arabian camel, the Icelandic reindeer, the Chinese rice-field, are balanced in Chittagong by the bamboo and the cane, which grow in profusion in the hills. Here is a lucid and animated description of the place they occupy: 'The cane is the hill-man's rope; with it he weaves baskets, binds his house together, and throws bridges over the hitherto impassable hill-torrents. The bamboo is literally his staff of life. He builds his house of the bamboo; he fertilises his fields with its ashes; of its stem he makes vessels in which to carry water; with two bits of bamboo he can produce fire; its young and succulent shoots provide a dainty dinner-dish; and he weaves his sleeping-mat of fine slips thereof. The instruments with which his women weave their cotton are of bamboo. He makes drinking-cups of it; and his head at night rests on a bamboo pillow; his forts are built of it; he catches fish, makes baskets and stools, and thatches his house with the help of the bamboo. He smokes from a pipe of bamboo, and from bamboo ashes he obtains potash. Finally, his funeral pile is lighted with bamboo. The hill-man would die without the bamboo; and the thing he finds hardest of credence is, that in other countries the bamboo does not grow, and that men live in ignorance of it. In Central India there is a migratory tribe called Bhatos, who follow the profession of athletæ, and perform most of their feats with the aid of a bamboo; and this tribe have actually deified it. Their patron goddess is Korewa, an incarnation of Mahadeva. Her shrine is situated at Kittoor, around which dense forests of bamboo grow. One they select, and the attendants of the temple consecrate it. It is called *gunnichari*, or chief, and receives their worship annually. To it, as to a human chief, all respect is shewn; and in cases of marriage, of disputes requiring arbitration, the gunnichari is erected in the midst of the councillors or arbitrators, and all prostrate themselves before it, before commencing their discussions.' One of the tribes of the Hill-tracts offers worship to the bamboo, but not in the same sense as the Bhatos; they regard it as the impersonation of the deity of the forest.

There is nothing unpleasant or degraded in the picture drawn by Captain Lewin of the hill-people, of whom he writes with humanity, sympathy, and

Digitized by Google

appreciation, which, could we but hope they would be more generally felt and manifested by the representatives of English authority in India, might gloriously change the moral history of English rule, and largely influence the destinies of the eastern world. Before he enters upon an account of their origin and their characteristics, he describes their mode of cultivation, which is known as 'joom,' and contrasts their hill-life eloquently and advantageously with that of the dweller in the plains. 'In the month of April, a convenient piece of forest-land is fixed upon, generally on a hill-side: the luxuriant undergrowth of shrubs and creepers has to be cleared away, and the smaller trees felled, the trees of larger growth to be stripped of their branches, and left standing. Although the clearing of a patch of dense jungle is no doubt very severe labour, yet the surroundings of the labourer render his work pleasurable in comparison with the toilsome and dirty task of the cultivators of the plains. On the one hand, the hill-man works in the shade of the jungle that he is cutting; he is on a lofty eminence where every breeze reaches and refreshes him; his spirits are enlivened and his labour is lightened by the beautiful prospect stretching out before him; while the rich and varied scenery of the forest stirs his mind above a monotone. He is surrounded by his comrades; the scent of the wild thyme, and the buzzing of the forest bee, are about him; the young men and maidens sing to their work; and the laugh and joke go round as they sit down to their mid-day meal, under the shade of some great mossy forest tree. On the other hand, consider the toil of the cultivator of the plains. He maunders along, with pokes and anathemas, at the tail of a pair of buffalos, working mid-leg in mud; around him stretches an uninterrupted vista of muddy rice-land—there is not a bough or a leaf to give him shelter from the blazing noonday sun. His women are shut up in some cabin, jealously surrounded by jungle; and if he is able to afford a scanty meal during the day, he will munch it *solus*, sitting beside his muddy plough. Add to this, that by his comparatively pleasurable toil the hill-man can gain two rupees for one which the wretched ryot of the plain can painfully earn, and it is not to be wondered at that the hill-people have a passion for their mode of life, and regard with absolute contempt any proposal to settle down to the tame and monotonous cultivation of the dwellers in the lowlands.' The migration of the people when 'jooming' begins, and the villages are quite abandoned, is a curious thing to witness, also the assembling of the various jooming parties. Men and women, boys and girls, each bind on the left hip a small basket filled with the mixed seeds of cotton, rice, melons, pumpkins, and Indian corn; each takes a 'dao,' or hill-knife, in hand, and every hill-side soon echoes to their hill-call (a cry like the Swiss jodel), as party answers party from the paths winding up each hill-side to their respective patches of cultivation. Arrived at the joom, the family will form a line, and steadily work their way across the field. A dig with the blunt square end of the dao makes a narrow hole about three inches deep; into this is put a small handful of the mixed seeds, and the sowing is completed. A solitary joom is very rare; they are almost always in close propinquity, and mutual help is cheerfully given. The first thing to ripen is the Indian corn; then come the melons, to which succeed all sorts of vegetables; finally, in September, the rice and other grain, to which the monkeys and the jungle-fowl do much damage. In October, the cotton crop is gathered, completing the harvest.

The country suffers severely from the visitations of rats. 'They arrive,' says Captain Lewin, 'in swarms, and sweep everything before them; they eat up the standing corn, and empty the granaries of the hill-people—nothing stops them. They are said to come from the south, and they disappear as suddenly as they make their appearance. The hill-folk gravely assured me that during the last visitation, which occurred in 1864, the rats were transformed into jungle-fowl: in proof of this, they point out a peculiar dragging feather in the tails of the jungle-fowl, which they assert to be a rat's tail.'

Throughout the whole of the Hill-tracts, Captain Lewin has known no instance of a hill-man cultivating with the plough; in the few instances in which some acres of ploughed land may be seen near the villages of the chiefs, they are invariably tended by Bengalee servants engaged for the purpose. The deserted villages present a curious appearance, having all the evidences of occupation and recent life, but every living creature having disappeared. The migrating people leave half their property behind them: granaries containing grain, the women's weaving implements—all sorts of things to be removed at their leisure; and this they do with perfect safety, for '*there are no thieves in the hills!*'

To be a good and successful hunter is a great merit in the estimation of these people, whose country abounds in almost every species of wild animal. The elephant roams over the district in large herds, and the Assam rhinoceros is common; likewise the boa-constrictor, which is of enormous size. The domesticated animals are the cow, the buffalo, the goat, the dog, the cat, the pig, and the common fowl.

The author divides the tribes which inhabit the Hill Chittagong into two classes: 1. The Khyoungtha, or Children of the River, who are of pure Aracanese origin, speaking the ancient Aracan dialect, and conforming in every way to Buddhist customs; 2. The Toungtha, or Children of the Hills, who are of mixed origin, and who speak numerous dialects, and are more purely savages than the Children of the River. No record of their origin save that of oral tradition exists among them. The Khyoungtha possess a written language, but have no history; the Toungtha have no written character, and their languages express nothing beyond the wants and sensations of uncivilised life. 'The general physique of the hill-tribes,' says Captain Lewin, 'is strongly Mongolian. They are short in stature, not five feet six inches in height. Their faces are broad; the nose flat, with no perceptible bridge; the eyes narrow, and set obliquely in the head; high cheek-bones, and no beard or moustache. They have an honest bright look, with a frank and merry smile; and their look does not belie them, but is a faithful index of their mental characteristics.'

Certain customs are common to all the tribes; for instance, slavery, under two forms—that of the debtor-slave, in which persons borrowed money from the chief, or some other individual, and gave their children or female relatives to serve as menial

Digitized by Google

servants until the debt should be paid. This custom has been put down, under our rule, with a high hand—not always, as the author shews, judiciously or with desirable results. The other form of slavery which once existed among our tributary tribes is now only carried on by independent tribes beyond our jurisdiction; that is, captivity to the bow and spear, men and women taken by force in war, and sold like cattle from master to master. Concerning this the author says: 'The origin of this custom, if not indeed the origin of the chronic state of warfare in which all hill-people seem to live, was the want of women. Among all hill-people, the woman is the chief toiler, and naturally enough their incessant labour, in all weathers, kills the women of a tribe, or renders them more liable to disease. Hence, among some tribes, we find the strange custom of polyandry prevailing; but among others a simpler course is adopted—the law of the strongest. Those who had few women went with arms in their hands, and took them from a weaker community.'

The Khyoungtha of the Hills are a fine race—manly, upright, and noble. They are firm believers in metempsychosis. There is no such thing as caste among them, all are equal, and the priesthood is not perpetual. Captain Lewin upholds the moral superiority of Buddhism over Brahminism. 'No one,' he says, 'can go among a people professing the Buddhist faith without seeing their superiority in manliness, truth, self-denial, and all the sterner, nobler class of moral excellences. These characteristics have operated strongly in raising the social status of the weaker sex, and among our hill Buddhists women are respected, and occupy an honourable position. They enjoy great freedom of action, and are unmistakably a power among the people. They, as well as men, can work out their own salvation, and attain "Nirvan."' The author's description of the religious ceremonies is very interesting and poetical, sometimes, but rarely, bordering on the grotesque. The dress of the Khyoungtha is simple and graceful, and the men are tattooed: the name of God is marked upon the shoulder. Men and women alike are passionately fond of flowers, and wear many ornaments. In each village community the adults have a head, and the boys also, and the unmarried men and boys sleep in a separate house, as in Borneo. The standard of morality, according to European ideas, is low, but an unfaithful wife is seldom heard of, and family ties and duties are powerful. The ceremonies attendant on marriage and death are complicated and picturesque. Their personal habits are not objectionable, except in one respect—both sexes allow their hair to become very long, and seldom wash it; 'the consequences,' says Captain Lewin, 'may be better imagined than described.' The Khyoungtha do not dance together. Their festive gatherings are enlivened by a travelling theatrical company, which comes round every cold season, and of whose performances the author gives a curious and very amusing description.

The Toungtha are different from the Khyoungtha in many ways. Their villages are generally situated on lofty hills and in places difficult of access. The men wear hardly any clothes, and the women a single scanty petticoat. Upon the women falls all the hardest work, and their position is lower. The religion of the Toungthas is simple—it is that of nature; they worship the elements, and have a vague notion of some divine controlling power. They are cruel, and attach but little value to life. Reverence and respect are emotions unknown to them; they salute neither their chiefs nor their elders; no form of greeting exists in their many tongues, neither have they any expression conveying thanks. They attach importance to an oath; it is a test in matters pertaining to crime, and by it they ratify engagements. The oath is made upon the things upon which their very existence depends—water, cotton, rice, or the dao, or hill-knife. They are monogamists, and as a rule, good husbands and fathers. Adultery is punished with death. Slavery is a recognised institution, but a man's slaves are his children, and universally well treated. Should a man's wife die, he may marry one of his slaves; his so doing, at once raises her to the position and privileges of a free woman. Each village is a small state, owing fealty to no one save its own leader. A man may leave one chief, and transfer himself and his family to the village of another; hence, the power of different chiefs, which depends upon the size of their respective villages, varies considerably from time to time, according to their success or popularity. They are a healthy and long-lived people, perhaps because they have no medicines, and very few stimulants. After he has given a general account of the hill-tribes, according to their classification as Children of the River and Children of the Hill, Captain Lewin takes them in detail, and gives us a number of interesting particulars concerning the subdivisions. All the details, especially those concerning their religious ceremonies and varying notions of the supernatural, are exceedingly curious. It is good to be instructed in the ways, and taught to understand the condition of, our fellow-men, more especially when they are our fellow-subjects, and our country is responsible for the amelioration, the debasement, or the 'letting alone' of these people. The author of this book, who has lived among the hill-tribes, who likes them, and understands them, puts in a plea, as strong as it is modest, for fair dealing with them on the part of England. 'They are very simple,' he says, 'and honest, and merry, but they have no sympathy with anything above the level of their bodily wants. There are whole tracts of mind, and thought, and feeling which are unknown to them, and which could not be made known by any explanation.' We may make them better and happier, but it must be in their own way, not in ours; not by inspiring them with the thirst for wealth, the desire for the superfluities which attach to our civilisation. There is no starvation among them; they know neither poverty nor riches, and they enjoy perfect social equality. This book explains the condition, mental, moral, and physical, of the inhabitants of an immense district, who are in our power, and for whom we are accountable. The student of them, the pleader for them, is surely the best judge in their case. In these strong and simple words, he epitomises his experience, and formulates his belief: 'What is wanted here is not measures, but a man: place over the hill-tribes an officer gifted with the power of rule; not a mere cog in the great wheel of government, but one tolerant of the failings of his fellow-creatures, and prompt to see and recognise in them the touch of nature that makes the whole world kin—apt to enter into new trains of thought, and to adopt and modify ideas, but cautious in offending national prejudice. Under a guidance like this, let the people by slow degrees civilise

Digitized by Google

themselves. With education open to them, and yet moving under their own laws and customs, they will turn out, not debased and miniature epitomes of Englishmen, but a new and noble type of God's creatures.'

THE RED NOSE.

In the village of Tattlecombe were many curious persons; and very small matters sufficed to awaken their curiosity. It was generally satisfied at last, either by incontrovertible proof or by ingenious speculation; but there was one puzzle which could not be solved either by a collection of facts or a reduction of theories. Everybody wondered, and nobody knew why Mrs Murton had a red nose.

Wherever you went you were sure to hear something about Mrs Murton: you were questioned about her looks; you could not help confessing that she was a very pretty little woman; you had to allow that it was a great pity so pretty a little woman had so red a nose; you were strictly charged to furnish an explanation of the phenomenon; you were, of course, unable; and the village of Tattlecombe remained dissatisfied.

The problem had been submitted to a distinguished mathematician who lived in the neighbourhood, who had been very high amongst the wranglers at Cambridge, and who was said to have won his distinction chiefly by a successful solution of problems: and also to the wise woman of the parish, who was supposed to understand the language of the many-twinkling stars, and who could, for a consideration, see looming in the future any kind of husband any silly young woman wished for: but they were both obliged to give it up.

It certainly was no ordinary nose; and thereby hung a tale. Something else hangs thereby in the case of the upper ten thousand savage women; a gold ring or a piece of crystal is with them the hanging ornament; but Mrs Murton was highly civilised and refined, and as to *her* nose, it may be truly said that thereby hung a tale.

Now about red noses there are divers theories; and most of them are, according to my judgment and experience, wrong. You very seldom see a red nose, which, upon reflection, not in the looking-glass, but in the mind, does not appear to be the right thing in the right place. So much so, in fact, that if you were to meet a certain person of your acquaintance, and were to miss the usual redness of nose, you would at once say: 'My dear So-and-so, you don't look at all well;' and you would be on the point of adding, by way of explanation: 'Your nose is quite pale.' There is a very prevalent belief that alcohol is at the bottom (or, rather, tip) of every red nose; but I can (on oath, if necessary) declare that one of the reddest noses I ever saw was above the chin of a man who had been from his youth up almost a Rechabite, and to whom the doctor actually recommended a liberal allowance of generous wine, as the best means of toning down the colour. For a red nose is a great drawback to a clergyman, whose parishioners look upon it with suspicion; so that the efficacy of his ministrations is impeded by his nasal deformity. Indeed, the more reprobate amongst the boys of his parish lurk in undiscoverable hiding-places, and greet the reverend gentleman with snatches of a comic song called *Jolly Nose*.

Still there is a fashion of nose which, with a view to conformity, ought to be red, which properly accompanies a certain complexion, which harmonises with cheeks, and ears, and hands, which is undoubtedly the right nose in the right place, and which seems more natural and less remarkable than the most natural red hair.

But on none of these grounds was Mrs Murton's case to be explained. Arethusa was not more unlikely to have had a taste for alcohol; and, moreover, Mrs Murton's complexion was lovely; her cheeks, and ears, and hands were as delicately tinted as the daintiest blush-rose; and her nose, therefore, seemed quite unnatural, and out of place, so far as the colour was concerned—for in other respects it was perfectly natural, being exquisitely shaped, and unexceptionably situated. Mrs Murton was the wife of the vicar, a young man who was reputed to be a prodigy of learning, who had greatly distinguished himself at the university, and who had been presented by his college, not long after he took his degree, to the vicarage of Tattlecombe. It was whispered about, moreover, that Mrs Murton was not unacquainted with awful mysteries; that she had received what very credulous people are pleased to call a superior education; that she could read Latin and Italian with equal ease, that is, with considerable ease; that she was familiar with Greek; that she had even a smattering of Hebrew; that she was versed in ancient history, metaphysics, and theology; and that, woman though she was, she had studied and understood, even if she seldom put them into practice, the principles of logic.

The vicar and his wife had two little children of very tender years, both girls; and it was remarked that their education and management were left almost entirely to Mrs Murton, who, if ever the vicar attempted to interfere, would turn upon him with a tartness hardly to be expected from her habitual sweetness, and would say to him sharply: 'Pray, allow *me* to know what is best for *girls*;' and would accompany her words with an angry flash of the eye, and a glance of deep meaning, which at once silenced the reverend gentleman, and led witnesses to suppose that there was between Mr and Mrs Murton some secret which gave her an advantage, whenever she chose to exercise it, over her reverend consort.

Close observation led me to believe that the secret to which Mrs Murton owed her power was somehow connected with the red nose, and that the red nose was to Mrs Murton a thorn in the flesh. Many a time, when she had reason to believe she was unnoticed, have I seen her watching it in mirrors and all manner of reflectors; and every time I have remarked that a cloud momentarily passed over her face, and that for a minute or so after her contemplation she was irritable and snappish. But for a long while I could find no one

Digitized by Google

who could read me the riddle, who could solve the puzzle which tortured the gossips of Tattlecombe.

Murder, however, will out; and at last I found somebody who could clear up the mystery which hung over Mrs Murton's nose.

I fell in, I am happy to say, with the delightful Mrs Tittle, who herself came from Tattlecombe. Tittle had been a friend of mine from early youth; and so Mrs Tittle admitted me with more than usual readiness to intimate acquaintance. I soon discovered that she was a woman who was sure to know whatever could be known by close inquiry, keen observation, and acuteness of hearing about all her neighbours' affairs: she even seemed to have a key to the cupboards where many of them kept their private skeletons, and so she was clearly the person who should be able to enlighten me. On a favourable opportunity, therefore, I said to her: 'You know Tattlecombe, I believe, Mrs Tittle?'

'O yes,' she answered, '*so* well! Dear little Tattlecombe! I know every tombstone and grave-mound in the pretty churchyard; every green lane for ten miles round; every lovely view in the whole neighbourhood; every cow, I verily believe, in the parish; and every queer old gossip in the thatched cottages.'

'And I daresay you know the Murtons?' I rejoined.

'The Murtons!' she replied. 'Ah! that I do—so well. Lily Murton, that is Mrs Murton, who was Lily Bourne, and I, were like sisters when we were at school together. But we have not seen much of one another for the last year or so. Do *you* know them?'

'Slightly. I was lately staying with a friend of mine at Tattlecombe, and I met them several times.'

'Is she not a pretty little woman?'

'Very.'

'Is it not a pity she has such a dreadfully red nose?'

'A thousand pities: it makes her look like a beautiful peach with a horrid blemish, or a snow-white something with a dirty port-wine stain upon it.'

'Ah! poor thing,' sighed Mrs Tittle, looking at the same time rather pleased than otherwise, 'she paid dearly for her superior learning.'

'Learning!' I exclaimed in astonishment; 'does learning give a lady a red nose?'

'It did in her case,' replied Mrs Tittle laughing.

'Dear me,' said I, 'was it the Latin, or the Greek, or the Hebrew?'

'Oh, I don't know,' she answered, 'that it was the dead languages exactly'——

'Perhaps,' I broke in, 'it was the theology: I knew a theologian with an awfully red nose. Or was it the history? or the metaphysics? or the logic? If she studied nosology, now'——

'I can only tell you,' interrupted Mrs Tittle, 'that it was the learning generally.'

'Well,' I said, 'I knew that learning resembled alcohol so far as getting into your head is concerned, but I did not know that it carried the resemblance so far as to discolour your nose.'

'I will tell you exactly how it happened,' said she confidentially. 'You must know that Lily was engaged to young Murton when he went up to Oxford. He was very good-looking and very clever, and Lily was quite silly about him, though the Bournes generally didn't like him.'

'Why not?'

'Oh, I really hardly know; but they thought him a conceited young prig.'

'Hear, hear!' I said.

'Now, you mustn't interrupt me,' observed Mrs Tittle severely, 'or I will not tell you my pitiful story. Young Murton, I must tell you, was destined for holy orders; and Lily, who worshipped the clergy in general, was quite ready to worship him in particular. She thought the holy office he was preparing himself for gave him unquestionable authority over her, and she was willing not only to love him (which she could not help), but also to obey him, even before they were married (much more, I suspect, than she obeys him now). Well, he had very prim notions; made Lily quite unhappy by preaching to her about the worldliness and frivolity of her family; and was especially bitter against what he was pleased to call the shallow, flimsy, showy, and even sinful education of young women. So he constituted himself Lily's instructor as well as lover, and insisted upon her taking from him lessons in his horrid Latin, and logic, and things. And as poor little Lily had to keep up her more lady-like accomplishments as well (for her father would not hear of her relinquishing *them*), she had to work like a galley-slave. And I really do think,' continued Mrs Tittle, looking at me appealingly, 'that her father was right; for, though it may be all very well to be just like a man if you are not going to be married, I think that in married life the very diversity of mental culture and attainments tends to prevent unpleasant collision. We wives have often to act towards our husbands the part David acted towards Saul when the evil spirit was upon the son of Kish. But if we had minds trained exactly as our husbands', we should most likely attempt to argue with them, instead of dealing with them by means of enchantments they can appreciate, but can neither practise nor understand. What do you think?'

I, being a bachelor, assented heartily.

'Then, you see,' she went on, 'if women are to receive the education some even of their own sex would give them, they will have double work to do; for they will have to do the new and not leave the old undone (in case they should ever marry).'

I thought it best to mutter something which might sound like entire agreement.

'To resume, then,' said Mrs Tittle. 'Poor little Lily had to work double tides (as they say), and she used, consequently, to read, read, read, both at her meals and directly after them. And in a little while her dear little nose grew red, and, by degrees, redder and redder. It was of no use to tell her what was the reason, or for the doctor to assure her that it was a symptom of indigestion, and that there was nothing so likely to impair digestion as reading at and directly after meals: she vowed, with tears in her eyes, that she "must do the lessons dear George took the trouble to set." Well, different people, I suppose, have different ways of making love; but Lily's and George's must have been the strangest since that one-eyed person, you know, made love to somebody whose name I think began very appropriately with Gal—but'——

Digitized by Google

'Polyphemus and Galatea?' I asked.

'I daresay,' replied Mrs Tittle. 'Dear little Lily knew all about them; but *I* don't, though I fancy Handel wrote some music about their love-affair. But let me get on. I assure you I have been staying at the Bournes' when George Murton was there, and he and Lily would remain alone together in the study for hours, and when any of us knocked at the door, and called out to Lily to come into the garden, we very often got no answer, and we could hear George Murton talking angrily about "accents," and "quantities," and "long by position," and all that sort of stuff; and poor little Lily whimpering: "Yes, yes; I beg your pardon, dear George; I quite forgot." And if they did come into the garden, they walked up and down sombrely, whilst we played at croquet; and I verily believe he was examining her all the while in some nasty dead language. And he was always lecturing her about Lady Jane Grey and Plato, and exhorting her to set an example to her worldly, frivolous family. After all, I don't think George Murton had done himself much good with all his Hebrew and theology; I am sure his temper was very bad, and many a time I have seen him fling out of the house in an ungovernable rage, leaving Lily sobbing in the study; and when Lily was asked what was the matter, she would say: "Oh, George is *so* angry. I couldn't say my Virgil by heart." Or: "Whatever shall I do! I made three false quantities in two lines, and that hurts poor George's feelings more than anything." Or: "I couldn't give a proper account of the Manichean heresy, and George says he can't love me."'

'I wonder *she* could love *him*,' said I; 'I wonder she didn't treat him as Omphale treated Hercules.'

'*She* was infatuated, you should remember,' rejoined Mrs Tittle; 'whereas in the case you mention I believe the infatuation was on the side of the gentleman. And there really was some ground for Lily's infatuation. She and her family went once or twice to Oxford, and heard George Murton recite his prize exercises; and Lily's love was mingled with something like the awful fascination exercised by the Veiled Prophet of Khorassan, when she heard the cheers which greeted the repeated appearance of George Murton as he came forward time after time in his capacity of prize-man, and when she saw how his good looks became more than beauty under the influence of applause. No wonder she clung to him as to a higher power. Besides, at those visits to Oxford he relaxed a little; and Lily then thought him so kind as well as good and noble, that he completely subjugated her. As for him, I never saw anybody so imperious to another as he was to her; and, though I suppose he really loved her, I believe his love varied directly as her success in doing the papers he set her. I *know* that he postponed (fancy the *gentleman* postponing the happy day!) their marriage for three months, until she could satisfy his worship in history and logic; and the logic paper, Lily told me, was the hardest and most repugnant work she ever had to do in her life. At last, they were married; but he had spoiled her beauty for ever.'

'She does not appear to be in much awe of him now,' I remarked.

'No,' rejoined Mrs Tittle laughing. 'You see he gets no prizes now, no distinctions, no acclamations; even his learning is of very little use to him where he is. He is, as a member of ordinary society, quite a commonplace person; and, besides, she is not fearful of losing him now, and she can always twit him with having caused her only personal blemish.'

'Ah,' I broke in, 'not even Socrates could have borne *that* from Xantippe without wincing.'

'I don't know any Saint Tibby,' rejoined Mrs Tittle, looking suspicious; 'but I was just going to say that, as for Lily's own learning, it certainly enabled her to marry the man she loved, but she has long since discovered that it is of no further service to her. It is out of place in the circle in which she moves; and, though her reputation for it may do her good with some, it does her harm with others; and, moreover, she hasn't time to keep it up, and is forgetting it all in attending to her children and household. All this she feels deeply, and she throws it in the teeth of George Murton. She has found out also that taking holy orders does not necessarily sanctify the taker; and that an ordained sinner is but an unordained sinner with a difference—especially of necktie.'

'But Mr and Mrs Murton seem to be tolerably happy together.'

'O dear, yes; quite as happy as most married couples, if not happier; but the varnish has gone off the gentleman, and the blemish remains on the lady.'

'You mean the red nose?'

'Yes. The poor little thing confessed to me that she feels the infliction more than a sensible and Christian woman should feel such a thing. But then she pleads that it is so very peculiar in her case; she has the mortification of knowing that it might have been prevented; and she cannot help seeing that people notice it, or fearing—not without ground, as *I* know—that they attribute it to a wrong cause. She believed that by altering her habits after she had secured George for better and worse, she would be able at her leisure to get rid of her disfigurement; but one must not trifle with one's digestive organs, which, when they have once been upset, are almost as incapable as Humpty Dumpty of being set up again. She has tried exercise, regular diet, and every kind of pill ever invented for the cure of indigestion; but if she have at all improved her digestive organs (and I should think the contrary is more likely), she has made no change for the better in her appearance. She has even condescended to write (anonymously, of course) to those papers which give advice as to the removal of freckles, tan, redness, &c.; but to no purpose. She has sat for an hour at a time with her feet in cold water, but that obstinate nose refuses to be unreddened, and she remains a warning to all lovely and confiding girls who try, at the expense of their digestions, to secure the affections of pedantic lovers.'

Such is the history of Mrs Murton's red nose; and it causes one to fear that the project which is gaining favour of making girls solidly learned as well as elegantly accomplished may have a baleful effect upon their noses. Let the maids of merry England see to it.

As for *men* who mourn over their red noses, and would feel hurt by such a remark as one 'bus driver does not scruple to address to another, saying: 'This here frosty weather seem to suit you, Tom; that there old beak o' yourn is a-colourin' beautiful,' they may derive some comfort

Digitized by Google

from the following quotation taken from the works of a popular writer, not of the masculine gender: 'He had a fair complexion, a small straight nose—*very red*, womanish lips, a slightly receding chin, a low forehead, large blue eyes, and light auburn hair. He was rather *handsome*, and was generally said to have a *most prepossessing countenance*.'

What more could a reasonable *man* wish for? It should be mentioned, however, that the popular writer's red-nosed man with the prepossessing countenance poisoned his brother, and committed bigamy.

LOVERS STRUCK BY LIGHTNING.

THE recent death of two lovers, struck by lightning in a field, is paralleled to a remarkable degree by an event which took place a century and a half ago, and which exercised the pens of three of our poets —Pope, Gay, and Thomson. It curiously marks the difference between the two periods, that the catastrophe was treated poetically at that time; whereas now our newspapers are 'ventilating' it as a matter of science, connected with currents, fluids, positive and negative electricity, and so forth.

Briefly, the episode in George I.'s reign was as follows (it will be found somewhat more fully treated in Chambers's *Book of Days*): On the 31st of July 1718, John Hewit and Sarah Drew were in a field near Stanton Harcourt in Oxfordshire. They were rustic lovers; he about twenty-five years of age, and she a comely maiden a little younger. They were betrothed, and had on that very morning obtained the consent of the parents on both sides to their marriage, which was to take place in the next following week. Pope and Gay were both guests at Stanton Harcourt at the time; and the latter recorded the tragic incident of the day in the following words: 'Between two and three o'clock in the afternoon, the clouds grew black, and such a storm of thunder and lightning ensued, that all the labourers made the best of their way to what shelter the trees and hedges afforded. Sarah was frightened, and fell down in a swoon on a heap of barley; John, who never separated from her, having raked together two or three heaps, the better to secure her from the storm. Immediately after was heard so loud a crash as if the heavens had split asunder. Every one was now solicitous for the safety of his neighbour, and they called to one another throughout the field. No answer being returned to those who called to the lovers, they stepped to the place where they lay. They perceived the barley all in a smoke, and then spied the faithful pair; John with one arm about Sarah's neck, and the other held over her, as if to screen her from the lightning. They were struck dead, and stiffened in this tender posture. Sarah's left eye was injured, and there appeared a black spot on her breast. Her lover was blackened all over; not the least sign of life was found in either. Attended by their melancholy companions, they were conveyed to the town, and next day were interred in Stanton Harcourt churchyard.'

Pope wrote the following epitaph on the unfortunate pair:

When eastern lovers feed the funeral fire,
On the same pile the faithful pair expire:
Here pitying Heaven, that virtue mutual found,
And blasted both, that it might neither wound.
Hearts so sincere, th' Almighty saw well pleased,
Sent his own lightning, and the victims seized.

It is said that Lord Harcourt, at whose house Pope was staying (and in a room of which, hence called 'Pope's Study,' he finished the fifth book of his *Iliad*), feared that this epitaph would be a little beyond the comprehension of the simple villagers around; whereupon the poet wrote a second, which was engraved on a stone in the parish church of Stanton Harcourt. It ran thus:

Near this place lie the bodies
Of JOHN HEWIT and SARAH DREW,
An industrious young man
And virtuous young maiden of this parish;
Who, being at harvest-work
(With several others),
Were in one instant killed by lightning,
The last day of July 1718.

Think not by rigorous judgment seized,
A pair so faithful could expire;
Victims so pure Heaven saw well pleased,
And snatched them in eternal fire.

Live well, and fear no sudden fate;
When God calls victims to the grave,
Alike 'tis justice soon or late,
Mercy alike to kill or save.

Virtue unmoved can hear the call,
And face the flash that melts the ball.

It is believed that Thomson had this incident in his thoughts when he wrote the lines (in his *Seasons*) beginning

Young Celadon
And his Amelia were a matchless pair.

On Sunday, September 5, 1869, Thomas Hardaker and Emma Carrick were walking in the fields near Leeds, on a footpath leading from Stanningley to Farsley. The young man was a toy-dealer; and the young woman a weaver, employed at one of the woollen mills which so abound in that neighbourhood. The couple had been Sunday-school teachers together, were betrothed, and had arranged to be married in a month or two. On the Sunday afternoon they took tea at the house of the poor girl's father at Stanningley; then walked to Farsley, where Hardaker was staying; and were returning when the catastrophe befell them. They took a field-path, and were last seen alive in conversation in a narrow road, bounded by two walls. They retreated a little towards Farsley, on seeing that a storm was coming on, and took partial shelter behind a garden-wall. Two iron gates or palisadings were on either side of them at no great distance; and these metals are supposed to have had an intimate connection with the sad result. It was about nine o'clock in the evening, dark, and gloomy; rain fell slightly, then heavily, and vivid

Digitized by Google

flashes of lightning were followed by terrible peals of thunder. The circumstances led to a supposition that the lightning, attracted by the iron of the first gate, swept onward to the second, and caught the hapless couple on the way. No one saw the death-stroke; but the evidence afterwards adduced lent support to this supposition.

At eleven o'clock on that night, a cloth-weaver, passing that way, almost trod on the bodies of the two young people, who were lying across the footpath near one of the gates. He touched them with his umbrella, and bade them get up, thinking they were intoxicated; but as they were senseless and motionless, he hastened for a lantern. It was then found that the poor young people were really dead. Emma Carrick was lying flat on her face, Thomas Hardaker on his back; her dress was but little touched, but his right boot was split or ripped up. The only actual mark of lightning on the bodies was to be seen on the faces, which were scarred and burned about the forehead and nose. Besides the ripping up of the young man's boot, small holes were burned in his shirt and his purse. Gold, silver, and copper, in the purse and the pocket, were partially melted; and two shilling-pieces were fused together. So little was the discoloration of the faces, that when the lovers were laid out side by side, they seemed to be tranquilly asleep. No poet was near, to write monody or epitaph; but the sad event made a deep impression on the neighbours, by whom the young couple were well known and respected.

There is something very mysterious in these attacks of lightning on the human body. We know in a sort of rough, general way that metals and other substances differ greatly in their power of conducting electricity; but science must advance beyond its present stage before we can lay down infallible rules for guidance. Some persons have supposed that lightning does not penetrate far beneath the surface of the ground; but in 1843 three men were struck with a flash at the bottom of a mine six hundred feet deep—the lightning having passed down a chain in the shaft. Others, again, believe that safety is to be found in bed. It certainly is so generally, but by no means universally. In 1828, lightning attacked a cottage near Chichester, destroyed with a crash the wooden part of a bedstead, threw the bed-clothes on the ground, and with it the mattress and a person who was sleeping on it—fortunately without further mischief. Again, in the same year, near Doncaster, a flash of lightning tore the coverlet from a bed, but without doing any injury to its occupant. Again, in 1772, Mr Hearthley of Harrogate was killed by lightning while asleep in his bed; his wife, lying by his side, was not even awakened by the shock. A Roman Catholic church was once struck by lightning during the celebration of mass; two of the three officiating priests were struck dead, while the third remained untouched. Sometimes trees are sought, sometimes shunned, for shelter during thunder-storms, according to the prevalence of certain opinions. Some years ago, a theory was broached to the effect that lightning often strikes the elm, chestnut, oak, pine, and sometimes the ash, but not the beech, birch, or maple; then there was an assertion that, when the oak and the pine grow near together, the latter escapes while the former is attacked. Generally speaking, however, the opinion prevails pretty strongly, that the further distant we are from trees during a thunder-storm the better. The supposed protective power of glass, too, is not always reliable. In 1780, two persons were killed at Eastbourne while standing inside a window during a thunder-storm; the glass was reduced to powder, but the wood-work of the window remained uninjured. Any articles of metal worn about the person are pretty certain to increase the danger from lightning. In 1819, lightning attacked the prison at Biberach, and out of twenty prisoners in one apartment, attacked only a brigand who was chained round the waist, leaving the others unscathed. In 1749, during a thunder-storm, a lady raised her arm to shut a window; the lightning flashed, and 'a golden bracelet so completely disappeared that not a vestige of it could be found,' without the lady herself being hurt. The *complete* disappearance of the bracelet is probably a bit of exaggeration. The melting, without the actual disappearance, is credible; for in 1844, a lightning-flash struck a fishing-boat off the Shetland Islands, shivered the mast, and melted a watch in the pocket of a man sitting near the mast, without scorching his clothes or injuring him. In 1858, when a peasant-woman was killed by lightning near Auxerre in France, not a wound was found on her body, but a silver comb was melted in her hair—probably defining the spot where the death-stroke was given. Brydone relates an incident of a lady whose bonnet was reduced to ashes while she was looking out of a window at a thunder-storm: it is supposed that the wire in the bonnet attracted the electricity. It is, however, not very likely that ladies will adopt the highly scientific precaution suggested by him for such occasions: 'Every lady should wear a small chain or thread of brass wire, which she should hang, during the time of a thunder-storm, to the wires of her bonnet, by which the fulminating matter might pass to the earth, instead of traversing the head and other members.'

Not the least embarrassing of the questions which arise in reference to lightning-flashes is to guess in what way the action will shew itself when two or more persons are near each other in a line or in a curve. Will it act most at the extremities of the line, or in the middle? In 1808, a lightning-flash struck a house in a Swiss village: five children were sitting on a bench; it killed the first and last in the row, but gave only a violent shock to the others. In 1858, at Drome in France, a lightning-flash killed a young girl in a farm-house, but left untouched a child in her arms. It is not yet known whether horses and other quadrupeds resist the effects of lightning less safely or more safely than human beings; for some recorded facts tell on the one side, some on the other. In 1785, lightning attacked a stable at Rambouillet: thirty-two horses were in a row; thirty were overturned, of which two at the extreme ends of the line were killed. In 1801, a miller near Chartres was walking between a horse and a mule; the two animals were struck dead by lightning, while the man escaped with slight injury. In 1781, three French gentlemen were out riding: a lightning-flash killed all three of the horses, but only one of the riders. In 1826, a boy was leading a mare on a road near Worcester: a thunder-storm came on, which killed the mare, but left the boy unhurt. In 1810, a gentleman was sitting with his dog by

Digitized by Google

his side: a lightning-flash killed the dog, but only gave a slight shock to the gentleman. In 1858, while a clergyman near Leatherhead was riding in a fly with two members of his family, a lightning-flash struck the driver from his seat, without hurting the other persons or the horses. There is almost as much doubt whether the popular view is correct, that water is less attacked by lightning than land. Kaempfer stated that the emperors of Japan were wont to take refuge in a grotto containing a reservoir of water during a thunderstorm. Do the Tycoon and the Micado, of whom we hear so much now-a-days, practise the same cunning device? That fish are stunned in the water there is sufficient proof. In 1772, lightning attacked the river Doubs near Besançon, and stunned the fish, which were floated along by the stream. In 1670, a lightning-flash fell on the lake of Zirknitz in Austria; and 'such a quantity of fish almost immediately floated upon the surface, that the neighbouring inhabitants collected twenty-eight wagon-loads for manure.'

HOSPITAL-VISITING.

TO THE EDITOR OF 'CHAMBERS'S JOURNAL.'

SIR—You were good enough to insert a paper bearing the above title in last month's *Journal*, which has been the means of my receiving various sums of money and contributions of clothing and books for the patients of a London hospital.

I am now going to ask you to allow your *Journal* to be the medium of my acknowledgment of the *anonymous* contributions only—all others having been acknowledged by letter. For these, I need only repeat my thanks.

I wish to mention, for the information of those who sent sums *specially* for Mrs Dean, that I have not been able to find her since my return to town. I have, however, one clue to her, as her husband is on board a friend's ship, now nearly due. If I fail to discover her, or if I hear of her death, after a reasonable time, I shall either return the said money, or ask leave to apply it to some other case.

It has been suggested to me that in my former paper I did not allude to the Samaritan Fund, the object of which is to assist destitute patients on leaving. It is true that such funds exist in connection with more than one London hospital, and I know that the good they do cannot be over-rated; but I also know that the number of destitute patients is great, and the means of the fund are limited, *so* limited, that my own small experience has taught me that there is still ample room for individual exertion in the same direction. It is for the assistance of those whom the Samaritan and similar Funds cannot assist, that the appeal was written, which has been so generously responded to by the readers of your *Journal*.

Lastly, though, for obvious reasons, I do not name the hospital referred to, it might still be recognised by a few; and lest I should unwillingly have given any impression to the contrary, I would here gladly testify to the excellent management—the good order, cleanliness, and comfort of the arrangements, and the unvarying kindness and care shewn to the patients. My appeal was made, not because the hospital did not do enough, but because it was impossible it could do more.

The bag is still incomplete; but the first instalment will shortly be sent in.—With grateful acknowledgment of this and all other contributions from your readers, I remain, sir, faithfully yours,

S. D. H.

The contributions are those received up to September 25th inclusive.

A FAREWELL TO SUMMER.

See Winter's van, with blazoned banners flying,
Sweep o'er the forest, mountain, plain, and dell;
The drooping flowers and breezes sadly sighing,
To Summer bid farewell.

Blithe morns! that scattered joys, though oft repeated,
Still ever new as at creation's dawn;
By thousand glad harmonious voices greeted
From grove and dewy lawn.

Still noons! when e'en the aspen ceased to quiver,
And honey-sated lay the alumb'ring bee;
Amid whose silence faintly lisped the river,
Translucent to the sea.

Eves! when fond lovers paced the terraced alley—
Where, through the twilight, gleamed the lustrous flowers;
And birds, within the leaf-enshrouded valley,
Sang from dim violet bowers.

Nights! when the starry clusters slowly thickened
To the full structure of heav'n's golden maze;
Nights! whose cool breath the stretching landscape quickened,
Veiled in a moonlit haze.

Farewell! Amid your dimmed and scattered treasures,
Queen of the year, your lovers sigh adieu!
Farewell! till with your pure, health-giving pleasures,
Earth's pulse shall throb anew.

Re-issue of

CHAMBERS'S MISCELLANY

OF

Instructive and Entertaining Tracts.

Issued this day,

TALE OF NORFOLK ISLAND: AND TWO BEGGAR BOYS.

PRICE ONE PENNY.

CHAMBERS'S JOURNAL

OF

POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 305. SATURDAY, OCTOBER 30, 1869. PRICE 1½d.

'TIS EIGHTY YEARS SINCE.

BEFORE us lies a newspaper of a single sheet, which measures twenty inches by twelve. Its date is January 1, 1788, its price is threepence, and its title is THE TIMES. You would no more recognise in it the lineaments of that gigantic broadsheet which now emanates from Printing House Square, than you can trace in an infant of a day old any likeness to a grown-up man. The paper in question is the first-born and just-born *Times*, 'printed logographically' (of which the proprietor appears exceedingly proud), and issuing from the same locality as at present. Hitherto, the journal had been called the *Daily Universal Register* (of which there seem to have been nine hundred and thirty-nine issues); but that had led to much confusion, 'the word *Universal* being universally omitted, and the word *Register* only being retained. "Boy, bring me the *Register*." The waiter answers: "We have not a library, but you may see it at the *New Exchange Coffee-house*." "Then I'll see it there," answers the disappointed politician; and he goes to the *New Exchange*, and calls for the *Register;* upon which, the waiter tells him that he cannot have it, if he is not a subscriber—or presents him with the *Court and City Register*, or the *Old Annual Register*, or the *New Annual Register;* or if the coffee-house be within the Purlieus of Covent Garden, or the Hundreds of Drury, slips into the politician's hands *Harris' Register* of Ladies.'

For this weighty reason, then, the *Times* newspaper, so called, was, it seems, originally begotten; and a more melancholy specimen of journalism, as read by our present lights, it is not easy to imagine. Its jokes are very numerous, and very bad; so bad, indeed, that they are invariably printed in italics, in order that their humorous intention may not be overlooked. Moreover, they are sometimes exceedingly indecent, and almost always personal. The paragraphs which are meant to be severe remind one of the old *Satirist* or *John Bull* in their grossness, but without their wit. The cuckoo is a bird without which the newspaper writer of those days, who would be smart, could not have got on at all: Mr Tristram Shandy is also laid under frequent contribution; nor does their sex preserve the ladies from the lash of the cynic. Squibs such as are now confined to country journals at election-times, seem to have formed quite a usual ingredient of a newspaper in those days. In the Notice to Correspondents, we read: 'The *Critic* will do; so will other Squibs from the same hand.' Again: 'Though much has been said of Lord George Gordon's beard, yet, as the subject increases every day, the *Times* will not let it pass *unnoticed*. The Shandean *jeu d'esprit* will, of course, be attended to, though perhaps with a little clipping.' The editorial shears, however, seem to have been very merciful. We are informed, in immense capitals, that AMERICAN PHILOSOPHERS & PHILOSOPHY are entitled to the protection of THE TIMES. Also, 'with ARTS and SCIENCES it will ever be at *peace*.' Peace is printed in italics, so there must be a joke somewhere. In very small type, we learn that 'Parisian intelligence shall have insertion without fail.'

The *Times* seems to have been in hot water with the printing fraternity even before it was christened. In a few words 'To the Public,' Mr Walter tells us of 'the unjust and illiberal measures' which have been taken to impede the progress of his logographic press. 'The *Daily Advertiser* being generally read by the lower orders of people, I offered at its office an advertisement for several apprentices, which Mr Lenour, the printer, refused to insert, though he had received payment several days preceding.'

In the programme describing the future line of the new paper, there are some significant sentences. There is no boast of an impossible consistency. 'The *Times!* What a monstrous name! Granted; for the *Times is* a many-headed monster, that speaks with a hundred tongues, and displays a thousand characters, and in the course of *its* transformations in life assumes innumerable shapes and humours.' What the infant paper *did* promise in the following respect, its manhood has certainly nobly redeemed.

'On the *Parliamentary Head* every communication

Digitized by Google

that ability and industry can produce may be expected. To this great *national object*, THE TIMES will be most sedulously attentive, most accurately correct, and strictly impartial in its reports.' In 'discussion, description, dissection, and illustration,' it also engages 'to employ the pens of the most celebrated of the *Literati*;' but it must be confessed that so far as this first number goes, there is very small evidence—if the proof of it lies in the reading—of literary talent. Cabinet ministers did not write 'leaders' in the *Times* in the last century; and even the penny-a-liners knew nothing of their business.

Imagine the *Times* of to-day, in its just indignation against medical quacks, threatening a particular transgressor after the following fashion. Whether the bad grammar of the paragraph is intended, we cannot say; perhaps it was considered to be facetious:

O QUACKERY! where wilt thou end? O PHYSIC, when are thy disgraces to terminate? There are at this time a practitioner in town, who says to his patients—'Use my *vegetable*, follow my *regiment*, and never fear it will *radicate* all your *pectril* complaints.' Such a character should not escape the animadversion of THE TIMES; but of *this here* Doctor more anon—when *The Times* have leisure.

Besides these small social hits, are a few political ones, the salt of which—if they ever had any—has long since lost its flavour.

The public events of Holland are known to every one who can and will read the newspapers, but they alone who are able to get a peep into private correspondence can be informed, though they will not all of them *believe*, that Lord Beauchamp is actually giving dinners—ay, and good dinners, too, at the Hague.

Was Lord Beauchamp sparing in his hospitalities? we wonder; and if so, was it worth while to twit him with it in the *Times*?

These or similar paragraphs are really all of a public or social nature to be found in the paper; while the news is meagre in the extreme. Among the Home Intelligence, we learn, at considerable length, how Ryan in his last 'set to' with Johnstone trod upon the latter's great toe, and lacerated the nail. Under *Mails Arrived*, with no particular date, are 'two Holland, one French, one Flanders, and one Irish.' *Mails Due*, one Irish.

'Yesterday, the purser of the *Dutton*, Captain Hunt, for Bombay and China, received his final dispatches from the India House.'

The foreign news seems to come almost exclusively from Warsaw, and is of the most unintelligible description—concerning 'the Waywodes of Volchinia and Podolia.'

From Frankfort, we hear that, on the 11th of December, 'the reformers established in that city have got permission to follow the duties of their religion in private houses, until their churches shall be finished.' From Constantinople, the Porte declares 'that the restoration of a durable peace must be impossible so long as Russia keeps possession of the Crimea,' and does not consent 'to the re-establishment of the new Chan in all the rights of sovereignty which that prince may claim upon Little Tartary, by virtue of his Highness' Proclamation.'

There are short notices of the drama at Drury Lane and Covent Garden, by which we learn that Kemble is acting Hamlet at the former to almost empty benches.

By way of literature, we have the entire Ode for the New Year, written by Mr Wharton, and set to music by Mr Parsons, 'which will be performed at St James's;' and sad stilted stuff it is. There is but one *Married:* 'Yesterday, at Walthamstowe, &c.;' and one *Died;* nobody seems to have been born except the *Times* itself.

Besides what we have mentioned, there is absolutely no news; but the advertisements, considering the size of the paper, are very numerous, and at least as interesting to us now as the rest of the contents. It is a strange reflection, to begin with, that in all probability not a single soul is now alive to whom any reference throughout the sheet is made, notwithstanding that, in many respects, it might have been printed this very morning. The *Times* of to-day has indeed given up 'the puff direct;' but in many of the less ambitious journals, we see exactly such a paragraph as the following, and, like it, without the depreciatory letters *Adv.*

The cheapness, elegance, and durability of the FASHIONABLE FURS sold at MELANSCHEG'S MANUFACTORY, No. 333 in the *Strand*, accounts for the number of nobility and gentry that daily honour him with their preference, and as he makes it his chief study to insure the most distinguished encouragement by the superiority of his goods, we hesitate not to declare that we should have been surprised had he failed of receiving the most flattering encouragement. In patronising works or articles of merit, the public most eminently display their taste, spirit, and liberality.

The above occupies the same prominent position in the paper that the last telegraphic news now holds.

The same arts, it seems, were employed then as now, by advertisers, in respect to warning the public against spurious imitations of their invaluable wares. The superiority of 'Sharp's Concave Razors' and 'Cyprian Wash Balls,' have induced (says Sharp) designing persons to offer less estimable articles as genuine. Clay and Cavendish were not to enlighten the whist world with their scientific news for threescore years and ten, but *Bob Short's Rules of the Game at Whist*, and *Every Man a good Card-player*, by 'a Member of the Jockey Club,' can be had for fourpence, or 'four for a shilling to give away;' which seems a generous enough deduction of price. Medical benefactors of their species are as unselfish and charitable as to-day: 'emolument not being so much the object' of each excellent invention 'as that of spreading relief.' The peculiarity of the drugs lies in their being so excessively dear. 'Opiate of Life, most sovereign for weak and decayed stomachs, and infallible to all consumptive patients, 7s. per pot; Golden Pill, a restorer of lost memory, and most wonderful for giving a beautiful complexion, 10s. 6d.' Also, among *Interesting Discoveries*, 'a liquid which will render all writings not legible at once distinctly visible' [which, in the case of the caligraphy of more than one of our correspondents, would be well worth the money], 'at 10s.,' and 'an ointment which destroys bugs so as never to return, at 2s. 6d.'

The literary advertisements are more various than select. There is a new edition of *Tomkin's Selection of Poems to enforce the Practice of Virtue*, which it seems a pity should not be reprinted; but also *Pæans of Pleasure* and *Memoirs of Kitty*

Digitized by Google

Cut-a-dash, of which it is perhaps as well that there are no copies at the railway bookstalls. There is also a third edition of *Letters which passed between an* ILLUSTRIOUS PERSONAGE *and a* LADY OF HONOUR *at Brighton*; and another of the *Festival of Anacreon; or the Songs of Captain Morris and others, as sung at the Anacreont* (sic) *Society, and the Beefsteak and Humbug Clubs*. Poor Captain Morris, so well known then, and now but the shadow of a name! His last song has been sung, his last toast been given, these fifty years, and all those who stood up to applaud and drink are gone with him. Yet, those past days, of which this old paper speaks with such dumb pathos, were 'merry,' not only in the sense of bacchanal fun; the public amusements therein advertised are of a class which it is in vain to look for now. At the Theatre Royal, Drury Lane, this night, Kemble and Mrs Siddons play in the tragedy, and Kelly in the afterpiece. At Covent Garden, there is Lewis as Ranger, and Mrs Abingdon as Clarinda. At the opera, among a host of forgotten names, stands out that of Vestris, the father of our late ancient evergreen of the same name. The institution of opera fans seems to have died out, but it here receives considerable prominence.

THE OPERA FANS.

To the Subscribers and Frequenters of the KING'S THEATRE.

Last Saturday were published, according to Act of Parliament.

THE Delivery, however, was put off till the Re-opening of the Opera House next week, for the purpose of presenting them in the best state of improvement.

These FANS, calculated to present at one view both the number of boxes, including the additional ones, names of Subscribers, &c., have been carefully compared, with the plan of the House as kept at the Office, and will be sold only by the Proprietor,

Mrs. H. M., No. 81 Haymarket,

Where she will receive with respectful gratitude any commands from the ladies, and wait on them if required.

Under the head of Anatomical Lectures, Mr John Abernethy, assistant-surgeon to St Bartholomew's Hospital, advertises a course to be held at No. 17 Bartholomew Close.

The cure of souls was not treated one whit more delicately, we may be sure, than at present; and the next presentations to livings are advertised with all particulars, and the extreme age of the present incumbents as a lure.

Sale by Auction heads a single advertisement, but *Sale by Candle* heads half a dozen, and at once reminds us that we are reading of the past. What a totally different state of things to the present, when even the betting-houses are being prosecuted by the police, do these long advertisements of the state lotteries suggest, of which there are several. Some lottery firms do not publish the good fortune which has attended their tickets, 'declining to adopt the parade and nonsense which renders some of their cotemporaries ridiculous;' but Messrs Richardson and Goodluck (Goodluck is surely an adopted title?) have no intention of concealing their light under a bushel in that respect.

ENGLISH STATE LOTTERY.

Begins Drawing FEBRUARY 11, 1788.

RICHARDSON and GOODLUCK respectfully inform the public that the TICKETS are SOLD and divided into Half Quarter, Eighth, and Sixteenth SHARES, at their licensed State Lottery Offices, in the Bank Buildings, Cornhill, and opposite the King's Mews, Charing Cross, where every business of the Lottery is transacted with correctness and fidelity.

N.B.—In the last and TWO preceding Lotteries the following CAPITAL PRIZES have been sold and shared at the above Office, viz.:

Sold in Shares.	Whole Tickets.
No. 48,577 a Prize of £20,000	No. 968 a Prize of £20,000
23,148.....20,000	4,196.....10,000
27,964.....10,000	5,473.....5,000
41,827.....5,000	18,179.....5,000
33,599.....5,000	3,605.....5,000
22,740.....5,000	

Besides many of Two Thousand, One Thousand, and Five Hundred Pounds.

Tickets registered at Sixpence each, and the earliest Intelligence sent of their success.

*** Money for the Prizes will be paid at the above Offices as soon as drawn.

Altogether, if this old newspaper may be supposed to mirror the Times after which it is named, we have indeed small reason to regret that we did not live three generations ago. At all events, if nothing else has improved, without doubt *Journalism* has. The halfpenny newspaper of this evening will not only contain ten times the amount of news—and that of the newest—that is found in this sheet of eighty years ago, but even in literature—in the mere talent of expression—will infinitely surpass it. If it has jokes, they may not be very good ones, but it will not be necessary to italicise their point: they will not be indecent; and they will not be offensively personal. Not the least curious part of this ancient paper, and one which probably illustrates the difficulty which Mr Walter found in getting it circulated, is the last line, wherein the places are indicated where the *Times* is to be procured. Of course, 'at the Logographic Press, Printing House Square, near Apothecaries Hall, Blackfriars, where advertisements, letters, essays, and articles of intelligence will be taken in;' but also 'at Mr Mettenius', *Confectioner*, Charing Cross; Mr Roos', *Silk Dyer*, Spring Gardens; and Mr Whiteare's, *Watchmaker*, Fleet Street.'

WAS SHE WORTH IT?

CHAPTER IV.—THE BARNCOTE BANK IN 1857.

THE announcement of the Barncote public ball for New-year's Eve had appeared for several weeks in the *Barncote Herald*, with a long list of stewards and lady patronesses, low down on which, as beseemed their mere local position, stood the names of Alderman Tom and Mrs Bellamy. Tom's thoughts were not, however, on balls, as he stood at the tall desk in the brewery counting-house, which looked out into the brewery yard. He held in his hand a sheet of figures. It was Tom's profit and loss account for the year just ending, and it wasn't an unsatisfactory one. It shewed in round numbers a profit of two thousand five hundred pounds; and Tom's drawing had only been one thousand two hundred pounds. Tom called his manager into the counting-house, and shewed him the balance-sheet. 'Very satisfactory indeed, sir,' said Mr Birks, who, from much poring over vats and inhalation of worty vapours, was rather husky in the throat.

'I'm greatly indebted to you, Birks, for the

Digitized by Google

way you've worked for me. I've signed a cheque for your salary and the wages. I've great pleasure in giving you this cheque for fifty pounds, as a new-year's present. I shan't be here to-morrow, Birks, as I'm going to Luffhaven to collect, and can't be back till late at night. So I'll wish you a happy new year, Birks; and good-bye, and God bless you!'

Birks was embarrassed by the warmth of his master's manner and the largeness of his gift. A five-pound note was about the figure he usually had. Fifty pounds! Birks's salary was ten pounds a month, and when it came, it was usually forestalled; and there were also numerous little scores against him, which were troubling his mind, this festive Christmas tide. Indeed, Mr Parkins, the draper, had been very sharp with him about a small account which he owed for mourning, for a little boy who had died two years ago; and Parkins had threatened to complain to his master of his dishonesty in not paying his bills. Poor Birks had fancied that he had seen Parkins walking up with Mr Tom, and he imagined the summons to the counting-house was a prelude to instant dismissal.

Fifty pounds was to Birks salvation: it would pay off his old scores, it would start him afresh, it would make a man of him. But he couldn't thank his master for it—the words stuck in his throat: they couldn't struggle through the deposits of the vats. His master smiled and nodded, and passed out. Birks followed him to the door, and watched him down the street.

'He's just the kindest, thoughtfullest soul is the young master; but, dear me, how he be aged the last few years sure*ly*!'

Tom's face was not that of a youngster as he entered the private parlour of Birkin's bank. Arthur Birkin rose and shook him coldly by the hand, and then took his stand with his back to the fire. He was a short dark neat little man, excessively clean-looking, dressed quietly and plainly, as became a banker, but with a little touch of the country squire breaking out in his blue birds-eye scarf, his roomy shooting-coat, and well-shaped riding-trousers.

After a little chat about the weather, the last run with the East Wessex hounds, and the town drains, Arthur, without circumlocution, went to the purport of their interview.

'I sent for you, Bellamy, to tell you we must have our advances repaid. I gave you a hint of the sort a few days ago, and I find that it is now absolutely necessary.'

I don't suppose that the bird fairly caught and fluttering in the paws of the cat, its captor, suffers much terror and agony of mind: the thing is over; a sort of fatuous wonder as to how it will feel whilst its bones are being crunched, and a stupid amazement at being in such a plight, are in its mind; it recks not of its modest mate, the peaceful nest, the callow brood. So with Tom; he had discounted his troubles; he felt stupefied, that was all. The long, long while he had suffered, the trouble he had had, seemed to surge into his head, and prevented him from thinking. Only one thing could he hold on to, that he must shew no change to that black-whiskered face, with the dark-gray eyes, and wide mouth, and white teeth; he must hold on to that face, and not let himself go. He sat down on the banker's table, and taking up some pens, began sticking them, javelin fashion, into the leather cover. It was an old trick of his boyhood.

Arthur exclaimed angrily: 'Mr Bellamy, please not to damage my table.'

That woke Tom up; the whirl in his head stopped; he stood up, and confronted the banker. 'How can you expect me to reduce my debt more rapidly than I am now doing? Haven't I paid off twenty thousand in the last ten years? Haven't I worked like a nigger for you? Why, Birkin, when your uncle persuaded me to take over the concern in '47, you stood to lose thirty thousand pounds; and I put five thousand pounds of my own in it; and I believe I saved the bank by that. And your uncle was my trustee! Arthur, how can you be so wicked, knowing all you do, to talk to me of calling up that money?'

'My uncle was a very good sort of man, and was very forbearing with your uncle and yourself. I don't know anything more about the transactions you refer to. My uncle was not very sound upon banking, however. It's *our* principle, Mr Bellamy, not to make advances except upon convertible securities.'

'Haven't you got the deeds of the brewery and all the freehold houses?'

'Just so; and taking the brewery as a going concern, its value would no doubt cover our advances. But look here: in time of pressure, when *we* wanted to realise, such security would be practically worthless. A prudent mariner, dreading an approaching storm, takes in his canvas, and—and—— Well, you know he gets ready for it. *We* foresee a crisis in the money-market, and we are preparing for it. We don't want to inconvenience you; but really now the advance has been standing so long—— Mr Andrews,' whispered the banker through a speaking-tube, 'bring down Bellamy's note.'

'You damned serpent!' hissed Tom between his teeth.—'No; don't run away; I'm not going to hurt you, you little venomous beast!' And he stalked out of the private room before Arthur Birkin had recovered from his astonishment.

Tom was not altogether mad; he knew that the promissory-note which Birkin held was payable fourteen days after demand—that he had a good balance on his current account—and that Arthur Birkin would not be moved from his purpose were Tom, and his wife and his daughter, to grovel in the dust before him.

Arthur Birkin was a 'gentleman.' He was a little upset at being called a serpent and sworn at; but if there was one thing he prided himself upon, it was that he had a Christian and forgiving spirit. Nor was the accusation Tom hurled against him a just one. He only wanted his own. He was too clear-headed and sensible a man to be influenced in his line of conduct by the supposed wishes of a man who was dead. Certainly, he had often heard old Birkin promise Tom that he should never be unduly pressed about the advance so long as he kept reducing the principal. But what was that to him? The old banker had made many indiscreet and foolish advances out of the goodness of his heart. Arthur had no idea of setting up as a little providence, and rewarding virtue, and all that; and that his keen intelligence should be dominated by some old-fashioned notions which formerly animated a departed soul, was to him a

Digitized by Google

thing inconceivable. Still, he was quite disposed to act fairly by Tom Bellamy; and if he'd asked him for a month, or even for two, and could have satisfied him that the money would be forthcoming, Tom might have had the time—yes, and might now, notwithstanding the serpent and the venom.

Tom went off to the joint-stock bank.—Yes, they'd take his account with much pleasure—discount for him with pleasure. As for a large advance, for a considerable period—Yes, with pleasure!—on sufficient security. Life policies?—No; the bank would *rather* not take that sort of security—was against the rules of banking. 'But bring your interests to us,' said the manager cheerily; 'we'll take care you don't suffer.'

Very satisfactory this, as far as it went. Tom knew, however, it wouldn't go very far. He must try and think of something. He'd go on to the pier, where he would be quiet. He turned through the pay-wicket, and went on to the pier. He hadn't been there for years. People who live near the sea rarely go down to the beach, or on to the pier, or out in a boat, or in anyway take notice of the sea. The fashionable visitors of Barncote didn't care about the pier. It was out of their beat; and a few children and nursemaids were generally the only visitors to the pier-head. The day was cold and raw, with an east wind, and nobody but Tom was about. He went out to the end, and sat down on a beam a little sheltered from the wind. From habit he took his pipe out of its case, and knocked it against the beam; but he didn't smoke. He couldn't think, either, connectedly of his business. He knew, he felt, it was useless. The blow that had fallen upon him was fatal. He pitied himself a little. He had worked so hard; he had been so near success; but he had failed; and his failure was final and irremediable. He felt inexpressibly sad. A wasted life!—Wasn't all life wasted? a causeless and purposeless ebbing and flowing? Wouldn't it be better to end it all, by dropping quietly into the swirling waters? And then he thought of his wife at her needlework at home, and of Gracie sitting by her knee—radiant figures in all the gloom. He could think and plot for them, though not for himself. He rose and left the pier. The shadow of overwhelming care had cleared away. A shadow there still was upon him, a shadow and a light.

'Gracious, Tom,' said Lucy as she kissed him on his return, 'how cold you are! You must stop at home to-night, and have your feet in hot water: you've got a chill.'

'Nonsense, child; it's nothing,' said Tom. 'Stay at home! why, it's the ball to-night; I wouldn't miss the new-year's ball on any account. Don't you remember ten years ago?'

CHAPTER V.—THE BARNCOTE BALL IN 1857.

The old Barncote assembly-rooms had been pulled down years ago. In their place was a town-hall, with a Grecian portico. Within, was a fine room, supported by polished granite columns; a large organ and an orchestra at one end; as well as numerous refreshment-rooms, committee-rooms, and law-courts—the last only used by the local justices in petty sessions, and the county court judge. But the Barncotians were living in hopes that, some day or other, the judges of assize would enter those courts with much blaring of trumpets, and rushing to and fro of policemen. Her Majesty's judges, however, and those minor judges who held her Majesty's commission of the peace, and ruled the destinies of the county in quarter-sessions assembled, were understood to set their faces against any alteration; so the assizes were still held in the little town of Lumpstone, some fifteen miles from Barncote. As three-fifths of the prisoners, and four-fifths of the civil cases, came from Barncote, there might seem to be some reason why the judges should come to the suitors, rather than the suitors should go to the judges. But legal wisdom had decided otherwise.

The damage also to the hotels of Lumpstone, which contrived to exist and pay their rents from the exorbitant profits they extorted from the visitors to the assizes, would have been great; and as these hotels were owned by county magnates, who served their Queen and county as magistrates, deputy-lieutenants, and high-sheriffs, law and order would have been indirectly damaged by their loss.

Tum te iddity, tum te iddity! away went the fiddles, cornet, and harp at the opening quadrille. The hall was three times as big as the old assembly-room, and infinitely more grand: the girls were better dressed, and the men were better got up; but it wasn't half so jolly as in the old times—at least, so Tom thought, as he opened the ball with the mayoress of Barncote, whilst the worthy mayor led out Mrs Alderman Tom. The hall felt cold and chill, in spite of the brilliant sunlights and the hot-water pipes; and Tom looked over his shoulder every now and then, and shuddered. He certainly had got a chill. He almost made up his mind to go home and take his wife's advice about the hot water. The thought of his comfortable dressing-room, and the cheery fire, and the steaming tub, and the glass of hot grog that his wife would administer to him, came so strongly into his mind, that the tears came into his foolish eyes, and he forgot to 'chassez' to his partner, who, spreading out her plum-coloured skirts, was going through her paces unaided, with much dissatisfaction.

No such visions could be realised that night. Tom must be at Luffhaven by five in the morning, to meet the steward of the Luffhaven mail-boat, who owed Tom a long account, which he had promised to settle; and after that, he had a heavy day's collecting from Luffhaven to Lumpstone. He expected to get in about five hundred pounds.

He was claimed after the quadrille by his old friend Winter, who wanted him to go and have a rubber in the mayor's little parlour, which had been reserved for the *cognoscenti;* and Tom went and played, but was absent and *distrait;* trumped his partner's trick, led a false card, and otherwise misconducted himself. The whist languished, and the table was broken up; and Tom and Archibald found themselves sitting together by the fire as they had been ten years before.

'Tom,' said Winter, 'aren't you glad you didn't take my advice ten years ago?'

'I don't know,' said Tom dreamily.

'Ah! *you* were right, Tom, and I was wrong. I was a shocking young prig ten years ago, I think. Don't you remember how I solemnly assured you that you were on your way to "misery, ruin, death?"'

'So you did,' said Tom with a start.

'Bad shot, wasn't it? Why, I think you are the

Digitized by Google

luckiest fellow in the whole county of Wessex at this present moment.'

'Archie,' quoth Tom, after a pause, 'which do you think is the worst of the three?'

'Oh, Mr Bellamy,' said one of the waiters, putting his head into the room, 'I'm glad I've found you, sir; there's a young man from your office wishes to speak with you.'

'Send him in here, Williams.'

Enter Birks. He is dressed in decent black, which looks rusty and dull beside the sleek clothes of his master and friend. His red, bulbous nose shews all the more, that his cheeks are pale and tallowy. He is evidently suffering from strong fear.

'What is it, Birks?'

'O dear Mr Bellamy, you ain't going to drive all alone to Luffhaven to-night, be you, sir?'

'Yes, of course,' said Bellamy sharply.

'But, dear heart alive! there's been two farmers stopped on the Lumpstone Road this very night. Three men, with black maskesses on, and pistols.'

'Where did you get hold of that cock-and-bull story?'

'It's all the talk at the *White Hart* bar, sir.'

'Ah! I thought you'd been there. Well, don't come after me again, Birks, with these foolish stories.'

'But, master, if you must go, take me with you; I'm sure you'll be murdered if you don't: everybody knows as you carry bags full of money with you.'

Tom laughed. 'Much good you'd be in a scrimmage, Birks. If your friends in the black masks know so much about me, they'll also know that I carry a brace of double-barrelled pistols in my gig, and can use them too. Go home to bed, Birks.'

Birks shook his head in a melancholy way; but he couldn't say any more, and slunk out.

'I *would* be careful, Tom, though, if I were you,' said Winter. 'Let's go and get supper.'

Tom had a fancy to dance one dance with his wife that night. It was the Lancers. Ten years ago, the Lancers had decided Tom's fate. As he stood up once more to the well-known figure, and the band struck up the prelude, all the events of the last ten years crowded into Tom's mind. Such happy, peaceful years, but for the load he had been staggering under so long, and which was going to crush him at last!

Tum te iddity, tum te iddity! A playful poke in the back from his neighbour reminded him that he was stopping the way in the grand chain: away he hopped, getting many a pleasant squeeze of the hand and merry greeting. They were all townspeople in the set, and everybody liked Tom, especially the women-folk.

The music ceased, the figure ended, and still Tom stood for a moment with his wife in his arms, as they had finished the final galop. 'Good-bye, darling,' he whispered; 'enjoy yourself, dear: don't sit up for me to-morrow night.'

He was gone, and his wife looked after him wistfully for a moment.

Tom had ordered his dog-cart to take him up at his house. He walked home along the esplanade. Ten years ago, the moon was reflected gloriously in rippling waters: to-night, the sky was dark and overcast; the wind was rising; and while breakers were dashing eagerly in, Tom thought of the man who had gone down to the sea to ask a boon for his wife.

He opened the door of his house gently, and walked up-stairs on tiptoe into the room where Gracie was sleeping peacefully in her little cot.

There we will leave him, till the clatter of hoofs reminds him of the dog-cart and mare awaiting him.

The mare is fidgety, and will not stand; Tom was in his seat in a moment; and wrapping his rug round his knees as the mare darted forward with a plunge, and settling into a slinging trot, dashed into the gloomy night and gathering storm.

CHAPTER VI.—RELEASE IN FULL.

The morning was breaking coldly and cloudily on the day but one following the Barncote ball. No 1 Montgolfier Terrace was still without its lord. By the fire in her husband's dressing-room sat Lucy Bellamy, wrapped in a warm wrapper, sleeping quietly.

Rap-tap-a-tap-tap-dab-dab! Lucy woke in a moment, looking round bewildered for an instant, and then remembering her long vigil: 'Here's dear Tom at last,' she said, giving a vigorous stir to the fire, and running down-stairs to open the door. At the door stood Archibald Winter, grim and grimed, unkempt, unshaven: never before or since did Archibald Winter meet female eyes in such a plight.

Murdered—murdered—murdered! What use to break such news as this? The whole universe seemed to shout it in her ears, and yet he whispered it very gently. It was for her to weep and moan, for him to raise the county on the foul villains.

Ere an hour is past, in every homestead in Wessex, sturdy sons of Anak, unshorn and unwashed, are rousing up their hinds to beat the county for the murderers. One of their own flesh and blood! The stream of Saxon blood still runs strongly in the veins of the Wessex men. Had the Lord-lieutenant been murdered, it wouldn't have sent such a shock through the country-side, or roused so many eager hearts to the chase of blood, as did the death of Tom Bellamy the brewer. Mounted police were galloping furiously along the county roads, to draw a cordon round the scene of the deed; the county magistrates had already met in special session at the *White Hind* at Lumpstone; and the body of Tom Bellamy was lying at the *Eight Bells* at Snarfield, awaiting the coroner's inquest. It was just half-way between Lumpstone and Snarfield that poor Tom had been shot. The road, which winds in and out amongst the bluff downs, here reaches its highest point: thick and tall hedges hem it in on each side; the road takes a sudden turn; and just in the corner, among the grass and dead leaves, the mail-cart driver carrying the early mail from Lumpstone to Barncote saw the body lying. He gave the alarm at Snarfield, and carried the news on to Barncote. Tom's horse was found quietly grazing by the roadside, a little nearer Snarfield; the dog-cart was lying upset between. The mare had apparently kicked herself free from the cart; the traces were broken, and the breeching-straps; but otherwise there was not much damage done.

When Winter reached the *Eight Bells*, he met Mr Baker, the Snarfield surgeon, coming away. 'Dead for three or four hours, I should say. Shot

Digitized by Google

through the heart. The villain who did it must have put the pistol to his breast, for the powder has burnt his waistcoat. I've been telling the people here to send somebody to search for the bullet; it might give a clue: it went right through him. Poor Tom; he was a decent fellow.'

'The superintendent has attended to that, I think, sir; he has posted men on each side of the place, and they've been examining the ground inch by inch for the last two hours,' said the landlord of the *Eight Bells*.

The police, however, couldn't make much of the trail: the ground was trampled about; Tom's pocket-book had been ransacked, and was lying open on the grass; his watch and chain and purse were gone. The murderers had made a good booty, and got clear off. Ere the evening, the whole country-side confessed that they were baffled. There was one comforting circumstance—the robbers had not made such a haul as they must have expected: Tom had paid five hundred pounds into the Lumpstone bank before he left.

Next morning, whilst the secretary of the Legal was unlocking his private drawer, and getting out his papers, Mr Jakes, the actuary, looked in at the office door: 'Seen the murder in Wessex, in this morning's paper?'

'Yes; what of it?'

'Why, it's one of our lives.'

'God bless my soul! is it?'

'Yes; and a devilish heavy life too! and the first year! Bellamy his name is.'

The secretary took down his index, and turned to the *Bs*. 'Bellamy, Bellamy. Ah! here he is. Three thousand, by Jove! And the Dubious, and the Highlands, and the Veritable, are in with us.' The secretary touched a spring-bell on the table: 'Oh, Mr Bowler, just write out a telegram for me: "Secretary Legal Life, to A. Winter, Esq., Barncote. —Bellamy's death, send full particulars: meet the Board to-day if possible."'

The secretary prided himself on his telegrams: he always managed to express his meaning in twenty words, thus saving miscellaneous charges to the society. Before he left the office, he received a telegram from Barncote: 'A. Winter, Barncote, to Secretary Legal Life, Lothbury.—Am solicitor to deceased's executors. Send special agent, if you think inquiries necessary. Will send particulars of claim to-morrow.'

The secretary shook his head. 'Mr Winter has not prepaid the telegram! Dear, dear! it might all have been said in less than twenty words. Two shillings—dear, dear! I don't know what the Board will say.—I think, by the way, Mr Bowler, I shall suggest to the Board that in such an important case I'd better go down to Barncote myself. A little sea-air will do me good, Bowler.'

Mr Cranby, the secretary of the Legal Life, when he arrived at Barncote next morning, was informed by Mr Winter that the inquest on Tom Bellamy had been held; that a verdict of 'Wilful murder against some person or persons unknown' had been returned by the coroner's jury; that two men had been apprehended on suspicion; and that the magistrates and police were busily engaged in investigating the circumstances of the dreadful deed. Mr Winter proposed to drive Mr Cranby over to Snarfield, to see the body and the scene of the murder. It was a bleak January day, and Mr Cranby didn't think it at all necessary.

'We don't want further proof of the death, Mr Winter; we are quite satisfied about that. The only question that struck our Board was this: do the circumstances of the death altogether preclude the idea of—eh?—um?—ah?'

'What do you mean?' said Winter sharply.

'Well, you know, it occurred to our Board that —well, in point of fact—*suicide!*'

'You haven't broached such an idea to anybody in Barncote, I hope, Mr Cranby?'

'Dear me, no!'

'Ah! that's right. Do you know, I think that if it were known you were down here for an insurance company, trying to save your company's pockets by casting a slur on poor Tom Bellamy's memory—on my soul, I think you'd be torn to pieces before you could get to the station.'

'God bless my soul! Surely, Mr Winter, such lawlessness in the nineteenth century isn't possible?'

'Ah! you don't know what our Barncote boys can do. But, apart from that, my dear Cranby, don't let such a very foolish suggestion escape you again. No man was more happy in all his social relations than Tom Bellamy—no man more respected in public life. A magistrate, an alderman, an ex-mayor, a man of blameless life and character —and you suggest suicide! Now, Mr Cranby, as solicitor to the estate of my dear deceased friend, I have been put into possession of the papers found on his body. You're quite at liberty to look over them, and amongst others you'll find our friend's profit and loss account for the year just ended. He was a remarkably energetic and careful man; it's made up to the last day of the year. You see the profit shewn; you see my friend's expenses. Why, he was at our ball the evening before he was murdered, danced with my wife, who never saw him more cheerful. Why, Cranby, he was the best friend I ever had, and you come to me whispering such vile suggestions—good God!' and Winter leaned his head on his arm, quite overcome.

Cranby got up, and patted him on the shoulder. 'There, there!—don't agitate yourself; I'll never mention it again. We had the mere vaguest doubt on the matter, and I assure you we're entirely satisfied now.'

'Then, look here, Cranby; you've a Board day to-morrow—waive all forms, and send me down a check for three thousand by to-morrow's post. I'll take care that it shall be known all over Wessex—ay, and all over England, for that matter. You couldn't do a better thing for the society's interest. I'll guarantee to double our business in this agency alone.'

'Well, but, Winter, you haven't administered yet, or anything.'

'Never mind that; I'll give you a receipt that will satisfy you. Bless you, *we* don't want the money; it's the society I'm thinking of. You see the funeral's on Friday—all the county will be there. Well, if I have that cheque in my pocket, and shew it to a few friends after the funeral, there isn't a man in Wessex who won't know of it before night; and if I don't have a hundred proposals in a week, call me a Dutchman.'

'I think you're right, Mr Winter; I'll advise the Board to do it.'

'That's right.—Now, let me take you to see Mrs

Digitized by Google

Winter. You'll dine and have a bed at Rhino Square, and go back in the morning to the Board meeting.'

Mr Winter was right when he foretold that all Wessex would be at Tom Bellamy's funeral. When the hearse containing Tom's body left the *Eight Bells* at Snarfield for the churchyard of Snitterfield, which was Tom's parish, there followed some twenty private carriages of the county and town gentry, forty or fifty dog-carts and wagonettes belonging to the farmers of the county, several hundred horsemen, and hundreds of footmen. Never had such a funeral been seen in Wessex. It took ten minutes before the last man in the procession filed past the *Eight Bells* at Snarfield. There was plenty of beer for all the mourners at the *Wagon and Horses* at Snitterfield, and there was a substantial luncheon for the farmers laid out in a large barn near the churchyard. Birks had managed all the arrangements, and had been ordered to spare no expense. Barrels of ale and large stone jars of spirits had been sent up from Barncote; and the melancholy rite performed, the farmers laid themselves out for enjoyment.

Mr Winter made his appearance amongst them for a moment; and the clatter of knives and plates, and the calls for beer and grog, were hushed. 'My friends,' he said, 'the relatives of the departed desire me to thank you most gratefully for the mark of respect you have shewn his memory. Called suddenly away, our poor friend was not unprepared. I will leave your spiritual guides to draw a moral from his sudden death. I will only recommend you to follow his example, and prepare for it in a worldly point of view. I have in my hand a cheque for *three thousand pounds*, which has been sent to me, acting for the representatives of the deceased, in payment of a policy of life insurance which by my advice he effected with the Legal Office. One premium of ninety pounds only has produced this most considerable sum. Go and do likewise.'

From that day the Legal Life dates a period of largely increasing business; and I don't think it suffered any loss in the end from poor Tom's death.

Mr Winter's next business was with Birkin's bank; and the day after the funeral saw Arthur Birkin and Winter closeted together in the bank parlour.

'We won't acknowledge your claim at all, Mr Birkin; and we raise a claim for five thousand pounds and ten years' interest against you, as executor of your deceased uncle. A more heartless and flagrant breach of trust than that of your uncle, when he persuaded that poor young man to hand over his fortune to pay old Callum's debts to the bank, I never met with in the whole course of my legal experience.'

'I really can't go into the question of my uncle's motives or actions, Mr Winter,' said Arthur, calmly and loftily.

'But I'll *compel* you to go into them, sir!' cried Winter, bristling up. 'I'll file a bill against you, sir!—a bill in Chancery, sir! You shall account for every penny you've received from my poor ill-fated friend. There's such a thing as a Court of Equity, sir, thank God!'

'Well, Mr Winter, if you can shew me any legal obligation on my part'——

'I think one of the vice-chancellors had better enlighten you on the point.'

Arthur Birkin meditated. One of the principles of a bank should be to avoid litigation. He might lose more by a suit than he could estimate. To shake the good name of his late uncle would shake the credit of the bank. 'How can we settle the matter, Mr Winter?'

'Withdraw your claim, and we'll withdraw ours.'

'Really, now, that's very unreasonable.'

'That's my ultimatum.'

'You'll give me a few days to consider?'

'I'll instruct my agents to-night to file a bill.'

Arthur Birkin thought it over for a few moments. Ten thousand pounds was very dear to him, but the good name of the bank was dearer still.

'Your terms are very hard, but I'll accept them.'

'I think you're wise.'

When Mr Winter found himself in the sanctuary of his own office, he permitted a grin of intense self-satisfaction to irradiate his features.

'Just to think, now, what a little clearness of vision does for a man! Bellamy, poor fellow, went through life borne down by a load which a touch would have loosened. And he was a clear-headed, good man of business too; but he saw things through a mist of fancied generosity, trust, family pride, and what not. Dear, good old giant! you were everything that was honest, true, and faithful; if you could only have seen things as they are! You were an anachronism, that's all.'

After the first shock, Mrs Tom Bellamy took comfort. There are some women with faith so vivid and clear that they actually carry about with them the unseen world, which to others seems only the shadow of a dream. That she and Tom are only parted for a brief moment, is to her a certainty, and not a form of expression. She has not married again, although she is a rich woman, and has many suitors.

Some of the prosperity of the Barncote brewery is due to the untiring energy of Mr Birks. He is now installed as manager with a handsome salary. He only 'breaks out' now on New-year's Day; and as he then takes a week's holiday to have his 'spree' out, it doesn't interfere with business. Two years after Tom's death, Birks was finishing up a hard drinking-bout at the *Eight Bells* at Snarfield. He had come to the brandy and soda-water and penitence stage, and was sitting alone in the bar-parlour, trying to smoke. An old man in the costume of a hedger and ditcher put his head cautiously into the room, and finding Birks alone, came in and closed the door.

'I've been leuking along of you, sir,' said the old man.

'Well, what do you want?'

'Why, you see I've been clearing out the big pond close longside the road about arf a mile from Lumpstone; and as I was a-shovelling out the mud, I clap eyes on something as I thought were a bit of old rag; and I teuk it up jest to throw it away, and it was jest heavy; and look here!'

The old man brought out of his pocket a bundle of wet rag, and laid it on the table. Birks untied it with fingers trembling with the effect of his late potations. 'Why, it's my old master's handkerchief!' said Birks, as pale as death; 'and here's his watch and purse.'

'So it be,' said the old man.

'Those murdering villains were so hard pressed they had to throw 'em away.'

Digitized by Google

'Sure*ly*!' said Giles.

'I'm sorry for you, though,' said Birks after a pause.

'Why, what *hev* I done, sir?'

'You don't think the police will believe your tale of your having found these things in a pond!'

'Dear, dear; I hope I shan't get into no trouble!'

'That you certainly will, if these things are found upon you: you'll be took up for the murder, as sure as a gun.'

'O lawks-a-massy! what shall I do, master?'

'You haven't told anybody else about finding these things?'

'Dear no, sir, not a soul!'

'Well, *I* won't say a word to bring you into trouble. Just you go back as hard as ever you can, and put them things back into the pond again.'

Old Giles hobbled off in mortal fear of being 'took up;' and in about an hour's time reappeared beaming. 'I've done that to rights now, master.'

'That's right, Giles. Now go and get a pint of beer. I shouldn't like to have anything brought up again about poor master; it would be like digging his corpse up again, poor man. I think I've done right.'

So, through Mr Birks's mistaken sense of delicacy, the clue that might have led to the tracing of Tom's murderers was lost.

Mr Winter often tells the story of his friend's murder, and the moral that he draws is, that to insure his life (especially in the Legal) is a paramount duty with every prudent man.

You, kind reader, may draw any moral you please. I was in Barncote in 1867, when I heard of the engagement of Miss Grace Bellamy, the beauty and heiress, to Adolphus Plumme, Captain 17th Plungers, and eldest son of Sir Damson Plumme, of Plumme Hall; and I trust that this piece of fashionable intelligence will be accepted as a happy ending to my tale. She has been promoted to a higher station in life, than her father, had he lived, could have hoped to see her attain. We trust, and indeed have reason to know, THAT SHE IS WORTH IT.

THE PRISONERS OF PRESIDENT LOPEZ.

BETWEEN the bewildering network of rivers radiating from the Paranà, and close to the empire of the Brazil, lies the state of Paraguay, concerning which little was known, and slight interest was felt, until the war between its President, and the Allied Republics and the Brazil, made it important, and its capital, Humaità—which has been aptly called the Sebastopol of South America—famous. The chief feature of the late Paraguayan revelations, and indeed the first quite dependable information which has reached us through the medium of books,* is the resolution of the whole of this prolonged and destructive strife into the individual pursuit of Lopez. The so-called republic of Paraguay is in reality a despotism, ruled by a tyrant who has no parallel in modern times but Ali Pasha; and the allies have addressed themselves to his destruction with a zeal and effect which are very likely to bring about the extermination of his subjects *en masse*. The last news from Paraguay is that the President, pursued by his enemies, has been driven from his retreat at Cerro Leon, and has fled, it is not yet known whither; and conjectures are afloat that he will try to reach one of the small outlying states, and there construct a kind of Elba for himself. That he should be shot in the attempt, is a consummation devoutly to be wished, for he is simply a monster, with the ferocious instincts of a wild beast, and with unbridled human passions and cultivated cunning in the devising and executing of evil.

When this man's rule began, Paraguay was a fertile country; the old Jesuit settlement, called the Missionés, in particular, was a rich and beautiful province, celebrated for its productiveness. Comfortable homesteads and innumerable herds of cattle were to be seen there, but now it is a desolate wilderness, without an inhabitant; and in the other parts of the country, where population still exists, the people are in the extremity of want and misery. The rivers of Paraguay present the flat and desolate appearance peculiar to the giant streams of the great continent of America. Waterfowl, vultures, and alligators have undisputed lodgings on the banks, and long lapses of distance lie between the towns; for instance, after leaving Corrientes, there is not a town for three hundred miles. Asuncion, the capital city, is picturesque, irregular, tawdry, and unfinished, the fine old Spanish houses having been replaced by buildings more to the taste of Lopez, a semi-barbarian in that as in everything else. Public buildings are falling into decay before they are half-built, and ruin is written on everything. There was a so-called Public Library, but Mr Masterman says the books were nearly all theological, and he never heard of any one reading there. Lopez, however, found a characteristic use for the books—he had them cut up for rocket and squib cases.

The Paraguayans are a handsome people, and the native costume of both sexes is beautiful, but it is abandoned almost entirely to the use of the lower classes. They are very ignorant, especially the women; and their lives are wretched, according to our ideas, though it is to be presumed they like them, or did like them, until they came to learn the unmitigated misery of prolonged and merciless war. The country has always been in the worst political condition possible to its institutions for the time being; so bad, that its probable extinction—a design with which 'people who know' credit the allies, and which Lopez has certainly done his best to forward—would really appear to be the best thing that could happen to it. Francia, the first President of the republic after the Spanish yoke had been thrown off, did much good, though he was a ruthless tyrant, who might have been the model monster, had there been no Lopez. Terribly severe and irritable, and, haunted by a constant fear of assassination and revolt, he became, in his later years, a moody, bitter, and cruel tyrant, absolutely without a friend, or a single joyous hour.' Francia ruled alone, and with irresponsible power, for twenty-six years, and died on Christmas-day 1840, at the age of seventy-eight. He was buried in the Iglesia de la Incarnacion, the oldest church in Asuncion, in a tomb built on the floor of the choir. The next morning, the bricks were found scattered around in all directions, and his body had disappeared.

* *Seven Eventful Years in Paraguay; a Narrative of Personal Experience among the Paraguayans.* By George Frederick Masterman. Sampson Low, Son, and Marston, London.

What became of it, remains a secret: the trembling people believed the Evil One had carried it away during the night; but it is probable the alligators could have solved the mystery. The terrible dread his very name inspired did not die with him. 'A native,' says Mr Masterman, 'will never willingly speak of "el muerto," as they call him, and to this day will look round fearfully if Francia be mentioned, and only to intimate friends will tell tales of his cruel deeds and supernatural wisdom.' The implicit obedience to which he tamed the people, rendered them passive in the hands of his successors. They were perfectly submissive to Don Carlos Lopez, a man of very low birth and mixed blood, who was a tolerably good governor, for a Spanish American ruler not cruel, and though imperious, rude, and overbearing, tolerably just. He died in 1862, and his son Francisco was 'elected' as his successor. On this occasion he appears to have inaugurated his career of crime.

'The election was but a farce. The deputies from the ninety-two *partedos* of the republic met in the capital, and sat in the Cabildo, which was surrounded by a strong body of troops, commanded by the very man who asked their votes; and of course all free action, or even discussion, was out of the question. One member, it is true, had the temerity to say that the office of President was declared by the "organic law" of the country not to be hereditary, and that therefore Don Francisco was not eligible: he was listened to in ominous silence. Another suggested that the present was a good opportunity for modifying the laws of the country; when he was angrily told to hold his tongue by Lopez himself, who reminded the deputies that they had not met to consider the laws of the country, but to elect a new President. That same night both disappeared, and have not been heard of since. It is almost superfluous to add that the next day "the citizen Francisco Solano Lopez" was unanimously chosen "Gefe Supremo y Generál de los Exercitos de la Republica del Paraguay."'

There was much formal joy; and many forced festivals, which cost large sums of money, were held throughout the country; and the new President began immediately to increase the army, having already raised his own salary to a much larger sum than his father's. Mr Masterman is one of those who believe that Lopez inaugurated the war with deliberate personal motives from the first, and gives the following explanation, which introduces us to the inevitable female element in this strange story: 'From Paris, in 1857, Lopez returned, and imported two novelties—the French uniform for officers, and a mistress for himself; the latter a most fatal step in his life, as that lady occupied, eventually, a very prominent place in Paraguayan affairs, and was, I believe, by her evil counsels, the remote cause of the terrible war which has utterly depopulated the country. She is of Irish parentage, but was born in France, and was married to a surgeon in the French army, who still lives, so I will not give his real name; that by which his wife is known in Paraguay is Madame Eloisa Lynch. She is a tall, stout, and remarkably handsome woman; and I could well believe the story, that when she landed in Asuncion, the simple natives thought her charms were of more than earthly brilliancy, and her dress so sumptuous, that they had no words to express the admiration they both excited. She had received a showy education—spoke English, French, and Spanish with equal facility; gave capital dinner-parties, and could drink more champagne without being affected by it than any one I have ever met with. A clever, selfish, and most unscrupulous woman, the influence she exercised over a man so imperious, so weak, and so vain as Lopez was immense. With admirable tact, she treated him with the utmost respect and deference, whilst she could really do with him as she pleased, and virtually was the ruler of Paraguay. She had two ambitious projects—the first, to marry him; the second, to make him the "Napoleon of the New World." The first was a difficult one, for her husband, being a Frenchman, could not sue for a divorce; but should the second succeed, it would not be very hard, perhaps, to procure a dispensation, and her equivocal position would be changed for a secure one. Therefore, she gradually, but insidiously imbued Lopez with the idea that he was the greatest soldier of the age, and flattered the vain, credulous, and greedy savage into the belief that he was destined to raise Paraguay from obscurity, and make it the dominant power of South America.'

It was necessary for the realisation of this ambitious project that a war on a grand scale should be undertaken; and with neighbours so encroaching as Brazil, so turbulent as the Argentine Confederation, it was not difficult to find a pretext for hostilities. The opportunity soon arose; and in 1863, Lopez had made all his preparations, not without exciting much uneasiness, which he allayed by the simple expedient of causing every one who displayed that inconvenient sentiment to be arrested and severely punished. Many of these were secretly murdered, and the relatives of all were involved in their ruin. There was but one newspaper in Paraguay, the *Semenario*, and it was written under the personal direction of Lopez, and filled with glowing accounts of the advancing greatness of Paraguay, and the virtues and wisdom of the 'heaven-sent' ruler. We heard far-off echoes in England at that time of these triumphant strains. It would be useless and unprofitable for any English person to attempt to understand the principles and working of political parties in any of the republics of La Plata, whose normal condition is confusion and disturbance. And to pursue the origin, the pretext of the war, would be simply loss of time. Lopez had only to espouse the cause of one of the contending parties—of the Blancos or Coloradoes, the Crudos or the Cocidos (or raw and cooked), the Confederados or the Unitarios (whose disputes have no connection with theology, though they are as bitter and as unreasonable as though they had), and his quarrel would be immediately started and running alone. He availed himself of this state of things; and having offered to mediate in the contention between the Oriental government and Brazil, a proffer which was rejected with open ridicule, he commenced offensive operations by the seizure of the Brazilian ship the *Marques de Olnida;* and from that moment things went on bravely, though it was actually General Flores who proclaimed war against him in the name of the republic of Uruguay. On being refused permission—the Argentines being at peace with Brazil—to march his troops, of which he had one hundred thousand, in superb condition, across

Digitized by Google

the province of Corrientes, he immediately proceeded to occupy the capital city, Corrientes, urged, it is said, to this step by Mrs Lynch, in revenge for a biography of her which had been written and printed in that town. Thus he had speedily secured three powerful enemies; and within three days the Argentines declared war; and on the 1st May 1865, the now famous *Triple Alianza* was signed by Brazil and the Argentine and Oriental republics. Mr Masterman supplies a translation of this document, in which—like the proclamation of the European allies, that they made war, not on France, but on Napoleon—the republican and imperial avengers ostensibly seek only the destruction of Lopez, and the free navigation of the river, guaranteeing at the same time perfect liberty and independence to the Paraguayans. There was a good deal of enthusiasm, presumably the product of fear; and the people were unmercifully taxed, and forced 'offerings' exacted. Hostilities commenced in June 1865; and the defeat of Lopez's forces at Biachuela gave the allies the command of the river. The incidents of the war are tolerably well known; the new sources of information now open to us are chiefly valuable as affording a knowledge of Lopez, and shewing us what have been the sufferings of our own countrymen who have been unfortunately concerned in it. From the first, there is the stamp of barbarism upon the entire conduct of the war. Defeated generals are accused of treason, imprisoned, put to the torture, and shot; the truth is suppressed, and lying reports are fabricated by authority; everything is made to depend on extreme audacity; there is no science, and no sagacity. A frightful system was maintained of punishing the relatives of all real or supposed deserters, which soon spread ruin and misery widely through the country. Hundreds of perfectly innocent people, principally women, suffered thus vicariously for the faults or the misfortunes of their sons, husbands, or brothers. The instances alleged of this barbarous and unmeaning cruelty are heartrending. But the expedients by which the sufferers were permitted to escape were incredibly disgraceful. The relatives of the culprits were allowed to shield themselves by publishing anathemas against them in the *Semenario*, and disowning all relationship with them. Mr Masterman possesses numbers of these letters—in one, a mother bitterly curses her son; in another, a man heaps imprecations on the head of his brother; a wife disclaims and vituperates her husband, who was not even a deserter, but died, a prisoner of war, at Corrientes. 'I saw this lady,' says the author, 'a few days after the letter appeared, and, as I knew her intimately, ventured to ask her how she could have written it. "To save my children," said she, the merriest little woman I have ever met with. "It is all false; you know I love my husband dearly, but, señor, what will you?" I do not know if I can present a more shocking picture of the state of affairs in Paraguay than one such letter reveals.'

Very early in the war, the absence of proper commissariat arrangements began to tell severely on the troops; and the condition of the hospitals was truly deplorable. Before his overturn came, Mr Masterman had had to witness, in his capacity as military surgeon, an appalling amount of human suffering. In the General Hospital at Asuncion, the wounded men lay in hundreds under the colonnades in the miserably wet and cold weather. The sick were sent to Cerro Leon, but generally only to die. There was no proper food for them; terrible epidemics were raging; before a battle was fought on the land, the army had lost fifty thousand men. 'They came up,' says the author, 'from the front in the half-crippled steamers, after a journey of three or four days, and, as a rule, did not get a morsel of food on the way: by "they" we understand a third of those who had been put on board; the rest had died and been thrown overboard. The condition in which they arrived was shocking beyond expression; and I saw their sufferings with an indignant pity, which frequently overpowered me completely. Almost or quite naked, with their wounds untended, dirty and famished, and so emaciated that when dead they dried up without decomposition, they were carried up from the pier to the hospital, and then had to lie, perhaps for a week, or until they died, on the ground; but one never heard a word of complaint: they bore all with a silent heroism which won them our heartiest sympathies.' Very touching and terrible was the author's task, and the gentleness and courage of the suffering made it much harder. When, after a brief rest, he would enter the hospital in the morning, he would be greeted, in a general chorus by such as could speak: 'Buenos dias, mi padre; we are all quite well this morning.' The rounds to be made by the surgeon included so many serious cases, that the less severe had to be passed over quickly. 'Here and there a man holds out his arm, and begs me to feel his pulse. They seemed to regard it as a sort of charm, and always thanked me gratefully, if I acceded. But they are very quiet and patient; a groan or cry is rarely heard, though I am making no idle rounds. If to the frequent question, "Shall I get better?" I could give no hopeful answer, they would but reply: "Esta bien" (It is well), in a tone of sad but uncomplaining resignation.' A brave, simple, loyal people, with all their ignorance and superstition, a people true to their domestic ties, and only too faithful to their rulers—it is pitiable to think of their being exterminated to feed the lawless lust of power, and the insatiable cruelty of such a man as Lopez.

The arrest of Dr Rhind and Mr Fox, some time after the invasion of Paraguay by the allies, left all the work of the General Hospital to be done by Mr Masterman—a task utterly beyond any one man's powers. But he was soon relieved from it. For carrying a packet of private letters to Dr Rhind, and, on failing to get admittance to him, refusing to give up the letters to the mayor, Mr Masterman was also arrested, and imprisoned. One dares not think of the increase of their already dreadful sufferings, inflicted upon the wretched patients in the hospital by the loss of their sole solace and medical attendant. The pretext for his imprisonment was, that he had attempted to deliver letters (they had been sent through the French consul under a flag of truce) which had not passed through the post-office. His prison was a room twelve feet by eight; the walls were rough *adobes;* the floor was of mud, full of hollows, cold and wet. The only furniture was a hide stretched on a wooden frame, and a broken chair. In the passage outside the threshold stood, day and night, a sentry armed with musket and bayonet, and relieved every two hours. He stood facing the prisoner; and from nine at night until the *réveillé* sounded the next morning, every quarter of an hour he

Digitized by Google

shouted, 'Sentinela alerta!' at the top of his voice, to shew that he was not sleeping. This startling cry was taken up in succession by the others in the chain of sentries, within and without the prison; and by the time the last had finished, the first began again. Well may Mr Masterman describe this as a cruel torture, and say he will never be able to efface it from his memory. 'Often,' he says, 'have I passed the whole night pacing wearily up and down the short length of my prison, or lying with my fingers firmly pressed upon my ears, lest I should fall asleep but to be awakened by that dreaded cry. For months I slept only every third night.' The weary and monotonous life of a prisoner was in his case aggravated by the proximity of other captives, of whose sufferings he was a helpless spectator. Next to his prison there was an open corridor, where a great many *presos* were confined in chains, of whom he occasionally caught sight through a chink in the thick boards which covered the window. The isolation of his life from theirs, and yet their nearness, the almost seeing, the constant hearing, and yet the mere conjecture respecting these poor creatures, form a strange episode in this terrible experience. How the Englishman's heart must have burned and raged within him at the sights he saw and the sounds he heard. 'The prisoners were of all ages—some very old men, others but boys, but all reduced to the last stage of emaciation, mere brown skin and bone. All had one heavy pair of fetters riveted on their ankles, rough with callosities and old wounds; several two; and one man bore on his skeleton legs three heavy bars, which swung backwards and forwards as he shuffled along. Yet these sufferers were not so wretched as one would have thought; they used to laugh and sing, and have clattering, staggering races in their narrow den. One of them used to tell endless stories, which were received with bursts of laughter and a rattling of fetters which reminded me of that terrible scene in *Les Misérables* where the "chain," in their mad desperation, make the early morning hideous with shouts and clashing irons. They were allowed to do this by the sentries, who enjoyed the stories and jokes as much as they did, and gave them notice when an officer was coming. One day, however, they were all so interested in some story of great facetiousness, that they did not hear the usual *Charqué* (Look out!), and the grim old commandanté himself came upon them whilst they were all screaming with laughter at the climax. They were all silent in a moment! A hushed stillness succeeded to the uproar, and I could almost feel that they were pale with terror. My own heart stopped, and then beat violently, for I feared that they would be cruelly punished. The commandanté said not a word, but walked back, and soon returned with a squad of soldiers. The unfortunate story-teller was thrown on the ground, and flogged severely; his yells made the place ring again; and two or three of his most vehement applauders shared the same fate. They were as still as mice for a week afterwards. Every week or so, some of them would be taken out to the *pdtro* to be flogged. These were sad days for me.'

Outside, these devilries; inside, cold, darkness, physical and mental wretchedness, and the society of centipedes, scorpions, and toads, preternaturally large, cold, and hideous. But Mr Masterman did find one resource—the investigation of the manners and customs of spiders; and one solace—there were no fleas; the prison was too damp for them. All this time, and during his second imprisonment, Mr Masterman wondered vainly why he had been arrested. It was only when he returned to England he discovered the reason: the affair of the letters he had always known to be a pretext. The truth was, that strong suspicions were entertained that Mr Atherton had been poisoned, and Lopez gave Mr Masterman credit for having originated the rumour. His imprisonment became more and more dreadful, as did the atrocities perpetrated upon the captives near him. That he retained his senses is wonderful, under such hours of horror. It is not well to dwell upon such recitals; this one instance will suffice: 'One afternoon a poor fellow was horizontally crucified just beneath my window. Never shall I forget what I endured that day in listening to his moans, and constant frantic yells and prayers for mercy, and in picturing to myself what he was suffering.' His own sufferings were frightful; and at length he was released, though not permitted to go beyond the city, after eleven months passed in a damp den, in either dim twilight or total darkness, without ever seeing the sunshine; in a fetid atmosphere, surrounded by prisoners dying of Asiatic cholera; weak, emaciated, half-blind, and so changed that his friends did not recognise him.

After his release, Mr Masterman, who could not leave the country, and would not serve the republic, applied for leave to commence private practice, but was refused. He had plenty to do, however, for cholera broke out at Asuncion, and he worked among the sufferers manfully and successfully. All this time, and for many months later, our government was deceived by false accounts of the condition of Paraguay: English sympathy was got up for a little republic, said to be bullied by two big ones and an empire, and British subjects were supposed to be remaining contentedly in Paraguay, whereas they were suffering under a reign of terror, and the *soi-disant* letters and dispatches were all 'cooked' under the superintendence of Lopez. In Mr Masterman's work, the true story of the Washburn and Gould correspondence is to be found, and ample proof of the absurdity of the charge of conspiracy under which the unfortunate assistant-surgeon was again arrested, to undergo an imprisonment infinitely more rigorous than the first. Mr Washburn made the great mistake of replying *seriatim* to the charge that he was the chief of a secret revolutionary committee, having for their objects the destruction of Lopez, and the rendition of the country to the allies. Then no accusation was too absurd, and every one was involved. The *Wasp* steamboat from the United States arrived just in time to take Mr Washburn away from the danger of personal molestation; but Mr Masterman and Mr Bliss were ordered to remain 'to be tried by the tribunals of the country.' There was nothing for it but submission; so Mr Masterman parted with his friends and patients, and hid some opium and quinine in the seams of his coat, as a wise precaution against the future, and then was formally arrested in the presence of Mr Washburn. He was stripped, searched, everything was taken from him, fetters were riveted to his ankles, and he was thrust into a cell. A little later, fresh irons of such weight that he could hardly stagger to his feet for a moment under them were put on

Digitized by Google

him, and he was placed sideways on a mule for a thirty-five mile journey to Villeta. The whole of that journey was a scene of ingenious agony, of hunger, thirst, blows, and such pain in every limb and muscle as hardly left life possible. It ended in—the torture. They took him into a hut in an orange-grove, where were Captain Falcón and a priest, his secretary. They commanded him to confess, and when he refused, they ordered him to the *potro*, or rack. The description is most dreadful; that such things can be done in our time seems almost incredible. He heard the shrieks of others under torture too. When he could bear no more, he made a false confession. It could harm no one. Mr Washburn was safe; the doom of the others, including Benigno Lopez, the President's brother, was already sealed. He blames himself severely, and pleads his previous sufferings, his exhausted state, and his dread, not of death, but of the preliminary tortures always inflicted in such cases. No one else is at all likely to blame him, or to think that the suffering of martyrdom in such a cause would have been anything but arrant folly. They gave him a little bread, and took him back to the *guardra*. There, in the open air, and under the scorching sun, the gangs of wretched prisoners were kept, suffering starvation, awful thirst, blows, curses, utter destitution of help in dreadful sickness and pain. The want of water was the worst of all; the weight of the irons prevented their being able to stagger to the pits to get it. The prisoners of war and the felons were better off, for they could not only drink, but carry back water. 'One day, as the long straggling line returned from the pits, a sick companion, his eyes glazed with fever, rose on his elbow as he heard the clink of the water-tins, and in feeble tones begged but for a drop, groping blindly for a steadying hand the while; the man he asked, himself tottering on the verge of the grave, repulsed him with a muttered imprecation, and the poor fellow fell back, half turned, and died. Day by day our ranks were thinned; by twos and threes they passed away, and were at rest.' In this state of misery, Mr Masterman remained four days; and then began the march to the camp at Pilrysyry, which surpasses in horror any facts which have transpired in modern times, and present such a spectacle as Dante might imagine as a scene in the lower Inferno, rather than the experience of a man who lived through it to tell the story—of which this is not the worst incident. In the horrible *mêlée*, in which twelve hundred men, women, and children were driven and goaded along, there came close to Mr Masterman an old man, thin and tall —a well-dressed foreigner. He stumbled and fell; he was instantly stripped; and two corporals were thrashing him unmercifully: he staggered to his feet, and blindly hurried forward as fast as his fetters would permit, and again fell; the same dreadful scene was repeated; and an officer, after striking him several times with a sword, stamped on his head till his white hair was dabbled in blood. An empty bullock-cart passed at this moment; he was taken up insensible, and thrown like a log into it. When this wretched rabble reached the camp, in which Lopez was living in sensual luxury, and enjoying the infliction of the utmost refinements of cruelty, especially upon his own near relations, Mrs Lynch drove past them in an open carriage, and smilingly returned their abject salutes. Surely this is the utmost limit of wickedness and degradation. Mr Masterman's physical and mental sufferings lasted eleven weeks longer, during which he had to reiterate many times his false confessions, and to witness the horrible deeds of Lopez.

The shooting of the helpless prisoners by scores a day, the torture and degradation of women, the inconceivable excesses of a despot gone mad with desperation and unresisted cruelty, are sufficiently awful; but Lopez has done more than these things. He shot his brother, he tortured the husband of one of his sisters to death, and shot the other. He imprisoned his sisters in covered carts for five months, and compelled them to witness the execution of their husbands. They dared to grieve, and he had them both brutally flogged by common soldiers, and sent back to their prisons, where he forced them, by more devilish threats, to depose falsely against their murdered husbands. He did not spare his mother, but, last December, he forced her to leave her house at La Trinidad, where she had been virtually a prisoner for two years, and to go to Luquè, the temporary capital, and there, before the altar of the church, to swear that she recognised Francisco Solano alone as her child, and cursed the rest as rebels and traitors. She piteously pleaded her advanced age and disease of the heart, as excuses for not complying; but the officer charged to see that her son's orders were carried out told her she must go, *or die;* and she went.

Lopez and his country have been mysteries to us hitherto; the clearing up is a revelation of individual wickedness and national suffering for which we can find no parallel.

TWO MINUTES OF SUSPENSE.

At no great distance from our station on the plains lay a forest of considerable extent. The ground was covered by a scrubby jungle, in which were found a few hares and jackals, while crowds of apes and monkeys gamboled and chattered among the dense foliage overhead. We were tired of the plains, infinitely weary of the heat, the dust, the incessant sight of the natives and their ways, and of the dull uniformity of our existence. Suffering from debility and nervous depression, the occasional languid attempts we made at getting up dinners, balls, or theatricals could scarcely be pronounced successful, except by the very few whose health and spirits seemed indestructible. To add to our annoyances, our native servants were causing us great anxiety. Their manner, usually so indifferent and apathetic, suddenly became restless and uneasy. When not on active duty, they loitered about in gloomy meditation, or fell to discussing in undertones some topic that absorbed their attention. They shewed, too, no desire to tell us the cause of their agitation. Much though we wished to clear up the mystery, it was agreed that we should appear to pay no attention to it, as there was little chance of our getting at the truth so long as they were disposed to conceal it, and to have betrayed our anxiety might have made matters worse if mischief was brewing. Many of us, on retiring for the night, took the precaution to place our revolvers

Digitized by Google

and swords within easy reach of our bedsides, carefully removing them in the morning before the servants entered the rooms. The more robust, including some who had gone through the Mutiny, laughed at these preparations; but the nervous members of the community, who were in the majority, shook their heads and thought longingly of home.

A close attention for some days enabled us to perceive that the agitation among the servants increased as the sun went down, and that those whose duties detained them within doors at night were comparatively unaffected, while the others who had to pass to their homes after nightfall took their departure reluctantly, and delayed it till they could go in a body. As no one could give a plausible explanation of this conduct, our anxiety daily increased. At last it occurred to us to request the assistance of a retired subahdar, or native non-commissioned officer, the respectability of whose character was well known to some of our number, under whom he had served in the days of John Company, and through the Mutiny. He came at once, though the distance from his village was considerable, made inquiry among the natives, and the mystery was immediately solved. How we enjoyed the joke in the fulness of our relief, and rallied one another on our needless alarms! 'What stupidity these natives can be capable of; and, confound them, what a fright they have given us! The subahdar is a good fellow, but don't forget that he is a native. Send him home again with a few rupees in his pocket, to keep his tongue quiet, or we shall be laughed at most unmercifully, should the story get wind.' Yet the explanation was not without interest. The subahdar stated that the natives residing near the forest had lately observed what they considered an ominous change in the habits of the apes and monkeys: instead of going peaceably to sleep after their usual uproar at sunset, they often prolonged their concert far into the night, supplementing their monotonous barks and howls with sudden screams of rage or terror. This the timid and suspicious natives attributed to the presence of some roving animal, who had taken up his abode in the forest, and might steal beyond its limits after nightfall, and prove a formidable enemy for a solitary traveller to encounter. To our inquiry why the servants had not communicated this story sooner, the subahdar stated that they felt assured we would have ridiculed their fears as groundless, and therefore they resolved to hold their peace.

The subahdar was dismissed; and we hoped that the indifference with which we heard his explanation would have some effect in reassuring our servants. Anyhow, we knew it would be useless to argue with them, and so let them alone.

We slept once more in peace—that is to say, we took as much sleep as the prickly heat and the mosquitoes would allow. Revolvers were unloaded and laid aside; but unfortunately the servants refused to share the incredulity with which we treated their fears. To get a message delivered in the evening was impossible; the messenger would vanish for the remainder of the night, and do his errand next morning. Some of them went the length of tempting the punkahwallahs to overlook the irregularity of staying with them overnight, by offering to do part of their work, over which they would generally fall asleep, and nearly stifle us in our beds by the consequent stoppage of the punkahs. We got out of all patience at last, and determined to have the forest beaten up as the only way to convince the natives of the groundlessness of their fears. We resolved at the same time to mix pleasure with business by making a picnic of the thing, in which the ladies should join us. Our arrangements were soon completed, and we started—the gentlemen on horseback, and the ladies filling the howdah on the back of a very steady elephant belonging to the regiment. We had selected as the most suitable place for our purpose a hollow in the forest, within which stood several overgrown trees. In these we proposed to station ourselves, and blaze away at everything the beaters turned out above the size of a jackal. On reaching this spot, therefore, Chuny and the horses were dismissed, and a ladder placed against the largest of the trees, by which the ladies ascended into a cozy nook within its lofty shade. There they found a tablecloth spread, on which tiffin was laid for them. The gentlemen, however, finding none of the other trees large enough to hold them all, sought the shady side of the hollow, where, laying their guns aside, they set seriously to work on the tongue, cold roasted fowls, preserved meats, iced liquors, and fruit, which the careful forethought of Ali Khan, the major's khansamah, had also provided for them. Meanwhile, signals had been passed to the beaters, who had gone to their starting-point some time before, to begin their noisy operations.

We leisurely finished our tiffin, and felt so supremely comfortable, that we quite resented a reminder from Ali Khan that the beaters had been some time at work. We resolved, however, to delay taking up our guns, and perching ourselves in the trees, no further than after finishing the cigars then lighted, and a couple more of bottles of iced pale ale. These were opened, and we were chatting pleasantly over their contents, when our attention was suddenly called to the terrified looks of one of the servants, who, with outstretched arm, pointed unsteadily at some object behind us. We cast a hurried look in the same direction, and sprang to our feet as two immense-looking tigers met our view. They had emerged stealthily from the cover, and were standing with heads erect and fluttering ears, listening intently to the distant clamour of the beaters. Ere we could recover from the confusion into which we were thrown, the largest animal—from his size and deeper colour, evidently the male—disappeared among the long grass, and with breathless anxiety we heard his heavy tread approaching us. In a moment more we were face to face with him. He started back, rushed towards the tree within which the unfortunate ladies were seated, and, to our horror, scrambled quickly up the ladder. The next moment the tigress was upon us. She, too, started on seeing us, and retreated a few paces. Her courage, however, quickly rose, for she wheeled round with a short angry roar, and fixing her glowing eyes upon us, advanced steadily with tail erect, and her ears set viciously back. Suddenly she crouched within a few paces of us, with her head resting on her fore-paws, when, at that critical moment, the beaters combined to raise a louder and more discordant noise than usual. The tigress rose, turned

Digitized by Google

her head, listened, and slunk away. Her mate had just then descended the ladder, and as she brushed past him he struck at her savagely, and rolled her over with a single blow. He then stood over her with averted head and closed eyes, but offering no further violence. In no way daunted, the tigress turned quickly upon her back, and clutching her mate tightly round the shoulder, attacked him with tooth and nail. Their united roaring was horrible. He received her assault for a few seconds with considerable firmness, but finding no symptom of mollification, shook himself free, and bounding lightly over her as she rose, galloped into the jungle in the direction away from the beaters. The tigress rose, shook herself, gave one malignant look at us, trotted sulkily after her mate, and all was over.

We lost no time in going to the assistance of the ladies. To our great relief, we found them unhurt, but only one of them fully conscious of what had passed. She had the presence of mind to remain perfectly still, and stated afterwards that on making his appearance, and before becoming aware of their presence, the tiger placed one of his fore-paws among their feet. He appeared more astonished than alarmed, scowled steadily round, and closed his survey with a prolonged stare at the solitary individual who had retained her senses. He then retired as quickly as he came. We, of course, had no time then to listen to this story, for Chuny was fetched in hot haste, and received the terrified ladies on his back. The gentlemen mounted their horses, and all started off at the elephant's best walking pace. Meanwhile, the beaters having heard the roaring in their front, had decamped, giving the scene of our discomfiture a wide berth.

I need not say how crestfallen we felt as we returned thus ingloriously home from an enterprise so confidently undertaken. For once Pandy was in the right; and from the difficulty with which for some time after he kept his composure in our presence, we knew that he enjoyed our defeat thoroughly. It was some time before we could endure without a qualm any reference to the subject, however delicately introduced. To conclude: the tigers were marked down and shot shortly afterwards. During the interval, the unanimity of opinion that prevailed among all classes of the community as to the propriety of remaining within doors after nightfall was marvellous. I fear I shall be scarcely credited when I state that both of these animals were killed by one gentleman on foot; but such is the fact. A few days after our misadventure, this hero arrived, just about daybreak, at the station, where he was anxiously expected, and was hurriedly informed by two frightened natives that the tigers had killed a heifer during the night, and dragged it into the wood. A start was immediately made; and on being shewn the spot where the tigers had been seen to enter the forest, he cocked his double rifle and followed. A few steps into the jungle brought him face to face with both animals, who started up not a dozen yards before him. The tigress fell dead at the first discharge, with the bullet through her head; and her mate shared the same fate immediately after. At nine o'clock in the morning both animals were brought into the station. I measured their wounds, and found them almost exactly in the same position—not half an inch between them. I also touched their terrible teeth, and in doing so felt devoutly thankful that no worse consequences than a good fright ensued from our two minutes' terrible suspense.

THE MONTH:

SCIENCE AND ARTS.

In addition to the summing up of the results of the British Association meeting at Exeter, which has for some weeks occupied natural philosophers and scientific editors, the 'off season,' as it is called, has been taken up with discussions about our standard of value, the pound sterling—with acknowledgment of invitations to 'assist' at the opening of the Suez Canal—with talk about a tunnel under the Channel from England to France, or an iron tube which is to be laid on the sea-bottom, and so avoid the expense of excavation—about a canal across the Isthmus of Corinth, which will materially shorten the voyage between Marseille and Constantinople; and in Paris an enterprising few are again talking about a ship-canal which shall cross France from the Mediterranean to the English Channel. Besides all this, the Americans and Germans are again trying to reach the North Pole, or to make fresh discoveries within the arctic zone, in case they cannot achieve their main object.

As regards the pound sterling, some financiers are very desirous that a new sovereign should be coined somewhat lighter than at present, and of the exact value of twenty-five francs, whereby, they contend, both trade and travellers would derive much convenience and advantage, and without disturbance of our commercial relations. But this argument involves a fallacy. If a grain of gold is to be taken from the sovereign, it will be worth less, and purchase less, than at present; the whole community would be losers thereby, while exchange transactions between England and foreign countries would not be easier than at present. The question of the standards, whether of value or of weight and measure, is essentially a scientific one; and if ever a change is to be made in one or the other, the very best science of the country must be employed in the operation.

According to the annual Report just published by the School of Mines, 1012 ounces of gold were produced in the British Islands in 1868. In the same year, 4,970,206 tons of pig-iron were manufactured; of lead, 71,017 tons; and of silver, 835,542 ounces. The total value of the metals produced, including copper, tin, and others, was L.15,736,416. The quantity of coal raised in the same year was 103,141,197 tons, the value of which at the pit's mouth was L.25,785,289. Reckon unsmelted ores as worth two million pounds, and the grand total added to the wealth of the kingdom by the mining industry of 1868 amounts to more than L.43,000,000 sterling. Art and science are here presented in a very material form; but it is a very reproductive one, out of which new developments of art and science are always growing.

The quiet intimation given last spring about a new metal is now something to be talked about, for Sir Joseph Whitworth, after a long course of experiment, has succeeded in producing iron and steel, which, as he states, will resist any amount of shock or strain that may be put upon them. This 'Whitworth metal,' as it is called, is, while in a molten state, subjected to enormous pressure, by

Digitized by Google

which all the air-bubbles—those sources of weakness—are got rid of, and the metal is rendered perfectly homogeneous. If Sir J. Whitworth is right in his conclusions, our iron trade is about to undergo another revolution, and we shall have guns of the largest size, which will send their bolt through anything and everything, and never burst: we shall have wheels for railway-carriages that will never crack, boilers that will never blow up, and wire for submarine cables that won't break in the laying. It is an encouraging prospect; and we hope that the ten young men who have just obtained the ten Whitworth scholarships of one hundred pounds each, will perpetuate the persevering skill, the ingenuity, and enterprise of their benefactor.

As if to be ready for the new demand that will grow out of these indestructible guns, a new kind of powder, nearly six hundred times stronger than gunpowder, has been invented and patented by an Austrian, resident in the United States. Further particulars may be expected ere long.

Sir Henry James, Director-general of the Ordnance Survey, has published a thin quarto, with plates, entitled *Notes on the Great Pyramid of Egypt, and the Cubits used in its Design*, in which he explains that he has put 'the simple geometrical problems involved in the question in the clearest possible light, in the hope that these *Notes* will be found useful for the instruction of the boys in our National and other schools.' There has been a good deal of speculation published about the Pyramids of late years, which perhaps may be tested by the results obtained by English Ordnance surveyors. For eighteenpence, any one interested in the subject may procure a statement of facts and measurements taken by authority, with determination of the Greek and Egyptian measures of length, with diagrams shewing how the plans of the Pyramids were first set out by the architects, and with a photozincograph of the Nilometer.

It may be regarded as a favourable sign of the times that the question of drainage of towns and utilisation of the sewage was brought on for consideration and discussion at such a meeting as that at Exeter. With so many able chemists and able engineers on the spot, the chemistry and mechanics of the question could of course be discussed from the scientific and the practical point of view. Some attempts were made to shew that a system of earth-closets or charcoal-closets would be the most feasible; but the general opinion was decidedly in favour of water as the best means of carrying away the waste from dwelling-houses. Noteworthy cases in point were cited: among which we take Banbury, a town of 11,000 inhabitants in North Oxfordshire. Forbidden to pollute the little river Cherwell with their daily superflux, the townsfolk rented a farm of 137 acres about a mile distant, over which they pumped their liquid waste—about 300,000 gallons in the twenty-four hours. The solid matter is intercepted by tanks, and being then mixed with street-sweepings and ashes, is sold as manure to the neighbouring farmers. The farm produces rye-grass, meadow-grass, and cabbages, which, in 1868, were sold to the amount of L.1300, the rent of the farm being L.616, 10s. This year, sixteen acres of mangold have been grown in addition; and at the time when the discussion took place at Exeter, most of the roots were twenty-four inches in circumference. Hence it may be said that irrigation with liquid sewage is a decided success at Banbury, especially as the water, purified by flowing across the farm, enters the river lower down so clean that it does no harm to the fish, and creates no unpleasant smell.

Another way of utilising sewage is beginning to be talked about, which seems important. The report thereof comes to us from India, where experiments have been made on the gases which, as every one knows, are given off by sewage: and the result of these experiments is that these gases can be concentrated, and used in the same way as coal-gas for the lighting of streets and houses. Hence our sanitary engineers may look forward to a twofold triumph—that of converting a nuisance into grass and root-crops, and into a brilliant illumination.

The Report of the Royal Agricultural Society, just published, announces that the annual meeting for 1870 will be held at Oxford, and gives particulars of a large number of implements and machines useful in connection with farming operations. Among them we notice an Earth-boring Machine, which will bore rapidly even through hard rock and gravel, and clear itself of the waste in a most surprising manner. On estates deficient in water, it should be appreciated, for it will sink a large-sized well through any kind of strata in a comparatively short time; and in seasons of drought, many a thirsty country village would rejoice to see one of these machines tapping their underground water. Another is a Patent Automatic Grain-weighing and Registering Machine, which, by an ingenious contrivance, weighs, counts or records, and discharges the grain by the sole effect of the weight thereof. There are many trades, besides farming, in which this machine would be of great utility.

AUTUMN EVENING.

Cross-barred with colouring hedgerows, hill and dale,
All variegated with white stubble-field
And emerald pasture turning slightly pale,
A beauteous, if a saddening prospect yield.
Herds homeward hie; the starlings valeward push;
And, settling in the warm heart of the wood,
Rooks dusk the embrowning trees. An ominous hush,
A deep, peculiar calm that bodes no good,
Reigns over all; and Nature, sore distressed
At earth's decaying glories, seems like one
Held in suspense. A while, and up the west,
White, jagged clouds ascend. The squall comes on;
And birds and leaves from gusty trees are hurled,
And through the evening sky together whirled.

Re-issue of
CHAMBERS'S MISCELLANY
OF
Instructive and Entertaining Tracts.
Issued this day,
ANECDOTES OF THE DEAF, DUMB, AND BLIND.
Price One Penny.

Printed and Published by W. & R. Chambers, 47 Paternoster Row, London, and 339 High Street, Edinburgh.
Also sold by all Booksellers.

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 306. SATURDAY, NOVEMBER 6, 1869. PRICE 1½d.

A LIMITED HORIZON.

IN FIFTEEN CHAPTERS.

CHAPTER I.—THE WAY TO RETRENCH.

'ISABEL, this will never do,' said Mr Hesketh, handing his cup to his daughter for more coffee.

'What will never do, papa?' asked Isabel Hesketh, looking up from her letters.

But Mr Hesketh made no answer, and went on reading the long list of shareholders which he held.

They were breakfasting together, this father and daughter, in one of the dark handsome dining-rooms in Eaton Square, and were as dissimilar a couple as could well be seen. John Hesketh, Esq., M.P., was a tall gentleman, with white hair and moustache, but no whiskers; rather a fine-looking old man, with a benevolent expression of countenance, to which he was hardly entitled, or at least no particular line of conduct on his part had hitherto warranted it.

Isabel Hesketh was not a girl; she was at least thirty-five, but she could scarcely have been handsomer at any time of her life than now. She was a large, grand-looking woman, with a clear olive complexion, but no colour, regular features, beautiful silken black hair, and blue eyes.

'Hang it, Isabel, this will never do, I tell you,' repeated Mr Hesketh, pushing his papers impatiently from him; 'by George, they're trying to ruin me!'

'What will never do, papa?' reiterated his daughter. She was a patient woman, and by no means ruffled by the previous disregard of her question.

'Why, here's another call upon me from this confounded bank; they've already robbed me of a good slice of my yearly income, and here they coolly tell me I am to be called upon for eight hundred pounds more.'

'It is a large sum,' said Isabel.

'It *is* a large sum,' said Mr Hesketh hotly; 'and I tell you what it is, Isabel, we must retrench. I've been thinking it all over, and this morning's letter has decided me.—Where's Lalagé? How late that girl always is.'

'I hear her coming now, papa,' said Isabel.

The door opened, and a girl about eighteen entered; she was tall, and slight, and fair, bearing not the slightest resemblance to her half-sister. She came in quickly, with a little stir and bustle; she always moved in that way, so that people's heads turned to look at her, but this was an unconscious attraction, and it was easy to forgive her for it, for she was a very pleasant sight to behold. She bent down her fresh young face, and kissed her father.

'Good-morning, papa.'

'Good-morning, Lalagé; I'm glad you've come at last.'

'O papa, I know I'm so bad.'

'I don't say that, my dear; but I want to speak to Isabel and you. I've lost a great deal of money by this failure, and we must retrench.'

'Very well, papa,' said Lalagé brightly.

'Very well, papa!' repeated Mr Hesketh half ironically, half sadly—'as if you in the least know what that means. In the first place, Lalagé, I mean to cut down your allowance. It is nonsense a girl like you spending a hundred and thirty pounds a year on dress; you must try and make sixty pounds or eighty pounds do. I am sure Isabel never draws more than fifty pounds, and I don't know but that she doesn't always look better than you.' But Mr Hesketh's eyes, as they rested on his younger and favourite child, made a distinct contradictory statement.

'O dear, I am quite disappointed,' said Lalagé. 'I was in hopes we should be obliged to leave London.'

'We'll come to that presently,' said Mr Hesketh with a portentous nod. 'Isabel, my dear, you know I have an old house in Grimswold, on the Cotswold Hills?'

'Yes, papa,' said Isabel.

'Suppose we go and live there for a couple of years?'

'I thought it was almost an uninhabited place, papa; does any one live there?'

Digitized by Google

'No, Isabel,' said Mr Hesketh in an aggrieved tone; 'I don't suppose I should be justified in saying that any one does live there: there are not more than two or three families worth calling on, and even those may be seven or eight miles from the Hill House, it is such a straggling place. But I thought you would perhaps put up with that for a short time. I 'm sorry to ask it, girls, indeed I am,' said Mr Hesketh, pushing back his chair, and walking up and down in a troubled way; 'but I don't know how else to get out of this blackguard mess, hang me if I do! One thing I won't do, that is, touch the money I 've put by for you two.'

'Why not?' said Lalagé eagerly. But her sister shook her head.

'Dear papa,' said Isabel, 'your plan is very nice, as far as I am concerned; I am only thinking of Lalagé, but I know she won't mind giving up her balls and gaieties to help you in any way.'

'Mind it!' cried Lalagé; 'why, Belle, you know I shall like it better than almost anything, I am so tired of London and the sea, London and the sea, year after year. I have never been anywhere else, you know, and I do so long to get into the real country, and see nobody but cowboys and milkmaids! And I will try to be economical; indeed I will, you dear old duck!' she said, turning to her father; 'and as we shall never see anybody but you, I shall only dress nicely when parliament isn't devouring you.'

'Very well, my dears,' said Mr Hesketh. 'I must say you 've both shewn a great deal of proper feeling in the matter. You see,' he added apologetically, 'it concerns you far more than it does me, for, to tell you the truth, I believe it is a place that no man can stand for long, so I daresay my bachelor rooms in town will see a good deal of me.'

'And I daresay,' said Lalagé saucily, 'that we shall see just as much of you there as we do here.'

'And now that it is settled,' said Mr Hesketh regretfully, standing with the bolt of the door in his hand, 'hadn't we better make a move quickly? The Hill House has already been vacant a month, and I know I can get this taken off my hands at once.'

'Very well, papa,' said Isabel.

So, a month later, they found themselves travelling down into Gloucestershire, with a diminished retinue of servants, and a great deal of luggage. The line ran eight miles short of Grimswold, which was too unimportant to be distinguished by a station, so they had a long drive before them, in addition to the journey. Lalagé jumped out of the railway carriage, and stood on the narrow boarded platform of the station, looking round. The under-groom—the only one of their menservants they had retained, and who had been previously sent down—came forward, touching his hat, and said that Mrs Harris, the housekeeper, had sent him down with the pony-carriage.

'She be mortal afraid as you 'll find it very 'illy, miss,' said the youth, who was a raw, uneducated lad.

And very hilly they did find it; even Belle was shaken out of her usual calm to the utterance of a faint occasional 'Oh!' and as for Lalagé, she was alternately in a state of ecstatic delight and abject terror.

'O Belle, what splendid scenery: look at those hills! But we shall never survive this journey—it 's awful,' she cried, as the carriage crawled up the almost perpendicular side of an unyielding little hill.

At last the Hill House was reached—reached by the driver's dashing into destruction, as it seemed, by turning a corner sharply, and precipitating the carriage down a hill so steep that they could scarcely see the bottom. Belle and Lalagé clung to the sides of the vehicle in terror too great to allow of utterance. Half-way down, another crisis arrived, for the carriage was turned again, and they drove at last through wide open gates to the door of their new abode. It was a large house, built of the gray stone in which Gloucestershire is so rich, standing in a large garden; the stables being kept from view by a tall fence of syringa. The drive itself was very pretty, bordered with shield ferns, and white lilies, and dark-leaved peony-bushes; only bushes, however, for it was but the beginning of May, and the peonies had not yet made their appearance.

Inside, the house fulfilled its fair outside promise; all the rooms were large and lofty, and there were plenty of them; the hall especially pleased Lalagé, accustomed as she was to the smaller dimensions of a London mansion. And the view from the windows was more beautiful than anything she had ever dreamed of: hills, and woods, and brooks, and verdant, irregularly shaped fields, were scattered around in splendid prodigality.

As she leaned from her bedroom window that night, she was more than content. Except in books, she had never before come across such beauty; the sight of it filled her eyes with tears, and a great yearning came into her heart.

'Oh,' said Lalagé, 'if I could only be good!'

The next day, she was up early (for her); and as soon as breakfast was over, put on her hat, and went out to make discoveries. The first she made was that, whichever way she went, to the right or to the left, must either be up or down a hill. To be sure, it could hardly be otherwise, for the house was built on the side of a hill, as indeed was every house in Grimswold, there being nowhere else to build them.

Lalagé chose uphill; and after skirting their own house and garden, came upon what she afterwards found to be the principal street of the village—or town, as the Grimswoldians called it. A quaint, straggling street it was, with irregularly built houses, looking like a large family of children, no two of which are of equal height. The greatest

Digitized by Google

stillness reigned everywhere; the inhabitants of this part of Grimswold were respectable enough to keep themselves *to* themselves, and did not sit working at their doors, as people do in poor neighbourhoods. Here lived the 'better sort' of Grimswoldians—the chemist, the grocer, the draper, the clerk, the old woman who kept the post-office, and even the doctor. Yet shops there were none, at least none properly so called; plate-glass was unrepresented; only a few casual 'articles' in the windows of the respective tradesmen admitted that they were open to customers.

Lalagé gazed wonderingly at the strange, silent street; then stood still for a minute, amazed at the utter absence of human beings, little knowing that, as she stood there with her fair sweet face, floating muslin drapery, and fresh mauve ribbons, she had won the hearts of the Grimswoldians. People looked at her from the corners of windows, from under blinds, even through keyholes. A stranger was an event in Grimswold.

Of course, they knew who she was. 'The ladies coming to the Hill House,' had been talked of for the last three weeks; and the landlord of the *Raven* had laid a pot of beer against the chemist's five-shilling piece that they would be 'sharp and old, like the Misses Verey at the Lodge: he'd never seen a pretty face in Grimswold since his child, poor Susan, died.' But the landlord, although a great local authority, was wrong; and all unknowing of his mistake, and consequent defeat, Lalagé walked on.

An opening in the street gave a vision of fresh beauty, and turning down a green lane, she gave herself up to unmitigated enjoyment. The air was light and clear, and all summer-scented with the odour of the flowers, growing in such profusion on the banks. Lalagé did not even know their names; but she gathered a great bunch of them, and wandered on till she came to a brawling, noisy, gossiping brook. She sat down on a bank, and gave a deep breath of content, and staid there for a while, thinking and dreaming, and sending out soft little prayers into the blue summer sky.

Coming home, she found that people had waked up a little. It was twelve o'clock now, and the children of the National School—a pretty stone building near the church—had been released, and were capering about the churchyard, playing leap-frog over the tombs. It shocked her to see it that day; but before she had been many weeks at Grimswold, she had become quite accustomed to it, for the churchyard was public property, and did duty instead of the village green of old! Here came old men and maidens, young men and children, 'lovers and loveresses;' old quarrels were adjusted here; sometimes, alas, new ones made; marriages agreed upon; kindly offices promised. And it was not unpleasant to see the old people—those who were metaphorically standing on the brink of the grave—sitting contentedly on some friendly tombstone, and enjoying the rays of the sun. Lalagé watched many now doing so; saw an old man, feeble and worn to a degree, give his arm to his yet more feeble and worn wife; heard a child scream at being separated from its grandfather, saw it fling itself on the gravel path in a passion; and then went in.

What a funny old place it was! The church was gray and battered, bearing, as she afterwards found, the impress of Cromwell's bullets; and as for the churchyard, it was unlike every place of the sort she had ever seen before: two paths at right angles ran from end to end of it, thus forming a Maltese cross, and leaving four separate means of ingress or egress to or from the churchyard. Then, in close rank, bordering each path, and stretching out in straight ray-like lines, were yew-trees, clipped out of every resemblance to their original shape; clipped till they were short, and stout, and round; clipped till they reminded Lalagé of nothing but the little hard, dark-green trees she remembered in her German farmyards of old. She had the curiosity to count them, and found there were one hundred and ten.

'I have had such a charming walk,' she said, putting her head in at the drawing-room door when home was at last reached. 'O Belle, it is such a funny, beautiful place; and coming up the lane just now, I distinctly heard a little bird say: "I did it."'

CHAPTER II.—THE FIRST SUNDAY AT GRIMSWOLD.

The next day but one was Sunday. Mr Hesketh had not accompanied his daughters down to Grimswold; he satisfied himself with running down previously, to assure himself that everything was ready for them, and thanked his stars that Belle, or Isabel, as he invariably called her, was old enough to act as chaperon to Lalagé, and need none for herself.

He was a man who could get on very comfortably indeed without women-folk, though he was by no means wanting in love for his daughters; but that love was not the same, just as his affection for his two wives had been different. His first wife, Isabel's mother, had been a safe investment—a woman rather older than himself, with a large dowry, and very handsome. She had given more than she had received, in marrying him, as women so often do; but she was wiser than most women in that, having discovered this, she took good care not to shew it. She moved placidly through the world, seeming fully content with the respect and admiration her husband paid her, and if she yearned for more, she kept those longings to herself. So, when she died, Mr Hesketh mourned for her with a decent, creditable sorrow, never roused to the vehemence of grief by the memory of one passionate reproach, or one ungratified wish of the calm dead woman, who had demanded so little at his hands, though wanting so much. The comfortable thought that he had done his duty by her had been very gratifying to Mr Hesketh, and it was no fault of his if that duty had come to an end.

But with Lalagé's mother the case had been altogether different; at forty, the sober man of the world found himself, after many years of a comfortable widowhood, foolishly captivated by the fresh young face and violet eyes of the youngest girl of a 'daughterful house.' It was almost *infra dig.*, he thought, but he was rich enough to afford the whim at the time, and the girl was just sufficiently careless of his admiration to make her attainment a dearer wish than ever. She married him, and was very happy, though at first he had seemed too well off, and the step altogether too practicable a one for the imagination of seventeen.

When she died—a four years' wife only—for the first time in his life the man felt bereaved indeed, and all the best love of which he was capable

Digitized by Google

poured itself out on the head of the one child she had left. All Lalagé's little failings and shortcomings, her wilfulnesses and waywardnesses, her need of some one to lean on, her childish love of beauty, were sanctified to him, as remembrances of the dead; still, he never hesitated to scold her heartily, when her misdeeds were brought before his notice.

And Lalagé had roused into active life her father's dormant love for his elder daughter. He had never much thought of or cared for Isabel till she came home in her early womanhood to look after the motherless baby. Her previous life had been passed at school, and afterwards with rich aunts, so that her father had known nothing of her as a child; but on hearing of his loss she went direct to him, and had never since left him for any length of time. And 'she had been very good to the child,' Mr Hesketh thought, and he admired, and respected, and loved her—in a certain way—just as he had admired, respected, and loved her mother before her.

He placed the utmost confidence in her, and was indeed proving it now, for he did not conceal from himself that he meant to leave the Grimswold household almost entirely in her hands. Grimswold was three hours' journey from London, and that is a consideration to an M.P.; but Mr Hesketh was anxious to know how his daughters were getting on; so, late on that Saturday evening, he made his appearance at the Hill House. Isabel greeted him with one of her rare, beautiful smiles; but Lalagé the privileged put her arms round his neck and choked him, he declared, besides creasing his collar.

'O papa, it 's such a charming place!'

'I 'm sure I 'm very glad you like it, my dear; it is certainly pretty enough for anything.'

But that very evening he got into one of his sudden little passions, at which Lalagé laughed, and to which Belle had long been resigned.

'Where is the evening paper?' he had asked.

'We don't take one now that we 're alone, papa,' said Belle.

Mr Hesketh rang the bell, and ordered one to be sent for.

'Please, sir,' was the answer, 'you can't get one, unless you bespeak it beforehand.'

'Confound it all!' said Mr Hesketh.

The next day they went to church. The Hill House pew was in the foremost row of the gallery, a straight-backed, high, uncompromising old seat, such as our forefathers delighted in. As Isabel and Lalagé swept to the pew, followed by Mr Hesketh, the people in the free seats stood up, some of the children even making that half-military salute which village children affect so extensively. Isabel was shocked, but silly Lalagé nearly laughed; it was so dreadful an idea, that she stretched beyond the horror of it, and could only feel its comicality.

But everything was strange; people seemed to think nothing of turning round for the purpose of staring at her—at her, it appeared, even more than at Belle, till she grew pink at the thought that perhaps there was some terrible mistake in her dress: had she put on her bonnet the wrong side in front? Or could it indeed be that the sight of fresh human faces was so unusual in Grimswold? Such was, in fact, the case; and she, sitting there in a pink mist of gauze, and ribbon, and lace, had unconsciously drawn on herself the eyes of half the congregation. Belle, dark and handsome, had fewer admirers, the taste of the people not being sufficiently educated to appreciate her; but Lalagé was bright and gay enough to please the youngest child present.

No town-people can tell what Sunday is to the inhabitants of a desolate little straggling place like Grimswold. Most of the congregation lived in lonely little cottages far up one of the hills, or on the other side of other hills, so that their human interests were very small, a strange face being unseen from week's end to week's end, and they learned to look upon Sunday as the grand day for a glimpse of the world. They would come early to church, these poor people, gladly walking their four or five miles at nine in the morning, having locked up their houses, and carrying their dinners in little white bundles. (Not often, however, did a whole household thus turn out; there were generally as many left at home as those who came.) These dinners were, after morning service, spread out on some tombstone, and eaten in a spirit of festive gaiety, accompanied by discussions on the parson, the prayers, and the people.

Sometimes one or the other would have a piece of news to communicate: 'Parson 'ud promised to come and see our Betsy, as is down with the fever;' or, 'Parson says it 's high time as baby was christened.'

Then would come the waiting for the afternoon service, the early getting of seats and taking of places in the church, the eager watching for the seldom-coming strangers. Sometimes, half a family would come only for this second service, and straggle in, flushed with heat and haste; or a 'coorting couple,' half an hour too late, would stand looking in at the open door whilst the prayers went on, or talk audibly in the churchyard, where they walked about till service was over. And when service *was* over, the day's work was done; the 'country-folk'—as those who lived far off were called—would gather themselves together, and tramp off home again, tired and contented, feeling they had done their duty to God and to their neighbour, and strengthened and refreshed for the next week's stolid working, eating, and sleeping.

So it went on, and goes on now; a part of the 'old times,' as it seems to us—the old times, which people are wont to call 'good,' not without a certain beauty of simplicity of its own, in which we, who have so much that is better, are perhaps wanting. But people dive deeper now-a-days; we root up flowers and plant trees.

But to go back to the church. A few minutes after eleven, the clergyman came in. He was a big man—measuring at least six feet three—and came striding up the church with uncanonical gracelessness. But his face—ruddy and bronzed as a ploughboy's—was kindly and good-natured, with twinkling brown eyes, far too small for his size. His tawny, leonine hair was so long that it completely hid his ears—a strange thing in these closely cropped days. He performed the service in a loose but not irreverent way; and his sermon on 'Length of Days'—peculiarly appropriate, as there were more old men present than Lalagé had ever seen together before—was all one could wish. But to Belle and Lalagé, accustomed to the rigid

Digitized by Google

orthodoxy and cultivated rhetoric of a West-end clergyman, the whole service was almost painful.

'How terrible!' said Lalagé to her sister, as they walked home.

'Perhaps it is good for us,' said Belle softly.

'I'll be hanged if that fellow's a university man,' said their father.

They went to church again in the afternoon, no choice being left them, as there was no evening service. There was rather less staring, for the nearer neighbours—who had not exerted themselves to come in the morning—filled many of the previously vacant places, and were better behaved than the more artless rustics.

It was what the Grimswoldians called 'Christening Sunday;' so, after the second lesson, the big curate strode down to the font at the west end of the church. Lalagé liked him better then, principally because he handled the babies gently, which was touching in a man of his size and muscularity.

Bending forward for the purpose of joining in the baptismal service, Lalagé caught sight of a face which made her start. In a square pew below her sat a lady, a gentleman, and two children; the first named looked as unlike her surroundings as did the Hesketh's themselves—a calm-faced, self-contained girlish wife, emphatically 'nice-looking,' as the saying is. Her husband, a brown-bearded, handsome man, was whispering to her; he had an irritated, restless expression. 'A regular worry, I daresay,' thought Lalagé, wondering at such behaviour in church.

She was looking at them intently, for it seemed to her that she knew the lady's face quite well; and when the quiet eyes were lifted up for a moment, Lalagé instantly recognised, without possibility of further doubt, a certain Gertrude, who had been very dear to her in her younger days, but who had been lost to her by marriage five years before.

'How strange!' she thought; but then the prayers began again, and her thoughts drifted away into the old beautiful channels made by the Reformers long ago.

When the sermon came, the curate preached it in his surplice, evidently a new thing, for people nudged one another, and giggled, and frowned disapprobation, and Gertrude's husband was much excited on the subject.

'I shall hate that man,' thought Lalagé, looking down.

Not a very pleasant thought to come in church; but altogether it had not been a very pleasant Sunday, and this unlooked-for recognition had made her feel excited and unquiet.

As she and Belle walked through the churchyard after service, she said: 'Gertrude Cleather was in church, Belle.'

'Nonsense, Lalagé.'

'She was, though, and I'm watching for her now; don't walk so fast, Belle.'

Down a narrow pathway, leading to a private wicket-gate, came the little group Lalagé had noticed in church; Captain Cleather was gesticulating violently, and Gertrude talking softly: both were too much preoccupied to notice the Heskeths.

'I hate these infernal changes,' said Captain Cleather, and then they had passed on.

'We must find them out to-morrow,' said Belle; 'they evidently live in that quaint old house.'

'I am so glad,' said Lalagé; 'she's such a dear!'

As they lingered in the churchyard, they noticed little knots of men gathered together, evidently grumbling, and the murmurings grew louder as the curate swung out of church.

'Pawned the black gown,' said two or three of the malcontents, speaking together. 'Parson's pawned the black gown—pawned the black gown.'

Big Tom Mitchell walked past with utter nonchalance. He was a man who could better fight for his opinions than talk them into favour.

'O dear,' said Lalagé, 'what a strange Sunday it has been! Never mind; it will never seem so strange again.'

OUR IRON-CLAD NAVY.

I.—BROADSIDE VESSELS.

Now that the reconstruction of our navy is being pursued upon something like a definite plan, and the contest between guns and armour appears to have ceased for a moment by mutual consent, it may be interesting to take a glance at the iron-clad ships we already possess, and to notice the modifications that experience has suggested in our original models. The burning of the Turkish fleet at Sinope was sufficient to convince all persons conversant with naval matters of the necessity of adopting some means of protecting ships of war against the destructive effects of shells; and early in 1855, an eminent ship-builder submitted to the Admiralty the plans for a sea-going ship which was to be rendered impenetrable by means of thick iron plates. But this department, generally averse to adopting anything new or strange, was disinclined to listen to his proposals, and the distinguished ship-builder in question, knowing the people with whom he had to deal, and comprehending that argument was useless, forbore to press the matter. With a foresight, however, that did him credit, he remarked, on quitting the Surveyor of the Navy, that 'he might as well preserve the drawings, as such a vessel would certainly have to be built before many years would elapse.'

This prophecy was soon fulfilled; and it was M. Dupuy de Lôme, the chief-engineer of the French navy, who aroused our Admiralty from its apathy. About the year 1858, rumours, vague at first, but afterwards more definite, crossed the Channel, to the effect that the French were building, and had indeed nearly completed, an iron-clad frigate, absolutely impenetrable to shot and shell, and against which not one of our famous liners would be able to hold its own for a single half-hour. Early in 1859, the Secretary of the Admiralty, the Accountant-general of the Navy, and the Secretary, and Chief-clerk of the Treasury made a Report, which was immediately presented to parliament, to the effect that France was building four iron-sided ships, of which two were more than half completed. The Report went on to say: 'So convinced do naval men seem to be in France of the irresistible qualities of these ships, that they are of opinion no more ships of the line will be laid down.' The Admiralty, of which Sir John

Digitized by Google

Pakington was then First Lord, perceiving that there was no time to be lost, at once instructed its naval architects to prepare the drawings for a first-class armour-plated frigate on a plan which had already been proposed by Mr John Scott Russell; and on the 13th September 1859, a contract was signed with the Thames Iron-works Company at Blackwall for the construction of the *Warrior*. About a month later, Messrs Napier, of Glasgow, received orders to commence a sister-ship, named the *Black Prince*. The designers of these vessels had a most obscure and difficult problem to solve, and it is doubtful if at that time it could have been solved with greater success. Since they were built, however, improvements in artillery have been so numerous, that these vessels are now very inefficient as ships of war. This is due not only to the thinness of the armour (4½ inches of iron upon 18 inches of wood-backing), which can be penetrated by the 9·22-inch gun at 2000 yards' range, but also to the fact, that although 380 feet long, they are only protected for some 200 feet amid-ships. In the original design, too, Mr Scott Russell had intended that the *Warrior* should be able to make a considerable voyage at full speed, without its being necessary for her to stop and re-coal; but this good intention was frustrated, through the official designers having made the hull considerably heavier than he had proposed, thereby necessitating the sacrifice of more than half her supply of fuel. Notwithstanding, however, this excess of weight, she is inferior in structural strength to some of the later ships of a lighter but more scientific form of construction.

After the lapse of several months, the *Achilles*, belonging to the same class as the *Warrior* and *Black Prince*, was laid down at Chatham Dockyard. She had an armour-belt added to her, and several other alterations made, which render her in many respects superior to her predecessors. All three behave well at sea, and have good speed, but, owing to their excessive length, steer with difficulty. After a further delay of some months, two smaller vessels, the *Defence* and *Resistance*, were commenced on the Thames and Tyne respectively. As they are only plated with 4½-inch iron over less than half their length, and have a speed of under 11½ knots, it is difficult to understand why they should have been built at all. They were, it is true, primarily intended for coast-defence purposes, but with their slight protection they are very unfitted to withstand that continual 'pounding' to which a low-speed coast-defence vessel would be exposed, to a much greater extent than a fast sea-going ship.

It soon became evident, however, that if we wished to maintain our position as the chief naval power of the globe, something further must be done to hasten the reconstruction of the navy. Owing to France being in a great measure dependent upon other nations for her supplies of iron and coal, iron ship-building had not acquired the development in that country which it had in England, so that the construction of iron armour-clads was almost out of her power. But she had large stores of timber in her arsenals, and numerous workers in wood in her service; and therefore every inducement to adopt the system of armour-plating wooden vessels. In England, on the other hand—on the Clyde and the Thames especially—iron ship-building had reached a high state of perfection; although in the government establishments it had been utterly neglected. So the dockyards being well supplied with timber which it was necessary to use up, and with men qualified to build wooden ships whom it was necessary to employ, the Admiralty determined to follow the lead of France, and issued orders for the timber which had been prepared for certain line-of-battle ships, to be utilised in the construction of wooden iron-clads, in opposition to the opinion of most private ship-builders, and of the more scientific officers of the navy, who contended that iron was the best material for vessels of war. But the necessity of using up some of our immense store of timber, the prejudice in favour of wooden hulls, and the desire to rapidly obtain an iron-clad fleet, prevailed; and the result was the production of the *Royal Oak*, *Caledonia*, *Prince Consort*, *Ocean*, and *Royal Alfred*. None of them, however, can be said to have proved a success; their armour is thin, their ports too near the water, and their speed low; while they are noted for being, as a rule, the deepest and quickest rollers of the whole iron-clad fleet.

About the same time that it was decided to armour-plate these wooden vessels, the Admiralty determined to give the country an improved *Defence* and *Resistance* class in the shape of the *Hector* and *Valiant;* and although not ships to be copied, they are, to a certain extent, improvements upon their prototypes, having a slightly higher speed, and a larger amount of armour. The next efforts of the Admiralty were directed towards the production of a vessel which should combine high speed with perfect protection from shot, and this led to the construction of the *Minotaur* class, consisting of the *Minotaur*, *Agincourt*, and *Northumberland*. In these ships, the armour is one inch thicker than in the *Warrior*, and the backing is decreased from eighteen to nine inches, leaving the strength of the side about the same as before. Their great length (four hundred feet) causes them to be anything but handy vessels; while the error committed by their designers, in giving them the long fine bow of the *Warrior*, and their overloading it with armour, has not tended to improve their sea-going qualities.

The public began to feel alarmed at the increase in the estimates caused by the construction of these armoured monsters, and of the enormous docks necessary to accommodate them, especially as, on the other hand, it became every day more apparent that the smaller and partially protected vessels were far from being satisfactory; and it was soon perceived that some great change must be made in the design of our ships of war. Of course, at such a period, there were numerous persons urging the adoption of more or less impracticable schemes, everybody at all conversant with the subject considering himself entitled to propose something; but, amongst many others of inferior capacity, there was one gentleman, Mr E. J. Reed, the present Chief-constructor of the Navy, who was known to possess considerable scientific attainments; and his solution of the difficulty was eventually accepted. He denied that, in order to completely protect a vessel, it was necessary to have her of the excessive dimensions adopted by the Admiralty, and maintained that even the smallest sloops of war could carry a very useful amount of armour. By means of papers read before various learned societies, and through a

Digitized by Google

certain connection with the press, Mr Reed managed to get his views put before the public with a completeness and precision that left nothing to be desired. It resulted that a very strong feeling was aroused in favour of his plans being tried; and the Board of Admiralty, in its utter helplessness, was only too happy to place itself under his guidance, provided that the doing so would be agreeable to the public. There were many reasons for this. For years past, the Admiralty had been exposed to the most adverse criticism both in parliament and in the press. Its professional advisers, although scientifically trained men, were well stricken with years; they had lived to see one great revolution in the navy—the introduction of steam—but they had neither the energy nor the inventive talent necessary for coping with, or even properly appreciating the greater revolution which they saw themselves called upon to direct, and they consequently discouraged, even if they did not actually condemn, the trial of Mr Reed's plans. But in addition to the desire of the Admiralty to acquire popularity, the Duke of Somerset—who had succeeded Sir John Pakington as First Lord—had become a convert to Mr Reed's views; and in the summer of 1862, it was decided to allow that gentleman to make a trial on the *Enterprise*, a wooden sloop already in frame at Deptford. This vessel he plated with 4½-inch armour, arranged so as to form a central battery with a belt; and under the designation of the 'box system,' a similar plan has been followed in most of his later ships.

Shortly after the *Enterprise* was commenced, Mr Reed was requested to superintend the construction of the *Research* and *Favourite*, also built of wood. The plan of armour-plating adopted in the previous vessel has to a great extent been followed in these, and, as in all of his ships, extra strength has been thrown into the bows, so that they may be used as rams if required. The *Enterprise* and *Favourite* have proved tolerably successful vessels, and have served the country well in all parts of the world; but it must be admitted that the *Research* appears to have been protected with armour at the expense both of structural strength and of speed.

Mr Reed's plans had achieved a certain amount of success; and if he had not thoroughly demonstrated the advisability of armour-plating very small vessels, he had at least shewn the absurdity of building such ships as the *Minotaur* and her consorts. He next succeeded in inducing the Admiralty to allow him to design the *Bellerophon*, an iron ship of comparatively small dimensions, but plated with 6-inch armour, and carrying eight large guns in a midship battery, as well as 6½-ton guns at the bow and stern. Every endeavour was made to combine in this vessel the greatest structural strength with the least weight of material; and the encomiums which have been passed upon her by such authorities as Mr Laird and Dr Fairbairn seem to shew that these efforts have not been unsuccessful. The undoubted error of the *Bellerophon's* design is the extreme length of her ram, which, besides causing the sea to run up into the hawse-holes and ports, must have a very serious effect upon her speed. In spite of these drawbacks, however, the ship is fast under steam, and forms a very steady gun-platform. Thanks, too, to her balanced rudder, she is perfectly under control, even when going fourteen knots.

Meanwhile the Admiralty had derived much assistance from Mr Reed's services, and especially from his energetic defence of that department in the columns of the *Times*. So Mr Watts having resigned the Chief-constructorship of the Navy, Mr Reed succeeded to the post in January 1863. During the two years which had elapsed since the building of the *Royal Oak* class, enormous improvements had been made in artillery, and the Admiralty was therefore anxious to possess a new class of vessel, with armour of greater extent and thickness, and with the battery higher out of the water, but without increasing their length or draught, or decreasing their speed. Unfortunately, however, it was determined that this new class should be of wood; and in the latter part of 1863, orders were given for the construction of the *Lord Clyde*, *Lord Warden*, and *Pallas*, from the designs of the new Chief-constructor. The first two are of practically the same tonnage as the *Bellerophon*, although shorter, and are fine powerful frigates, comparing favourably with any similar vessels belonging to foreign powers. They are protected with 5½-inch and 6-inch armour, in two thicknesses, with wood between; and the experiments on a target representing their sides were so far successful that Captain Noble, in his Report, states it to be doubtful whether the 15-inch American gun would pierce them, even with the *muzzle touching the armour-plates*. The *Pallas* is rather larger than the *Favourite*, which she much resembles, and was designed as a fast and handy cruiser under sail and canvas. In this latter respect, she has quite realised the expectations of the Admiralty, having in more than one trial of sailing-powers beaten the entire fleet. She was the first vessel in the royal navy to which 'recessed' or indented broadside ports were fitted, enabling a very near approach to a line-ahead fire to be obtained. The class of wooden iron-clads contains two other vessels, the *Zealous* and the *Repulse*, which, although of slightly smaller dimensions, do not differ materially from the *Royal Oak* in construction.

The other broadside vessels at present afloat are the *Hercules*, *Penelope*, *Audacious*, and *Invincible*. Of these, the first is probably unequalled in power by any other ship in the world, except perhaps by the *König Wilhelm*, a frigate originally designed by Mr Reed for the Turkish government, but afterwards purchased by Prussia. She is, in many respects, an enlarged edition of the *Bellerophon*, the chief improvement being, besides the heavier armament and increased thickness of armour (9-inch at the water-line, 6-inch and 8-inch elsewhere), the recessed ports at the corners of the battery, similar to those fitted in the *Pallas*. The guns carried by this vessel are 400-pounders, mounted on Captain Scott's patent carriages; and the trials already made with them prove, contrary to what the advocates of the turret system have maintained for years, that it is possible to work these heavy guns at broadside ports. The *Penelope* was the first large twin-screw ship constructed for the royal navy, and her most notable feature is the large amount of steel introduced into her hull, which of course compares favourably in weight with those of vessels built entirely of iron. It would scarcely be fair to attempt to criticise the *Audacious* and *Invincible*, also twin-screw vessels, as they are not yet ready for sea, having indeed only recently been launched. They belong to what is known as the *Invincible* class, which also includes the *Iron Duke*

Digitized by Google

and *Vanguard*, at present in course of construction. Their chief peculiarity consists in a portion of the upper-deck amidships being carried out over the side, so as to obtain a fore-and-aft fire from the broadside guns.

THE MYSTERY OF BELGRAVIA.

It was no use for me, bein' a poor man, to go on grumblin' at our governor, for he'd only have said what he said before. 'There's the keb,' he says, 'and there's the 'oss,' he says; 'and if you don't like 'em, you can leave 'em. I don't ast you,' he says, 'to bring in so much by two shillin' as I do your mates; and if you don't like to drive number three thousin' eight hundered and noughty-nine, there's plenty more as will be glad to; so no more bones about it.' Well, you see that's how it was; and from drivin' a shabby keb and a knacker of a 'oss, I got into the habit of goin' shabby myself, and always got all the shabby jobs as came to the Knightsbridge stand: takin' sarvants to the parly trains—boxy jobs, as I calls 'em; linendrapers' gals with boxes of things to shew at gentlefolkses houses; all the wust-paid fares there was, and too glad to get 'em.

For you see mine was a shabby turn-out, quite a reg'lar sight, you know: old yaller keb with a coat-of-arms on it, and bloo linins, 'cept the cushins, which is all odd uns, stuffed with all sorts; and allus, no matter how I smoke or air that 'ere inside, smellin' affle o' mushrooms, so as you might think some old woman had broke a bottle o' ketchup inside; when it ain't nothin', bless you, but the damp. The paint had got wery shabby, 'specially about the tires; and the spokes o' them wheels would rattle in dry weather most as bad as did the windys in wet. For you see the glasses used to be all up in wet weather, while people was glad enough to keep 'em down in dry, becos of the smell; and them windys was about the most aggrawatinest part about that keb, since you never had no control over them, for they shet up when they liked, and shet down when they liked; and them all the while of sech thin glass, as you didn't dare shew fight, for fear of their goin' all to smash, and your havin' to pay up.

I said as them windys was about the most aggrawatinest things about that keb; but they worn't, for all that: the 'oss was the wust by a long chalk. He was a disappynted sort of a 'oss as took everythin' contrairy; and though I drove him a matter o' ten year, I never once got anythin' like understandin' his charakter. You see he was a low-spereted animal, one as had seen better days, as you might know by the way he hugged the left 'and sharp, as if it had bin a pole—shewin' as he'd once run in pairs, p'raps alongside o' some lovely creetur of a mare as died, and so broke his 'art, makin' him to come down in the world, and take no pride in hisself. For though I did all man could do to make him look decent, he never would, not a bit of it. If I bore him up tight, to make him arch his neck, he only arched it wrong ways—pyntin' that nose of his at the sky, and goin' along like a camel as was in wants of water in a great desert. If I putt a couple o' bits o' laylock on each side of his blinkers, to cheer him up a bit, he'd do nothin' but shake his head, mournful like, jest as if he was a-sayin': 'This here's a wale of tears;' and then, ten to one if he didn't have a fit o' megrims—bad uns too. He'd got the roughest coat as ever a 'oss had, one as never shined any when it was wet; while, where his mane ought to have bin, was all a stubbly, scuffy ridge, like a worn-out brush. As for his tail—there, it worn't no wonder as he used to keep it tucked wery close in between his legs, for that was the only redeemin' pynt in his charakter: he were ashamed of that there tail. You never saw his old spavined hocks, nor his broken knees, nor his rough coat, nor nothin' else, when that tail was wisible; for it took up your whole attention, so as you couldn't see nothin' else. I believe I might have got on a bit better at first, same as I did towards the last, if it hadn't bin for that tail; for you see it was enough to ruin any turn-out, even if it had bin a Lord Mayor's carridge. You couldn't help that tail wherrittin' you, do what you would; for though it was all wery well so long as the 'oss—*Solomon* I called him, cos he was sech a long-headed un—was down in the mouth, and kep his tail outer sight, yet there was times as he'd stick it straight out, 'specially if he'd got a bearin'-rein on, and then, do all I would to keep my temper, I used to be obliged to hit that 'ere tail with the but-end of the whip, to make him keep it outer sight.

Now, I'll jest tell you what that tail was like. It was jest eighteen inches long; and, beginnin' at the top, there was jest twelve inches all smooth as smooth, and then there was seven 'airs; after which you travelled over six more smooth inches, right to the pynt, and then there was twenty-three more long uns. Now, jest let me ask anybody as knows anythin' about 'osses if that worn't a tail as would break any man's 'art. Thirty 'airs there was altogether in that there tail, for I counted 'em often, to see if any more was a-comin'; but, no; not a blessed 'air more would come, no matter how I coaxed 'em. Fancy a tail with only thirty 'airs in, flourished about in your face when you was a-drivin', and jest see if you was tied down to it, if you wouldn't soon get to look as shabby as your 'oss and keb. I took my missus into consultation about that tail, which I s'pose came bald from grief; and she says as stimmylusses was the best thing to make 'air grow; so I got a tin pot fitted in the bottom of *Solomon's* nose-bag; and many 's the half-pint of porter he 's sucked up; but never a 'air came of that. Then my missus explained as it was stimmylusses applied to the part itself, so I tried liquid blister and solid blister; but they never did nothin' but make the old 'oss kick; while as to rubbin' on Spanish-fly pomatum, it worn't no more use than nothin'.

'I can't stand that there tail no longer,' I says to my wife one night when I'd come home quite

Digitized by Google

low-spereted; 'it 's enough to break a man's 'art, that it is. Here 's three days runnin' I 've ony took in twelve shillins.'

'Tain't the tail; it 's the whole turn-out,' says my wife.

But I knew better, and I'd made my mind up what I'd do. Next day, I makes-believe to be ill, and sends word to the yard as I worn't a-comin', knowin' as it would be a rest for the old 'oss, as nobody else wouldn't drive; and off I goes to the knacker's yard in Maiden Lane, King's Cross, outs with my money to Mr H——, and comes back with the skin and 'air of as pretty a tail as ever you see in all your born days.

It took me all that day to dress and do that bit o' leather into shape; but I did it, and fitted on straps; and next mornin' I fitted it on to *Solomon*, and drove out o' the yard with him holdin' it up for every one to see, and our chaps a-laughin' like mad. But I didn't care for that: the public wouldn't know, and they didn't neither; for though I never could expect to do much with such a turn-out, with that tail improved and set right, my takins rose a pound a week, and I says to the missus, quite triumphant-like: 'Now,' I says, 'worn't it the tail?'

Now, this here 's all introduction to explain why I had sech a shabby turn-out, and what followed. I told you that I allus got all the wust jobs; but I didn't tell you that time after time the others would be called off the stand two or three times over, while *Solomon* and me chewed our cuds, a-ruminatin' all alone with the waterman and his little flat pails—*Solomon's* cud bein' all chaff, and mine bein' a bit o' baccy. What was the good of talkin' about turns? Nobody decent wouldn't have my keb, as I'd found out long enough before, when I'd gammoned footmen and buttonses into takin' me. I only used to get sent back: people wouldn't go in me, and then there was ony a row, and one got one's feelins hurt.

It was one evenin' when I was all alone, and quite melancholy-like on the stand; old Muddy the waterman being fast asleep a-sittin' on a pail turned topsy-turvy, and his back leanin' up agin the water-post, when a swellish-lookin' fellow in one o' them long Inverness capes comes saunterin' by. He was a big, well-fed, tallish chap, with plenty of black whiskers, and a rollin' eye, and a way of stoppin' and lookin' up street and down street, and beatin' his gloves together. Well, he walks by me two or three times, examinin' the keb and *Solomon* all over; and at last he pulls out a penny cigar, and makes up to me, and asts quite civil for a light, which I gives him, and he begins smokin'.

'Drive me through the squeers,' he says then.

'All right, sir,' I says, and I opens the door; but he didn't like the smell, I thought, for 'No, thanky,' he says; 'I'll take a turn on the box with you.' So I bears up the 'oss, when up goes his tail—that bein' before the improvement time—and as I jumps up, I hits *Mr Sol.* a sly crack with the whip, to make him keep it down; but not he. What does he do but give it a whisk, and lay the twenty-three 'airs over the tail-board, and rest the end of his tail on the top, as if jest out of aggrawation, because I 'd a outside passenger!

However, we drives gently along, 'shig, shog—shig, shog,' which is *Solomon's* reg'lar pace; and my gentleman talks away quite affable-like about kebbin' payin', and the rest of it, till he pumped me quite dry; for I let go a good deal about bein' obliged to drive such a shabby turn-out; and ended by sayin' that it was quite starvation-work at times, and I was pounds now behind-hand with the governor; for my dooty was to take in fourteen shillins a day, and all over was for myself, when sometimes I couldn't make above six or eight, and always havin' to work what we call dead-horse.

'Ah,' says my gentleman at last, 'I've often noticed you standin' empty on the rank. Yours isn't a good turn-out; but I dessay it will do for me. I want a keb four or five nights a week.'

'You do, sir?' I says.

'Yes,' he says. 'Not reg'lar, but mostly for professional pupposes.'

'You don't look like a doctor,' I says to myself. 'But there; it 's no business of mine what you are, so long as you hire my keb, and pay me honestly.' And then I says aloud: 'I shall be wery happy to attend on you, sir.'

'Yes,' he says, 'I thought you would. I suppose, if you were well paid, you would hold your tongue, and not keep your eyes too wide open?'

'I say, governor,' I says, checking *Solomon*, so as he threw his head round, and looked me full in the face, as much as to say: 'What d'yer mean?'—'I say, governor,' I says, 'no burglaries, body-snatchin', or habductions?'

'Nonsense,' he says, laughin'. 'Don't you be alarmed; I shan't get you into any scrape. Mine 's professional business, as is quite honest and above board; and, between ourselves, a five-shillin' job every night for you isn't to be sneezed at.'

Now, I knew that well enough, and was precious glad I'd met him; and we parts quite pleasant at last over a pint of half-and-half at the *Coach and Horses*, in Knightsbridge, after he 'd pulled out a piece of tape and measured the width of my keb's doorway, and arranged for me to meet him next night at half arter eight, at the corner of Kinnerton Street, Wilton Place.

Five minutes before the time, I was at the appynted spot, which, perhaps you mayn't know, is a little back street, full of coachmen's wives and children, and people as takes in servants' washin', and two or three chimbley-sweeps, and a purweyor of hasses' milk to Her Majesty and the Ryal Family, as sends round his donkeys reg'lar every mornin' to be milked at people's doors in the squeers.

Well, punctooal to the moment, Black Whiskers comes, follered by a boy bearin' a basket lined with black oilskin—a big square one—jest the same as you see milliners' boys carry about.

'Oh, ho!' says I; 'cap and fancy work—eh? Rum time to begin business, though.'

Well, the basket was put on the back seat, which it jest fitted; and Black Whiskers gets in and sits down on the front seat, sendin' the boy off, and he says to me—Black Whiskers, you know, not the boy—'Lay hold of the check-string,' he says, 'and stop when I pulls.'

'Ain't none,' I says gruffly; for I thought he 'd have rode outside, so as I could have got to know what dodge he was on.

'Then I'll open the windy,' he says; and he tried to let down the glass, which, after a wonderful deal of shovin' about, came down; and then off we starts, goin' through Wilton Crescent, and down into Eaton Place, when 'Stop!' says he;

Digitized by Google

and I pulls up close to the pavement, and out he gets, walks on a bit, whistlin' a Jim Crow sort of a chune; and then, when he'd got most out of sight, comin' slowly back a bit, when, if he didn't squat down all at once right in the middle of the pavement, with that cloak of his spread out all round him, just like a hen goin' to hatch chickens, and stopped like that a matter of five minutes, when he comes back and gets into the keb, and he says, says he: 'Drive to t'other end of the place;' and I drove there.

Well, if you'll believe me, if he didn't get out, walkin' away whistlin' the same Jim Crow sort of chune till he was most out of sight; then I saw him comin' back till he was two lamp-postes off, when down he goes agin, right in the middle of the pavement, with his cloak spread out; stops a minute or two, and comes back, and gets into the keb, sayin': 'Now to Eaton Squeer.'

It worn't my head as itched when I kep' on skratchin', but my curiosity; for I couldn't make it out nohow, not even when we'd stopped a good twenty times in Eaton Squeer, Belgrave Squeer, Chester Squeer, and all about there. Always the same dodge—walkin' away, whistlin', comin' back a short distance, squattin' down on the pavement, and then comin' back to the keb. Not that it was always right in the middle of the pavement, for sometimes it was right on the kerb-stones.

'He's a hinspector of noosances,' I says, 'and goes about smellin' the streets, that's what it is,' I says, after bein' out an hour; but when I'd set him down at the corner of Kinnerton Street, and seen him lift out the basket, set it on the ground, and then, because it was heavy, pull out half-a-dozen bits of macadam granite and shy 'em down: 'He's mad,' I says—'mad as a hatter!' But all the same he gives me five shillins, and he says, says he: 'I may depend on you for to-morrow night?'

'All right, sir,' I says; and then I drove off.

'It's a rummun!' I says that night when I got home.

'What's a rummun?' says my missus.

'Never you mind,' I says quite gruff. And after a bit of hot supper, we goes to bed, when I begins dreamin' about Black Whiskers, but only to be woke up by my missuses elber being dug into my ribs.

'Don't, Joe!' she says.

'Don't what?' I says.

'Don't keep on whistlin'!'

'Was I whistlin'?' I says.

'Yes,' she says, 'quite loud; and I've got to be up at four to do Winkby's washin'.'

'What chune was it?' I says.

'How should I know?' she says. 'Such stuff!'

'Easy there,' I says. 'Was it anythin' like this?' and I whistled a bit of the Jim Crow sort of chune, same as Black Whiskers had—a chune as would keep runnin' in my head, do all I could to get it out.

'That's it,' she says, quite cross; 'and that's quite enough for one night; for if you can't come to bed without whistlin', you'd better get up.'

Next night, things went on jest the same. Black Whiskers comes with his basket, gives me my orders, and off we goes agin; and so matters went on for a matter of six or eight times; when feelin' nat'rally anxious to get to the bottom of it all, I began to sham a little, and to make-believe that *Solomon* wouldn't stand—followin' my gentleman up a bit. But that was no go: he was down upon me directly, makin' me always afterwards to turn the keb round, so that if *Solomon* ever made a move on, it took him further away from the scene of operations.

I couldn't make it out nohow, try what I would; there was always the same dodge on—leave the keb, the whistled chune, the walk on, the walk back, the squat down, and then back to the keb. No one never spoke to him, and he never spoke to no one; and what he did it for, I couldn't make out, only that he'd sometimes make a run into the newly mended road, and pick up a few bits of stone and bring back with him, so that, besides takin' a lot away in his basket, he'd sometimes leave some on the floor of the keb.

Always the same fare—five shillins, five and six times a week; so you may guess I worn't well pleased when one night in August I goes to the reg'lar spot, and he worn't there. I waited an hour, and he didn't come; and so it was several more nights, when I took a look round, he worn't there; and that last night agin, I says, when I went home: 'It's a rummun!' took my wife up short, and got woke up in the night for whistlin' that there Jim Crow chune.

Well, a matter of nine months slipped by, and that there mystery was allus settin' me off whistlin' that Jim Crow chune; when one night I was drivin' back sharp to the Knightsbridge rank, when, runnin' through Chester Squeer, I turns on to a lot of tan fresh laid down, becos some one was ill. A wonderful deal there was of it, spreadin' right round the corner into the next street. I passes a keb standin' empty, and gives the driver the reg'lar whip-hand shoot, and then turns sharp round the corner, and comes upon Black Whiskers hisself, squatted down in the middle of the pavement.

We was so took by surprise that we both stopped short: me pulling up *Solomon*, and him shootin' upright, when blest if I didn't see through the whole dodge in an instant, and called myself a gumph for not seein' it sooner; for as Black Whiskers pops up, he'd got half a chickin' in one hand, and somethin' tied up in a basin and handkercher in the other; while at the same moment that there round iron thing as covers the holes where the coals are shot went down with a clatter, havin' evidently been held up with a broom-handle.

I never said nothin'; but I put that and that together, and then talked it over with two or three mates as had shabby kebs, to find that in the season when families was in town they'd all had a turn with Black Whiskers, who turned out afterwards to have bin a policeman on that beat—a gent whose black whiskers had won the 'arts of no end of cooks; so that when he got turned out of the force, he used to make a reg'lar trade of it, takin' his basket round of a night, whistlin' his chune, and then comin' back to give a tap on the iron in the pavement, which used to shoot up, and Mrs Cook in the coal-cellar would send her offerins up that safe passage, gettin' a squeeze of the hand for thanks; while a few stones were afterwards pulled up to blind the kebman.

It was a game that could not last for ever; but whether the cooks found him out, and tore up all them black whiskers by the roots—or whether he

Digitized by Google

committed bigamee, and was transported, I never knew; but he disappeared all at once like; and that was the end of the Mystery o' Belgravy.

THE CENTRAL CAUCASUS.

NOBODY knows much about the Central Caucasus. The very name is associated with mystery, and the prevalent idea connected with Bashan, apart from the Scriptural association of that place with bulls, is that there are wonderful and very inaccessible traces of 'giant cities' there. Mr Freshfield* has 'been there,' and tells us most interesting particulars about the Caucasus, a range two thousand feet higher than the Alps in the average height of its peaks, and less known than the Andes and the Himalaya; and also about Bashan, where he did not meet either with bulls or with giant cities. His route lay by Egypt and the Nile, but he restricts himself to only one observation upon those over-'done' places—a useful hint to future tourists. 'Visit,' he says, 'the petrified forest, and make your donkey-boy bring you back by Djebel Mokattam, or you will lose one of the most wonderful views in the east. After riding for miles over the arid African desert, with a narrow horizon, and nothing to attract the attention save a distant train of camels or a troop of gazelles, the edge of an abrupt descent is reached, and the view of Cairo and the valley of the Nile bursts upon the eyes with an almost magical suddenness. The immediate foreground is formed by the quarried heights of Djebel Mokattam; in the centre of the picture rise the taper minarets of the mosque of the citadel; in a valley on its right are the tombs of the Memlooks, a deserted town of the dead, and the vast modern city spreads itself out in the plain below. In the centre of the broad bluish-green ribbon of fertile land, dotted with clusters of pyramids, the Nile itself can be traced to the commencement of the Delta; while beyond, on the west, the yellow sands of the desert mark the limits of its fertilising inundation.'

No more interesting, no more suggestive route than that pursued by the travellers could be traced out by untrammelled imagination; but to pass from Jerusalem to Damascus by the east side of the Jordan is not an easy achievement. No one has done it since Lord Lindsay achieved the feat in 1837; but Mr Freshfield and his companions made up their minds to try, and succeeded, by the simple expedient of having nothing whatever to do with the Arabs, and getting the Turkish protection, through the pacha. They were warned, advised, and pitied to any extent, while they remained in Jerusalem; awful examples were adduced from experience for their instruction and reproof, but in vain. They left Jerusalem, a small body, but strongly armed, and marched to the Jordan. Having crossed the river, the party diverged from the customary track of eastern travel, and continued to ascend by zigzag paths until they overlooked the whole Jordan valley, from the Lake of Tiberias to the Dead Sea; and then on through a country remarkably like North Wales, until they suddenly came upon the columns of Jerash, the ancient Gerasa, where not a single inhabitant is to be found, while the ruins are wonderfully preserved. Into what insignificance the impressions produced by Pompeii fade, before such a picture of antiquity as this: 'We went first to the magnificent Temple of the Sun, the columns of which, standing on elevated ground facing the east, are conspicuous in all distant views of the city. Near them, in the side of the hill, is the largest theatre. Returning to the great street, we stopped to admire the exquisite carving of a richly decorated gateway, and then proceeded to the "Forum," an oval space, surrounded with columns. On the brow above it stand another temple and theatre. The latter is wonderfully little injured by time; the stage is almost perfect, and very tastefully decorated.' When will some photographer carry his camera across the Jordan, and reap the rich, and as yet almost untouched field which awaits him amid the ruins of Amrâmn, Jerash, and the Hauran?

This journey supplied Mr Freshfield with some charming traits of Arab manners. While they were camped at Jerash, the sheik of a neighbouring village came to visit them, the identical sheik of Suf, of whose iniquities Mr Tristram gives a vivid account. They inspected his testimonials, which extend over thirty years, and are probably unique. One Englishman writes: 'On no account have anything to do with the bearer of this; he is a thorough villain and awful liar.' The others are in a similar strain. This gentleman tried to force an entrance into their tent; but the dragoman, a great character, stopped him by seizing his beard and waggling his head with one hand, while he soundly boxed his ears with the other. At Derat, Bozrah, Hebran, and Kufr, they found the ruins very perfect and most interesting, but certainly not carrying out the 'giant' theory. Here is an anecdote which one would like to be able to tell to Gay, as a pendent to his fable of 'The Travelled Monkey.' 'The headman of one of the villages gave a feast to our muleteers. One of them, a Christian of the Lebanon, ate with a fork. "Mashalla!" exclaimed his Bozran host, "what a brute; he has not yet learned to eat with his fingers!"' In the exploration of the Legah, they experienced so little difficulty, that they found it hard to realise the fact, that, with the exception of Burckhardt and Mr Cyril Graham, they were the only European travellers who had ever succeeded in penetrating the interior. Their progress was as unadventurous as it was interesting; and Mr Freshfield deliberately rejects the belief that the ruins now in existence are those of the cities conquered by Moses. He says: 'The Pentateuch tells us that Bashan was once inhabited by giants, and it has been argued that the size of the stone houses shews that they were built by a race of abnormal stature, and proves the date of their construction. In reality, the private dwellings are the reverse of gigantic, and the rooms they contain are to modern ideas small. If gates are sometimes found eight feet in height, they are always in positions where animals as well as men had to pass under them, and those found at the present day in similar situations are of the same dimensions. The stone doors guarding the entrances to the vineyards around Tabreez are larger and more massive than any we saw in Bashan. The extent and number of the ruined towns are used as an argument that they are the

Digitized by Google

remains of the sixty fenced cities conquered and destroyed by Moses. Travellers are too apt to forget that Syria formed a portion of the Christian empire of Constantinople, and that in the fifth century there were thirty-three Christian bishops in the Hauran alone. The population which built the churches and the theatres was quite numerous enough to have filled the ruined houses which now remain. If any buildings older than our era still exist in the Hauran, they are, I believe, exceptions, and do not disprove our conclusion, that false impression is given by describing the ruins of Bozrah, Kernawat, Suweideh, and Shuhba—in fact, those of Roman provincial towns—as "giant cities." It is not of Og, but of the Antonines, not of the Israelitish but of the Saracenic conquest, that most modern travellers in the Hauran will be reminded.'

Having left Damascus and Baalbec for the Lebanon, the travellers determined to do another feat, which dragomans and dwellers in Damascus pronounced to be impossible—that was, to reach the famous Cedars, in spite of the snow. They divided the party into three sections, and they all succeeded, though Mr Freshfield acknowledges that getting up to the grove and down again was as heavy a three hours' task as he has ever done. It took one hour and forty minutes' sharp climbing up a steep snow-gully to reach the ridge (7624 feet), whence they looked down on the Mediterranean. The splendid view well repaid the exertion, and they found the immemorial trees in very good condition, with the snow resting on their wide-spreading branches, the only green thing visible on the great white slopes.

They visited the Isles of Greece and Smyrna, and went to Ephesus. It sounds oddly to talk of Aisalook, the nearest station to Ephesus, and how they were entertained by Mr Wood, who is excavating with a view to the discovery of the Temple of Diana. He had already done a great deal. The theatre, the scene of the goldsmiths' riot, is uncovered, the stage is cleared, many inscriptions have been found. Some of the recently excavated marbles are as white as on the day they were cut. Mr Wood has also discovered a small building, which, on the strength of some Christian symbols, he rather boldly calls the Tomb of St Luke, a marble basin of noble dimensions, and a sort of 'Via Sacra,' outside the walls, lined with sarcophagi and funeral inscriptions. When his visitors were there, he believed himself to have settled within a square mile the site of the Temple of Diana, and seemed quite confident of turning it up sooner or later. At Constantinople they received aid and instructions from the Russian government, and on a fine May day they sailed, in a small Russian steamer, for the Caucasian shores. Then began the absolute novelty, the strangeness of the journey, the successive revelations of mountain grandeur and beauty, the recognition in a huge dome of ice of mysterious, untrodden Elbruz. The exploration of the Georgian plains brought many objects of interest and historical association to light, and then they reached Tiflis, a city of which little is known in Western Europe, but which is rather 'cracked up' in the east. Mr Freshfield has no opinion of it, and disposes of it briefly as a place wherein one may expend a great deal of money and get very little value for it. Tiflis was to be the base of operations, of which the most interesting was the ascent of Mount Ararat. The march along the valley of the Kur was indeed a weird and wild one, passing through the borderland of the steppe country, which is inhabited only by the wandering tribes of Turkomans and Kurds. They passed several underground villages, whose existence is indicated, at a distance, only by a brown blotch on the surface of the plain; on a nearer approach, a low mound of earth, with a thin column of smoke issuing from it, shews the position of each house. Here is a strange picture in a few lines: 'The men wear great sheepskin coats and conical fur-hats; the women, dresses of crimson-lake hue, which lit up wonderfully the dull green landscape. Every half-hour we came to a weird group of ruddy tomb-stones, averaging six feet high, and often delicately carved: they resemble upright sarcophagi in shape. These strange graveyards make much more show than the villages. Companies of camels, their day's work done, and their heavy cotton-bales ranged in a circle, sauntered lazily about in search of herbage. Gaily feathered birds perched on the telegraph wires, which were our constant companions and guides, scarcely cared to fly away as we passed. It was hard to realise that it was scarcely twelve hours since we had left a town supplied with every European luxury.'

Through this romantic land, in which the natural features of the east and the west are strangely blended, and the inhabitants are merry, harmless people, quite uncivilised, the travellers journeyed towards the Russo-Persian frontier—to follow the route on the map is to get bewildered with unknown distances and strange names—and suddenly they beheld the giant mountain of Armenia. They had been traversing uplands since the dawn, and had come to a rise in the ground, which shut out all beyond. 'As we overtopped the brow,' says Mr Freshfield, 'Ararat burst suddenly into view—a huge, but gracefully shaped mass, rising to a height of 16,916 feet, from a base of about 3000 feet. It stands perfectly isolated from all the other ranges, with the still more perfect cone of Little Ararat (12,840 feet) at its side. No single mountain within my knowledge presents so magnificent and impressive an appearance. I can only compare it to the popular idea of Atlas—a huge head and shoulders supporting the sky.'

The ascent of the mountain was not to be attempted until the return of the travellers from Persia; so, after an inspection of it, they started on their journey over the seemingly boundless grassy steppe, whose surface is interrupted only by groups of Turkoman huts, formed of canvas and wicker-work, and hung with gay carpets, woven by the women—probably exactly a similar scene to that which existed there in the earliest ages of the world.

The travellers had formed lively anticipations of finding in Tabreez a Persian city quite beyond the reach of European influences, and their expectations were fully realised. Here is the very core and centre of the East, in buildings, in costumes, in bazaars, in manners, in walled gardens, in fantastic and brilliant ornamentation, with open shops—displaying a confusion of goods of utterly unfamiliar aspect—surmounted by offices, or rather dens, where the traders sit in grave contemplation, and the wooden roofs are studies in the picturesque. The poetry of trade and of labour comes out strongly at Tabreez. 'Here are the grocer's stalls, tastefully decorated with devices in tinfoil; and the provision-shops, set out with nosegays of

Digitized by Google

buttercups, poppies, and clover, are a perfect blaze of colour. In one of the brightest and liveliest alleys of the whole bazaar you watch the shoemakers all stitching as if the pair of shoes in hand must be sent home in five minutes; close by are the forges, where eight men, standing in a circle, hammer out, with alternate strokes, a mass of iron; how each hammer keeps clear of the next being a mystery to the uninitiated. Then there is the carpenters' row, the bookbinders' row, the old clothes row, the knickknack row, where you may buy anything from revolvers to Persian ink-trays, and the saddlers' row. The roof is bright with saddle-cloths, some covered with the most beautiful Resht embroidery; while in the stores you find gay girths and tasselled bridles, carpet saddle-bags and leather salt-pouches heaped together in picturesque confusion. The crowd which fills the streets of Tabreez is purely European. You do not meet two men in eastern dress during the day, nor do you see the red fez, which lends such life to the cities of the Levant.'

From this fine, quaint civilisation to the splendid wildness of the Caucasus, was a transition indeed. The names of the places, the forest passes, the scattered villages through which the travellers passed, hardly make any impression, all is so new and strange. Every variety of natural beauty, from the most savage forest scenery to great plains of dazzling flowers, presented itself upon the way to the great glaciers of the Caucasus, through Suanotia; and the tribes are interesting, in their complete isolation. Their language is Tartar, their religion is Mohammedan. The imperial sway of Russia does not press hardly on these mountaineers, who pay only a light house-tax, are exempt from conscription, and too remote to be exposed to the petty restraints which a once free people often find the hardest to bear. Their local government is generally described as feudal, but Mr Freshfield thinks it is rather patriarchal. The princes are the recognised head of the community; they live in a house four times the size of any other in the village, they are richest in flocks and herds, and on them falls the duty of entertaining strangers; but their word is not law, and they can only persuade, not compel, their poorer neighbours to carry out their wishes. The notion one gains of the life of these Caucasian peasants is not an unattractive one, by any means, to the tired and cramped fancy of Western Europe.

A tramp over the snow-fields of Elbruz, rewarded by the sight of sunrise from a height equal to that of the top of Mont Blanc, is worth while, though the suffering from cold was great, and it was doubtful whether the climbers could go on. They persevered, however, and reached the summit of the mighty mountain, where, owing to the shelter of a small tower of rock, the temperature was endurable, and they sat down to examine the panorama. Thus simply Mr Freshfield gives the result: 'I never saw any group of mountains which bore so well being looked down upon as the great peaks that stand over the sources of the Tcherek and Tchegem. The Pennines from Mont Blanc look puny in comparison with Koschtantan and his neighbours from Elbruz. The Caucasian groups are finer, and the peaks sharper; and there was a suggestion of unseen depth in the trenches separating them, that I never noticed so forcibly in any Alpine view.'

The ascent was regarded as a wonderful undertaking, and its achievement rendered the English travellers very popular at the village of Urnspick, whither they returned, bearing evident traces of the severe cold and fatigue they had undergone. They occasioned some disappointment, however, by having to acknowledge that they had not seen the gigantic cock who lives up aloft on the mountain, and prevents the approach of men to the treasure which he guards, by attacking intruders with his beak and talons. The legend of treasure buried on a mountain-peak seems to be common to every mountainous country. The variety of natural beauty in this remote part of the world prevents travel from becoming monotonous, even though the scattered villages are pretty much alike, and there is not much difference between one group of sheepskin-clothed, hardy, frugal, ignorant peasants, and another. But woodland and mountain, plain and ravine, rich stretches of garden-like land, and rapid rivers, present themselves in rapid succession; and the traveller emerges from luxuriantly wooded hills into a portion of the Tcherek valley, for instance, which is a dreary swamp, uninhabited except by wild boars, and then looks down upon a Tcherkess hamlet, exactly resembling a South African kraal; after which he sees no human dwelling for a day's journey. Then he gets into the hill-country again, and crossing the eastern Tcherek, where it flows in a cleft so narrow that a man might almost leap across it, has a ten hours' ride through woodland scenery so exquisitely beautiful as to fill the mind with fresh delight, even after all the previous experience of the beauty of the Caucasian country. They were bound for Balkar, which was to be reached through the tremendous gorges of the Tcherek. Nothing can be finer than that journey, on the brink of awful precipices, whose magnitude they could only appreciate when a bend in the hillside enabled them to look back. 'The gorge of the Tcherek,' says Mr Freshfield, 'is no mere crack in the lower slopes of the mountains, like those of Pfeffers and the Via Mala. It is rather a huge trench, dug down from their very summits to a depth of more than five thousand feet. Behind us, forest trees clung to every available inch of ground. Looking upward, the character of the defile was more savage. The foaming waters of the Tcherek, crossed three times by bridges, filled the bottom of the trench, the sides of which were perpendicular walls, succeeded by shelves, capped in their turn by a loftier tier of precipices. The path, a mere ladder of broken stones, brought us, by a rapid series of zigzags, to a most extraordinary spot, where the overhanging cliffs meet, and form a natural bridge over the river, which can barely be seen at the bottom of its deep bed. As we looked from this spot, at which the savage grandeur of the scenery attains its height, the torrent, to all appearance, plunged directly into the bowels of the mountains, and it was impossible to discover how it found a way out of them.' This ascent achieved, and a wide upland basin traversed, where the careful cultivation and intelligent industry of the Moslem population manifests itself in marked contrast to the thriftless waste and indolence, and the consequent poverty of their Christian neighbours, the travellers approached Muchol, and so entered Balkar, the first Western Europeans who had ever been seen there. Their arrival created a

Digitized by Google

great sensation, and they were treated with effusive hospitality. They had received equal kindness, but there the princes were imbued with Russian manners, in contrast to which the patriarchal simplicity of Balkar was very striking.

Then began the climbing of Dychtan and Koschtantan, after a march over their great glaciers; but to ascend to the peaks was impossible. The difficulties were such as would have required a strong party of step-cutters. No help was to be expected from the natives, and the travellers wisely resolved to abandon the attempt. 'The second and third summits in the Caucasus and Europe are therefore not only unscaled, but unattempted peaks.' Notwithstanding this disappointment, the journey was very pleasurable, and camp-life in the Caucasus has the combined charm of being excessively romantic and perfectly safe.

The Uruch Valley is even more beautiful than that of the Tcherek, and, being the 'Gate of the Mountains,' it has an almost mystical interest, as though it were enchanted ground, beyond which lay the real, actual, work-a-day world. Mr Freshfield describes it, as he gazed at it from a height of three thousand feet. The immense extent of undulating woodland stretching to the horizon, and the rivers, which, unbridged and unconfined, converting their immediate banks into swampy jungles, wander like bright flashes of light across the green landscape, convey to the traveller's mind the impression of a rich virgin country, such as he would rather expect to meet with in the New World than in the Caucasus, the supposed cradle of his race. Nothing within their experience of more civilised countries was to be compared with its rich yet melancholy effect. In this extraordinary spot they bade farewell to the mountain fastnesses of the Central Caucasus, an exit which left upon their minds imperishable recollections of its sublimity.

Mr Freshfield's narrative has more than the ordinary effect of entire novelty in travel. Any mountaineers whom his account of the journey may set 'thinking on the frosty Caucasus,' may be assured that the difficulties of a journey through the whole of that beautiful and mysterious land are quite surmountable by the aid of perseverance and good temper, and that two of the most famous peaks of the Caucasian chain, Elbruz and Kazbek, are within the reach of all who possess the physical endurance necessary for an ascent of Mont Blanc.

A BOOK OF REFERENCE.

NEWSPAPER readers cannot have failed to notice that during the month of November there appear long advertisements, each headed by the name of some railway company, followed by some such sentence as this in brackets [Branch Lines to A and B, Further Powers, Additional Capital, Amendment of Acts], after which comes the body of the advertisement, containing a fuller statement of the objects for which an act of parliament is desired, in language which will prevent any but those whom it may concern from wading through it. Should any unfortunate shareholder, moved by his anxiety to know what his company are about to do, succeed in reading through one of these advertisements, he will probably rise from the perusal with a hazy notion that a great deal is to be done, and a large amount of money is to be spent. A few weeks later, the papers contain a list of railway bills before parliament; and towards the end of January or the beginning of February there will appear paragraphs to the effect that compliance with standing orders has or has not been proved in the case of the X Y Z Railway Company.

To many readers these statements must appear as unintelligible as the terms made use of in a law report intended for professional use; and even those who are aware that railway bills, although so greatly affecting the public, are technically termed private bills, and that both Houses of Parliament have certain rules, called 'standing orders,' a compliance with which is necessary before a private bill can be introduced, have much to learn before they know the whole process of obtaining an act of parliament.

The standing orders require that 'plans, sections, and book of reference' for any proposed line shall be deposited in certain offices before the end of November. There are other requirements, a compliance with which is necessary, but this is the principal one; that which involves the greatest amount of labour. Every one, of course, knows what a plan is, and a section, but a great many people do not know what a 'book of reference' is, and as the writer has had considerable experience in the preparation of such books, he will endeavour to add a mite to the stock of general knowledge, and make shareholders acquainted with one way in which their money goes.

When the directors have determined upon the application to parliament for power to construct a line of railway, the first operation is for their engineer to prepare a plan. This plan is usually a copy from the six-inch Ordnance Survey. A thick black line is drawn to represent the intended railway, and on each side of this centre line, at a distance representing about one hundred yards, are drawn dotted lines, called the limits of deviation. These limits are of great importance, because in constructing a railway it is often found necessary to alter the direction, to avoid some natural obstacle, and power is therefore given to vary the line as originally laid down to any part within the limits of deviation. The plan shews every object—field, house, garden, stable, pond, shed, or even waterbutt—within these limits, but scarcely anything beyond them but the continuation of a few hedges. When the plan is completed, a copy of it is handed over to the solicitor for the bill, in order that he may prepare the book of reference. Everything marked on the plan is distinguished by a number; and the object of the book is to shew, by reference to this number, what it is, where it is, and who are the owner and occupier. All this information has to be collected by the solicitor; and as the plans are very seldom in his hands before the middle of November, he has plenty to do. The course adopted is to send out a party, or, if the line be of any length, several parties, whose work it is to inspect all the property within the limits of deviation, so as to get an accurate description, and to obtain, by seeing or writing to all persons interested, a correct list of the owners and occupiers. The importance of this will be seen when it is considered that if any opponent of the line can detect an error in the book of reference, such as the omission of the name of any person interested in the property to be taken, he can oppose the bill before the examiner for standing orders; and if he

Digitized by Google

make good his objection, the bill will be thrown out, and all the money spent in the preliminary steps wasted.

Each party sent out 'referencing' (as the preparation of the book of reference is termed) usually consists of three—one to follow the plan, another to write down the descriptions and names, and the third to make inquiries in the immediate neighbourhood. The writer is generally considered the chief of the party, as most of the responsibility devolves upon him. Sometimes only two are sent, and occasionally one will go alone.

To talk of being in the country every day and all day long sounds pleasant enough; and many will perhaps envy those who are employed in referencing. It may be, on the whole, healthy work, but I can assert, from experience, it is not always so very pleasant. In the first place, it is not always country work. There was a time when railways avoided large towns, but those days are passed; and any one who, in leaving London by train, will look out upon the district through which he passes, and will remember that the book of reference often has to contain a description of a similar mass of tumble-down houses, dirty streets, and filthy yards, can form some idea of what occasionally falls to the lot of a referencing clerk. Even the open country too has its disadvantages. November is not the pleasantest month in the year; on rare occasions it is bright and fine, but far more frequently rain, or fog, or frost prevail. In referencing, it is out of all question to stick carefully to roads and footpaths; you must follow the plan over hedges and ditches, ploughed fields and gardens, or how could you be sure that your description is correct; and it is really difficult to say what kind of weather is the best, or the worst. If there is a frost, either you are bitterly cold and numb, or the sun thawing the surface, makes it almost impossible to get along. A fog necessitates your going round and across each field, lest some pond, path, or shed should escape you; and if it rain, you must carry an umbrella, to protect the book in which you write, and the plan. Add a high wind, and you have about as uncomfortable a position as any one could be in. But the catalogue of unpleasant incidents does not end here. In addition to getting wet to the skin, or nearly frozen, you are also liable to be half-starved. On one occasion, after a hard day's work, about half-past five o'clock, my companion and I came to the conclusion we must have some food. A brisk walk of about two miles brought us to the nearest public-house, where we ordered dinner. Our horror when we found there was nothing to be had but bread, cheese parings, and pickled cabbage, may be imagined. There was not another inn within four miles, so that we had no choice but to be thankful for what we got. Another day, I had to dine upon jam tarts, with the consolation that if I came the next day, I might fare sumptuously, as they were going to kill a pig in the morning.

After all, however, there is a certain charm about referencing which is attractive to many. In the first place, you are invested with a considerable amount of importance in the eyes of the inhabitants of the district; a railway is a great thing to them, and from it you receive a reflected greatness. Then, again, signboards, warnings to trespassers, and notices of spring-guns and man-traps, lose all their terror—you become a sort of privileged person. If a man sees you climb over the wall into his garden, and jump down upon his pet cucumber-bed, he is naturally angry; but in nine cases out of ten, when he learns you are come about a railway, his anger will disappear, and if you want to go back the same way, he will give you a leg up. The true reason was once forcibly expressed to me. I was engaged upon a long line through an agricultural district. I had finished my part, and as time was pressing, and I was regarded as careful and experienced, I was sent off alone to check the reference of another portion. Towards the close of the day, having got over about five miles of country, I came upon an inn, where I decided to get something to eat. Upon entering the bar, the first thing I saw was a large bill headed 'Society for the Prosecution of Trespassers,' which stated that a large reward would be given for information which should lead to the conviction of any one damaging hedges or walls, or trespassing on the lands of any of the undersigned. I had just finished the list, when the landlord entered. 'Look here, landlord,' I said; 'here's a chance for you. I've this very day broken through hedges, and trespassed on the lands of nearly every member of your society. If you like to inform, you may get a reward.'

'You're here about the railway, are you not, sir?'

'Yes.'

'Then we shall be paid well enough for our hedges,' he said, with a meaning smile.

The soothing influence of future profit has unfortunately no weight with dogs and bulls. It is decidedly unpleasant, when you wish to visit a farm-house, and to reach it have to cross some three or four fields, to be met at the first stile by a big dog, who will insist upon constituting himself your escort, and enlivens the way by making furious charges at your legs every dozen yards or so. Nor is it pleasant to find yourself face to face with a fine young bull. The latter is a case when the bravest man may run away, and I have never hesitated to give a bull as wide a berth as possible. I once had to run for it, and managed to escape in a manner which would please Captain Mayne Reid. I was making my way alone across country, when, upon getting over a difficult hedge, I found myself closer to a bull than I liked. At first I thought I might cross the field without being observed; but just as I was in the middle, the brute caught sight of me, and advanced to the charge. Behind me was the hedge I had come over; before me was another rather worse; to the left was the bull; I had nothing for it but to make to the right, where there appeared to be a wide ditch or stream. I tried to go as unconcernedly as possible; and the bull followed, not very fast, but still gaining on me. I reached the ditch. It was quite dry, and about seven feet deep, and rather more in width. The sides were broken, and looked nasty for a jump, but a projecting branch of a thorn-tree offered a good firm foothold for a spring. The bull evidently guessed my intention, for, as I reached this branch, he came on with a rush. I sprang as he got uncomfortably near; but the branch broke off, and I fell to the bottom of the ditch. There is a picture by Paul Potter which depicts a bull, who, from his face, appears about to burst into tears. I always thought the expression greatly exaggerated; but since the time when I climbed up the far side of the ditch and saw the face of the bull that had

Digitized by Google

pursued me, I can understand the power of expression of which bovine features are capable, for never, even upon human countenance, have I seen such a look of astonishment as that which my sudden disappearance had caused.

Another time, I was referencing for a line near London. My book was complete, as I thought, except in one case, where I was not quite satisfied with the description of some property laid out for building. It wanted only a few days to the end of November, and having nothing particular to do that afternoon, I took the train to the nearest station, and walked over to complete my description. Having done so, I was just leaving, when I saw a man at work on a small piece of ground included in the limits; it was only about half an acre, and was used for growing vegetables, and, as I had been told, belonged to a Mr D. To make assurance doubly sure, I went up to the man and asked: 'This piece belongs to Mr D., does it not?'

'No, sir; he only uses it because nobody knows who it belongs to.'

'How so?'

'Why, you see, sir, some ten years ago it belonged to a building society: I don't know whether they ever divided it, but about nine years ago they were dissolved, and no one has been near here since.'

Beyond this he could tell me nothing, but that the society, the name of which he did not remember, had met in Chelsea, and he believed there were some fifty or sixty members. Here was a nice mess; some fifty or sixty people to find out in the course of two or three days, with the prospect of the number being greatly increased by the representatives of those who were dead. A detail of what I had to do would only weary the reader as much as the doing of it wearied me. I visited nearly all the building societies in Chelsea, and at last discovered one in whose possession were the books of the defunct society. Thus I got the names; and by an unlimited employment of Hansoms, I eventually succeeded in making up the list of owners just in time. Many of the people had not the faintest idea that they were interested in any such property.

These are specimens of the kind of work that falls to the lot of those employed in making up the book of reference. Of course it cannot be done without expense; but the cost is very much increased by the pressure of time, in consequence of the solicitor not having the plans till nearly the middle of November. The reference must be completed by the end of the month, cost what it may, or all the survey is useless; and, with regard to this cost, there is one point worthy of notice: it is incurred without the knowledge or sanction of the shareholders. The directors determine to apply for powers to make a branch, either for the benefit of their company, or by way of opposition to some other company. The consent of the shareholders is not asked until the bill has reached a certain stage, and even then they are not informed, and many, I believe, have no idea of what the preliminary expenses have been. In these days of small dividends, when in many of our large companies retrenchment and economy are so much to be desired, would it not be well that the consent of the shareholders should be obtained before a step which involves an outlay often very considerable is undertaken?

A BALLAD OF THE PERIOD.

PART I.

The auld wife sat at her ivied door
(*Butter and eggs and a pound of cheese*),
A thing she had frequently done before;
And her knitting reposed on her aproned knees.

The piper he piped on the hill-top high
(*Butter and eggs and a pound of cheese*),
Till the cow said, 'I die,' and the goose asked 'Why?'
And the dog said nothing, but searched for fleas.

The farmer he strode through the dim farm-yard
(*Butter and eggs and a pound of cheese*);
His last brew of cider had turned out hard—
The connection of which with the plot one sees.

The farmer's daughter hath frank blue eyes
(*Butter and eggs and a pound of cheese*);
She hears the rook caw in the windy skies,
As she sits at her lattice and shells her peas.

The farmer's daughter hath ripe red lips
(*Butter and eggs and a pound of cheese*);
If you try to approach her, away she skips
Over tables and chairs with apparent ease.

The farmer's daughter hath soft brown hair
(*Butter and eggs and a pound of cheese*);
And I met with a ballad, I can't tell where,
Which mainly consisted of lines like these.

PART II.

She sat with her hands 'neath her dimpled cheeks
(*Butter and eggs and a pound of cheese*),
And spake not a word. While a lady speaks
There is hope—but *she* didn't even sneeze.

She sat, with her hands 'neath her crimson cheeks
(*Butter and eggs and a pound of cheese*);
She gave up mending her father's breeks,
And let the cat roll in her best chemise.

She sat, with her hands 'neath her burning cheeks
(*Butter and eggs and a pound of cheese*),
And gazed at the piper for thirteen weeks;
Then she followed him out o'er the misty leas.

Her sheep followed her, as their tails did them
(*Butter and eggs and a pound of cheese*);
And this song is considered a perfect gem;
And as to the meaning, it's what you please.

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 307. SATURDAY, NOVEMBER 13, 1869. PRICE 1½d.

WALTER SCOTT AT WORK.

IN the autumn of 1796, a firm of publishers in Edinburgh, of very little note in the trade, issued a thin octavo volume of translations from the ballads of Bürger, which were then on the lips of every one who made any pretension to taste or sentiment. The volume bore no author's name; and with the exception of a terse and vigorous line here and there, a striking metaphor, or a bold and picturesque expression, the work contained nothing to distinguish it from the host of translations from the German which were then issuing from half the presses of London and Edinburgh. The author's own friends, of course, were in high glee about it; but out of their circle it was hardly seen. It fell dead from the press; and most of the edition was condemned to the service of the trunk-maker.

This was Sir Walter Scott's *début* in literature. The failure, however, hardly touched his spirits. 'I was coolly received by strangers,' he said, recalling the incident many years afterwards, when he stood at the head of English literature, the Ariosto of the North; 'but my reputation began rather to increase among my own friends, and on the whole I was more bent to shew the world that it had neglected something worth notice, than to be affronted by its indifference.'

The history of the translation itself is not without its interest, giving us, as it does, our first glimpse of Walter Scott at work. Till Scott took up these German ballads, he had been known, I need hardly say, principally as a harum-scarum sort of youth, of awkward and bashful manners, possessing a fund of queer stories and old Border ballads, little scholarship, and less law, but with a turn for versification and story-telling; and one evening, when the conversation at his father's table happened to turn upon the ballads of Bürger, Scott promised one of the guests, Miss Cranstoun, a rhymed version of the most popular of them, *Lenore*, from his own pen. He began his task after supper, and sat up till he had finished it, working himself up into such a state of excitement in reproducing the vivid imagery of the original as to set sleep at defiance. He presented his translation to Miss Cranstoun at breakfast the next morning, and she seems to have been particularly struck by its point and finish. 'Upon my word,' she said, writing to a friend, 'Walter Scott is going to turn out a poet—something of a cross, I think, between Burns and Gray.'

Acting upon his determination to realise this friend's conception of the powers of his genius, Scott set vigorously to work, with the assistance of an old German dictionary, which he borrowed from the original Jonathan Oldbuck, and that of his clever and accomplished cousin of Harden, to translate everything that struck him in his reading of the literature of Germany—lyrics from Goethe, ballads from Bürger, and dramas wherever he found them; and in 1799 a selection of these were, through the assistance of Monk Lewis, 'a martinet in rhyme and numbers,' published under Scott's name by Mr Bell. This was the first of Sir Walter Scott's acknowledged publications; and it was the first, too, that brought him a penny in the form of what he calls 'copy-money.' Its price was twenty-five pounds.

Concurrently with the translation of these scraps of German poetry, Scott had been collecting the Border minstrels, and making his 'first serious attempts in verse' by writing in imitation of these ballads the trifles by which he won his spurs as an original writer—the *Fire King*, the *Grey Brother*, *Glenfinlas*, and the *Eve of St John*. It was not, however, till he was preparing the third volume of the *Minstrelsy* for the press that the idea of trying his 'prentice hand at anything more ambitious struck him, and in its original form even the *Lay of the Last Minstrel* was, to use his own words, nothing more than 'a romance of Border chivalry in a light-horseman sort of stanza.' Like his translation of *Lenore*, too, this *Lay* owed its origin to the suggestion of a lady, the Countess of Dalkeith. Scott was in the habit, when living at Ashestiel, of riding out with his lovely chieftainess and her husband

When Summer smiled on sweet Bowhill;

and in the course of one of these pleasant rides,

Digitized by Google

Lady Dalkeith happened to repeat the grotesque story of Gilpin Horner, which she had recently heard from an old gentleman on a visit to the castle, as an o'er true tale. She insisted that Scott should 'turn it into a Border ballad.' 'Had she asked me to write a ballad on a broomstick,' said Scott, 'I must have attempted it.' He therefore took up his pen and sketched out 'a few verses, to be called the *Goblin Page*.' These he read over to his friends Erskine and Cranstoun one evening after dinner. They do not seem to have thought much of what they heard; and Scott, taking his cue from their criticism, threw his stanzas aside in a fit of disgust. 'They lay long by me,' says Scott, in a letter to Miss Seward, 'till the applause of some friends whose judgment I valued induced me to resume the poem; so, on I wrote, knowing no more than the man in the moon how I was to end. At length, the story appeared so uncouth that I was fain to put it into the mouth of my old minstrel, lest the nature of it should be misunderstood, and I should be suspected of setting up a new school of poetry, instead of a feeble attempt to imitate the old. In the process of the romance, the page, intended to be a principal person in the work, contrived (from the baseness of his natural propensities, I suppose) to slink down-stairs into the kitchen; and now he must e'en abide there.'

The scene and date of this resumption Lockhart traced years after in the recollections of a cornet in the Edinburgh Light Horse. 'While the troop were on permanent duty at Musselburgh, in the autumnal recess of 1802, the quarter-master (Scott), during a charge on Portobello sands, received a kick of a horse, which confined him for three days to his lodgings. Mr Skene found him busy with his pen; and he produced before these three days expired the first canto of the *Lay*—very nearly, if his friend's memory may be trusted, in the state in which it was ultimately published. That the whole poem was sketched and filled in with extraordinary rapidity, there can be no difficulty in believing. He himself says (in the Introduction of 1830), 'that after he had once got fairly into the vein, it proceeded at the rate of about a canto in a week.' Visiting London shortly afterwards, Scott read the manuscript to his friend Mr Ellis under a tree in Windsor Forest; and afterwards 'partly read and partly recited, sometimes in an enthusiastic style of chant,' the first three or four cantos to Wordsworth when on a visit to Ashestiel. Of its success when published, I need say nothing: it was prodigious; and, under cover of this success, Scott at once made up his mind to make literature the profession of his life.

This point once settled, and the law abandoned except as a crutch, Scott set to work with characteristic energy, entered into partnership with Ballantyne, stocked a printing-office in the Canongate with types and presses, and drew up a plan of work sufficient to keep them and himself well at work for three or four years by the republication of a costly series of standard works. To be the editor of Dryden and Swift, and the annotator of old ballads, was at this time the highest ambition of the most brilliant and fertile author of the age. Poetry was the last thing in his thoughts. 'As for riding on Pegasus,' he said, in a note to Mr Ellis, when at work on the proofs of Dryden, 'depend upon it I will never again cross him in a serious way, unless I should, by some strange accident, reside so long in the Highlands, and make myself master of their ancient manners, so as to paint them with some degree of accuracy in a kind of companion to the *Minstrel Lay*.' To vary the monotony of hunting up original readings and scribbling foot-notes, Scott threw off an article now and then for Jeffrey's *Review;* and in the summer vacation of 1805 we find him trying his hand at 'a companion to the *Lay*,' by throwing together, in the form of an historical novel, some of his recollections of Highland scenery and customs. This was the origin of *Waverley*. Like the *Lay*, however, it was no sooner taken up than it was thrown aside. 'When I had proceeded as far, I think, as the seventh chapter, I shewed my work to a critical friend, whose opinion was unfavourable; and having then some poetical reputation, I was unwilling to risk the loss of it by attempting a new style of composition. I therefore then threw aside the work I had commenced, without either reluctance or remonstrance.' It was not till some months after this that the idea of writing *Marmion* seems to have suggested itself; and the necessity of raising one thousand pounds to pay off some debts of his brother Thomas was the motive of this magnificent poem. Constable offered the sum in question for the copyright before a line of it had been written; and it was on the spur of making it all that Scott thought it ought to be for this handsome sum, that he put his whole soul into it, and gave up to its composition all the time that he could spare from the proof-sheets of Dryden. Most of it seems to have been composed on horseback, either on the banks of the Yarrow or the sands of Portobello. Mr Skene, his mess-companion, tells us 'that in the intervals of drilling, when out with the Edinburgh Light Horse, Scott used to delight in walking his powerful black steed up and down by himself upon the Portobello sands, within the beating of the surge; and now and then you would see him plunge in his spurs and go off as if at the charge, with the spray dashing about him. As we rode back to Musselburgh, he often came and placed himself beside me to repeat the verses that he had been composing during these pauses of our exercise.' The description of Flodden field was struck out in this way; and we know from Scott's conversations with Lockhart years after, that most of the rest of his descriptive pieces were put together in the saddle when out for 'a grand gallop among the braes of the Yarrow.'

Of the conception of the *Lady of the Lake*, I can find no account beyond this, that Scott, in the summer of 1809, undertook to have a third poem ready to keep Ballantyne's press in action at the end of the year. What that was to be, Scott probably knew no more than Ballantyne, for about this time he began what I may perhaps call the system of drawing bills at three, six, and nine months upon his genius, to raise cash to pay for his purchases at Abbotsford, or to guard against the presses and types in the Canongate lying idle for a day; but in reading or conversation, his imagination had been set on fire by the story of the *Lady of the Lake*, and upon the rising of the Court of Session in July, we find him starting off with Mrs Scott and his eldest daughter to visit the scenes which he had apparently chosen for the framework of his fable. Not a little of the poem was, I believe, written in the course of the trip. The description of the Stag Chase certainly was;

Digitized by Google

and I do not think one needs the gift of second-sight, knowing what we do of Scott's habits, to pick out at least one passage which was worked out in the course of the gallop from the shore of Loch Vennachar to the rock of Stirling, which Scott tells us in one of his letters that he undertook, to anticipate his critics by testing the practicability of a good horseman, well mounted, riding within the space allowed to Fitzjames after his duel with Roderick Dhu. Except bits of description, however, here and there, the greater part of the *Lady of the Lake* was confessedly written at Ashestiel during the winter of 1809; and we have from his own pen a very characteristic conversation which took place with his cousin, Miss Christian Rutherford, upon the poem and its composition. 'A lady to whom I was nearly related, and with whom I lived during her whole life on the most brotherly terms of affection, was residing with me when the work was in progress, and used to ask me what I could possibly do to rise so early in the morning. At last I told her the subject of my meditations; and I can never forget the anxiety and affection expressed in her reply. "Do not be so rash," she said, "my dearest cousin. You are already popular—more so, perhaps, than you yourself will believe, or than even I or other partial friends can fairly allow to your merit. You stand high—do not rashly attempt to climb higher, and incur the risk of a fall; for, depend upon it, a favourite will not be permitted even to stumble with impunity." I replied to this affectionate expostulation in the words of Montrose:

"He either fears his fate too much,
Or his deserts are small,
Who dares not put it to the touch,
To win or lose it all.

If I fail," I said, for the dialogue is strong in my recollection, "it is a sign that I ought never to have succeeded, and *I will write prose for life:* you shall see no change in my temper, nor will I eat a single meal the worse. But if I succeed—

Up wi' the bonnie blue bonnet,
The dirk and the feather an' a'!"'

This was one of the busiest periods of Scott's life, and it is not one of the least striking illustrations of the strength and elasticity of Scott's mind, that a poem like the *Lady of the Lake* should have been thrown off, as this was, in the two or three hours of leisure which he stole in the early morning from the manifold duties of the day.

The two or three hours which Scott thus stole in the morning were to him the golden hours of the day; and it was during these hours that the greater part of his poems and his novels were thrown off. Till he took up his abode at Ashestiel, and settled down to his task as a man of letters by profession, Scott, like Byron and Moore, and most men of their class, had been in the habit of

Lengthening the day
By stealing a few hours from the night;

but upon a suggestion from his physician that this habit was likely to aggravate his nervous headaches, he at once reversed his plan, and adopted those habits of early rising and of early work which characterised him from this period till the pen dropped from his cramped fingers on the closing pages of *Count Robert of Paris*. He was out of bed by five o'clock all the year round, at his desk by six; and by the time that his family and visitors assembled at breakfast between nine and ten, he had 'broken the neck of his day's work.' These were his hours of inspiration, and generally his best work. Observing how Scott was harassed by lion-hunters at Ashestiel, and what a number of hours he spent either in shooting or coursing with his visitors, or in looking after his workpeople, Mr Cadell, Constable's partner, once expressed his wonder that Scott should ever be able to write books at all in the country. 'I know that you contrive to get a few hours in your own room, and that may do for the mere pen-work; but when is it that you think?'

'Oh,' said Scott, 'I lie *simmering* over things for an hour or so before I get up—and there's the time I am dressing to overhaul my half-sleeping, half-waking *projet de chapitre;* and when I get the paper before me, it commonly runs off pretty easily. Besides, I often take a doze in the plantations; and while Tom marks out a dike or a drain as I have directed, one's fancy may be running its ain riggs in some other world.'

He attests the same facts in his diary eight or ten years afterwards. 'The half-hour between waking and rising has all my life proved propitious to any task which was exercising my invention. When I got over any knotty difficulty in a story, or have had in former times to fill up a passage in a poem, it was always when I first opened my eyes that the desired ideas thronged upon me. This is so much the case, that I am in the habit of relying upon it, and saying to myself, when I am at a loss: "Never mind; we shall have it at seven o'clock to-morrow morning."' Scott, in fact, thought so much of these morning hours as the hours when his thoughts were fresh, that he generally lingered over his toilet longer than he did over anything else; 'shaving and dressing,' as his son-in-law tells us, 'with great deliberation; for he was a very martinet as to all but the mere coxcombries of the toilet, not abhorring effeminate dandyism itself so cordially as the slightest approach to personal slovenliness, or even those "bedgown and slipper tricks," as he called them, in which literary men are so apt to indulge.' I know no brighter picture in the history of genius than this of Sir Walter Scott sitting down to his morning task dressed in the green velvet shooting-jacket of a Scottish laird, with his books and papers around him on the desk and on the floor, his favourite hound eyeing him from the rug, a couple of spaniels gamboling with his children in the garden, and the songs of the birds pouring in through his half-open window. Scott knew nothing of those feelings of irritation that make composition a torment to so many men. His study was always open to his children no less than to his greyhound. 'He never considered their tattle as any disturbance; they went and came as pleased their fancy; he was always ready to answer their questions; and when they, unconscious how he was engaged, entreated him to lay down his pen and tell them a story, he would take them on his knee, repeat a ballad or a legend, kiss them, and set them down again to their marbles or ninepins, and resume his labour as if refreshed by the interruption.' Of course, when at Edinburgh, two or three hours after breakfast were spent at the clerk's table in the Court of Session; but when at Ashestiel or Abbotsford, these hours were devoted to the *Lady of the Lake*, *Rokeby*, or one of his novels. He

Digitized by Google

generally, however, laid down his pen about one o'clock, and devoted the afternoon to sport or exercise. When he had visitors staying with him, he would even say: 'Out, damned spot, and be a gentleman,' at ten o'clock; and he was in fine weather so complaisant in this respect, that most of them, like Washington Irving and Sir David Wilkie, left him with the impression that, by whatever magic he might contrive to keep Ballantyne's press at work, he was a man of leisure, who had nothing to do but to bask in the sunshine, and repeat legends and ballads for the diversion of himself and his friends.

Of course the explanation of this apparent leisure of Scott, in comparison with the vast amount of manuscripts which he turned out, was to be found partly in the regularity of his habits, the steadiness with which, day after day, and week after week, and year after year, he adhered to this plan, and setting apart four or five hours of every morning to his task; and partly in the ease and fluency with which he used his pen when he did sit down to his desk. When Scott took up his pen, it was not to think, but to write. He never knew, I believe, what it was to cast about for either a thought or an expression; and he never wasted a second with the file. Possessing a prodigious memory—a memory that lost nothing—a powerful and vivid imagination, a fluent pen, and a spirit that courted difficulties instead of craning at them, Sir Walter Scott never needed anything more than an incident or a tradition to start with in any of his novels; and when he had once laid down the 'keel of a story,' it grew under his hands, chapter by chapter, and volume by volume; and a stroll in the woods, or the half-hour's quiet between waking and sleeping, or dressing, was enough to supply him with his chapters for the day's work. 'I sometimes think,' he says, speaking of *Harold the Dauntless*, 'my fingers set up for themselves, independent of my head; for twenty times I have begun a thing on a certain plan, and never in my life adhered to it (in a work of imagination, that is) for half an hour together.' 'The action of composition,' as he goes on to say, after noting down a similar confession in his diary years after, when, writing *Woodstock*, he found himself at the end of the second volume without the slightest idea how the story was to be wound up to a catastrophe in the third volume—'the action of composition always extended some passages, and abridged or omitted others; and personages were rendered important or insignificant, not according to their agency in the original conception of the piece, but according to the success, or otherwise, with which I was able to bring them out. I only tried to make that which I was actually writing diverting and interesting, leaving the rest to fate. I have,' he adds, been often amused with the critics distinguishing some passages as particularly laboured, when the pen passed over the whole as fast as it could move, and the eye never again saw them, except in proof.' These sort of confessions turn up again and again in his diary and his correspondence with Ballantyne and his brothers and sisters of the quill. Referring to the *Maid of Perth*, for instance, he makes a note in his diary that he has 'sent off ten more pages this morning with a murrain. But how to get my catastrophe packed into the compass allotted for it?

It sticks like a pistol half out of its holster,
Or rather, indeed, like an obstinate bolster,
Which I think I have seen you attempting, my dear,
In vain to cram into a small pillow-bier.

There is no help for it—I must make a *tour de force*, and annihilate both time and space.' Of the *Antiquary*, again, he says in a note to Mr Morritt: 'I have only a very general sketch at present; but when once I get my pen to the paper, it will walk fast enough. I am sometimes tempted to leave it alone, and try whether it will not write as well without the assistance of my head as with it.' The *Lord of the Isles* and *Guy Mannering* grew under his hands in exactly the same manner. Like them, and like all his works, they were written without either plan or premeditation. 'The ideas rise as I write;' and the faster he wrote, Ballantyne used to say, the freer the ideas rose, and the better the story developed itself. This was Scott's opinion also. 'I cannot pull well in long traces,' he used to say, 'when the draught is too far behind me. I love to have the press thumping, clattering, and banging in my rear; it creates the necessity which almost always makes me work best.' When he was ahead of the press—when the printer's devil was not at his door waiting for copy—Scott's spirits drooped and his pen flagged, he dallied with what he was about, and lost the threads of his story. His poetry, of course, stands in a different category—that he frequently laboured, and wrote over two or three times; but all his novels were printed as they left his desk, with nothing more than a little revision at the hands of James Ballantyne, and a hasty glance at the proofs by Scott in odd half-hours.

But with all this tendency to slipslop in his style, with all this haste and carelessness, all this want of preparation, allowing his pen to take its own course, and his plots to construct themselves, perhaps no great writer ever took more trouble about the substratum of his fiction and poetry. Even when building with rubble, his foundations were of adamant. His imagination was vivid and powerful, and the amplitude and accuracy of his memory were the marvel of all his friends. But he trusted nothing, either to memory or imagination, when he could trace out the facts themselves by paying a visit to a scene, or by hunting up an old ballad or a tradition in a library. Refusing to give ten minutes of his leisure to lay down the plot of a novel, he never hesitated a moment to give up the leisure of a week to settle a point of history, or to gather the details of a bit of scenery, which he was thinking of working into a poem or a novel. Upon points like these, he was almost finical. When at work upon *Quentin Durward*, Lockhart frequently found him in the Advocates' Library at Edinburgh, poring over maps and gazetteers with care and anxiety; and his own letters to Ballantyne attest the scrupulous nicety with which he hunted up his facts, even for the description of a village like Plessis les Tours, consulting Malte Brun's geographical works, Wraxall's *History of France* and his *Travels*, and even Philip de Comines. Most of his descriptions, too, like Byron's, are photographs; and with the *Lady of the Lake* or the *Lord of the Isles* in your hand, you may trace out every view that Scott had in his eye when penning them, with his dogs and his children at his knee, in the morning-room at Ashestiel. He visited his friend Mr Morritt, when

Digitized by Google

he was at work upon *Rokeby*, to refresh his recollections of the scene; and Mr Morritt gives us a striking conversation that took place the morning after Scott's arrival upon this characteristic of his compositions.

'You have often given me materials for a romance,' said Scott; 'now I want a good robbers' cave, and an old church of the right sort.'

'We rode out,' says Mr Morritt, 'in quest of these; and he found what we wanted in the ancient slate-quarries of Brignal and the ruined abbey of Egglestone. I observed him noting down even the peculiar little wild-flowers and herbs that accidentally grew round and on the side of a bold crag near his intended cave of Guy Denzil; and could not help saying, that as he was not to be upon oath in his work, daisies, violets, and primroses would be as poetical as any of the humble plants he was examining. I laughed, in short, at his scrupulousness; but I understood him when he replied, "that in nature herself no two scenes are exactly alike, and that whoever copied truly what was before his eyes, would possess the same variety in his descriptions, and exhibit apparently an imagination as boundless as the range of nature in the scenes he recorded; whereas, whoever trusted to imagination, would soon find his own mind circumscribed, and contracted to a few favourite images; and the repetition of these would sooner or later produce that very monotony and barrenness which had always haunted descriptive poetry in the hands of any but the patient worshippers of truth. Besides which," he said, "local names and peculiarities make a fictitious story look so much better in the face!"' And that was the principle upon which Scott worked in all his poems and his novels. It is the source of half their charms. Most of his characters, too, are flesh and blood. Margaret Branksome, for instance, in the *Lay of the Last Minstrel*, is a photograph of Scott's first love; and Alan Fairford in *Redgauntlet* is obviously intended as a portrait of himself. Under the thin disguise of Saunders Fairford we have a sketch of Scott's father, even down to the minutest details of his dress, his suit of snuff-coloured brown, his silk stockings, his silver buckles, and his bob-wig and cocked-hat; and in Darsie Latimer we have one of the dearest of Scott's companions in his youth, Mr William Clerk. George Constable, a friend of Scott's father, sat for Jonathan Oldbuck; but as the original conception was developed, Scott 'embroidered' Constable's character with many traits from his old friend, John Clerk of Eldin. Dominie Sampson, again, was a cross between Launcelot Whale, the master of the Grammar-school at Kelso, an absent grotesque being, between six and seven feet high, and an old blue-gown, who used to stand bleaching his head in the wind at the corner of one of the streets of Edinburgh, in order to raise enough to pay for his son's education for the ministry. Most of Scott's sketches of the heroes of '15 and '45 are reproductions of his own personal recollections and those of his friends; and characters like those of the Black Dwarf and Tod Gabbie were all characters that Scott had met with in his ballad-hunting rambles. Those who knew Scott, too, before he thought fit to avow the authorship of the Scotch novels, frequently tracked him in the snow of his own dialogue; for Scott's ear was as quick as his eye; and anything particularly striking or characteristic that happened to turn up in conversation, generally found its way in one form or another into his works.

Reinforcing his imagination and his wit with recollections like these, and possessing wider and more diversified experience than probably any writer of fiction except Fielding, Scott dashed off his novels when he had once got into the thread of his narrative with astonishing fluency. Even when his eyes were failing, and his fingers gouty, he frequently threw off thirty or forty pages of print before dinner—that, in fact, was his task when he was at work upon *Woodstock* and the *Life of Napoleon;* and till he had accomplished that, he did not think himself at liberty to take his axe and stroll out into the wood for an hour's sharp exercise. In his prime, he thought nothing of throwing off a novel in a month. *Guy Mannering* was written in six weeks about Christmas, and that he thought easy work. Very frequently, however, Sir Walter had a brace of novels on hand together, or a novel and a poem, or two or three reviews for the *Edinburgh* and the *Quarterly*. *Ivanhoe* and the *Monastery* were written together like this; and he took up the story of *Woodstock* as a diversion to kill time when he was ahead of the press with his *Life of Napoleon*. Hasty work in literature is not generally the highest kind of work; and of course there is in all Sir Walter Scott's works much that is thin, and rambling, and vapid. But with Sir Walter Scott literature was not an art, but a trade. What was good enough for the public, was good enough for him; and his cardinal test of the value of his work was the price of its copyright and its sale. In poetry, he wrote by inspiration; taking up his pen, like Byron, only when the fit was upon him; but when at work upon a novel or a history, all he thought of was to get through his task; and if he was not in the vein when he took up his pen, he simply wrote on, as he said, till he 'wrote himself into good humour.' This was not generally a very hard task; and when he had got into a good humour with his work, he wrote on as freely and as gaily as he talked. His manuscripts testify sufficiently to this. In his poems you meet with stanzas that are hardly legible with blots and interlineations; but the manuscripts of his novels are as free from everything of this description as his correspondence. You may turn over page after page without finding a single correction. He never boggled over a sentence, or cast about for an expression. 'His thoughts,' as his amanuensis said, 'flowed easily and felicitously, without any difficulty to lay hold of them, or to find appropriate language. He sat in his chair (when dictating), from which he rose now and then, took a volume from the bookcase, consulted it, and restored it to the shelf—all without intermission in the current of ideas, which continued to be delivered with no less readiness than if his mind had been wholly occupied with the words he was uttering.' When dialogue of peculiar animation was in progress, James Ballantyne says Scott walked up and down the room, raising and lowering his voice, and, as it were, acting the parts. The file-work Scott left to the printer; and of several of his stories he did not even see the proofs till they were in the hands of the public. With the exception of the *Lay*, I doubt whether he ever read any of his poems after they were published. He liked that better than he anticipated; but I do not think the perusal

Digitized by Google

increased his opinion of the critical discernment of the public. He was 'never fond of his own poetry;' and when Ballantyne told him that the *Lord of the Isles* and *Rokeby* were paling in the glare and glitter of *Childe Harold* and the *Giaour*, he abandoned the laurel wreath to Byron without a struggle, and almost without a sigh. 'Since one line has failed,' he said, 'we must strike out something else.'

This was the spur under which he took up the abandoned manuscript of *Waverley*, which had been lying among the fishing-tackle of an old drawer for seven or eight years, and threw off the second and third volumes in three weeks. When, in turn, the novels of the 'Author of *Waverley*' began to pall upon a taste which likes its fiction fresh and fresh, Scott left the field to his imitators, and turned to history. 'There is but one way,' he said, 'if you wish to be read—you must strike out something novel to suit the humour of the hour;' and that was the principle by which he was governed all through his career. It was not a very lofty principle to act upon; with a weaker man it might have been a dangerous principle, ending, as in the case of Byron, in the complete demoralisation of his genius. In Scott, however, it led to nothing more than a variation of style. The most voluminous author of an age not particularly distinguished by the purity of its literature or morals, the contemporary of Byron and Moore, and the personal friend of George IV., an author, too, who avowedly set his sails to catch the popular breeze, Sir Walter Scott never allowed his genius to pollute itself by anything that, as a man, he could blush for. Talking over his writings at the close of his career with a friend, and contrasting their tone with that of Goethe's, Sir Walter said, with a flush of pride: 'It is a comfort to me to think that I have tried to unsettle no man's faith, to corrupt no man's principle, and that I have written nothing which on my death-bed I should wish blotted.' And his boast was true.

LIFE IN A LOG-HUT.

'Now for a lot of backwoods adventures,' thinks, doubtless, the reader who may honour me by glancing at this heading: 'a little shanty in the heart of some Western forest; a man dressed in deerskins, carrying a long rifle; a whole day up in a tree, with a mad buffalo underneath, a lot of ants crawling all over the trunk, and the thermometer at 120 degrees; and a hand-to-hand fight with the hopping frog, or the long-nosed musk-rat, or the energetic rattlesnake, or some other eminent godson of Mr J. Fenimore Cooper; and all the rest of it, in the style of Captain Mayne Reid or Gustave Aimard.'

Worthy reader, I am sorry to disappoint thee; but I have no such dainty fare to offer. I am not one of those genial beings who, when any one settles within ten miles of them, remark with an injured air: 'Guess I'm gettin' crowded,' and move three days' journey farther west. *My* log-hut is a Russian one, and built in genuine Russian style, with no tools but a short axe; the cross-beams fitting into each other like the corners of a slate-frame, and the whole structure being shaped very like the end of a blunt pencil. My furniture is of the simplest kind, consisting merely of a bed, a table, two chairs, and a clumsy chest of drawers, or 'komod,' as it is called here. The plank door and quaint little windows (which open like the door of a bird-cage) are secured on the inside with strong hooks—no unnecessary precaution in this land of boisterous winds and instantaneous changes of weather; while, in front of the hut, firmly fixed in the ground, stand a round table and low bench, for my convenience in fine weather. As I sit there about 7 A.M. on a glorious summer morning, with my primitive little teapot steaming in front of me, a fresh roll on one side, a brace of new-laid eggs on the other—and the soft, dreamy, sunny uplands of Central Russia stretching before me for miles, edged here and there with dark patches of forest, like fur-trimmings on a velvet robe—I inwardly acknowledge that one may be comfortable in Russia as well as anywhere else, and that life in the land of the Czar is, after all, something better than the marvellous phantasmagoria of sledges, wolves, caviare, prisons, fur-coats, flogging to death, perpetual winter, an omniscient police, and a passionate love of eating candles, which the word 'Russia' seems to call up quite naturally in the mind of every Englishman.

This village which I have chosen for my summer residence is one of those quaint little clusters of log-huts, clinging like limpets to either side of the highway, which are nowhere seen to such perfection as in Sweden or Russia. Some few of the houses actually reach two stories, and attain the dignity of a painted roof* and whitewashed verandah; but the majority are nothing more than little one-storied hovels of the traditional type, surmounted by the invariable cocked-hat-shaped 'tcherdak' or garret, wherein the Russian peasant stocks his hay, piles his wood, stores his provisions, hangs his clean linen (when he has any), and, in short, bestows everything that he cannot cram into the little box below stairs, in which he, his wife, his children, and very often likewise his ox and his ass, his sheep and his poultry, and everything that is his, eat, drink, sleep, and vegetate.

'A native acquaintance,' says Mr G. A. Sala in his amusing *Journey due North*, 'lately gave me the following succinct description of a peasant's hut: "The roof is gray, the walls are gray, the floor is gray; you may cut the smell of cabbage-soup with a hatchet, and at night you can hear the bugs bark."' Without exactly endorsing these vivid details, we are compelled to admit that the 'creeping things innumerable' so much dreaded by Western travellers form rather too conspicuous a feature of the Russian mujik's ménage; that his roof is an ingenious mixture of saplings and spiders; his walls a compound of wood, earth, and earwigs;† and his floor a paste of trampled straw and clay, dotted with black beetles like plums in a Christmas pudding. My cabin, however, being newly built, is as yet free from these unwelcome tenants; and I have nothing worse to fear than an occasional

* The love of the Russians for bright colouring is almost as strong and universal as that of the negroes. Their churches are perfect harlequins; their streets exhibit all the hues of the rainbow; while the gaudy kerchiefs of the peasant women, the scarlet cloaks of the city nurses, the crimson girdles of the cabmen, all tell the same tale. It is worthy of remark that the Russian word for 'beautiful' (prekrasni) means literally 'very red.'

† Earwigs in Russia are called 'Prusaki' (Prussians), a curious mark of national enmity.

Digitized by Google

foray of black ants from the cracks in my window-sill, or a Balaklava charge of mosquitoes, with a sound like that of a small church organ, through the open window.

To the north of our village the country is tolerably open; but to the south stretches a wide extent of richly wooded park, behind which lies outspread for many a mile the fantastic splendour of mighty Moscow. In fine weather, three-quarters of an hour suffice to carry an average pedestrian over the four miles of almost level ground which separate him from the capital; but should a strong wind overtake him beyond the shelter of the over-arching trees, woe to the adventurer! For along every street of Moscow, and throughout all its environs, lie strewn vast sheets of fine powdery sand, such as might lead one to imagine that not merely the dust of the czars, but that of all their subjects from time immemorial, had been garnered into the soil of the Holy City. Under the guidance of one of Mr Kingsley's favourite north-easters, this inexhaustible store of ammunition becomes a formidable weapon. The whole atmosphere is blurred and indistinct, as if beneath the sweep of a simoom; foot-passengers flit by like ghosts, applying shadowy hands to half-seen faces; heavy-laden wagons, plodding their way through the driving storm, appear and vanish like a train of phantoms; men trudge onward with heads bent, and handkerchiefs pressed to their eyes; ladies hold down their veils with the grasp of desperation; while here, and there, and everywhere, the tormenting wind leaps and dances like an airy Robin Goodfellow. There is no escaping from this relentless persecutor; he buffets you from behind, he strikes at you in front, he meets you round corners with a rapid, scientific, round-hand whirl, sending the hot prickly dust tingling through every crevice of your clothing, with an ingenious and malignant persistency which seems almost like the intelligent malice of a human enemy. With such phenomena before one's eyes, it is not difficult to put faith in the caustic popular saying, that 'the streets of Moscow are watered only when it rains.'

During the heat of the day, our villagers are not very locomotive. A few of them may be seen creeping along the high-road, or straggling about the fields, like stray ants in a garden; but, as a rule, the bulk of the population is invisible till evening. Then, as if by magic, the whole scene becomes alive with flitting forms; bearded labourers in greasy striped shirts, with baggy trousers thrust into their high boots; shouting children, shaggy as bears, and brown as hazel-nuts, simply attired in a pancake-coloured night-gown warmly lined with dirt; short-skirted women with gaudy kerchiefs round their heads, and round, flat, wide-mouthed faces, that look like a penny with a hole through it; sallow students, with straggling black hair, and an earthy unwashed look about them, ogling the brown-faced, barefooted lasses, who trip past with their pails of spring-water; and trim-looking village policemen, surveying everything with an air of fatherly superiority. It is beside the great wooden pump, however, in front of the village 'possible' shop, that the great parliament is held. There the 'rude forefathers of the hamlet' discuss things in general, to a running accompaniment of black bread and salted cucumber; there the matrons meet to talk over family affairs, and drive shrewd little bargains among themselves; and there the juvenile population of every age recreate themselves with the national diversions of rolling in the gutter and throwing dirt in each other's eyes (varied by an occasional bout at knuckle-bones), without fear and without reproach.

But it is on the morning of a summer holiday—one of the long-established days of bright faces and best clothes, of boisterous cordiality and unlimited tea-drinking—that the little colony is seen at its best; and of all the summer holidays, there is none like the Festival of the Holy Trinity, with its profusion of picturesque national observances, and open-hearted rustic merrymaking. In this far border-land of Europe, the traveller might imagine himself transported back to the days of medieval romance, as he watches the long procession of strangely attired forms, women turbaned with scarlet kerchiefs, children crowned with tiaras of gilt pasteboard, men with red shirts over their clothes—who, bearing green boughs or garlands of flowers, and chanting one of those weird rippling melodies which must have been taught to the ancient Russian by his flowing rivers and breezy forests, circle the village in their measured march; ending at last by planting freshly-cut saplings around every door, and then (of course) getting helplessly drunk, and lying sprawling in the mire in all the splendour of their brilliant garments, like fragments of coloured glass on a dust-heap. In spite of railways and telegraphs, of foreign travel and foreign literature, the national life of Russia—that quaint, striking, grotesque, indescribable life of which the passing tourist sees so little—is as yet but slightly altered; and within hearing of the railway whistle, many a rite is still celebrated which was practised in Russia while the wild grass of the steppe grew high over the cradle of Moscow, and the still unconverted Prince Vladimir was hanging his shield of defiance at the gates of Constantinople.

My landlord (whom, by-the-bye, I have hitherto forgotten to mention) occupies another log-hut of somewhat larger dimensions, so near my own, that, as he leans out of his side-window, I can almost shake hands with him from my own doorway; his garrison consisting of his wife, sister, and mother-in-law, for children he has none. He is a carpenter by trade, but doubtless owes as much of his worldly wealth to the sleek comfortable-looking poultry that cluck around his door, and to the huge substantial wash-tub into which his industrious helpmate has just plunged a vast pyramid of linen, as to his own handicraft; for in this land of forests every man is his own carpenter, and Jack (I should say Ivân) is as good as his master. In appearance and manners, my host forms an admirable specimen of the better class of Muscovite peasantry. He is a slender, trimly-built fellow of thirty-five or thereabouts, remarkably lithe and active for a country-bred Russian, with a brown handsome face, bright restless eyes not unlike those of a squirrel, and one of those magnificent beards which are seldom seen west of the Niemen or the Lower Danube. In marked contradistinction to the majority of his class, he is able to read fluently, write tolerably, and claim acquaintance with the works of several famous native authors, whose names sound very strangely in the mouth of a labouring-man. In temper he is frank and sociable,

Digitized by Google

as fond as any child of picture-books and new stories, and enjoying nothing so much as a chat with any one from foreign parts—a *penchant* which my advent has enabled him to gratify *ad libitum*.

Here he comes even while I speak of him, with his white holiday smock-frock thrown over his rough working-dress, moving slowly along the front of the low two-railed fence behind which I am sitting at my al-fresco tea, with a huge roll of brown bread on one side, a tumbler of strong, fragrant, amber-coloured tea* (such as one finds only in China or Central Russia) on the other, and a book of Slavonic legends, in the racy mother-tongue of the ancient nation, propped against the tea-urn in front of me. He halts before my table, under the slanting radiance of the glorious July sunset, and plants himself in the attitude of a man who has made up his mind for a good long talk.

'Good-evening, Barin' (that is, master); 'see what splendid weather God has sent us to-day!'

'Splendid indeed, brother. There will be plenty of folks about the park this evening. But come, sit down a minute; I've hardly had a word with you all day.'

My companion takes off his cap, and seats himself on the extreme end of the bench with a dubious air, as if he did so under protest; one characteristic feature of the Russian peasant being the marked deference and submissiveness ingrained in his nature by the yoke that has pressed his neck for two hundred and fifty years.† Indeed, it is no easy matter to wean the lower-class Russian from this habitual obsequiousness, as Peter the Great discovered to his cost, when, finding that even his imperial ukase forbidding prostrations and genuflexions‡ on the part of his subjects toward himself, proved ineffectual to restrain them, he at length seized upon one of the most pertinacious of his worshippers, and cudgelled him soundly, *coram populo*, with his own august hands.

'I hear, Barin, that you have been a great traveller, and seen many lands; but tell me, did you ever, in any of the places where you have been, see finer sunsets than ours?' and he looks admiringly at the green waving woods that girdle the base of the hill on which we stand, now all ablaze with the glow of the western sunlight.

'Well, brother, to tell the truth, I haven't seen many to beat them, although there are fine ones in Switzerland and Italy too.—But you are mistaken in thinking me a great traveller, for I've seen very little as yet; the only thing is, I can go where I like, which not every traveller can do.'

'Well, that's just what I said to my wife the other day. "Dunâsha," said I, "it seems to me the English Barin goes about as he pleases, without anything to stop him."—Permit me to ask of what occupation are you? I see they've put down "Tourist" in your passport; but I don't know what that means.'

'It means a traveller, brother—nothing more; and it's pretty nearly all the occupation I have. After all, you know, one sees more by travelling than by sitting still.'

'Well, yes, that's true. Just as our proverb says: "Water runs not under the stone that lies still." For all that, though, one can be very comfortable in one place; in this little village of ours, for instance, one may live very snugly, without ever wanting to travel. I've been at Moscow once or twice, but I didn't like it: what with the dust, and the noise, and the crowd, I felt as if I hardly knew where I was; whereas out here, where everything's so fresh and green, and quiet and still, it seems more like the world that God created.'

'But don't you find it rather dull sometimes in winter, when you can't go about?'

'Well, perhaps it is so, a little, now and then; but there's always plenty of work that can be done in-doors—that piece of carving,* for instance, which you saw yesterday morning, was done in the long evenings last winter—and every now and then you drop in upon some one for a visit, or a neighbour looks in upon you; and you put on the tea-urn, and have a glass or two together, and talk, and sing songs, and are merry enough.'

'Sing songs, eh? Suppose you sing me one now? I'm very fond of Russian songs.'

'Why, I'm not much of a singer; but if you wish it, I'll try.' And in a clear mellow voice he strikes up the bold, characteristic, ungallant song put by Lermontoff into the mouth of his Circassian marauder—the best character of the best novel in Russia:

THE CHIEF'S COUNSEL TO HIS SON.

Maidens throng our hills, I wot—
Starry night is in their eyes;
Life with them, an envied lot—
But our freedom more we prize!
Wed not, wed thee not, good youth;
Well my counsel heed;
Here is gold for thee, good youth—
Buy thyself a steed!

He who seeks himself a wife,
Ill hath chosen, wretch forlorn!
Never rides he to the strife—
Why? Because his spouse will mourn!
Wed not, wed thee not, &c.

He betrays not—thy good steed!
Flood nor fire with *him* we fear;
Like the desert blast, his speed
Makes the farthest distance near.
Wed not, wed thee not, &c.

'Where did you learn that song?' ask I, astonished at this new proof of his extensive acquirements.

'I heard it first from a soldier, who was billeted upon us when part of the Semionnovski regiment was quartered here. He knew plenty of songs, but that was always his favourite, because he said it reminded him of what he had seen when he served in the Caucasus. The tune pleased me, and so I got him to teach me the words as well; and after that, I fell in with it in Lermontoff's book,

* The Russians drink tea in tumblers, and flavour it with sliced lemon instead of milk.

† Serfdom was established by Boris Godunoff in the early part of the seventeenth century, and abolished by the present emperor, on the 19th February 1861.

‡ This ukase was issued on the 30th December 1701, previous to which time the person of the sovereign was approached with all the most abject forms of Asiatic servility.

* This man's skill in carving can hardly be taken as a fair specimen of Russian handicraft, although the ability of the Muscovite in this respect, like that of the Swiss or Chinese, is almost innate; but he had certainly executed, with very ordinary tools, works which no London wood-carver could have surpassed. One piece in particular, representing a sleeping greyhound, might have taken a prize at the Great Exhibition.

and read it over again.—But come now, Barin, now that I've sung you a song, will you tell me some more about what you've seen in your travels? You can't think how pleased my wife was with that story of your living on the mountain-top all winter, in the midst of the snow, and going over the ice-fields all by yourself, when I told it her over again last night.'

And the seeker after truth rests his chin on his clasped hands, and 'listens like a three-years' child' while I unroll before him some fresh leaves from my journal of adventure: how trees never grow in the islands of the Arctic Sea, and rain never falls (except on special occasions) in Egypt; of the countless leafy islets that guard the approach to Stockholm, and the green waving woods that girdle the broad white streets of Copenhagen; what strange old castles there are along the Rhine, and what quaint old cities amid the flats of Holland; how the Turks always leave their slippers at the door of a church, and how the Chinese make tea without a tea-urn (the most astounding fact of all to a Russian!)—till at length the purple shadows of evening begin to deepen around us, and the sharp 'ping' of the mosquitoes warns us to retire indoors, and close our windows against these winged archers of the twilight.

Such a man, however, is no more a fair sample of the common Muscovite peasant, than Socrates was of the ordinary Athenian workman, or John Bunyan of the English villager. To the Western reader, a faithful description of the every-day life of a Russian mujik would appear as incredible as the first accounts of M. du Chaillu's gorilla. Imagine a creature ignorant as an Australian savage, superstitious as an ancient Roman, inured to hardships from which a medieval anchorite would have shrunk; at once a glutton and an ascetic; peaceful even to sluggishness, yet capable of the most frightful revenge; able to sustain life on a pittance of food which would starve a British seaman, and to pass whole nights, in the depth of winter, wrapped in a sheepskin, outside his master's door; intensely susceptible of kindness, yet ungovernable save by the extreme of severity—such is the mujik, an anomaly which even Pope or Dryden might have despaired of delineating. Yet in this incongruous mass lies the future of the great empire—the *peut-être* of the Slavonic race—the moiety of Napoleon's rash prediction, that within fifty years all Europe would be either Cossack or Republican.

Space would fail me, were I to linger over all the other features of our village life: the old red-shuttered shop—*the* shop *par excellence*, being the only one—where, as Jonathan says, 'yew kin buy airy thing in creation, from champagne to chicory;' the rudely-built watch-house, where two brown-faced, good-natured, do-nothing soldiers eat, drink, and sleep, in a space about the size of an ordinary dining-table; the cool sparkling spring welling out of the smooth green hill-side, whither troop at even-tide the whole feminine population, with a pail at either end of the yoke that crosses their shoulders; the quaint little cookshop, with its peaked roof and shady balcony, on which assemble daily a crowd of hungry and loquacious customers. The peasant fare, which I have tasted in all its native integrity, is rough but abundant. Black bread and cabbage-soup can be had for next to nothing; bacon and mutton are surprisingly cheap; and almost every man possesses a kitchen-garden, which supplies him *ad libitum* with the salted cucumbers and sliced onions so dear to the common Russian. Upon this coarse but substantial fare are reared many remarkably fine and powerful men—a fresh proof of the soundness of Mat Prior's gastronomical philosophy:

> Observe the several operations
> Of food and drink in various nations.
> Was ever Tartar fierce and cruel
> Upon the strength of water-gruel?
> But who can stand his rage and force,
> If first he rides, then eats, his horse?
> Salads and eggs, and lighter fare,
> Tune the Italian spark's guitar;
> And (if I take Dan Congreve right)
> Pudding and beef make Britons fight.

Suffice it to say, then, that for those who can appreciate it, the east of Europe has charms as well as the west; and that tourist-ridden France and exhausted Switzerland may be advantageously exchanged, by such as have once seen them, for a short summer taste of village life in the interior of Russia.

OUR IRON-CLAD NAVY.

II.—TURRET-SHIPS.

In 1859, Captain Cowper Phipps Coles, of the Royal Navy, took out a patent for protecting guns by means of 'a large convex shield, covered all over its exposed portion with thick iron or other metal, and mounted upon a platform or frame, capable of revolving after the manner of a turn-table;' and it was a modification of this invention that, in 1862, under the name of the *Monitor*, saved the fleet of the United States from destruction. The exploits of the *Merrimac*, and her defeat by her formidable antagonist, formed a valuable lesson for naval men; for the whole of the action, from the time that the Confederate vessel first attacked the fleet of the North till she was driven off by the *Monitor*, went to shew the advantages of armour-plating, the terrible use to which the ram might be put, and the immense amount of protection afforded by the turret system of armament.

Between 1859 and 1861, Captain Coles had been in communication with the War Office on the subject of his invention; but some difference having arisen, he applied to the Admiralty, who, at the instance of Admiral Robinson, tried one of his turrets on board the *Trusty*. This was in the latter half of 1861; and the trials having been pronounced satisfactory, tenders were invited early next year for the construction of the *Prince Albert*, for harbour defence. She was originally designed to carry six cupolas, each containing two 110-pounders; but after the action between the *Monitor* and *Merrimac*, four turrets of increased weight were ordered to be substituted for them. Captain Coles was, however, anxious for a sea-going turret-ship to be built; while the Admiralty, on the other hand, naturally preferred to test this novel invention on a vessel for harbour defence. Although it cannot be denied that the *Monitor* is probably the most perfect engine of war ever devised for attacking forts, or defending an extended coast-line, and although its practical invulnerability, its great steadiness, and the facility which its turret affords of working very heavy guns, all conduce to these

Digitized by Google

objects, many of its advantages are sacrificed directly it is attempted to convert it into a sea-going turret-ship. In this case, we get a vessel with a very small armament for its size, and with a large portion of its side unprotected, a vessel in which the steadiness of the *Monitor* is lost, and in which the all-round fire of the turret is sacrificed to the necessity of carrying masts and sails. Still, the action in Hampton Roads was sufficient to shew the advisability of adding turret-ships of some description to the English navy; and shortly afterwards, the Admiralty issued orders for the conversion of the *Royal Sovereign*, a new three-decker, into a second cupola-ship, to carry five cupolas. Between March 1862 and June 1863, many changes in her were proposed by Captain Coles; and after considerable discussion, four turrets were substituted for the five cupolas, one being made large enough for two guns. But in spite of the exploits of the American Monitors, the Admiralty was for a long time averse to adding to the number of turret-ships in the navy, for it seemed probable that, useful as the Monitors might be upon the rivers of the United States, they would not be at all able to cope with the stormy seas that surround our island; and the loss of the *Monitor* during weather in which the boats of another ship could live, and later, the foundering of the *Weehawken* in harbour, tended considerably to confirm this opinion. Moreover, the exaggerated pretensions of the advocates of the turret system, and their unwillingness to admit the many difficulties attending its application to sea-going vessels, caused it to be looked upon with disfavour by the professional advisers of the Admiralty, and did much to retard the progress of the invention.

After the completion of the *Prince Albert* and *Royal Sovereign*, Captain Coles contrived to involve himself in disputes with the Admiralty, as he had previously done with the War Office, and no progress was made with the construction of turret-ships till 1865, when a committee which had been appointed to consider the subject recommended the building of a vessel with two turrets. Before preparing the design, some important points had to be settled, such as height out of water, amount of armour, speed, and, above all, whether a forecastle should be built at a sacrifice of the direct fire ahead. After full consideration, these points were decided by the Admiralty; a design was prepared, and the result was the *Monarch*, recently launched at Chatham. This vessel was repudiated by Captain Coles as not representing his principle; and in 1866 he was authorised to employ a private firm to design a ship that should represent it. He chose Messrs Laird of Birkenhead, who prepared the drawings for the *Captain*, which is now nearly ready for sea. In both ships, forecastles have been added, and the all-round fire sacrificed, in order to obtain better sea-going qualities; indeed, as a writer in the *Pall Mall Gazette* has observed, it is difficult to say how the two ships differ in principle, and a trial at sea can alone decide whether the Admiralty ship *Monarch* or Captain Coles's ship *Captain* is the more efficient.* The only other turret-ships in the navy are the *Wivern* and *Scorpion*, built originally for the Confederate States of America, but purchased by the Admiralty from Messrs Laird for political reasons. As sea-going ships, they are unsafe, and whatever may be their merits for coast-defence purposes, they are undoubtedly most inadequately protected against heavy projectiles. It is therefore without regret that we hear the former is to be sold out of the service, while the latter is to be consigned to that limbo of nautical failures, the West Indies.

We now come to three vessels which belong neither to the broadside nor to the turret system; we refer to the *Waterwitch*, *Viper*, and *Vixen*, which are constructed to fight end-on, being furnished for this purpose with an armour-plated belt, and a bulkhead to protect the guns. They are gun-boats of about the same size as the *Enterprise*—Mr Reed's first contribution, it will be remembered, towards the reconstruction of the navy. The *Waterwitch* was adapted from the Admiralty designs for the purpose of trying Ruthven's system of jet propulsion, which consists in expelling, through movable nozzles, water previously admitted into the ship, the reaction causing her to be propelled, and the speed depending, *cæteris paribus*, upon the velocity given to the water by the machinery. Such a plan would prove of immense service in the event of a leak, and can also be applied to steer the ship without the aid of a rudder; but owing to the necessity of protecting the nozzles from shot, and to the amount of power lost through friction, it has not, in the present instance, proved very successful. The *Vixen* and *Viper* are propelled by twin-screws; the former being built on the composite system of construction—that is to say, with iron frames and wooden planking—and the latter, of iron throughout. For sea-going purposes, these little boats are practically useless, and although they have managed to reach the West Indies, they remain there without a chance of being utilised, save in the event of a war with the United States, when they might possibly be employed for coast-defence purposes.

It may perhaps be permitted, in concluding these remarks on our iron-clad navy, to refer for a moment to the qualifications of the gentleman who is primarily responsible for the designs of the later vessels built under Admiralty auspices. Mr Reed has met with much hostile criticism—indeed, with more, probably, than has ever fallen to the lot of any previous occupier of his post; but although in the earlier part of his career he may have been too much given to following French models, and have enunciated theories which have not stood the test of experience, he has always shewn himself ready to correct any errors into which he may have fallen. As a proof of the improvements which he has introduced in the construction of ships of war, it may be remarked that the iron ship-building of the Admiralty establishments, instead of being a servile imitation of that in private yards, has, under his direction, become the model adopted for this class of vessel, not only by private builders,

* Since the above was written, the recent cruise of the Lords of the Admiralty with an experimental squadron, in which the *Monarch* was included, has shewn that this vessel possesses good sea-going qualities, but these have been obtained at the sacrifice of all the leading characteristics of the turret, or rather, of the Monitor system. The only class of vessel in which these characteristics are likely to be preserved in combination with sea-worthiness, is that of which the *Glutton* and the *Cerberus*, now fitting for sea at Chatham, are types; and in this instance they are due to the novel idea of mounting the turrets upon an armour-plated breastwork which protects their machinery.

Digitized by Google

but by foreign governments throughout the world. It is certainly a matter for regret, after the expenditure of such vast sums of public money, that the English navy should include so many useless vessels, but it must be remembered that in the *Bellerophon*, *Hercules*, and some others, we possess ships which years hence will still be capable of upholding the dignity of our country in all parts of the globe, no matter what forces nature or man may bring to bear against them.

A LIMITED HORIZON.

IN FIFTEEN CHAPTERS.

CHAPTER III.—MEETING AN OLD FRIEND.

THE 'King's House,' as Lalagé found the abode of the Cleathers was called, was a strange gabled old building, bearing date 1600. That poor wrong-headed Charles I. had once inhabited it for a short time, whence its name. It stood in its own grounds, small, certainly, but completely walling it in on three sides from the vulgar gaze (had there been anything of the sort at Grimswold). It was built on a sort of flat terrace of land, on a level with the churchyard which it adjoined, and through which a private pathway led the family to church.

Standing as it did on a slab of elevated ground, the view from the King's House was unusually extensive. Lalagé's delighted eyes found it, like everything else in Grimswold, very charming, as she stood on Monday morning waiting to be admitted to her friend's presence.

Mrs Cleather was 'at home,' so she was shewn into a drawing-room where sat the Gertrude of old.

'O Lalagé!' 'O Gertrude!' that was all; but the two women looked at each other with heartfelt pleasure.

'What brings you into this part of the world?' asked Gertrude.

'Oh, we've come to economise,' said Lalagé gaily: 'papa lost so much by the failure the other day. I was so charmed to see you in church, yesterday afternoon, Gertrude.'

'I did not see you,' said Mrs Cleather; 'the children take up so much attention; but I had heard a Mr Hesketh had taken the Hill House, so I was not quite startled when you came in. But what could have made you choose so desolate a part of the world?'

'The house is papa's own,' said Lalagé; 'and as for its being desolate, I think it is so beautiful that no one could feel lonely here. O Gertrude, isn't the scenery lovely? It makes me so long to be good; all my heart stretches out every time I look out of my window!'

'Yes, of course, it is very beautiful,' said Gertrude. 'I remember how struck I was when first I came; but I must confess to a great weakness for human beings, and they are very scarce here.'

'But I think it will be nice to do without human beings,' said Lalagé; 'I did get so tired of London. But what brought you here, if you don't like it?'

'My husband found out the place when we were staying at Cheltenham last year; so we made up our minds to come here for a while. He is fond of travelling, so I daresay we shall not stay here very long. O Lalagé, since last we met, I have been half over England!'

'And you are just the same dear old G. as ever,' said Lalagé, sitting down on the floor by her friend, and taking her hand.

'Am I?' said Gertrude Cleather with a wistful look in her brown eyes. 'I know that I am more glad than ever to see you. You must tell me all about my old friends. How is George Wriothesley?'

'Oh, I don't know,' said Lalagé. 'Well, I suppose, he never has anything the matter with him. I don't like him; he is so *dolce far niente*, with his long yellow whiskers and his white hands.'

'I don't see that he can help good health, yellow whiskers, or white hands. I like him very much; I think he is so good.'

'Yes, I know; and I think it is that which provokes me. His goodness seems to come so easily to him; for half that amount, I should have to battle a lifetime; and I always fancy he would be so hard on others who do not come up to his standard.'

'That he certainly would not,' said Gertrude; 'and I know him to have been disappointed, and to have borne that disappointment better than most of us would do.'

Lalagé flushed up. Did Gertrude know that she had refused this man of whom they were speaking, only three months before?

'I know you always liked him better than most people,' answered she, almost pettishly. 'I hope you teach your children "G for George, the Good Guardsman."—But I want to see your children so much, Gertrude. May they not come in?'

Gertrude rang the bell.

'How dreadfully the service is performed here,' said Lalagé; 'Belle and I were quite shocked yesterday.'

'Is it?' said Gertrude. 'Well, I suppose I don't notice it, for when we came it seemed a great boon to have a church at all. We were in a wild part of Ireland just before, the nearest church being fifteen miles off, and the road to it so wretched. Besides, I like Mr Mitchell so much.'

'Is that the curate?'

'Yes. Such a hard-working man! This parish is so large, that it is difficult to keep up a connection with all the people of the outlying hamlets, yet he manages to do it. The rector is abroad in ill health; so everything falls on his shoulders.'

'Well, they are broad enough for anything,' said Lalagé. 'Is he a gentleman? And oh, why doesn't he cut his hair?'

'He is quite a gentleman,' said Gertrude; 'and as for his hair—it is a pity, but I don't look upon things of that sort as vital now, though I did when I was your age, Lalagé.'

'Well, you are only four years older,' said Lalagé. 'To think of you with three babies, Gertrude, and only twenty-two!'

'Yes; I was married when I was a year younger than you are now.'

'What an awful warning! But are not the children very young to go to church?'

'Their father wishes it,' said Gertrude.

'Oh, I don't know Captain Cleather in the least.'

'You must make friends with him now; not this morning, though, for he is out driving.'

By this time the children had made their appearance, and took up all Lalagé's attention. One

Digitized by Google

was a fine little boy of four; the other, a girl, a year younger. The baby, being asleep, was not brought in. Lalagé was an ardent child-lover, and her bright beauty never failed to attract them—children are such fervent worshippers of loveliness; so she and they were soon on the most friendly terms.

Presently she asked: 'Who lives in the large white stone house not a quarter of a mile from this, Gertrude?'

'The Vereys,' was the answer. 'Oh, my dear, they are the funniest people possible, without at all meaning to be so. Mrs Verey actually told me the other day she considered the present bonnets positively indecent! I think that is the opinion they have of every prevailing fashion; at least they in no way conform to any. They have lived here from generation to generation, and their thoughts never reach beyond Grimswold. There's an example of the harm done by a limited horizon!'

'But people need not get so narrow-minded unless they choose,' said Lalagé.

'I don't know,' said Gertrude; 'I should not like to try the effect of half a century of Grimswold upon me.'

'I should not mind a whole century,' said Lalagé. 'I think you are quite prejudiced against the place, Gertrude.'

Just then they heard a knock at the door.

'Dear me,' said Gertrude, glancing in dismay at the huge pile of linen beside her, 'it must be one of the Misses Verey; and they will be so scandalised at finding me busy in this way, though it *is* Monday morning. They have great ideas of what a lady should or should not do.'

'Give me the work,' said Lalagé promptly. 'I'll open this cupboard, and put it all in: shall I?'

'Do, please,' said Gertrude; 'but I don't know what that cupboard is used for.'

Lalagé pulled vehemently at the door, but it would not open; then a little push made it shake and creak in a more promising way; then a harder push sent it flying wide open, and discovered to her amazed eyes a narrow, well-like staircase. The impetus she had given to the door carried her along with it; so she was fairly inside, and conscious of a painfully twisted ankle, before she had time to be surprised.

She had the presence of mind to throw the bundle behind the door, and then sat down on the steps, unable to move, and with real tears of vexation and actual pain gathering in her eyes.

Gertrude gave one quick look of amazement and sympathy, and then turned to receive her visitor; but when the door opened, not 'Miss Verey,' but 'Mr Mitchell' was announced; and the big curate swung in.

'We have made the strangest discovery,' said Gertrude, as she shook hands with her visitor, thinking it best to face the unlucky *contre-temps* boldly. 'Had you any idea that we had a private staircase here?' She led the way to the cupboard door. 'My friend, Miss Hesketh, has just found it out.'

'Yes, and I've hurt my foot horribly,' said Lalagé, looking up; 'and I can't get up, and it's so stupid.'

The big curate looked in, and saw a sight which he never afterwards forgot—a sight which came to him again and again through all his years—a sight which followed him when his hair was gray and his eyes dim, and the bare memory of which, even to the last, filled his heart with the longing which beauty always creates. And yet it was only a girl he beheld on that bright spring day—a girl with crisp golden hair, with a fair, pale, oval face, violet eyes swimming in limpid self-pity, a small sensitive mouth, and straight, thin nose. But the slight, lithe figure, the far-spreading muslin dress, the cool mauve ribbons, the carefully outlined throat, wrists, and waist, all had their charm too, and all helped to make up that vision of refined loveliness, the like of which he had never before beheld in such close contiguity to himself. Sitting there in the dusty shadow, she almost shone out, and some such line as 'making a sunshine in a shady place' came into his dazed, unpoetical head. He stood staring a full minute; the girl looked up angrily, and a faint pink flush lighted the face of the curate's divinity.

'I wish you would not stand there,' she said; 'I can talk to you quite well if you will only go and sit down, Gertrude.'

Then Mrs Cleather introduced them, glad that the awkward pause was over.

'I am afraid you've hurt your foot very much,' said the curate, still gazing into the recess.

'Yes, I have,' said Lalagé; 'of course it is nothing of consequence, nothing that hurts one dreadfully ever is. I wish I were a man. Papa could say "Hang it!" or "Confound it!" or "By Jove!" and so jerk out a little of the pain; but I'm only a girl, so I can do nothing but sit here and cry.' This was said to excuse the two big tears which would come rolling down.

'So much the better,' said the curate, longing to say something to cover her confusion; but not a bit knowing how to do it: 'strong words are "idle words," and the fewer we say of them the better.'

'I daresay you use them, though,' said Lalagé.

'No, I don't, 'pon my honour; I use very little words for a man of my size; don't I, Mrs Cleather?'

By this time Gertrude had seated herself on the lowest step of the stairs, at Lalagé's feet, and the curate had taken a chair within gazing-distance, so conversation was easier.

'My poor Lalagé,' said Gertrude, 'can't I do anything for you?'

'O no, thank you,' said Lalagé; 'the pain is going off at last.'

Then Gertrude and the curate talked about district-work and poor people, and Lalagé could not help noticing that he did seem very much in earnest; and her heart quite came round to him, when Gertrude's two children—hitherto taken up by blankly gazing at Lalagé—clung round him. 'Dinner Bell,' as the little girl always called herself, climbed up to his big shoulder, and seating herself thereon with much satisfaction, stroked his brown forehead, and told him she 'did 'ove his pretty face.'

This exceedingly incongruous remark sent Lalagé and Gertrude into fits of uncontrollable laughter, and broke down the barriers of any remaining reserve, till at last the genial curate had so far won his way, that Lalagé really thought him 'very nice.' His manner to Gertrude especially pleased her. Mrs Cleather had that faculty, which some few happy women possess, of winning men's respect rather than regard, deference rather than love. Such respect and deference the curate paid unsparingly, and Gertrude, in her placid, matronly

Digitized by Google

security, received as her due. She was a woman who might have been intimate with half the world of men without being familiar with, or suffering familiarity from, one. Happily, Captain Cleather, irritable, excitable, and suspicious as he was, had yet sense enough to perceive this.

'My foot is all right now,' said Lalagé at last, getting up, though she flushed slightly as she did so.

'Not quite right, I am afraid, Miss Hesketh.'

'Yes, it is.—Shall we explore this funny old staircase, Gertrude?'

They went up, and found the narrow tortuous steps led to a small room at the top of the house, not more than ten feet square; it was empty, and very dark, the only light being afforded by the door Lalagé had opened; when this was closed, the obscurity must have been complete.

'How dreary it is!' said Gertrude with a little shiver. 'One would like to know who last took refuge here.'

'Let us go down,' said Lalagé, and they stumbled into the light again.

'Look here,' she said, as with eyes accustomed to the darkness she stood gazing up the narrow staircase; 'is not that a window?'

Nearly at the bottom of the staircase was a thin thread of light, almost imperceptible from its being so near the open door. The curate lumbered up again, and found that a wooden shutter, cleverly painted so as to resemble stone on the outside, had been wedged into a narrow aperture about two feet wide. He got it out, with some difficulty, by means of two bolts on the inside, and then carefully put it back again.

'Heaven help the poor fellow who had to make his escape by this way!' he said.

'By no means impossible, though,' said Gertrude, 'for, don't you remember, the gardener's tool-shed is just below? It must all have been done on purpose.'

Lalagé's face was quite saddened. 'It makes one so sorry for all the people of the old times,' she said, 'and so glad we live now instead of then.'

'Let us shut it all up again,' said Mrs Cleather.

They had done so, and Lalagé was just saying she must be going, when the door was opened rudely, and a flushed, excited face thrust in.

'Gertrude,' said Captain Cleather, 'this is madness—murder! The idea of keeping these children cooped up indoors; I must have them out, indeed I must,' he added vehemently, taking no notice whatever of the two strangers—'I must have them out at once!'

'Very well, John,' said Gertrude softly, and the man's troubled face grew a shade calmer.

She lifted each child in her arms, and took them, one after another, to their father. They were by no means unwilling to go; indeed, little Dinner Bell seemed to think her mother's long kiss hardly necessary. Then Gertrude closed the door, and looked defiantly into Lalagé's face; that look said plainly as words: 'You shall not dare even to think him rough; he more than satisfies me.' The curate was evidently accustomed to scenes of this sort; but a little sadness crept into Lalagé's heart, as she took up a hat with a floating veil and more mauve ribbons, and putting it on, looked lovelier than ever to the bedazzled curate.

'You must let me see you home,' he said to her; 'I shall be so uncomfortable about your foot, if you don't; and you know it's my duty to look after my flock.'

'Yes, pray, do, Lalagé,' said Gertrude; and the big curate was unspeakably happy.

As he swung along by her side in his foolish bliss, he felt that he was, as he expressed it, 'done for,' and 'for good' this time, forgetting that he had already more than once given and recalled that susceptible heart. But none of his captors had been in any way equal to Lalagé, who, with her refinement, freshness, and frank open manner, was to him like a breath from a new world. He could hardly keep his eyes from her face, hardly keep the throbbing of that big foolish heart to himself; but he managed to do so, and talked very creditably all the cruelly short way to the Hill House. He told her how old and curious the Cleathers' house was; how there was a paper extant written by Charles I., dated from 'his poor lodging at Grimswold;' how the whole place was full of historic association, if only people cared to look it up. And the bliss of taking her slender gloved hand in his when they reached their destination, and 'Good-bye' was imperative, more than repaid all his efforts.

CHAPTER IV.—VISITORS.

'So the curate is not an utter monster after all,' said Belle.

'No, indeed he isn't,' said Lalagé; 'still, his hair is terrible.'

They were sitting in the cool Hill House drawing-room, with the French door open to the lawn, and every pink-shaded window flung wide, to admit the sweet summer air. Belle, who was scientific, and read deep books, and even wrote papers for the *Social Science Review*, was sitting somewhat in the shadow of the room, with a great pile of volumes on a little table beside her. She had just taken up that 'heaviest book out,' *The Great Store-book of Nature*, but Lalagé's incessant chattering forbade very deep study.

There she sat, silly Lalagé, quite content with youth and beauty, and with delighted eyes gazing out on the fair land over which the summer glamour was cast.

'Do put down your book, Belle; I am sure it is that odious *Plurality of Worlds*. O dear, if you were only as contented as I am! I care nothing for any world but this, for it's such a beauty,' said idle Lalagé, who hated work, letting fall the piece of embroidery she held. 'Do you see that little wood on the side of the hill just in front of us? O Belle, I long to go there: I wonder if it is as far off as it looks; I think I'll try it this very afternoon.'

'After we've called on the Cleathers, then,' said Belle.

'O yes; I'll go there with you first,' said Lalagé; 'and then, when you go for your stupid drive, I'll set out.'

'Hadn't you better take one of the servants with you?'

'No, Belle; you know that just what I like best in this place is its charming independence. Oh, I long to go,' she went on, still gazing out on the fair hill-side; 'I could find it in my heart to set out this very minute.'

It was absolute pleasure to her to sit in that

Digitized by Google

pretty room, with well-chosen furniture and artistically designed paper; but to this pleasure she was accustomed. It was the outside beauty which gave so keen an edge to her happiness: the soft mouldings of the hills made her heart swell, the broad sweeps of light and shade made her eyes by turns dance, and grow calm.

There she sat, still revelling in the gorgeous pageant outside, when an hour later the big curate stumbled into this—to him—Elysium. Stumbled, I say, because the poor bedazzled man felt his big feet and clumsy limbs so incongruous in the midst of such surroundings. He sat down gratefully by Belle, who came forward with her queenly graciousness, and resolutely turned those too-small, unwise eyes of his from Lalagé, as though he expected her to be covered with confusion, as was he himself. But she rose and went to him with easy courtesy, blended with pity, and held out a slim hand sparkling with jewels.

'I had the pleasure of meeting Mr Mitchell yesterday at Mrs Cleather's,' she said—'my sister, Miss Hesketh—Mr Mitchell.'

This little introduction had a soothing effect upon the curate.

'I am so sorry I did not call last week,' he said; 'the fact is, I did not know you had actually come.'

Belle begged he would not mention it, and asked him about the place and people.

He told her it had been a considerable town two centuries before, but people had drifted away till it had been left in its present desolate condition. 'There is even a legend that its desolation was nearly fatal to one of your sex,' he said with a humorous smile: 'it is said that a certain Lady Lowther pined away and all but died in this very house, five years ago.'

'I am glad she had the politeness to say nothing about it to papa,' said Lalagé. 'I don't see why it should be so desperately dull; there are the Cleathers, and some people who live near them.'

'Yes,' said the curate, taking heart of grace, and turning round so as to face his divinity; 'but the Cleathers have not long been here, and till they came the Hill House was uninhabited for years. To be sure there are the Vereys, as you say; but they don't care for sociability; they are reserved people—very reserved, I may say.'

'And do you find it very dull?' asked Belle.

'Well, no, not exactly,' said the curate; 'at least it doesn't much matter to me; the parish is large, and I have plenty of work to do; still, one wants a little social intercourse now and then. But, as a clergyman, I get more society than poor Lady Lowther could. There are several retired tradesmen who have bought up places about Grimswold, and, of course, I have to attend their parties, and keep up a sort of intercourse with them. I must say they are all most kind about helping me with my Sunday-school: the Misses Farmer walk in from their place two miles off every Sunday morning at half-past nine, and stay for the afternoon school, bringing their luncheon with them, and sitting in the school-room in the interval.'

'How good of them,' said Lalagé. 'But don't the Misses Verey help?'

'O yes,' said the curate. 'There are eight Misses Verey, and six of them are good enough to come.'

'Mr Mitchell,' said Lalagé, with her faint pink blush, 'could I be of any use to you in the school? I have never taught before, but I should be so glad to help, if I could.'

'You, Lalagé!' said Belle with calm surprise.

'Yes, indeed. Don't say no, Belle; I have wished it so often.'

'Indeed, I should be very grateful if you'd come,' said the curate—'if you don't think it would do her any harm,' he added, turning to Belle.

'I should think it could do her nothing but good,' said Belle gravely: 'it was impossible in London; things are managed so differently there.'

Lalagé thanked her with her eyes.

'But you must have a large school, Mr Mitchell,' Belle went on, 'to require so many teachers.'

'I am glad to say it is a very large school,' said the curate, with a glow of honest pride. 'I think the long way that most of the children have to walk to get here every Sunday has something to do with it. Difficulty always enhances value.—So I may arrange a class for you, next Sunday, Miss Heaketh?'

'Quite a baby class, please,' said Lalagé shyly. 'I have never done anything of the sort before, but I will try my very best,' she added in her sweet humility.

'Quite a baby class,' echoed the again dazed curate; 'I will remember.'

He took out a pocket-book and wrote down 'Miss Heaketh, baby class,' partly because he knew he should begin to think it all a beautiful, indistinct dream, the moment he was out of that charmed circle, partly because it was such a pleasure to inscribe her name there without reproof. Then he slowly gathered his big limbs together, and, feeling it was time to go, unfolded himself, and rising, revealed the full enormity of his stature.

'Good-bye,' he said abruptly, shaking hands with Belle first, for he knew the giddy feeling would come on directly his fingers touched Lalagé's.

He knew the symptoms of old, this poor big man, who had so often been smitten, but whose sluggish vitality had hitherto saved him from being utterly slain. But as he strode out of the Heaketh's gate, he acknowledged to himself that he had never before been so speedily vanquished as now.

'I wish to goodness I were safely married out of the way,' groaned the susceptible curate; 'and I would do anything on earth to win her.'

To such ambition had his unwise thoughts already elevated him.

Meanwhile, happy Lalagé had fluttered up to Belle, and put her arms round her. 'I am so happy!' she said; 'it is all just as I wished. I always felt it would be so much easier to try to do right out here, all alone in the country, than in that gay, busy London.'

'My darling!' said Belle, kissing her softly; and if she did not agree with her, she said nothing.

After all, Lalagé did not go to the wood that day, for when luncheon was over they had more visitors: Mrs and three Misses Verey called. Mrs Verey was a stout old lady, rather red-faced, and very silent, at least at first. The daughters were even more monosyllabic than their mother; they were not young, half-a-dozen of them being over thirty; but Lalagé had never seen such awkward shyness in the youngest school-girl; it quite provoked her, for they were past the age when shyness calls forth sympathy.

They sat close to their mother, with crossed feet, and awkwardly protruding shoulders, and looked

Digitized by Google

frightened beyond description. Belle and Lalagé talked hard, but this in no way added to the comfort of their visitors; one girl vibrated her elevated foot nervously, and any remark addressed to her hideously accelerated the movement. At last Lalagé left her alone, and elicited from one of the others that she did not know there had been a Paris Exhibition; they never read the papers—'papa did not like it.' They looked so old to have a father; but Lalagé afterwards discovered that Admiral Verey was in his dotage. No ground of public interest being open to them, she tried nearer home.

'Did they like Grimswold?'

'O yes; they had never been anywhere else in all their lives, and they were so fond of it,' said two speaking at the same time.

'But haven't you been to school?' asked Lalagé.

'Mamma does not approve of schools,' said Hester, the plainest but least shy; 'so we used to have a governess, mamma's own old governess, we were so lucky to get her; but she died after she had been with us two or three years.'

Lalagé could not be surprised at this.

Then Miss Verey, in virtue of being the eldest, boldly hazarded a question on her own account. 'Have you been to the Roman encampment?' she asked.

'No,' said Lalagé. 'I had no idea there was one near here; I hope it is within walking distance?'

'O yes,' said Hester Verey; 'it isn't far off, just at the top of one of the hills, and there is such a splendid view from it! There was a picnic there once, but it was given by those vulgar, stuck-up Farmers, so of course we didn't go.'

'Are they vulgar and stuck-up?' asked Lalagé gently.

'Yes, I suppose so,' said Hester; 'they used to be tradesmen, you know, and they dress so! Mamma doesn't like it; she dresses us plainly on principle.'

'What a bad principle it must be,' said Lalagé to herself, as she thought of the hideous garments in which they were enfolded.

Meantime Belle was getting on heavily with Mrs Verey.

'The curate called here this morning,' she said; 'he seems a nice person.'

'I think him a very dangerous young man,' said Mrs Verey solemnly.

'He seems very hard-working,' said Belle, thinking Mrs Verey's judgment by no means infallible.

'So I hope we all are,' said the lady tersely.—'There is one question I am anxious to ask you,' she went on after a pause, 'if you will allow me.'

'Certainly,' said Belle, with well-concealed surprise.

'I hear that a young woman, by name Hannah Prole, has taken the place of housemaid with you, may I ask that you will keep a strict hand over her? I fear she is far from pious. I take a great interest in her, as she was in one of my daughters' class at school a long time, and I distinctly remember her being twice detected in falsehoods.'

'Perhaps she was very young,' said Belle, as the face of one of their new servants, a fresh, pleasant-looking country-girl, flashed across her.

'Is youth any excuse for sin, Miss Heaketh?' asked her visitor severely.

'I think it is,' said Belle, a slow crimson flood spreading over her clear pale face; 'at anyrate, I can promise nothing with regard to her; the housekeeper looks after the servants.'

'Oh!' said Mrs Verey, and got up to go.

And her verdict, as she shook off the Heaketh dust from her feet, was: 'Utterly frivolous.'

'But are they not pretty, mamma?' said Miss Verey.

'Now, girls,' said Mrs Verey, 'I'll have none of this nonsense: they are not a bit prettier than any of you; it's only all that dressing up, and vanity, and ribbons round their heads, and light muslins that does it—such frivolity!'

'That was only the youngest,' said Hester the audacious.

'Well,' said the exasperated woman, stopping short, 'and I suppose the other hadn't on black moire? Black moire indeed! why doesn't she sell her clothes, and give to the poor?'

And the Misses Verey were convinced.

When they left the house, Belle and Lalagé looked at each other in dismay.

'Odious, atrocious, wicked people,' said the girl; 'fancy dressing in that way!'

'Oh, hush!' said Belle; 'but certainly to-day we have had a refutation of the old idea, that fat people are always good-natured;' and she told Lalagé what had passed.

'For all her stoutness and her silence, I believe one could easily put her in a passion; and,' said Lalagé, with a guilty look in her violet eyes, 'I believe I shall put her in many a one.'

Then they went to the Cleathers, and Belle was introduced to the little girl, her godchild, and with Gertrude groaned over the society, or no society, of Grimswold.

A MEDIEVAL BANQUET.

ALTHOUGH, to our severer taste, the feasts of the middle ages may seem barbaric in their extravagance (and nowhere was this carried to greater lengths than in the wealthy states of Italy), still the almost meagre simplicity of modern times makes it interesting to look back upon those splendid entertainments, described with so much gusto by contemporary Italian chroniclers. How far the heavily burdened taxpayers of the day relished the magnificence with which their princely and ducal rulers celebrated their victories, or welcomed their illustrious visitors, we need not inquire; they probably, like our French friends each successive 15th August, admired the show, and grumbled at the bill. Leaving also to political economists to decide, if they can, how far the profusion of a court is advantageous to the prosperity of a nation, or the reverse, let us transfer ourselves in imagination to the wedding banquet of the Lady Violante of Milan, 1368 A.D.

Early in the month of May of that year, Lionel,* Duke of Clarence, second son of Edward III. of England, entered the fair city of Milan as the affianced of Violante Visconti, attended by her father, Galeazzo Visconti, who shared with his brothers, Matteo and Bernarbo, the sovereignty of that opulent province. All the Milanese nobles,

* This prince had first married Elizabeth de Burgh, daughter and heiress of the Earl of Ulster, by whom he had only one daughter, married to Edmund Mortimer, Earl of March. He died in Italy, soon after his marriage with Violante, by whom he had no issue. In character, he greatly resembled Edward the Black Prince.

Digitized by Google

knights, and ladies escorted Visconti and his guest, attired in magnificent dresses, designed expressly for the occasion; and a brilliantly equipped force of two thousand English horsemen and archers formed the Duke of Clarence's contribution to the splendour of the procession. From that time until the 15th June, when the marriage ceremony was performed by the Bishop of Novara in the church of St Maria Maggiore, the English and their prince were entertained with the profuse hospitality of the age, which in the evening, after the solemnisation of the marriage, culminated in the feast, of which we will endeavour to give a description.

The banqueting tables were arranged in the open court before the palace of the Visconti, in the Piazza dell' Arenga. Amongst the guests admitted to the private table of the bride and bridegroom were the Count of Savoy, the Bishop of Novara, and the illustrious poet, Francis Petrarch, then in the zenith of his fame. At another table a hundred of the most beautiful ladies of the court displayed their gorgeous toilets, studded with pearls and other precious stones, their extravagant use of which is a frequent subject of censure with the contemporary historians.

The 'breakfast,' if we may so call it, consisted of eighteen different courses, ushered in with the utmost pomp, and accompanied by appropriate presents for the newly-married pair. The first course, as a mark of peculiar honour, was served up in duplicate to the bridegroom's table, and was composed, amongst other dishes, of two small porklings entirely gilded, with fire in their mouths; and small gilt fish called porcelletti. As presents, two of the choicest greyhounds which could be procured, with their appropriate trappings, were led round and exhibited to the company.—The second course consisted of gilded hares and pike; with twelve greyhounds and six goshawks as presents.—The third entry was a large gilt calf in a silver dish, and an infinity of small gilt trout; twelve sporting dogs of various breeds, with velvet collars and silken leashes, as presents.—The fourth course—attended by twelve couple of sporting dogs, and twelve beautiful falcons with bells, hoods, &c. of silver—was principally of gilt partridges, quails, and roast gilded trout.—The fifth course, of gilt game of all kinds, and large gilt carp, was accompanied by a similar present of hawks to the fourth, only that they were enriched with hoods covered with costly pearls.

With the sixth entry, the solids of the feast and the more cumbrous presents commenced—beef and capons with garlic sauce, sturgeons whole in water; and twelve steel cuirasses of exquisite finish, buckled and studded with silver, for the bridegroom.—The seventh course sounds novel to our ears—capons, game, and fish served up in lemonade; and as presents, twelve matchless suits of Milan armour, twelve tilting-saddles, and twelve lances.—The eighth entry, pastry, beef, and huge eel-pies, with twelve more suits of war-armour.—The ninth course and its successor were more moderate, consisting of meat and fish, jellies, and lampreys; with gold coins, gold cloths, silver basins, and flasks filled with Malmsey and Vernaccia wines, as presents.—The eleventh course of this never-ending banquet was of kids, accompanied by six horses, with saddles, lances, targets, and helmets in like number.—The twelfth, hares and other game, with six large coursers, with saddles and golden trappings.—The thirteenth service, venison and beef; with six war-horses, with gilded bridles, bits, and full heraldic trappings and housings.—The fourteenth, fowls, capons, &c. dressed in coloured sauces with citron; and six light jousting coursers, with gilded bridles, red velvet cloths, and halters.—The fifteenth, peacocks' tongues, more carp, of which the Italians and French were particularly fond, vegetables, and fruit: as presents, a ducal hood, mantle, and lower robe, covered with pearls, and lined with ermine.—The sixteenth, rabbits, peacocks, ducks, &c.; and a huge silver basin, containing one large ruby, one large diamond, a large pearl, and some other choice specimens of precious stones.—The seventeenth course was rural and pastoral in comparison, being cheese, Parmesan, even then famous amongst epicures, and other products of the dairy, with the very appropriate present of twelve fat cows.—For the eighteenth course—fruits, sweetmeats, and various wines—was reserved the most costly present. Two splendid chargers—one called the *Lion*, the other the *Abbot*—were presented to the Duke of Clarence by his princely father-in-law; and seventy-seven similar steeds for his principal knights and barons.—The bridegroom's table at this unconscionable feast, which must have lasted many hours, was served by twelve principal knights of the duchy; pages of lower rank, but all of gentle blood, attending on the other tables, and taking charge of the various presents.

For more copious notices of the splendid entertainments of that period, such as the coronation banquet of Gian Galeazzo Visconti, brother of the Lady Violante, in 1395, the reader may consult Captain Napier's *History of Florence* (6 vols. 8vo, 1846), a work which appears less generally known than the accuracy of its facts and the pleasantness of its style entitle it to be.

DEAD.

With closèd lips and closèd eyes,
Wrapt all in white, so white she lies;
Calm as a statue's carven face,
And, oh, so cold to love's embrace!

Her share in all our dealings gone,
Life, as we know it, hath she none;
Slid into slumber calm and deep,
A maiden sculptured in her sleep.

She was my own ere this befell;
Whose now she is I cannot tell:
Man knows not—has no sense that saith
What this thing is that he calls Death.

And I but know that all my hopes
Lie like dead leaves on smitten slopes,
That though my evening is not yet,
The day-star of my life hath set.

Now all my thoughts will turn and tend
In one direction to the end;
And with the ghost of my dead Past,
Mem'ry will wander to the last.

CHAMBERS'S JOURNAL

OF

POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 308. SATURDAY, NOVEMBER 20, 1869. PRICE 1½d.

THE CLERICAL MARKET.

IT may not be generally known that there are establishments in town where clergymen of the Church of England can be obtained in the same manner (except that they are not 'on view') as hired domestics. 'Strong, active, willing' clergymen, as maids-of-all-work advertise themselves; clergymen with or without encumbrances; clergymen who, in addition to thoroughly performing the duties of their office, will throw in an extra or two, such as, 'can intone,' 'can train a choir,' just as the lady's maid intimates she can 'dress hair,' or 'understands millinery.' A good plain clergyman can be procured at a very reasonable rate, and a chaplain for private use at almost next to nothing.

There are periodicals also—two of which are now lying before us—which concern themselves solely with that curious branch of social economy, the supply-and-demand of ecclesiastics. It would abate the rancour of some of our radical friends, who are so given to cry out against the bloated church, and to see a purse-proud parson in every gentleman with a white tie, to cast their eyes over these instructive pages. Their indignation would then be turned to wonder at the fact of so many divines being able to afford white ties at all. At this present writing, there are, it seems, two hundred clergymen of the Church of England 'wanting places,' and the salaries they demand are certainly not of an ambitious character. There is only one man—who, with unconscious self-satire, has described his 'views' as 'moderate'—who ventures to demand L.180 a year. Only seven aspire to L.150. A single divine underbids these by ten pounds. Thirty-five ask for L.120; and the other hundred and fifty or so of reverend gentlemen are actually going—or wanting to go—for L.100 a year or less; going for a hundred (nine of them); going for L.90 (three of them); going for L.80 (six of them); going for L.70 (eight of them); going for L.60—the price of a butler—(four of them); going for L.50 (one of them); and even (one of them) going for '10s. 6d. a service, and his travelling expenses:' below which, one is not surprised to find, clergymen of the Church of England are not to be had, but (we suppose) are 'bought in.' The spiritual services of all these two hundred divines could be annually secured, therefore, for L.2000 a year—two-fifths of the price paid for those of one bishop. Here is an opportunity for some good lady, attached to the clergy, and with a handsome jointure, to provide herself with a whole army of preachers; or for that faithful but genial son of the church, who is said, after an overnight bowl of 'Bishop,' to have called in the morning for a Sodor and Man, instead of a soda and brandy.

Nor let it be imagined that these gentlemen are merely flying buttresses of the great clerical body, hangers-on, or in any way inferior to their more fortunate brethren, who are in the enjoyment of these wished-for stipends. Each divine is indicated by a register number, and if you purchase a copy of the next issue of either of these publications, you will see that these numbers have mostly vanished, and others have taken their place. In other words, the applicants have 'obtained their situations;' and one of them is at this moment perhaps installed as curate in the very parish in which you, reader, have the fortune to live. Your rector has provided you with a spiritual pastor at one of the very reasonable figures above indicated; and I think you will agree with me that he can scarcely be dear at the price. The average of the salaries demanded in these periodicals is, in fact, the standard of remuneration offered to unbeneficed gentlemen of the Church of England. Well, a hundred a year is not a bad income for a young man who has just taken orders, and has only himself to support. In no other calling could he have obtained a subsistence so soon, and with it a certain social position, which may also have been desirable. He will be welcome at the tables of his wealthy parishioners, or, at all events, on their croquet lawns; and may even, at that fascinating game, secure the heart—and fortune—of one of the squire's daughters. This is the worldly view, which—as we are talking of stipends—we may perhaps be permitted to take; since emolument has been mentioned at all, why not also these little 'perquisites' and godsends?

Digitized by Google

But in the clerical journals which we are considering, the *age* of these candidates for rectorial favour is printed in each case; and unhappily the great majority are *not* young men, and *not* unmarried. One applicant is sixty-eight! The amount of his stipend is 'to be privately arranged.' Are we uncharitable in supposing that this aged divine is desirous of the post of 'warming-pan;' that he is prepared, that is, to take a living, the owner of which is at present of too tender years to occupy it? When this is the case, a clergyman is sometimes found *pro tem.* to hold the benefice, until the young man comes of fit age, with the understanding that he shall then resign in his favour. But there are objections to this practice. These *pro tem.* ministers have been sometimes found to entertain conscientious scruples—just as Henry VIII. did in the matter of his marriage—with respect to giving up what has been thus intrusted to them; it has savoured to them of the nature of a simoniacal contract, and they have declined to execute it. To guard, therefore, against such tender consciences, Death is, as it were, retained for the proprietor's defence; the most venerable divine that can be procured is presented to the living, and hence it is that in these peculiar cases age may not only be no bar to a reverend gentleman's success in his profession, but even a distinct advantage. Still, these are but chance windfalls, and sixty-eight is a great age for a poor divine to be beginning work afresh, and asking for employment. There is another candidate of sixty-four. There are a dozen of fifty years and upwards. There are not threescore—even including those Seeking Titles to Holy Orders—under forty years of age!

This is surely a sombre picture. Imagine in any other profession—the members of which have spent from one to three thousand pounds upon their education—a similar state of things! It is true that, notwithstanding the minute particulars that are given in each case—so minute that it would scarcely astonish one to read, 'only back-teeth gone'—it is not stated how many olive branches belong to each divine; but the majority of them are 'married,' and require 'house accommodation;' and we all know how rare it is to find a married cleric without many mouths to feed. They have all of them 'views,' of course; from 'Ritualistic' to 'Evangelical;' but the greater part announce themselves as 'moderate,' or, as some rather curiously express it, 'views *via media*.' Some (perhaps with the idea of suiting a diversity of employers) have 'Prayer-book views;' others, 'sound' views; others express their opinions like a war-cry, 'no extremes.' Some, like housemaids, give the duration of their stay at their last 'place:' 'late positions, two and four and a half years;' 'incumbent' [probably a warming-pan, who has honourably fulfilled his engagement] 'four years;' 'present sole charge' [a poor fellow, whose rector is dead, and whose curacy dies with him] 'three and a half years;' and so on. In one column we find the word *immaterial* under 'views'—which is terrible to contemplate—but it is among those who are Seeking Temporary Duty, and evidently refers to the period of engagement.

If any one has any especial gift or advantage, it is of course made mention of. One reverend candidate has been an archdeacon—probably in the colonies, but still here he is with a genuine 'Venerable' prefixed to his name, and going for a modest hundred a year. Some have been engaged in missionary enterprise; some have been hospital chaplains; some have been masters of grammar-schools; and one has been a number of years 'on the Bombay Establishment'—the bearings of which, in the way of attraction, are by no means self-evident. Many offer 'opportunities for pupils'—and, let us hope, they may get them, and thereby eke out their scanty stipends. Some advertise their 'good voices,' and even their 'good health.' One modestly announces himself as 'a fair reader,' as though he were a lady; another, with more self-complacency, advertises his voice as 'powerful,' and his 'reading and preaching, good.' Some of them express themselves rather oddly: 'Not far from London; loud voice,' as though, if necessary, the advertiser could preach at Edgeware, and still make folks hear in the City. 'Voice equal to any church,' states another; and indeed this elliptical phrase is a very favourite one with our clerical friends. Again, they use the word 'wished' in a peculiar way: 'Plain service wished;' 'hearty service wished,' &c. One vague enthusiast expresses himself as 'fond of schools.'

It seems curious that 'clergymen seeking titles to holy orders,' should ask the same salaries (though, indeed, they could hardly ask less) as the old and experienced hands; but so it is. Length of service in the church is by no means of necessity rewarded. The taking of curacies is a labour of Sisyphus, and is finished only to be recommenced. Of course, in some cases, virtue is its own exceeding reward. There are saints upon earth (and quite as many of them) now, as of old. But to the majority of these clerical toilers it must be heartless work indeed. Imagine them, with their wives and families, removing from this place to that with their scanty furniture, to make a new home among strangers, again, and again, and again! They have one advantage. Disestablished they may be, but under no possible system can they be disendowed or rendered worse off than at present. Some of them, too, have not only poverty to contend against: 'a dry and bracing air,' 'a genial climate,' are sometimes 'essential,' and that, we fear, must mean ill-health or delicacy of constitution in the wife or the little ones. May God help His Minister. More fortunate brethren indulge their ecclesiastical tastes by stating this or that 'diocese preferred;' or they like sociality, and demand 'a cheerful neighbourhood:' one will only serve 'in the W., S.-W., or N.-W. London districts, or at the seaside, where there is agreeable society;' and another requires what he calls 'a nice locality;' but in these cases, the secret of their fastidiousness is disclosed in these pregnant words, 'has private means.' *When* house and land are gone and speech 'can preach extempore,' 'can train a choir,' &c. may be most excellent gifts, but, in the meantime, it must be very nice to have private means.

But these are the happy exceptions. That average stipend of a hundred a year only too often represents the poor curate's entire income. The usual payment, for temporary spiritual assistance, seems to be at the same rate: 'one guinea each service with travelling expenses and hospitality.' This last word reminds us of an anecdote of real life connected with our subject. A poor clergyman having obtained a curacy in a place where the air perhaps was *not* 'dry and bracing,' or the 'climate genial,' fell ill and died. The squire's wife, who

Digitized by Google

had not been pressing in her hospitality while the reverend gentleman was alive, was quite shocked to hear of his demise. 'Dear me, John,' cried she to her husband, 'there's that poor Mr Threadbare dead. *And we never asked him to dinner!*' There was surely both pathos and humour in the lady's remark, although she was conscious of neither.

AN INVENTOR'S REVENGE.

Time passes swiftly to those who have no settled home—to those who, from habit or necessity, have always before them a speedy change of scene. They have no need to seek painfully in their immediate circumstances new aspects and interests to conjure the dulness of life—contrasts with the past and the probable future come to them unsought; these fill their minds with easy occupation, and the new impressions have no time to stale. But, looking back on such a life, its incidents have a singular sameness, and successive cities and successive skies mark its stages so clearly and sharply, that it seems in the end about as sequent and interesting as a page of Bradshaw's *Guide*.

Partly from habit and partly from necessity, I have led such a life; the time has passed swiftly, and each stage is as clearly marked to me as the succeeding ones. But there is one episode in my life that appears to me dimly like a half-remembered dream; that will in no way be classed with the rest; and yet it was the most important of all. I will recall it as clearly as I can.

I was a student of science, and very young. Of course, therefore, I was unsettled and given to wild theories. Talk of the evils and pitfalls of army or navy, what are these to the influence of scientific study? When the senses themselves turn out delusive, and the difference between white and black vanishes in the hands of the chemical professor, it is long before one learns that these are only *objective* relations, that the *subjective*—— But this delays my story, and my meaning may be misunderstood. After studying in Germany and Italy, I had settled for a time in Paris. I was working under a distinguished chemist; and having made some original investigations, I was received as a member of the Société X. This Society had considerable influence in the Paris scientific world, and shortly before my reception it had attracted much popular attention by the striking discoveries of some of its members in the subject of the artificial production of gems.

My lodgings were in the students' quarter, the Quartier Latin. The house was chiefly inhabited by students, and it faced an old-fashioned *café* much frequented by the young population. I observed the students and their ways as I sat after dinner at the café, but I entered little into their amusements; and as each of the many inhabitants of the lodging-house was as independent from the others as the barristers of an Inn, my life was a very solitary one among all the laughter and dissipation of the Quartier. My mornings were passed in lecture-rooms and laboratories; then followed dinner at a restaurant, where the merry hum of the students' voices, their frank gestures and eccentric costumes, were enough to occupy my attention and make the meal pass pleasantly; then I sat at the door of a café, and watched the passers-by; then a stroll along the Luxembourg gardens; a chat with the pleasant lively housekeeper of the lodging-house, who sat in the evening in the porter's lodge, with her niece and a fat agreeable old priest; and then I would shut the outer door of my rooms, and bury myself for the night in my books. I did not lead this solitary life because I found the Quartier Latin the undesirable pandemonium I had heard it described in England. French students appeared to me neither better nor worse than students elsewhere. They were supreme in their own quarter, and one there saw both the worst of them and the best. Many were idle and dissipated, many were vigorous workers; most were neither one nor the other; and the view of their lives that I had learned in England was as true and yet as essentially untrue as the views of naval life that one acquires from the best naval novels. I was solitary from taste and from the nature of my objects, which were then less popular than now. This loneliness of my life had in part to answer for the bizarre adventure of which I was soon to be the victim.

One summer evening I was sitting in the Luxembourg gardens: it was nearly sunset, and there were many strollers enjoying the coolness of the long watered alleys, whose leafy walls dispersed the slanting sun-rays, and seemed to filter them of heat. The windows of the neighbouring houses flamed fitfully like answering signal-lights; the lofty dome of the Pantheon rose above like a blue distant mountain, the gilded cross on its summit flashing in the pure blue sky. The scene was beautiful and calm, and I was lost in reverie and delight; for the pure sky of Paris, contrasted with the fantastic aspects of the glorious city itself, had always for me a peculiar and enchanting charm. Suddenly, a large dog rubbed against me, and, as it were, awoke me with a nervous start. I instinctively thrust it from me, and the animal turned round, and shewing a foam-flecked mouth, bit me slightly in the hand. A municipal guard here hurried up and shot the animal through the head. A crowd was attracted by the shot, and much sympathy was expressed for me. At length an individual of striking appearance pushed his way between the others, and after ascertaining what had happened, told me he could prevent all consequences from the bite if I would follow him to the nearest chemist's. His appearance impressed me as that of a remarkable man; and having little confidence in the usual remedies, I was glad to grasp any chance of cure.

We reached the chemist's without speaking. My companion drew a small case from his pocket, asked for some very ordinary substances, and mixed them with others from his case. Having thus prepared a draught and a powder, he gave me the former to drink, and rubbed the latter on the wound. He then said there was no longer any danger, but an hour's walk would be advisable. I felt my position embarrassing, so, asking if he had leisure to accompany me, I was glad that he readily acquiesced. Observing that he spoke French with difficulty, and with a strong Italian accent, I addressed him in Italian, and found I was not mistaken as to his nationality. He appeared much pleased to speak his own language, and he was truly eloquent in it, for our talk passed from remedies to general science, and we found that our tastes and occupations were similar. I was charmed with my new acquaintance; our conversation grew more and more interesting; the hour passed

Digitized by Google

swiftly; and I pressed him to dine with me. He agreed, but left me for a little, promising to return.

I ordered the dinner, and waited for the Italian. He soon returned, and I had leisure to examine his appearance attentively. He was of medium height, and clearly past middle age. His head was singularly massive, and, except some short stubble at the back, had hardly a single hair; but his piercing eyes, his shaggy and bright black eyebrows, and the vigour and lightness of his movements and gestures, contradicted all appearance of age. He was dressed with remarkable plainness, but the plainness of a Quaker dandy, shewing elegance in the nature of cloth and linen, though not in cut or ornaments.

The soup was brought, and we commenced our dinner. Our conversation grew animated towards dessert—it became, I may say, confidential. I learned the principal facts about my new friend: first, that he was a passionately enthusiastic inventor; secondly, that he was animated by a deep feeling of resentment against the French government, which he considered to have cheated him; and against the French *savants*, who had ignored and professed to despise his discoverics. 'They accepted my inventions,' he said of the first, 'and for years they have refused to pay me. Should he who racks his brain in discovery spend his force for the benefit of scoundrels of *birboni*, who reap all the reward for themselves? I tell them they have cannons, and I have none, and that is the sole reason I have not my rights. They tried to poison me once: they asked me to a grand dinner; but I suspected them. I know all poisons, and I snap my fingers at them. I called in the morning on the agent who had asked me. I entered, and found him with one of the diners of the night before. "You thought me dead," I said. "I salute you, *messieurs*—do your worst, you will not injure me." They were stupefied, and I left them so.' Against the savants he was less bitter, but more contemptuous. He spoke of the ridiculous dogmatism of French chemists; of their impotence to solve questions which he had solved; of their ignoring his work, and then by degrees assuming it as their own. And I saw that if any opportunity of revenge should occur to him, the savants would not be forgotten. But these unpleasant characteristics were soon only subordinate in my impressions; for all other feelings were swallowed up in admiration of the daring audacity and the penetrating clearness of his intellect. He threw light on the darkest problems of chemistry; he described to me discoveries that he had made; he related the most marvellous cures; he told how he had solved problems of analysis through the application of one lucid original thought, where all the mechanical niceties of the best analysts had failed. And I knew enough of medicine and chemistry to recognise that his reasonings were just, original, and lucidly penetrating, and that they implied a vast study of the facts of nature, utilised by a marvellous memory, and a still more marvellous reasoning power. He disdained all conventionalities and etiquette of science; he described conjuring tricks which he had accomplished, and was as astonishing and enthusiastic about them as upon the highest problems of science. He seemed to have vowed war against the impossible, under whatever name, classification, or repute—to do all that others had not attempted, and, still more, all that others had failed in. But it may seem improbable that such a man should speak so freely of his discoveries to a stranger. True; but, first, our minds were analogous in that enthusiasm which is so rare now-a-days; and, secondly, though my friend was magnificently open, and in appearance so rich in thought and power that he could afford to waste it as he listed, yet he was no fool, and in all matters of really important discovery some essential point was left obscure—some point sufficiently indicated to complete the irresistible appearance of truth of the whole, was yet left so indistinct as to be utterly useless to the vulgar mind of a scientific plagiarist. Under all his glorious openness there was the wiliness of the Italian nature—the wiliness that once conquered the world, that now defeats the force of all opposing tyrannies, and can employ the strongest nations for Italian aims.

At length we left the restaurant, and strolled along the Boulevards. My companion became witty and amusing, but still he shewed in his conversation the prevailing tendencies of his mind. A Frenchman accosted him, and spoke to him on some business matter connected with his discoveries, and as he was speaking, a regiment of soldiers passed. 'What do you think of their appearance?' said the Frenchman. 'Oh, very fine,' said my friend; 'but my father had a saying he often used: "*Petit homme, petite affaire.*"'

For some days after, we continued to meet and talk. At length my friend invited me to his lodgings. They were in an old house in the cheap quarter between the Quartier Latin and the Champ de Mars. The street was dull, but there were gardens to the back, and my friend's windows looked over them towards the dome of the Invalides. A long dingy passage led past the smoky den of a cobbler, who acted as porter, and who directed me by a tortuous stair to the third floor, where I knocked at a rickety door. It was opened by a young woman, whom I recognised at the first glance as Italian, and who, after calling my friend, was introduced to me as his daughter. She seemed about twenty. Her clear olive complexion was transparent to a delicate vermilion tinge; and her dark eyes, fringed with long lashes, and surmounted by perfectly pencilled eyebrows, were strongly characterised by a tone of blue; her hands and figure were as near perfection as I have seen. Perhaps this girl more strongly influenced me than I have been accustomed to admit to myself, and she may have had a more important part in the subsequent events than I have been willing to suppose. She was like her father in expression and somewhat in mind; and in the conversation that followed his cordial greeting, she entered into his ideas intelligently, and seemed to half-worship his genius.

The apartment was small, and indicated poverty. The household work appeared to be performed altogether by the daughter, with the exception of the cookery, in which the father took part—speaking of it with as much originality and as much freedom from conventional prejudices as he had shewn in everything else. He spoke of his discoveries in cookery with enthusiasm; he had applied his knowledge of chemistry and his untrammeled originality of mind to the subject. He insisted on my staying to share their dinner and test his skill. The dish he had prepared was excellent, and it was evidently particularly

Digitized by Google

wholesome: it was accompanied by a bottle of Asti; and we finished with some excellent Rosolio, a liqueur I had not tasted since leaving Italy. Perhaps the Rosolio was partly to blame, but I know that no woman ever before made such an impression on me as did the Italian's daughter. The first impression is half the battle in such matters; and though I was little given to falling in love at the first sight of a pretty face, yet, when I left at the conclusion of the dinner, I felt there was another witchery that drew me to the Italian, perhaps more powerfully even than the magic of his conversation.

Day after day we met, and our intimacy continued to increase: I felt more and more impressed with the inventor's originality and power. In his rooms were a great number of vials containing chemical preparations—for at the time of my acquaintance with him he was specially occupied with chemical investigations—but it was strange and striking to me to see how little apparatus he required. With a few glasses and ordinary cooking utensils, he produced delicate and astonishing results in dyeing and other processes, such as my knowledge of the subjects assured me were of vast importance and value. He shewed me contracts, drawn up, but unsigned, with the English and French governments, for important applications of chemistry and physics to military and naval purposes; and contracts, also in the same state, with private manufacturers and companies. I was sometimes at the Bourse, for I found the excitement of a little dabbling in speculation a refreshing change from the seriousness and high-flown nature of my usual pursuits. And here, among the crowd of speculators and great capitalists who talked in eager groups under the pillared portico, or congregated at the cafés in the place, I found my friend was well known, and that he was much sought after by promoters of companies, and much believed in by them.

But how, then, it may be asked, was he poor? The causes were simple, but peculiar. He was almost wholly ignorant of English, and his knowledge of French was very slight: he was no longer young, and had an aversion to learning languages. Having been cheated already in some contracts, his character had acquired an overweening tinge of suspicion, and he would trust neither interpreter nor agent. Moreover, he seemed to care little for money, except as an acknowledgment from others of his power and genius; and he was extremely touchy on small points of treatment. So, somehow, though considerable wealth was within easy grasp for him, he hardly ever completed a bargain, but would draw back at the last moment; and he seemed never to fear that others would discover the same things as himself. He seemed confident that none could follow the same reasonings, that none could attain the same results; he appeared to take a pleasure in tantalising eager speculators; and having an iron constitution and exuberant spirits, he considered that he could delay as he pleased. Perhaps, if any project in his mind was fixed for definite and speedy accomplishment, it was the project of revenge on the government and the savants of France, for real or fancied injustice and insult.

We had been talking one day on that fascinating subject, the artificial production of diamonds. We had discussed the numerous attempts, the supposed successes, and the ultimate undoubted failure of all processes that had yet been tried. I had some ideas of my own on the subject, and on my stating them, the Italian took them up with considerable eagerness and enthusiasm. He met me next day, and immediately recurred to the subject: he had evidently concentrated on it the full force of his marvellous penetration and vast knowledge of nature. He sketched out to me a scheme of experiment, in which, though I recognised the general outline of my own ideas, I was astonished, and powerless to explain how those vague and confused apprehensions had crystallised in his mind into the clear and substantial reality with which he gave them back to me, supported by lucid analogies, and so interwoven with undoubted facts and irresistible logic, that they seemed possessed of all the characteristics of the very strongest scientific probability. He insisted, however, that the ideas were essentially my own, and that it was my proper business to realise them; as to himself, he would willingly aid me with his advice; but, as I knew, he had already enough that was valuable on his hands.

I prepared the necessary materials, and placing them in a dark cupboard, locked and sealed it—for absence of light and freedom from disturbance were necessary elements of the process—time, too, would be required; for, to produce any perfect crystals, a slow process is always inevitable. After a month had passed, the Italian entered my room one morning, and recommended our ascertaining the progress of the experiment. Too agitated myself, I reached him the key of the press. He broke the seals, opened the door, and reaching in his hand, withdrew the glass containing the liquid and transparent mixture. With a triumphant exclamation, he handed it to me: some twenty small transparent crystals were scattered on the bottom. A few simple tests proved them to be diamonds. We replaced the glass and its contents, and again locked and sealed the door. I shall not describe the intoxication of my success; such a feeling is indescribable. That evening, I dined with the Italian and his daughter; she shared the secret with us, and I thought her worship was not now wholly given to her father. We drank to the triumph of knowledge, sang songs, and formed projects for future discoveries together, swore eternal friendship, community of interests, drank to confidence in ourselves, and contempt of all bunglers and the world.

A month later, my friend again proposed to observe the progress of the process. He asked me for the key. I gave it him, and, standing behind, saw him remove the glass from its shelf. He reached it to me, and I found the diamonds twice their former size. Another month passed, and again he proposed an inspection; half instinctively I reached him the key. The diamonds had grown to thrice their first size: they were now of considerable value. There was no need of further proof. The process was perfectly successful.

That night we talked long, discussing the probable consequences of my discovery. The Italian was eloquent as usual, and his eloquence fascinated and convinced me. I determined to act as he advised, and I fully sympathised with the opinions he expressed. We determined to give the discovery to the world, making no restrictions as to its use. This course would yield me a greater reward in

Digitized by Google

the fame and high reputation it would bring, than a patent, which, on an article of such uncertain value as the diamond, would be harassing to work and difficult to sell. I had, moreover, enough for my wants, and we looked forward to what discoveries we pleased.

A meeting of the Société X. was to be held in a few days. My position as a member, and my assurance that I would announce a discovery of importance, obtained for me a portion of the time of the Society for that evening, and my name was entered on the programme for a paper 'On the Artificial Production of Precious Stones.' In preparation for the meeting, I devoted myself to preparing my paper. I commenced it with a general review of the most necessary conditions of the production of gems, and from this passed to the discussion of the various attempts to produce diamonds; and so gradually, and with the help of what I remembered of the arguments of the Italian, I passed to the description and justification of the process of which I was to exhibit the successful result. My friend, when the paper was finished, took it with him, and the next morning returned it enlarged and corrected, with numerous notes. After translating these into French, I was even more astonished than before at the clearness and irresistible evidence of his reasoning; and it was without any doubt as to the immediate and unquestioning acceptance of my discovery that I took the completed paper and the diamonds, on the appointed evening, to the meeting of the Society.

The long room was more than usually filled, and several foreign savants were present, besides most of the members of the Society. My paper was third on the list, but all eyes were turned on me as I entered; and it was evident that, from its title and from what I had hinted about it, my communication was to be the event of the evening. The first two papers were read, exciting little remark, and at length I took my place at the table facing the president. He mechanically touched his bell; but there was no occasion to call for silence. I placed the bottle of specimens on the table, and began to read. As the splendid and convincing reasoning that I owed to the Italian was gradually unfolded in the course of the paper, the attention of the Society became still more earnest; and when I shewed the bottle of specimens and concluded, there was perfect silence for some minutes. At length the president rose, and asked if none desired to speak. A second time he asked the question; and then one after another, several of those best acquainted with me, rose and spoke in terms of enthusiastic admiration of my discovery. When they had done, there was still not a word of criticism or doubt. All seemed convinced, or at least to find nothing to object to. The president rose again, and spoke a few words of praise, alluding to the disinterestedness I had shewed, and concluding that all that remained was for some of the other members of the Society to repeat and confirm my results. The meeting was then declared at an end; and I hastily left the room, leaving the specimens on the table, and observing as I left that most of the members appeared too overcome with astonishment to speak.

I gained the street, and made my way to the Boulevards, my brain on fire with excitement; seeking movement and life, the glitter of shops and cafés, the crowded pavements, the brilliant theatres—for thus I might escape from the thoughts and the feelings that, charged with strength and impulse, crushed and confused my mind. As the night wore on, and the lights became fewer, and the pavement solitary, so calmness and quiet entered into my mind, and I found in the solitude of the now hushed streets a charm as strong and as absorbing as I had found in their brilliancy before. I wandered long, and left the Boulevards for the still more silent smaller streets; and as the dawn approached, and the stately towers of churches and the summits of the higher-rising buildings grew black against the more and more transparent sky, I passed instinctively from the newer quarters of the city towards my lodgings in the old Quartier Latin. But I walked without definitely directing my steps, without choosing the shortest or the longest way; and in passing from street to street I seemed only guided in my choice by the curiosity or the whim of the moment. For this reason, it was no doubt less surprising that one of those strange coincidences should now happen to me which occur often in most lives. But through the acquired scepticism of my nature, it did not wear to me the significance that others might have attributed to it. As I traversed the students' quarter, I found myself in the street, and in the shadow on the further side, opposite my Italian friend's address. As I passed, the door silently opened, and two men stepped noiselessly out—two men whose faces and figures I recognised in the light that struck across upon that other side. They were Jewish speculators of the most unscrupulous and sordid type. Secret and cunning in their relations to others, they were yet well known to be frequently engaged in vast speculations, and to have immense capital at command. But whether they acted for themselves alone, or were rather the agents of an association of capitalists, was not clearly known, though the *latter* supposition was most generally accepted. Their faces were wizened and hard, expressing only the cold dryness of avarice. Their dress was usually shabby, and the passion for trinkets and tinsel common in a closely related class of their brethren, in no way shewed itself in them. But on this night, though I recognised their faces, their manner, and their walk, their dress was clearly a disguise, and seemed a rather clever attempt to realise the appearance of ordinary gentlemen. I had not observed the Italian ever speak to these suspiciously regarded characters; but nevertheless his frequent presence at the Bourse, and the character of the house in which he lived, which was not a likely one for other speculators to inhabit, made me at once conclude that the visit of these men had been to him. Had I then believed in the significant nature of striking coincidences, I might have been seriously impressed by my having obtained thus accidentally the apparent evidence of some dark scheme being engaged in by my strange and clear-headed friend. But though much astonished at first, I soon dismissed the occurrence from my mind, supposing it had somehow to do with his many inventions, and never dreaming that it concerned myself.

Tired with my walk and with the violent emotions I had experienced, I slept till late in the morning, and then visited my friend. He had already heard of my success; the papers were full of it, for besides the peculiar importance of the subject, such matters

Digitized by Google

attract more of general attention in France, and through the quick intelligence and vivid imagination of the people, produce a more immediate effect than elsewhere.

The Société X. was to meet again in a week; and I passed a part of the time in the company of my friend and his daughter, the one aiding me in the preparation of arguments to meet all objections that might possibly be made at the meeting, the other intoxicating me with the charm of her voice and of her beauty. The rest I passed at my lodgings, polishing and completing my paper for publication in the Transactions of the Society. The time passed quickly, and the day of meeting arrived. Some objections were proposed, but I answered them with evidently favourable effect. Altogether, I was thoroughly successful.

The next morning, as I had given in the paper for publication, I was free from work; and before visiting the Italian, I determined to cross the river to the Bourse, as much for change of scene and occupation, as in the interest of the trifling speculations I had been engaged in, and which, in the absorbing labours of the last week, I had entirely neglected and almost forgotten. So greatly had I been absorbed, that I had even omitted to look at the newspapers; and it was only afterwards that I ascertained how much they had been occupied with my discovery. At the Bourse, I attracted much attention. A speculator whom I had sometimes spoken with, came up to me, and exclaimed: 'Monsieur has then sworn to ruin all the diamond-merchants.' I was overcome with surprise. Singular as it may seem, this view of the question had never occurred to me; while cut off from general intercourse, I had been absorbed in the contemplation of the scientific magnificence of my discovery. I answered accordingly; and the speculator, after hesitating a moment, spoke laughingly of the singularity of *les savants*, and turned from me in evident amusement, and perhaps with some contempt. I questioned my Bourse agent and some other acquaintances, and found that the diamond-market had been steadily falling. I got away as soon as possible, avoiding the questions with which I was importuned by some of those who spoke to me. I told them that the discovery was now in the hands of the Société X., that the full details would be soon published, and that I had no further interest in the matter.

I spoke on the subject of the diamond-market when I found the Italian; but he treated it as of no importance to us, for the necessary consequence of nearly every important practical discovery was at first to injure some special class. He, moreover, recommended me to refrain from all business or study until the next meeting of the Society, which was to take place in a fortnight; for he thought that, now I had done all that was necessary in the diamond matter, I would be the better of a thorough rest, in preparation for the future works we were to undertake together. I thought his advice excellent; and we decided to spend the time together making country excursions, and so providing a fund of health and freshness to draw upon in the future. My friend's daughter of course accompanied us in our rambles, and many a pleasant day we spent beside the upper reaches of the Seine or in the woods of Fontainebleau. At first, the Italian was in splendid spirits; he seemed to enjoy our picnics with all the zest of a boy. He cooked the dinners with wonderful dexterity and most ingenious contrivance. He amused us with conjuring tricks; and had always a ready flow of jokes, quotations, and paradoxical sayings apropos of every incident, pleasant or annoying, of the day. His daughter was charming in her manner, but seemed a little sad and silent. On the whole, the time passed delightfully, and I abandoned myself wholly to its enjoyment, putting off all serious thoughts until the time of meeting of the Society. As this approached, my friend's manner became (I now think) a little more reserved, and I remember observing that he looked at me occasionally with a somewhat peculiar expression. Perhaps his daughter grew a little sadder and more silent towards the end; but this perhaps is only a fanciful creation of my own wounded vanity. What conscious part she played in the whole unscrupulous scheme of my ingenious friend, I am still at a loss to decide; I believe, on the whole, she was neither altogether innocent nor yet altogether guilty.

We usually returned thoroughly tired, and soon after dark. We would separate after a slight supper, and I would return to my rooms and sleep soundly till the morning, in preparation for another similar day. On the day of the meeting of the Society, I went in the morning to the Italian's lodgings: I found he had left with his daughter very early that morning, having packed during the night, and having announced his intention of leaving immediately on receiving a letter late in the evening. He had left no note or message for me, and the people of the house supposed he would have seen me before starting. He had left no address.

I felt surprised that no note or message had been left for me. I went back to my rooms with a vague fear oppressing me, but trusting that some delaying message would still afford an explanation of these strange appearances. I found no message for me yet. I sat and waited in my rooms with the vague fear upon me, that, growing more and more oppressive as the hours dragged slowly on, and increasing with the slow course of each successive minute, rose at length to a stupefying horror, a blackness of desolation and despair, that numbed all thought and sense. I was roused by the darkness of night, the lighting of shops and street-lamps, the buzz of pleasure-seeking students: I started up, and being still in time for it, I hastened to the scientific meeting. I was asked many questions that I felt powerless to answer; I understood confusedly that no shadow of a result had been obtained from the experiments, that other investigations had shewn the improbability of the results I had announced. I was half-conscious of innuendoes imputing fraud and impudent deception. I alleged illness, which my appearance fully bore out. I mechanically promised to justify myself at the next meeting. I was allowed to escape from the room. I walked hurriedly home; I wrenched open the cupboard where I had solutions in process of digestion, which I had placed there with the confident expectation of such results as I might wish. No traces of diamonds appeared in them! I dashed the glasses madly on the floor: then I fell into a state of stupefaction, slept at length on the sofa where I had thrown myself, and awoke late the next morning.

I felt calmer and more collected. The violence

Digitized by Google

of my emotions had produced a crisis and a reaction. I felt the necessity of cool reflection, and of immediately deciding on my course. I concealed the broken glass; I dressed slowly and carefully, removing as far as possible the traces of disorder in my appearance. I went out to a café, ate a substantial breakfast, and then examined the newspapers while smoking the best cigar I could obtain. I found the announcement, that for some days it had been suspected by the diamond-dealers that the late depreciation in the value of diamonds had been insufficiently justified by the recent discovery announced by a member of a distinguished scientific Society; that it was supposed this opinion was owing to private information from certain distinguished savants; that it had been discovered that vast quantities of diamonds had been bought at their depreciated value by a company of unscrupulous and ingenious speculators, to which several well-known frequenters of the Bourse were suspected to belong, but as to the *personnel* of which, nothing was yet certainly known; that certain information received late on the previous evening had confirmed all previous suspicions that a deep and ingenious financial plot had been successfully executed, and by such intricate and ingeniously planned machinations, that it was improbable any judicial proofs of conspiracy or fraud could be obtained; that a member of the scientific world was seriously implicated, but appeared to have been imposed upon by others; and that further particulars of more definite character would probably be obtained before the next impression.

I saw it all. The Italian had avenged his real or fancied slights and injuries—on the savants by imposing on them—on the government, through the Society it had constituted, and more directly by executing a vast fraud upon the community, which it was impotent to punish or prevent. He had snapped his fingers at both. My position in the scientific world had made me the tool he required; and the means he had used were, to some extent, now easy to understand. He knew enough of the Bourse, and was known enough therein, to find speculators able and willing to take part in such an enterprise. He had enough knowledge of conjuring to introduce the diamonds at our inspections of the solution. He had enough charm and fascination at his command to quiet all suspicions of mine, and to direct my occupations as best suited his scheme.

But one thing I could never explain—the marvellous plausibility of the man. I have since mistrusted all relevant hypotheses, all clearly self-evident theories. I have always shuddered when I hear of theories of which the several parts support each other like the stones of an arch, and are so consistent in themselves, and so supported by analogy, that they cannot but be true. All men of science mistrust such theories now—look on them as useful in their place, but separated by a wide gulf from certainty and truth. At the time of my story, it was very different; and those who know of the theories then readily accepted, will understand that much that could never happen now might have easily happened then.

I started immediately for Switzerland. I changed my name, and have wandered in many countries since. I never saw or heard of the Italian again. He had sometimes spoken to me of America, during the first part of our acquaintance, as the proper field for his inventions. These inventions were undoubtedly genuine, and the man had an astonishing genius: he may have gone to America, and prospered there. His daughter I have seen at Wiesbaden, playing an apparently elaborate system at the roulette table.

AMERICA'S NEW HIGHWAY.

IN TWO CHAPTERS.—CHAP. I.

'YES; the Pacific Railroad is open through to New York,' were the welcome words which greeted our eager inquiries on our arrival at San Francisco in August last. Before leaving Sydney, intelligence had been received to the effect that two hundred miles of railroad remained to be completed. Under the faith of the probable completion of this link before our arrival on the American coast, we had left Australia as pioneers of a new route from the colonies to England. Besides the novelty of the journey, there were certain substantial advantages connected with it which were not to be despised. The chief of these was the avoidance of the horrors of a mid-winter passage round Cape Horn: the desperate cold, and the short days, and dismal, weary nights, which have been so often described. We had a quick passage of sixty days to San Francisco, from whence the transit to England of about twenty days or so would, for those of us whom the attractions of *home* rendered sternly proof against the counter-attractions of a short tour through the States, complete the journey to England in about eighty days. San Francisco, or 'Friscoe,' as it is endearingly termed by its inhabitants, is, as seen from the water, decidedly disappointing. The Bay, it is true, is magnificent—the broad expanse of water stretching out full seven miles to the Golden Gate, as the entrance is termed, reminding us a little of Sydney harbour. But then the aridity of the situation of the city is quite distressing to the eye of any one coming from a sea-voyage, who naturally looks for trees, and grass, and herbage. The sand-hills are worse than our Sydney sand-hills, and are not compensated by surrounding vegetation, except where small, carefully watered patches of green mark the outside carpet of some villa. Moreover, a chilly white fog hangs over the scene, spoiling everything, and making us long for our bright southern sky. Then the arrangements for landing are very behindhand. We found no conveyance of any kind for ourselves, though we soon got an express for our baggage. Fairly arrived, however, in the city, we found the streets well laid out, with fine large buildings and stores on either hand. The presence of well-appointed street-cars gives to these the twang of Americanism which is otherwise not very apparent. When we got to our hotel, we discovered sure proofs of the wealth of California; in truth, the hotels in San Francisco are luxurious and magnificent beyond expectation. The *Cosmopolitan*, at which I staid, surpasses any hotel with which I am acquainted in any part either of Europe or America. In the matter of the table, California possesses great natural advantages over the Eastern States. Vegetables and fruit arrive at greater perfection along the Pacific coast of America than, perhaps, in any other part of the world. There is a much better supply of fresh fish than along the Atlantic coast; while a more

Digitized by Google

temperate climate allows that hanging and keeping of meat, the absence of which contributes in no small measure to the toughness of beefsteaks. We were all in a condition to appreciate these good things, coming as we did from a long sea-voyage. We did enjoy those juicy melons, and the fresh fish, and the little *recherché* dishes, and the fancy breads. But let us get up from the dinner-table. Going below, we try to pick up some information about the great Pacific Railroad. The walls of the newsroom are papered with any quantity of those peculiarly American railroad advertisements (not railway, as that Britisher by my side suggests; here, in America, it is rail*road*, if you please), which are constituted as though it were the object of their publishers to give the least possible information in the largest possible variety of print, and colour, and form. Of course the groundwork of all these is 'Atlantic and Pacific,' 'from Ocean to Ocean,' or words of like effect; but any one who expects to gain any useful information from such puffs is sure to be disappointed. But is not there an American *Bradshaw* to be bought? Well, there is an *Appleton's Railroad Guide*, which *professes* to do the same thing for one here that *Bradshaw* does in England. It is, however, full of inaccuracies, and is so little used, that I was unable to procure a copy of it in San Francisco. Alas, good *Bradshaw*, we don't know how precious you are till we travel to where you are not! I have often called you hard names. I have called you absurd, and confused. If I live to turn over your pages again, I will do so no longer.

But what is really to be found out from these advertisements? I find that there is an 'Erie Railway' (it was called railway because it is an English institution, I believe), and a 'Lake Shore Line,' and a 'Michigan Central,' and a 'Rock Island,' and a 'Chicago and North-western,' and a whole host of others too numerous to mention. The Erie Railway carries you on the 'broad gauge,' and the 'Pennsylvania Central' promises to do all sort of things for you. 'Silver palace sleeping-cars' accompany all sorts of trains, and 'lightning expresses' carry you all over the country: and wherever we go, it is apparently 'without change of cars;' we read all this in red ink, and blue ink, and black ink, and are directed to ask for tickets by the various routes indicated; but not one word is said about the times of starting, or the cost of our tickets, or, in fact, about anything which a real traveller wants to know. We have barely recovered from the fit of despair which was the result of our investigations, and are consoling ourselves with the hope that we might find out these things some day if we live long enough, when a gentleman comes up, and enters into conversation with us. His manners are agreeable; and, seeing we are Englishmen, he makes polite inquiries as to our probable journey to Europe. We eagerly clutch at the opportunity this offers for the discovery of the information we are in search of. It soon transpires that our informant is a ticket-agent, one of those gentlemen whose business it is to be about the hotels, and collect the waifs and strays of the travelling public. He not only offers to book us through to England, but to any other part of Europe as well. He can give us a ticket to St Petersburg. He can book us all round the world —to China, by way of England and the Red Sea, and back to San Francisco by the Pacific steamers. But, great and wonderful as these proposals are, they are even outdone by the generosity our friend shews in their negotiation. 'Yes, sir,' he says to one who hesitates, 'I'll book you through to Europe; and, if you ain't through in sixteen days, I'll return you the money.' Who can complain at such an offer? Some of us shake our heads, and we call to mind a certain passage across the North Atlantic which took seventeen days by itself, and then we suggest that there might be some little difficulty about the return of the money *after* seven thousand miles of sea and land had been placed between us and our friend, if the travel *had* been effected at a less rapid rate than sixteen days. The ticket-agent takes it all very good-humouredly, only he won't admit his exaggeration; he puts on a sort of thoughtful expression, and quietly remarks: 'No, but it 's a fact.'

Well, there was nothing to be gained by stopping to dispute this *fact*, so we came to practical business, and some of us booked ourselves through under our friend's auspices. The main line of travel from San Francisco to the eastern seaboard passes through Chicago. The fare through to New York is 112·50 dollars in gold, or a little over twenty-three pounds of our money. The distance is something less than 3300 miles. The time of transit is eight days. Of the 3300 miles, the first hundred or so were, at the time of my crossing the continent, performed by steamer up the Sacramento River to Sacramento City. At the present time, however, this portion of the journey is performed by rail from Oaklands, a point opposite San Francisco. From Sacramento to Omaha City, on the Missouri River, is a distance of 1774 miles. The line between these points was made, and is owned by two distinct companies. The Central Pacific Company possess the western portion, which consists of six hundred and ninety miles; the remainder, or eastern portion, belongs to the Union Pacific Company. The point of junction of the two lines is a place called Promontory, situated near the Great Salt Lake of Utah. The two companies, besides being allotted alternate sections of land along their lines of route, were highly subsidised by the United States' government. It is stated that something like ten million pounds of our money was paid away to them in bounties. The Central Pacific worked from the west towards the east, while the Union Pacific worked from east to west. Promontory was the point at which the lines happened to meet. By far the more difficult portion of the work was that which was performed by the Central Pacific. They had to ascend the sierras of California, while they worked under the pecuniary disadvantage of having to bring their materials round by sea, or across the Isthmus from the Eastern States. The greater part of the Central Pacific Railway route was made, I am informed, by Chinese labour. The quiet and orderly conduct of these much-abused Asiatics formed a striking contrast to that of the superior race working on the Union Pacific. Among these latter, indeed, there was not only lawlessness and every species of ruffianism, but even murder; while such a crime as this last was, I am told, unknown on the Chinese section.

As the railroad progressed, temporary settlements or towns were run up at its temporary terminus. 'As this was changed every thirty or forty days,'

Digitized by Google

says an American writer,* 'these settlements were of the most perishable materials—canvas tents, plain board shanties, and turf hovels—pulled down, and sent forward for a new career, or deserted as worthless at every grand movement of the railroad company. Only a small proportion of their population had aught to do with the road, or any legitimate occupation. Most were the hangers-on around the disbursements of such a gigantic work, catching the drippings from the feast in any and every form that it was possible to reach them. Restaurant and saloon keepers, gamblers, desperadoes of every grade, the vilest of men and of women made up this "hell on wheels," as it was most aptly termed.' The same graphic writer goes on to describe, in terms which one would fain hope exaggerated, that settlement which he himself visited, as being the then westernmost point of the Union Pacific line. 'One to two thousand men, and a dozen or two women, were encamped on the alkali plain, in tents and board shanties; not a tree, not a shrub, not a blade of grass was visible; the dust ankle-deep as we walked through it, and so fine and volatile, that the slightest breeze loaded the air with it, irritating every sense, and poisoning half of them; a village of a few variety stores and shops, and many restaurants and grog-shops; by day disgusting, by night dangerous; almost everybody dirty, many filthy, and with the marks of lowest vice, averaging a murder a day, gambling and drinking, hurdy-gurdy dancing, and the vilest of debauchery the chief business and pastime of the hours.'

Leaving San Francisco in the afternoon, in the beginning of September last, I proceed by steamer by the Sacramento River. There is not much of interest to be seen on this trip. For forty miles or so, the river is a broad estuary, then it contracts, and the banks on either hand shew a treeless, arid, uninteresting-looking country, such as one would expect to see where no rain had fallen since the month of March. At 6.30 the next morning the cars left Sacramento, and, having secured a berth in a sleeping-car, I felt well prepared for the long hours of railway travelling which lay before me. Not that I was going through the three thousand miles without stopping—that was not at all my intention. The chance of visiting Salt Lake City, and seeing something of the Mormons, was far too attractive to me to be thrown away. And, accordingly, I was bound for New Jerusalem. It is one of the advantages of American railway law that a through ticket enables you to stop at any station you choose on the line of route, and go on again when you please, without any forfeiture of your ticket. As to sleeping-cars, they are a grand institution, a real comfort, and in fact almost a necessity in these long railway journeys. For the payment of a few dollars, you secure a berth which is laid out with clean sheets; and you can, if you please, undress yourself, and, if you are of a sufficiently imaginative turn of mind, and the motion of the cars is not too great, fancy yourself to be arrived at your journey's end, and established in your hotel. As to sleeping, if you are at all of a sleeping disposition, you will certainly be able to do that; and if not, you will get a good rest, and a stretch of your limbs. Next morning, when you get up, you will find your boots blacked, have a wash and brush, and feel reinvigorated for the next day's travel. This arrangement, added to the facility of moving about, and changing place and position in the cars, really makes American railroad travelling far less wearisome than English. Our train started with two sleeping-cars, nine day-cars, and two baggage-cars, and was drawn by a couple of engines. There were, as far as I could count them, about seventy through passengers, and many way passengers, among whom were some Chinamen. In San Francisco, I was told that about fifty odd passengers went through to the east daily; but I cannot vouch for the accuracy of this statement.

In an hour's time we got to Roseville Junction, so named after a certain fair one, who was either false or true, as the case might be, to her railroad admirer. I heard the story, but forget it. A story hangs by many of the names given to stations along the line of route; and it was only to be expected that the 'master passion' should supply one of them. At Roseville the line from Oaklands comes in. Here we waited a quarter of an hour or so for breakfast. The meals along the road are generally well arranged, and the fare good. The train, as a rule, delays three times a day for meals, giving twenty minutes for each. As it pulls up at the platform, you hear the welcome sound of the dinner-bell going, and you sit down to your food, and begin to eat without further ceremony. The cost of each meal is six *bits*, or three shillings, in California and Nevada; while in the regions of paper currency it is a dollar and a quarter. The fare decidedly deteriorates as you go east. The line was dusty and disagreeable during the first portion of it; but we were fast ascending. Soon we got to the region of pine trees, and then to a gold-mining district. Here was the Chinaman (the 'everlasting' Chinaman, as he threatens to be called, after his 'nigger' predecessor), taking in washing, or gold-mining, as the case might be. There seemed to be a great dearth of water, for the *races* were all dry. Some magnificent views were opened up in the sierras; and there was an ever-varying scene as we went swinging about, running right up the gullies, then doubling round, and coming almost straight back again on the other side of the gorges. We passed miles of snow-shedding—strong wooden-work framed to prevent the snow from coming down upon the line and overwhelming it. These sheds have not been, as yet, tried against the snow; but they have found another and an unexpected enemy, which bids fair, as yet, entirely to get the better of them. The heat of the sun dries the wood-work, until it falls an easy prey to the sparks from the engine, which catch on it as on tinder. Whole miles of shedding have been thus destroyed by fire, and some of these fires have been so extensive as to necessitate an entire suspension of the traffic over the blistered rails for days together. Such a fire had occurred a week previously, and we passed the charred remains of the sheds. At about 1 P.M., we were on the summit of the sierras, being a little over seven thousand feet above the sea-level, and a hundred and five miles from Sacramento. Soon afterwards we passed Truckee, a small town made by the railroad, being the chief lumber and wood station of the Central Pacific, and possessing certain attractions in the form of some bold and picturesque lakes near by, at which there are hotels which are frequented by the tourists of

* *Our New West.* By Samuel Bowles.

Digitized by Google

California and Nevada. Eastward of this point, the scenery gradually becomes tame, and the Central Pacific pursues the remainder of its way over a table-land at levels never descending much below four thousand, or ascending above six thousand feet above the sea-level. Reno is the next important stopping-place, being the point of departure of stages for Virginia City, the centre of a large and important mining district in the state of Nevada. The country hereabouts is desert and dreary in the extreme. There is absolutely no vegetation, and the dust is very disagreeable, whilst the monotony of the parched plain is only partially relieved by the line of mountains in the distance.

Next morning, being the second day of the railroad journey, I found that we had run as near as possible four hundred miles in the twenty-four hours. Slow as this pace is, it must be remembered that a considerable portion of this distance was up steeply ascending gradients and round sharp curves; though, to say truth, when on the level plains, we did not go much more than seventeen miles an hour, including stoppages. I now began to make inquiries as to the stations from whence the stages run up to Salt Lake City. I found it very hard to get any information. Those passengers whom I questioned were not *posted* in the route; while the conductor of the train either did not know, or did not choose to tell me, and anyhow did not deign to listen to my inquiries. At last I found two Englishmen going up to Salt Lake City, and they informed me that Uintah was the station. It was a new station, and not even marked upon the only time-tables published in California. We were now following up the course of Humboldt River, a small sluggish stream with some vegetation, and patches of cultivated and pasture land in its valley. The only station of importance we passed through that day was Elko, the point of departure for the celebrated 'White Pine' mining district. It is like all the other places along the railroad. A new set-up town, consisting of a few rows of wooden shanties, many of which have canvas roofs stretched over them, and some fragile-looking tents, standing treeless and naked on the desert, it presents about as uncomfortable and cheerless an appearance as it would be possible to conceive. Still one cannot help feeling that these towns, or villages, or whatever you like to call them, are monuments of Yankee enterprise, and the only wonder is that they should have sprung up where and in the time they have. At 10 P.M. we arrived at Promontory, having travelled over the six hundred and ninety miles in a little less than forty hours —that is, at a rate of between seventeen and eighteen miles an hour, inclusive of stoppages. Here we had to wait for a few hours until the arrival of the Union Pacific train, and were, in addition to this, detained after the arrival of that train, while the whole of the baggage was transferred from one car to another. We had ourselves, moreover, to change cars. These very unnecessary and provoking proceedings are, I believe, the result of a jealousy between the two companies, and are about as absurd and unwarrantable an interference with the comfort of passengers as can well be conceived. The result of it all was that four hours were wasted, and we did not get away from Promontory till three o'clock in the morning.

Promontory is the remains and essence of those 'hells upon wheels' of which mention has been made. Some half-dozen bonfires were burning in the street, and these served to throw light upon the proceedings of certain card-sharpers and gamblers behind them. Each of the former had his table in front of him, around which were congregated about as villainous and blackguard looking a set of men as one may hope to meet with in any single locality. Here one of our passengers was green enough to allow himself to be sharped out of one hundred dollars—all the money he had upon him. It appears that a confederate of one of the gamesters was travelling on the cars, and there made friends with the passenger in question, until he induced his wretched dupe to stake his money upon his arrival. According to the account given to me, neither law nor order prevails at Promontory. I was told by persons who knew the place, that even life was not safe there from the hands of plunderers. So great was the terror entertained, that one gentleman, who asserted that his fear was grounded upon his knowledge of the place, refused to go unaccompanied from one train of cars to the other.

A LIMITED HORIZON.

IN FIFTEEN CHAPTERS.

CHAPTER V.—POOR TOM MITCHELL.

So the days passed on; spent by Lalagé chiefly out of doors, discovering new wonders and beauties on those wonderfully beautiful Cotswold Hills. Description of them is useless; word-painting is generally stereotyped, cold, and formal; but the old magical glimmer and glamour comes shining out before the eyes of the writer of these pages at the bare memory of that well-remembered loveliness.

Grimswold was formerly famous for its manufactures—cloth-mills, pin-mills, cotton-mills, mills of all sorts abounded there, chiefly on account of the immense water-power ready to the hand of any one who chose to make use of it; for the whole place abounds in brooks, springs, freshets, rivulets; walk in any direction you will, the sound of trickling and gurgling is seldom out of your ears. Sometimes, after rainy weather, you even come upon a brawling brook, flinging itself headlong round the very middle of a lane, and have to pick your steps as best you may; or, strolling along in the sweet summer stillness, you hear a continuous drip, drip, and wonder whence the sound comes, till a sudden dip in the land brings matters to a crisis, and a tiny waterfall shews you that you have been walking on with a small brook at your side, hidden by the grass and weeds at the foot of the hedge. Then the old channels which men made to turn aside the wasting water, and bring it into use, are in themselves pretty and picturesque. One could sit for hours, watching it foam, and fret, and dash over those flights of broad, winding stone steps, which must have been cut out so long ago, and which afford endless new combinations of cascade and waterfall.

Then the Flora of Gloucestershire is especially interesting; few other counties yield in such abundance such choice wild-flowers. Snowdrops, blue-bells, orchids, foxgloves, lilies of the valley, honeysuckle, all in their due season, with rare

Digitized by Google

ferns, come with splendid extravagance to this richly vegetated county. Rich, too, in other ways: those bald places on the sides of the hills, which throw up in bolder relief the numerous woods and fruitful fields, have a tale of their own to tell. The Cotswold stone quarries must be mines of wealth to their owners, and these quarries are yearly on the increase.

Altogether, it is a rich, fragrant, healthful land, and to the town-bred eyes of Lalagé Hesketh it seemed the realisation of an ideal dream of beauty. She wandered through it with full content, now and then startled by the monotonous voice of the fearless cuckoo close by her side, or making herself giddy by watching the aspirations of a lark. She was drinking long draughts of beauty, and deemed that her fervid thirst for it would never be slaked. Did she forget that even Paradise could not wholly content Eve? In the after-time, when it all seemed to mock her in her pain, mock her with its nearness and yet distance, she wondered at the old self which had found no sting in it. But there *was* no sting yet, and her happy, thoughtless feet guided her whithersoever she would.

Belle was not so ambitious; she had become accustomed to the uphills and downhills of Grimswold, and was contentedly driven out every afternoon, being occupied with her books all the morning.

About a fortnight of this placid life passed, varied now and then by short, perturbed visits from the big curate, who seemed to find some difficulty in arranging Lalagé's class. At last, he 'hoped to have the pleasure of seeing her next Sunday at the schoolroom,' as he told her in a small cramped hand, on a big sheet of paper; and Lalagé went.

She found herself, at ten o'clock on Sunday morning, standing before the door of the National Schoolroom—given up to the clergyman on Sundays—hesitating, in a sweet unusual shyness, as to whether she should go in or not. Her embarrassment was soon relieved by the big curate, whose foolish heart beat quicker as he came up to her.

'You are in capital time, Miss Hesketh,' he said; 'won't you come in at once?'

He opened the door, and—mercifully, as Lalagé thought, confusedly, as he knew—went in first. She found herself in a large room full of children; there were likewise six Misses Verey, four Misses Farmer, and the National schoolmaster: these were the teachers. Every eye was of course turned upon her as she entered in the wake of the curate, whom she followed nervously as he shook hands with the ladies; but the proceedings at church had led her to expect that. She had hoped to have taken her place by one of the Vereys; but they looked utterly repelling, and the one she liked best—the one with a face like a horse, Hester—was absent; so she drifted into a corner of the room, and stood gratefully by the National schoolmaster, who made way for her. Then came prayers; and after that the curate went up to her and begged her to go up-stairs—the baby classes were always taught there. She followed him, and was glad to find that only one class besides her own was held in this room, and that was taught by the grocer's daughter.

Eight little girls were given her; and when the curate was fairly gone, she felt quite at ease again. Her love for children made teaching them no hard task, and their open-mouthed admiration wrought in her favour. Only one, the youngest and most shy, burst into a terrified roar; but Lalagé took her up, and making a soft nest for her on her lap, soon won her to silence.

On the whole, she got on very well: it was not difficult to teach to these pure little baby hearts the great truths which she herself loved so well; but she could not keep their attention fixed for long, so they had a talk about their homes and mothers; it was then that the restless curate strode in again, and saw the prettiest picture but one that had ever blessed his eyes. But Lalagé, in her unconscious innocence, looked up in his face, and asked: 'Is it time to go?' as though she were any ordinary mortal.

He only said: 'Very nearly;' and how could she tell that, when one of the children stretched out a hand to stroke her dress as she rose, that big man would have given much to stoop down and do the same? Of all this, she knew nothing; and as the two, one with a heart looking up, and the other with thoughts bending down, walked together to church, they were silent from different reasons.

And yet the curate was blameless as far as his love for his work and his earnest perseverance in it were concerned. Even then he tried hard to draw his thoughts from Lalagé—this man, whose soul, mind, and heart were all of unequal heights, so to speak, and did not exactly work together; for the first stretched out to the heavens, and threw itself earnestly and gladly into its Master's work; but his mind was lightly led away by the fair things of the world, and that easily involved heart had more than once drawn him into scrapes which seemed incongruous in a man of his practical religion.

He was sorry, very sorry to feel himself once more slipping into the old pitfall which had so often ensnared him; he even prayed that he might be spared this time, for he knew well how the giddiness, the bliss, the dizziness, the joy, the despair, would make his foolish head swim, and his unwise heart throb, just when the one should be steady and the other calm; how the actual work, the daily duties would go on just the same, but with a little inner lack known only to himself.

That this new fatality should have a happy, conclusive ending—an ending that should be as iron bars and bolts to the wandering heart—he only dared to hope in his most sanguine and ambitious moments. To all the symptoms he was well accustomed; but any such ending had always been very, very far from him. Why should he be more lucky this time? he thought on that Sunday evening, sitting alone in his lodgings. He was a poor man, a very poor man, rising early, and going to bed late; working hard from week's end to week's end for one hundred and fifty pounds a year; and out of that—living being cheap at Grimswold—a yearly pension of sixty pounds was paid to his widowed mother. The big curate groaned, not from discontent, but just from acknowledging the fact that he must leave all his ailments to work themselves off.

How could Lalagé stoop to such a life as his? How could he ask her to do so? And even if he asked, and she consented—he had not hitherto found himself utterly distasteful to ladies—how could he reasonably expect Mr Hesketh to give his consent to such an alliance? No, it would never

Digitized by Google

do; he must keep his feelings to himself; and then he got up and shook himself, hoping much from Time, which had so often worked wonderful cures for him; Experience forgot to tell him that any such reticence as he was planning was impossible; and he walked out a little comforted, and spent the last hours of that busy Sunday reading and praying with a sick man.

Belle and Lalagé returned the Vereys' call, but, to their relief, they were not admitted; the servant told them 'Missis and the young ladies were very busy;' so they went home rejoicing in that easily fulfilled duty. The two families had evidently not 'taken to each other,' as people say; so, a few days after Lalagé's first essay at the Sunday school, the sisters were much surprised by receiving a note from Mrs Verey, requesting the pleasure of their company the next evening; they would be quite alone, the note said.

'I won't go to that wicked woman's house,' said Lalagé; 'besides, we must refuse, for in his last letter papa said he would try and run down to-morrow afternoon.'

'Suppose we ask them to come here instead?' said Belle. 'It would be very civil, and might possibly prevent their substituting another evening.'

'Then you mustn't ask the wicked woman herself.'

'Very well,' said Belle; and she wrote her note, saying they hoped to have the pleasure of seeing all the young ladies.

'What a dreadful, horrible evening it will be!' said Lalagé. 'O dear, what shall we do?'

'We can ask Gertrude and Captain Cleather to come too,' said Belle; 'that will make it a little better.'

'Ah, yes,' said Lalagé; 'but suppose they decline? Belle, don't you think Captain Cleather is rather—peculiar?' The defiant look she had seen in Gertrude's eyes suddenly flashed before her, and forbade her using a stronger word.

'No; I don't see it,' said Belle: 'he has rather a quick manner—is that what you mean?'

'Oh, I don't know,' said Lalagé, and went out to gather a sweet white rose that was bending its gigantic cup till it peeped in at the window.

The Vereys accepted; as Lalagé told her father with a groan as they sat down to dinner next day.

'But Gertrude is coming too,' she added, 'so perhaps it won't be so very bad; but, papa, they are terrible people.'

'I should think so,' said Mr Hesketh. 'By Jove! none but terrible people could make up their minds to live in such a place; hang me if the streets were not utterly empty as I came along!'

'An old woman told me the other day she remembered the time when the streets were so crowded at night with people coming from the mills, that one could hardly get along: there used to be lots of mills here, papa.'

'Much good they do now,' grumbled Mr Hesketh.

In due time their visitors arrived, and the heavy work of entertaining began; it was easier for Lalagé than for Belle, for she found that the Misses Verey knew all about every child in the school, and could tell her many interesting facts concerning the members of her class. It was in the midst of a flood of anecdote—for, oddly enough, if one of these young ladies spoke, the others invariably joined in—that a knock was heard.

'That 's Gertrude,' said Lalagé, springing up to open the door for her friend. But when she had done so, the big curate, not Mrs Cleather, stood before her astonished eyes.

'I have brought you a note from poor Mrs Cleather,' he said, with his fascinated eyes fixed on her face; this unexpected meeting was almost too much for him.

'Poor Mrs Cleather!' echoed Lalagé; 'what is the matter? is Gertrude ill?'

'I have made a great mistake,' said the bewildered curate; 'I have almost betrayed confidence; pray forget what I said; Mrs Cleather's trouble is no outward one.'

Lalagé looked pained.

'It is a very peculiar case,' he went on, 'and I could not help knowing it, or she would never have told me. And I am trying to help her,' he added humbly.

'I am sure you are,' said Lalagé looking up in the kind brown face. 'But do come in and see papa! he came down this afternoon;' and she opened the drawing-room door.

Then she went to the dining-room to find her father, and took the opportunity of reading her note.

'Dear Lalagé,' it ran, 'I find it quite impossible to spend the evening with you; my babies must be my excuse. Pray, ask Belle to pardon my shortcomings, and let me see you for a few minutes to-morrow morning—Sincerely yours,

G. Cleather.'

Lalagé re-folded her note, and returned to the drawing-room; there, to her surprise, she found her father in animated discussion with the curate, whom he afterwards declared to be 'a nice genial fellow after all, and a university man, though he doesn't look like it.

'You must find it confoundedly dull here, though,' said Mr Hesketh.

'Well, I do sometimes,' said the curate, who now felt as if his whole life previous to meeting Lalagé must have been a blank.

'Well, you must come in and see my daughters now and then,' said the imprudent man; thinking in his own mind that such a hard-working fellow should meet with some encouragement.

The evening was not so bad as had been expected. Lalagé took her visitors out on the lawn, and taught them croquet, of which the Misses Verey had never even heard, and which the curate had seldom played; indeed he was so awkward that she even had to put the mallet in his big unskilful hands, thus causing an instant accession of that dizziness which made him so hopelessly incapable. When the strange, imperfect game was over, she took them back to the house, where Mr Hesketh and Belle were reading, and sang song after song whilst the summer darkness dropped slowly down outside.

Ah, that voice—the sweetest, the dearest I ever knew, soft and clear, though never strong, touching alike the hearts of old and young! Yet it was rather talking to music than singing, for each clearly uttered word had its due weight, and its own appealing sweetness.

Mr Hesketh laid down his paper, and thought of Lalagé's mother; Belle, with her sober thirty-five years graciously enfolding her, thought of the nearer heaven and the half-done journey; the Misses Verey thought Lalagé the prettiest, sweetest

Digitized by Google

thing they had ever seen, though they must not say so to mamma; but the curate—the curate knew not what he thought, sitting by her in a mist of delirious fancies, a sea of intoxicating delight.

But when Mrs Verey heard of all that had taken place—'So the curate was there,' she said: 'I will take care that none of you spend the evening there again without me; I believe him to be a man quite capable of breaking any girl's heart.'

CHAPTER VI.—GERTRUDE CLEATHER GOES TO THE SEA-SIDE.

The next morning, as Lalagé stood at her window ready dressed for breakfast, she saw, to her surprise, a little pony-carriage being furiously driven down the hill just in front of the house. It rocked to and fro in an alarming manner, but the driver lashed the horse unsparingly, so that the fearful pace was not likely to diminish. She was fascinated with terror, and watched it as it grew nearer and nearer; then a sudden turn hid it from her, but not before she had caught sight of Captain Cleather's inflamed countenance and Gertrude's white face. But how could it be Gertrude? argued Lalagé; it was so early—hardly nine o'clock—and from the state of the pony it was evident they had been some distance. And would Gertrude have allowed her husband to be so very, very cruel? she thought, with a glow of indignation as she remembered the distressed state of the poor animal. And yet she knew that it could be none other than Gertrude.

Still, when she went down-stairs, she said nothing about it, thinking it best to be quite sure first. After breakfast, she went to the King's House; the door was opened for her by Gertrude herself, her calm face placid as ever.

'I am so glad to see you, Lalagé,' she said, 'though I must not ask you to stay for more than a few minutes. We are in a state of great confusion, for we are going off to the sea at once; my husband thinks we all need a change.'

'Going to the sea!' cried Lalagé blankly.

'Yes,' said Gertrude; 'and I want to know if you would be kind enough to look after my district-people for me in my absence; I have neglected them shamefully, lately, but what can I do when there are three little children at home always wanting me?'

'Of course not, dear,' said Lalagé, rather incoherently. 'I promise to do my best, but you must not expect much from me, for all that sort of work is new to me, you know.'

'Mr Mitchell will tell you which houses I have taken; and I have one more thing to ask you, will you make a point of thanking him for me for all his kindness last night? He helped us so much in making our arrangements; and after all, I let him go in a very cavalier way, with a note for you.'

'Yes, I will,' said Lalagé. 'I wish I could help you in a more substantial way.—O Gertrude,' she added, as she turned to leave the room, 'I had such a fright early this morning; I fancied I saw you and Captain Cleather out driving in a very reckless way. Could it have been you?'

In a moment, she felt that she had been almost cruel, such pain came into Gertrude's face, but the old defiant look slowly grew into her eyes.

'A very strange fancy,' she said. 'Do you think a sober married woman like myself has time for early drives? Besides, if you thought Captain Cleather was with me, how could you have been frightened?'

'Forgive me,' said Lalagé humbly; 'I am so stupid.—May we have little Dinner Bell this morning? We will take great care of her, and she will be out of your way.'

'Thank you,' said Gertrude; 'it would be a great relief;' and Lalagé afterwards remembered that she herself went out to get the child ready, instead of ringing for the nurse.

'Dinner Bell'—so called by herself when professedly unable to pronounce her rightful name, Isabel—was very glad to go, and made herself quite at home in the Hesketh' drawing-room. After some baby talk, got up for her benefit by the two sisters, she suddenly branched off, very irrelevantly, into home topics.

'Papa was so wexed last night,' said Dinner Bell, placidly smoothing down her pinafore—'he was *so* wexed, he said "Too bad," and sent all the servants away home. Two came from Sumset, and one came from London, and one came from Chelpenham; and they all had to go in the train in the dark; and Mary cwied, and said she was afwaid; and old nurse cwied, and kissed mamma's hand with the ring on.'

'But you must not tell us about that,' said Lalagé, looking at Belle in dismay; she hardly knew how to convey a warning of which mamma would not eventually hear. Dinner Bell was undaunted.

'And Mr Mitsell came,' she went on, 'and got all the trains ready for them, and said there wasn't time for me and Boy to get on his back, but we should have two rides next time. And he sent a big girl, with a little fat nose; but she is so stoopid, so stoopid,' said Dinner Bell, raising her two hands; 'she did put on Boy's pinafore with the strings in front, and he said: "'Found it!" and mamma said it was very wicked; poor papa only said it when he was ill; but I think'—with a solemn little nod—'he is ill 'most always.'

To stop this flood of undesired knowledge, Lalagé took the child up in her arms, and went out into the garden; but the recent events had evidently made a great impression on Dinner Bell's mind, and on her way she told her friend that papa was cooking the dinner down in the kitchen, with cook's big apron on.

The sisters were inexpressibly shocked and grieved by these revelations, but in mute respect to Gertrude the subject was not discussed between them.

After luncheon, Mrs Cleather came for the child, and bade Belle and Lalagé good-bye; she knew it was quite possible she might never return to Grimswold, but she could not trust herself to say anything of the sort to her friends; so she went out from among them in her self-contained calmness, bearing her own burden. Only she, of all the world, knew how her lot had fallen; only she, like that wearied dove of old, knew how wide had been her wanderings—how she had rarely found rest for the sole of her foot for any length of time—how she was once more about to flutter forth into the wide world, with drooping feathers and a fearful heart. Only she knew that death alone could bring her peace—that life had grown to be a terror and a misery.

Digitized by Google

One man had come to her in her trouble, and helped her as far as man could help; but the cause of that trouble he had only guessed at—and guessed wrongly; for Captain Cleather loved his wife with all his heart and strength, and Tom Mitchell had put him down as a brutal husband. He had been very good to her, this unwise curate, who, for all his foolishness, knew how to comfort the sorrowful and succour the needy; and if he did not believe in the often repeated 'It is not his fault,' which rose from Gertrude's lips, few men in his place would have done so.

And so Gertrude wandered out, with the love of her youth—the only love of her life—now grown to be a restless, miserable man, and, as she painfully knew, with failing funds and increasing troubles; a woman who bore the cross in her bleeding heart, and who was daily tasting the bitter waters of martyrdom.

The next two months were to her just what she had expected; they wandered from town to town, from village to village, along the southern coast, leaving each place abruptly and with scarcely an hour's notice, and the baby was ill, and the new servants careless. A time of trial—but all times were alike to her in that respect; a trembling sword hung daily over her unprotected head. The cup was bitter, but she had almost forgotten the taste of any other draught; and that old love of hers was still unspeakably dear to her.

But to return to Lalagé. She was glad to have Gertrude's district; it was a great occupation and a great pleasure; the big curate called about it the day after Gertrude left.

'Mrs Cleather said she would ask you to look after her people,' he said, and his unwise heart filled with a flood of bliss as he thought that this new state of things would bring his goddess nearer to him.

He took her round to the ten cottages of which Gertrude had taken charge; and it was pleasant to see how the people welcomed, and the children loved him.

'It 's a good bit sin' you 've come inside my door,' said an old woman nearly bent double, and crouched up in a wooden arm-chair.

The curate made kindly excuses: 'There were so many sick.'

'Well, beant I sick?' snarled old Widow Wallop. 'I 'n got Tantony's fire in my legs; and the rheumatics have got into my bones and s'news, till they feel like a bag of rusty nails.'

Lalagé looked on with her soft pitying eyes, but she found no favour in the old woman's sight; she could not help thinking how gentle, and kindly, and forbearing was this man, whose tremors and awkwardness left him when on his own ground, among his own people.

They went from house to house, most of the humble people being glad to see them—'very exceedingly much obliged' for their visit, as one woman expressed it. Then the curate's work was over, and his reward came; for he found himself, half-bewildered though he was, walking home through the happy summer afternoon with Lalagé. And receiving that message of thanks from her lips was very sweet.

'I would do anything to help Mrs Cleather,' he said; 'as it was, I was of very little use;' and as Lalagé saw how earnest the kindly bronze face looked, she began to think she really liked him very much. She took him home for a cup of their five o'clock tea, and made Belle laugh by her animated description of the 'funny poor people' they had been to see.

And when the curate begged to be taught a little more croquet 'before visiting a district four times as large as yours, Miss Heaketh,' she saw no harm in giving him the benefit of the hour before dinner.

District-visiting proved a great boon to Lalagé; firstly, and chiefly, because of that old childish longing to 'be good,' which made her desire to do right from the highest motives; and secondly, from a motive of which she was hardly aware, or which, at anyrate, she did not acknowledge to herself—a lack and emptiness in her life.

Hitherto, she had been accustomed to many friends, to much society; suddenly she had been removed from everything of the kind to a place of indescribable social desolation. Up to this time, the great beauty of her surroundings had more than made up to her for this great and utter change; but the novelty had now worn off, for they had been some months at Grimswold. As the slow weeks rolled on one after another, all exactly alike, and there were no more walks to be found out, no fresh lanes to be explored, she began to be a little lonely, to yearn a little for human companionship. She was either too deep or too shallow minded to find the beauty of hills and valleys quite sufficient for her; she was beginning to understand what Gertrude had meant by saying that she herself was 'very fond of human beings;' and Gertrude's absence was another cause of regret and loneliness; for even her district did not suffice her; she wanted some one to whom she could talk about even that; but still more, she wanted some one of her own class and station to whom she could talk her foolish, girlish talk, and who could in some degree see things from her point of view. A silence had settled over her life which chafed, and yet awed the girl.

True, she had always her sister; but between Belle and Lalagé was fixed that gulf of seventeen years, which is almost impassable at eighteen; and Belle had a deep still life of her own, almost uninfluenced by outer changes, and which Lalagé respected too much to disturb by her undefined, and yet growing ennui. In the midst of that former busy London life, Belle had been the same—a calm woman, moving in the world and yet not of the world; a hallowing influence over her father's household rather than an active member of it, doing all that was required of her in so exact and equal a way that every duty seemed an 'of course,' for which no special acknowledgment was required. She was like a mother to Lalagé, her tenderest, wisest, best; but for those very reasons, not to be intruded on by girlish emptiness of mind or vague longings.

Summer flamed into autumn, and the grand hill-sides blazed out like gorgeous illuminations; but the autumn sadness, without its pomp and glory, had grown into Lalagé Heaketh's heart. She would stroll out, day after day, to the old walks, and stand gazing down from some hill-top into the valley below for long hours, and then go back with the yearning in her heart unfulfilled, and life seeming to lie out before her as one long autumn road, with grand surroundings, but no inward peace for her. She used sometimes to

Digitized by Google

think of that old life in London, and wonder how she should like to go back to it, then turn away from the idea with a shudder—no; she wondered she had ever had spirits for it. Unhealthy morbidity of mind coloured all the world just then.

The curate went away for a fortnight in September, and this was a fresh grievance to Lalagé. Suppose her people got very, very ill, how unpleasant it would be to put them in the hands of that stranger from Gloucester, who knew nothing about them: she wished Mr Mitchell would come back. And when he *did* come back, she met him with an eager: 'I 'm so glad you 've come!' which was unspeakably sweet to the curate.

There was much to tell about district and class; and Lalagé poured it out in her impetuous way, and for a time forgot all about her weariness in the comfort of once more having a sympathising listener, and all unwittingly threw fresh spells over the unwise man, and nullified all the good his absence had wrought.

She was glad to see him, she had welcomed him eagerly—were not these signs in his favour? Perhaps she might be taught even to like him, he thought, with the latent conceit which lurks in so many apparently unassuming men; so he plunged eagerly into hopefulness and happiness, and went on in his foolish path.

He was very much to her then; able to help her in the little difficulties which arose among her poor (thoughtfully considerate of them he had always been), and giving her freely the sympathy he so ardently felt. The mutual interests that bound them together naturally threw them much in each other's way, but not so often as the curate found necessary. He was pursuing a selfish path; but, to do him justice, with no idea of its selfishness; he was too unwise to look far ahead; besides, he was accustomed to this state of blissful misery, and knowing by experience that that catholic heart of his was by no means likely to get unalterably riveted, he judged Lalagé by himself, and thought—if he thought at all—that no possible harm could come of this. It was an episode in the life of this hard-working man, which life, without such variations, would have been very, very dull.

And so he got into a way of seeing her home from her district, whither she went every Tuesday regularly; and if there was time for a game of croquet afterwards, they generally had one. With him the girl was never anything but her old bright self; she had always plenty to tell and ask him about, and she liked and respected his kindness and goodness.

Of the curate's feelings with regard to herself, Lalagé did not guess. It is an old theory that women always do know when any man regards them with warmer feelings than those of friendship, but of the untruth of it many women could testify. But that by-standing women do see and credit such admiration even before the parties involved are themselves aware of it, is unquestionably true. Isabel Hesketh, with a sort of scornful half-pity, watched the unwise bedazzled man, but took somewhat his own view of the case. It could do no harm to either: he was big enough to get out of this trouble, and foolish enough to get into another, without any one's interference. Lalagé was unconscious of his admiration, and would probably remain so to the end of the chapter; and as for *her* feelings being in the slightest degree involved—it was impossible. Belle smiled at the bare idea. She looked upon this awkward bronze curate somewhat with the upper-servant theory, which had been in Mr Hesketh's mind when he had asked Mr Mitchell to call upon his daughters as often as he liked.

WHEN YOU WERE SEVENTEEN.

When the hay was mown, Maggie,
In the years long ago,
And while the western sky was rich
With sunset's rosy glow,
Then hand in hand close-linked we passed
The dewy ricks between,
And I was one-and-twenty, Mag,
And you were seventeen.

Your voice was low and sweet, Maggie;
Your wavy hair was brown;
Your cheek was like the wild red rose
That showered its petals down;
Your eyes were like the blue speedwell,
With dewy moisture sheen,
When I was one-and-twenty, Mag,
And you were seventeen.

The spring was in our hearts, Maggie,
And all its hopes were ours;
And we were children in the fields,
Among the opening flowers.
Ay! Life was like a summer day
Amid the woodlands green,
For I was one-and-twenty, Mag,
And you were seventeen.

The years have come and gone, Maggie,
With sunshine and with shade,
And silvered is the silken hair
That o'er your shoulders strayed
In many a soft and wayward tress—
The fairest ever seen—
When I was one-and-twenty, Mag,
And you were seventeen.

Though gently changing Time, Maggie,
Has touched you in his flight;
Your voice has still the old sweet tone,
Your eye the old love-light;
And years can never, never change
The heart you gave, I ween,
When I was one-and-twenty, Mag,
And you were seventeen.

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 309. SATURDAY, NOVEMBER 27, 1869. PRICE 1½d.

MR W. H. BAKER'S RING.

MR BAKER himself told us this story. He said it was true; nor is this unlikely. I have known Mr William Henry Baker personally for a number of years, and I am inclined to think he has hitherto never in all his life told the truth. Now, it is so manifestly improbable that the most consistent man should protract a long and useful career of story-telling to such extraordinary limits, without at some period telling the truth by sheer misadventure, that it is quite likely Mr Baker may have committed himself in this instance. At least the time has arrived for human nature to assert itself, according to the doctrine of averages.

'Only once, gentlemen,' said Mr B., 'have I been deceived. William Henry keeps his eyes open, in a general way; William Henry also takes the liberty of seeing out of them. He uses them, as a rule, for purposes of observation, gentlemen. Still, I admit I *was*, once, taken in by as dead a swindle as could be, I am not ashamed to own it. I made money by it, after all; but I *was* swindled.

'It was about a diamond ring. I knew the fellow who had it for many years in the way of business. He was a commercial traveller, and used always to flash this ring about whenever he came round on his journeys. A jeweller friend of mine, who happened to be in my office once when Mr Block called, asked, I remember, to be allowed to examine it; and had pronounced the stones to be diamonds of the purest water, telling me afterwards the ring was worth about seventy pounds. Mr Block's initials were engraved inside the hoop of the ring: "R. B.;" and besides that, it was a ring of peculiar and rather old-fashioned make. Indeed, having once seen the ring, no one would be likely to mistake it for another. Well, Mr Block got into difficulties, and went so entirely to the bad, that I never saw or heard anything more of him. But about two years afterwards, whilst walking down a back street, my eye was taken by a ring exhibited in a pawnbroker's window. "Mr Block's ring," I exclaimed directly; "I'll swear to it." It was in a tray with a number of very seedy-looking rings, and was as discoloured and dirty as they were. I went into the shop and asked to look at it. The pawnbroker, an old Jew, said: "Yesh; I might see his ringsh; but he didn't know mosh about ringsh himshelf. They wosh unredeemed pledges—thash what they wosh—and they wosh all marked at the monish advanshed upon them, with a very shmall overplush for interesh—thash all he knew."

'There was no mistake about it. It was Mr Block's ring, and had his initials inside.—But how did the Jew get it? He would soon tell me. Referring to his book, he found it had been pawned two years ago in the name of Smith—"Thash all he knew. Would I buy? It wosh dirt sheap—three poundsh twelve; and cosht him all the monish!"

"Three pounds twelve!" I repeated, thinking he had made a mistake; for the ring was worth twenty times that amount!

"Well, if it wosh too dear, he had some sheaper ones—beautiful ringsh, he dareshay—but he knew sho little about ringsh, you shee, exshept that he alwaysh advanshed too mosh monish on them. One couldn't undershtand everything in his bishnish, you shee, from flat-ironsh to diamonsh."

'I bought the ring, after beating the Jew down half-a-crown, partly to prevent his suspecting its value, and partly—well knowing the disposition of the peculiar people—to oblige him.

'I wore my new purchase about, with no little inward satisfaction at having bettered a Jew at a bargain. In my own mind, I accounted for its coming into his possession somewhat in this way: Mr Block must have sold the ring, when in difficulties, to some one else. It was quite certain Mr Block had not pawned it at the Jew's, or the Jew would have known its value. The ring must, then, have either been lost by, or stolen from, a subsequent possessor; and the finder, or thief (whichever it happened to be), being ignorant of its value, had taken it to the Jew, who knew no better.

'There is a certain commercial club in our town, which I occasionally visit. The members are of an easy and somewhat lively disposition; generally

Digitized by Google

given to indulge in that playful style of banter popularly known as "chaff." My diamond ring came in for a good share of it. I can stand chaff as well as most men; but I put it to you, if, when you know very well your brilliants are real, it isn't a little annoying for the chaff of a whole body of people to assume the character of persistent disbelief in the value of your jewellery? For instance, the waiter answers the bell.

"Did any gentleman ring?"

"O yes," one of the members would retort; "it was the gentleman with the paste diamonds."

'Again, there are kinds of sham brilliants known as Irish Diamonds and Isle of Wight Diamonds. The club (not one or two members, but the whole body) refused to recognise such distinctions, and insisted on designating the whole class of shams as "Baker's Diamonds." "Baker's Paste," my gems were also denominated. They actually sent me by post a circular of somebody's Baking Powder, adding to it at the end, where it says the public is respectfully cautioned against spurious imitations, "*but more particularly against a specious preparation to deceive the unwary, known as Baker's 'Paste.'*" Now, after two or three weeks, this became tiresome. Still, I took no notice, and affected not to think the remarks intended for me.

'I hardly know what made me go and call on my friend the jeweller. It was not that I had any doubt of the genuineness of the diamonds, especially as he was the very man who had before valued Mr Blook's ring at seventy pounds. But it had been so dinned into my head they were false, that I wanted just a formal confirmation of the estimate he had previously formed of their worth.

"O yes," said my friend the jeweller; "I recognise the ring again directly.—Want to know what it's worth?" (He put it in the scales.) "Well—h'm—about seven-and-twenty shillings for old gold."

"Eh?" said I, as pale as a turnip. "Why, didn't you tell me it was worth seventy pounds?"

"Yes," he answered; "when it had diamonds in it—not when it has paste."

'Talking the matter over, the jeweller suggested, that on Mr Blook getting into difficulties, the first thing he did was to sell the diamonds out of his ring, and get their places supplied with paste; whilst, finally, he had pawned it himself with the Jew, *as* a paste ring.

"Well, William Henry," said I to myself, "the Jew has jewed you, and the club has chaffed you, and you may consider yourself trod upon, after the manner of speaking."

But the worm will turn.

"Did the jeweller let out diamonds on hire?" I asked.

'He did.

"Would he have a certain alteration, which I suggested, made in my ring in a fortnight's time?"

'He would.

"And keep it secret?"

"Certainly—business was business."

'For the whole of that fortnight I never went near the club; that was probably the reason why my appearance at the club-dinner was greeted with such lively sallies about Baker's Paste. One would-be wag recommended me, whilst helping a tart, "to keep my fingers out of the pastry." Believing him to intend some obscure allusion to the gems on my little finger, I thought it time to open fire.

"Gentlemen," said I, "for some weeks I have listened to casual observations in which the name of Baker has been unworthily associated with paste and pastry, but have refrained from making any remark, having been firmly persuaded they could only apply to industrious tradesmen employed in the manufacture of home-baked bread." (Oh, oh!) "It now occurs to me that such remarks were intended in allusion to the ring I wear—a ring, I take this opportunity of informing you—which, unlike the wits who have amused themselves at its expense—is indebted for its brilliancy to nature."

'They hooted me; they heaped opprobrious epithets on the name of Baker; they laughed and talked me down.

"I 'll bet him five pounds it 's paste," said one.

"So will I," said another. "And I." "And I."

'So said *eleven* of them.

"Really, gentlemen," said I, "I am sorry you should take the matter so much in earnest. All I can tell you is, I believe my ring to be a diamond ring, and this, notwithstanding I will freely admit I only paid a very small sum for it."

'They laughed and hooted me still more at this admission. They said that settled the question, and that it *was* paste.

'I told them I didn't think it was.

"Well, would I bet?"

'I would rather not.

'More hooting.

'At length, very reluctantly, I overcame my scruples. The name of Baker is a name too closely allied to the gentle bred (arms, four loaves, *ppr—sejant*, quartered—crest, the doe, *levant*) to allow it to be wantonly sullied. I bet.

'We adjourned to the jeweller's.

"Without question, they *were* diamonds," the jeweller decided, "and some of the finest he had ever seen." He ought to know, as they were *his* property—hired by me for the occasion.

"Eleven fives is fifty-five, gentlemen."

'Having established the value of my ring, and freed the name of Baker from suspicion, I paid for the hire of the real gems, and had the paste stones reset in their places, believing, after all, the reputation for diamonds to be as good as the possession of them, and free from the anxiety.

'It was talked about, and noised abroad: it even reached the little back street where the pawnbroker lived. You should have seen him.

"Real shtones! Oh, my heart! Sheventy-five poundsh—dead robbery—clean gone. Oh, my bootshe and bones! not to know that folkshe do shometimes come and pawn real diamonsh for pashte, sho as to have less interesh to pay for taking care of their ringsh. Oh, my bleshed heart, only think of it!"

'He came to me. He grovelled, and wriggled, and twisted himself before me. He prayed me to sell him his ring again. "Oh, my tere Mishter Baker, you musht shell it to me, or I shall be a ruined old manshe. The time wosh not out, and Mishter Smit has come to redeem it, and he shays that it wosh a legacy, and if he doesh not get it by Shaturday next he will ruin me—sh-help him, he will. Oh, Mishter Baker, think of it; twenty poundsh—all in gold—sholid money. Now, my tere, what do you shay? thersh a good mansh!"

'What did I say? Could I turn a deaf ear to the distress of the old man? There are people who

Digitized by Google

might do it, gentlemen, but not people of the name of Baker—not W. H. Baker. I certainly did ask him for more money. We compromised it at last at twenty-two ten, which he paid, part in sixpences and coppers, and owes me fourpence-halfpenny to this day.

'Twenty-two, nine and sevenpence-halfpenny, and fifty-five pounds, is seventy-seven, nine, seven and a half. It just paid for the real diamonds; for I bought the ones I had previously hired of the jeweller, and had them set in a ring the fac-simile of Mr Blook's, except that the initials inside are W. H. B.

'That was the *only* time I was ever swindled, gentlemen,' Mr Baker concluded.

A WONDERFUL SQUARE MILE.

If Mr Haywood's recommendations should ever meet with fulfilment, we shall hardly know ourselves here in London, and must buy a brand-new map forthwith. The City authorities, overwhelmed with the magnitude of the traffic, and the difficulty of providing new channels through which it may flow, some time ago instructed their engineer, Mr Haywood, to examine into and report upon the whole affair. He has done so at considerable length, and has given us exact facts and figures on a world of subjects previously known only in a vague sort of way.

It shews how nearly complete must be the absence of gardens in the City of London, that nearly one-fourth of the entire area consists of public way—carriage-way and footway. Even a back-yard is too precious to be left open: it becomes built upon by offices and warerooms. Where land is worth something like half a million sterling per acre (a million, in one particular instance), we can understand the strength of the motive which urges owners to make the most of every square foot of it. We have plenty of streets and lanes in the City; but they are too narrow, and do not connect sufficiently well to supply main arteries in adequate number. There are 913 thoroughfares of various kinds in this one square mile of area (for it is no more; although the *Metropolis*, as defined by the Registrar-general and by the Metropolitan Board of Works, covers the enormous area of 120 square miles). Of this large number, however, 311 are only wide enough for one vehicle; and of 117 out of the 311, we are told that they are *culs de sac*—mere alleys or courts blocked up at one end. Let us look at the places where the stock-brokers have their offices, within stone's-throw of Capel Court; let us read their names, and, still better, penetrate into them: we shall see that they are mostly little stuffy alleys, which would be occupied only by labourers in any other part of the metropolis. Angel Court, Copthall Court, Warnford Court, Union Court, Shorter's Court, Cowper's Court, Adam's Court, Crown Court, Change Alley, Tokenhouse Yard, King's Head Yard, Finch Lane—why, you could cover them all with a Brobdingnagian blanket! Here the stock-brokers—nearly every one of whom has his well-to-do suburban villa—crowd together in a dense mass, giving fifty or a hundred guineas a year rent per room. And not only stock-brokers; merchants and factors, commission agents and wholesale dealers of great wealth, have offices in many such narrow courts as those of which we are now speaking. They *must* (such is the theory) have their places of business near the Bank and the various Exchanges.

The strangest part, perhaps, of this alley-topography is, that there are 441 courts, &c. so narrow as to admit no vehicles at all; they are merely footways. Bringing Cocker to our aid, and adding these 441 to the former 311, we find that there are 752 public thoroughfares in the City of London so narrow that two carriages cannot pass each other abreast; and we know what *that* means, so far as the circulation of traffic is concerned. Of the fifty miles of thoroughfare (for such appears to be about the aggregate length) in this square mile of area, there may be a sort of fourfold classification. Thus—so many miles free from drivers' bad language, because there are no drivers there; so many disturbed by drivers' 'curses both loud and deep,' because there is no shunting-ground for passing vehicles; so many where the drivers are calm, if two lines of vehicles are steadily and uninterruptedly moving on, without any obstruction from carts and wagons stopping at traders' doors; and about seven miles of main thoroughfare broad enough for three or more vehicles abreast. Seven miles out of fifty give a very small ratio, shewing how few of our streets are broad enough for the requirements of trade.

No city in this world is more free from any visible wall, boundary, or limit. We can none of us tell when we are in the City and when out, so far as appearances go. London Wall is all very well as a name, but where *is* the wall? Shoreditch may have been, as the old topographers tell, a ditch outside the City wall; and Cripplegate, Aldersgate, Newgate, Ludgate, Aldgate, Bishopsgate, and Moorgate may have been gates in the wall—but where are these gates, ditch, and wall? Temple Bar claims exception; but even that does not belong to the real old City 'within the Walls,' which in that direction terminated at Ludgate. There is no wall. There are forty-eight inlets to the City, in the several forms of carriage-roads for vehicles, paved courts and avenues for foot-passengers, bridges, steam-boat piers, and water-side stairs—besides railway stations; and the corporate authorities have no means of ascertaining how many persons enter and quit the City every day, except by watching all these points. It was by means of this sedulous watching, continued for eight, twelve, fifteen, or even twenty-four consecutive hours, that those astounding numbers were obtained which have been noticed in a past volume of the *Journal*. Without troubling the reader to refer to it, we will mention that, in twelve hours of one day in 1865, there were (in round numbers) 4000 vehicles passed a particular spot in Aldersgate Street, 4500 at Barbican, the same number at Gresham Street, 5000 at Eastcheap, 6500 at Finsbury Pavement, 7500 at Bishopsgate Street, 8000 at Aldgate, 9000 at Holborn Hill (before the disturbance of traffic at that point by the works of the Holborn Viaduct), 10,000

Digitized by Google

at Blackfriars Bridge, 12,000 at Fleet Street, and—marvel of marvels—19,000 at London Bridge! On one day of twenty-four hours (not specially selected as being more or less busy than usual), 38,000 vehicles passed over the Thames at London, Southwark, and Blackfriars Bridges.

As there is comparative greatness in the great, we may be prepared to believe that the passenger traffic in the metropolis is still more wonderful than the vehicular—vast as the latter admittedly is. Mr Haywood tells us that on nine hours of one day in 1848 (8 A.M. to 5 P.M.), 315,000 persons entered the City; that on twenty-four hours of one day in 1860, the number reached the stupendous figures of 707,000, of whom 528,000 were between 7 A.M. and 7 P.M.; and that about three-fourths of the people came on foot, the remainder being in or on vehicles. In reference to foot-passengers only—those who walk on the side pavements—the following numbers were presented at eight of the principal inlets into the City, in one day of twenty-four hours: Aldersgate Street, 16,000; Finsbury Pavement, 21,000; Bishopsgate Street, 23,000; Blackfriars Bridge, 24,000; Temple Bar, 25,000; Aldgate, 29,000; Holborn Bars, 30,000; and London Bridge, 42,000. All these were persons who *entered* the City; and as about an equal number left it, there were 420,000 persons who walked into or out of the City at those eight arteries alone. But great as this throng is at the City boundary, it is still greater in the heart of the City itself; enabling us easily to understand how it is that Smith and Brown and Jones, or Jack and Bill and Dick, are always knocking up against one another. Just look at the significancy of the following figures. They relate to twelve hours (8 A.M. to 8 P.M.) of one day in 1867; and they include foot-passengers only, disregarding those who were riding in or on vehicles. Particular spots were selected, in the following thoroughfares, and the number of passers-by counted: Walbrook, 17,000; Throgmorton Street, 18,000; Threadneedle Street, 22,000; Lombard Street, 30,000; Newgate Street, 33,000; Leadenhall Street, 36,000; Cornhill, 44,000; Fenchurch Street, 46,000; Fleet Street (near St Bride's Church), 62,000; Poultry, 75,000. The busiest spot in the City—perhaps in the world—for foot-traffic, is the north side of the Poultry; it overpowers the south side in the ratio of about eight to seven. Along that wonderful foot-pavement of nine feet in width, there pass by more than *a hundred persons per minute* in a continuous stream for twelve hours! The average is above a hundred; there are certain periods of the day when the number very much exceeds a hundred.

There are certain very curious inequalities in the number of passengers on the two pavements of the same street. Why, for instance, are there three times as many passengers on the north pavement of Throgmorton Street as on the south? Will Echo tell us? or must we ask the sixty-five firms of stock-brokers and stock-jobbers who have their offices in that favoured street? And why is the north pavement of Lombard Street trodden by fifty per cent. more boots and shoes than the south? Mr Haywood very fairly points out that passengers cannot be expected to avoid jostling one another, on pavements often only four to five feet wide (Wood Street, Cheapside, has actually got less than a yard for the width of each pavement, at one part): 'Two adults of average size cannot pass each other, if walking straightforward on a three feet six inch footway, without touching; and even when it is four feet wide, they, as a rule, should nothing prevent it, do not pass without one of them stepping into the carriageway, where vehicles interpose; or, if the wheels of carts overhang the footways (a frequent occurrence), they with difficulty avoid jostling each other. Such footways are therefore highly inconvenient, even in dry weather, but are still more so during rain; for an average umbrella is, when opened, three feet six inches in diameter. And it should be borne in mind that, upon the average, there are quite three days in the week upon which rain falls, more or less, in London.' He considers it surprising that accidents are not more frequent than at present, in some of the busy narrow streets where the vehicular and the pedestrian traffic make up together an almost hopeless muddle of excited men and horses.

'Men,' we say; but Mr Haywood is more correct, for he says 'persons.' Women have not much to do in the City; but still they are to be found there. Mrs Brown goes twice a year to receive her dividends. The wives and daughters of wealthy cits go to be tempted by the jewellers and the mercers. Mothers are taking their children to the Epping train at Bishopsgate, or the Gravesend train at Fenchurch Street, or the Greenwich train at Cannon Street, or the Crystal Palace train at London Bridge. And large numbers of young women wend their way into the City, to the warehouses in which ready-made apparel, as well as textile and needlework goods, are stored in vast quantity. Still, the rougher sex preponderate notably over the gentler. Observations have led to the conclusion that there are about five times as many males as females to be seen in the City. Mr Haywood points out, as delicately as he can, that, however much our streets may be graced by this addition to the pedestrianism of the City, still there are certain disadvantages, seeing that 'females occupy more space, move more slowly along thoroughfares, accommodate themselves with less facility to the exigencies of the traffic, and, upon the whole, impede it more than the males do.' Mr Haywood's special observations were made, we believe, at a time when crinolines were in high favour, and when women certainly did 'occupy more space' than men; and although the more slim girl-of-the-period costume of the present day is less amplified, still feminine dress is an important matter in reference to street-traffic—especially if skirts are allowed to drag along the ground.

The feminine element is especially concerned in one particular feature in City pedestrianism: we mean, the danger of being run over. It is all very well—or rather, it is all very easy—for small wits to make a joke about 'only an old woman knocked down;' but it is no joke. Men and women, boys and girls, all are in danger: women and girls the most, because of the nervous flutter that so often seizes hold of them at such a time. The amount of crossing from pavement to pavement in the City is almost inconceivable; and every such transit is attended with a certain amount of peril. Mr Haywood selected five of the most momentous of these places of crossing; he appointed careful watchers to count the number of persons who crossed the streets from one foot-pavement

Digitized by Google

to another during the daylight hours, and he added an estimated small number for the night hours. Let us look at the figures, and bear as well as we can the visions of being 'run over' which they suggest. 1. We take the busy corner at the east end of Cornhill, where Gracechurch Street, Leadenhall Street, Bishopsgate Street, and Cornhill meet; and we find that forty-two thousand persons crossed the roadway on foot in one day, to get from one pavement-corner to another. 2. Then comes the still busier corner where Lombard Street, Fenchurch Street, and Gracechurch Street meet—the very heart and centre of the old, old City of London, in days when the region around the present Bank of England was almost out of town; here the number swelled to forty-six thousand. 3. Still more thronged is a corner which once belonged to the 'City without the Walls,' where Ludgate Hill, Fleet Street, Farringdon Street, and New Bridge Street meet; here the persons who crossed the road from pavement to pavement in one day were found to be fifty-six thousand in number. 4. Going again eastward, we know that there is a certain statue of King William IV. at a spot where Gracechurch Street, King William Street, Cannon Street, and Crooked Lane meet. The angles are many, and the necessities of pedestrian traffic require that the hazardous transit across these several roadways at that spot should be made in many different directions. Thus it is that the number swelled to sixty-four thousand. 5. But now comes the giant. There is a spot which is assuredly one of the sights of London: a sight which, whether for vehicular or pedestrian traffic, has probably no equal in any other part of the world. The Bank of England, the Royal Exchange, and the Mansion House, are all in sight one from another; and the open space between them is a centre from which nine thoroughfares radiate — namely, Cornhill, Threadneedle Street, Princes Street, Poultry, the new street (not yet named) leading to Blackfriars, Walbrook, Mansion-house Place, King William Street, and Lombard Street. Now people want to cross from every one of these corners to every other; and it often requires no little skill in steering to determine how many tacks must be made in order to effect the passage safely. The authorities have judiciously constructed three circular paved standing-places, with lamps and posts, at certain spots in the intermediate space; but even with this aid, the wayfarer on foot should have eyes in his poll, eyes all over him. Will the reader believe that more than eighty-four thousand persons cross the carriage roadways on foot, in this wonderful spot in a day? We have Mr Haywood's authority for the statement.

Let it be remembered that these almost incredible numbers of persons cross roads which are from morning till night jammed with vehicles. Talk of Scylla and Charybdis! they are nothing to it. If eighty-four thousand people cross where ten thousand vehicles are passing, there are a myriad chances per day of somebody or other being run over within easy sight of the Duke of Wellington, as he sits bestriding his horse in front of the Royal Exchange. A crossing-passenger never knows when he is safe. If he dodges behind the four-wheeler No. 999, he comes full butt upon Hansom No. 1001. If he escapes a *Favourite*, he finds Rawlings's Ginger Beer running into Pickford, and both of them likely to run into him. Then comes a *Royal Oak*, then Borwick's Baking Powder, and then an alderman's carriage, making a very close shave of it. Next we find an agitated old lady running into the middle of the road to catch a Kingsland 'bus; she catches a Greenwich *Nelson* instead, and is rewarded by the objurgations of the conductor, in addition to her own terrors. A City policeman frantically telegraphs with outstretched arms, to denote what a driver may or may not do; but he can scarcely prevent Sally and her three little brothers from being run over during a daring transit to the opposite pavement. Your real City clerk has acquired a knack of wriggling and worming between the vehicles in an extraordinary way, forming a pattern something like that of ladies' crochet or tatting—a knack not yet acquired by West-enders. Fortunately, there are no fascinating glittering shops at the corners of this extraordinary thoroughfare, to attract idlers and loiterers; every one is intensely busy, mind and body being equally determined in getting across to the other side as quickly and safely as possible; else the perils would be vastly increased. It must also be admitted that the City authorities do their best (under the provisions of an act of parliament obtained for the purpose) to keep the main streets clear in the daytime of wagons with a long string of horses, slow-going vehicles, and wagon-loads of exceptional length, breadth, or height.

Mr Haywood sees nothing for it but the construction of a new East-and-West Street, of great length and vast costliness. He admits that new railways and new bridges give improved access to the City; that the construction of the Holborn Viaduct and the removal of Middle Row are good things; that the approaches to the new Meat Market have greatly improved the neighbourhood of Smithfield; that the crescent at the west end of Ludgate Hill lessens the crush at that busy corner; and that the widening of certain portions of Newgate Street, Leadenhall Street, Fenchurch Street, Upper Thames Street, Ludgate Hill, Poultry, Threadneedle Street, Basinghall Street, and other thoroughfares, is gradually furnishing improved arteries for traffic. But he tells us we must have a new street. It is to begin at the corner of Giltspur Street and Newgate Street, so as to form a prolongation of the new Holborn Viaduct. Sweeping away Christ's Hospital and the Money-order Office, it will cut across Noble Street, Wood Street, Aldermansbury, Basinghall Street, and Coleman Street, to Moorgate Street, avoiding the numerous churches as best it may. Then, absorbing portions of London Wall and Wormwood Street in its width, it will cut diagonally across a huge mass of streets, the very names of which are only imperfectly known to West-enders; and at length join Whitechapel and the Commercial Road near the church. But oh, the cost! The street would be about a mile and a quarter in length, and would dash through buildings every inch of the way. We do not find in any part of Mr Haywood's Report an estimate of the probable amount to be paid to land-owners, leaseholders, and the occupiers of property. What the Post-office authorities have paid for the lately cleared space in St Martin's-le-Grand, to be occupied by an extension of their premises, would make one's hair stand on end even to think about; and that would be a mere drop compared with the mile and a quarter of new street. Nevertheless, Mr Haywood says we *must*

Digitized by Google

do something of the kind, cost what it may. There are 3,000,000 of us here in 1869; there will be 5,000,000 in 1899; and we shall be all blocked up unless new arteries are provided.

AMERICA'S NEW HIGHWAY.

IN TWO CHAPTERS.—CHAP. II.

Getting to Uintah about five in the morning, we found a coach just about to start for Salt Lake City. It was, however, full, and we had to wait till eleven o'clock for another coach. At Uintah, and the whole way to Salt Lake City, there are delicious streams of running water, and nice patches of vegetation and cultivation. There is a fine bold mountain above Uintah, which, looking more green than the mountains we have hitherto seen, is refreshing to the eye, and suggests the origin of the water-rivuleta. The distance to Salt Lake City is about thirty miles, over a very rough and heavy road. From it are obtained some beautiful views of the Great Salt Lake, peacefully ensconced by the surrounding mountains. We passed several wagons, each having in them usually one man, two women, and a few children. There is a quiet, English-country look about the people; the chief thing we notice about the women being that they avert their eyes from us as we pass along, or pull up at some roadside stopping-place. There are magnificent orchards, and luxurious gardens with any amount of fruit in them—apples, peaches, and grapes. Salt Lake City does not become visible until we get within a few miles of it; but the first view of it is impressive and charming to a degree. There it lies, at the foot of the hills, embosomed among green trees and luxuriant gardens, giving it a fairy sort of appearance somewhat like that which one imagines to have distinguished ancient Babylon. High above all the houses is the great Tabernacle, a huge, ungainly-looking object, of an oval shape, like a mere patch of white rock. This building is capable of seating ten thousand persons. A curtain is usually drawn half-way across it, so that only half of it is used. It was a Sunday afternoon when we got into the city, and the people were then coming out of the Tabernacle. A nearer view of the city does not belie its distant appearance. There are goodly buildings in it, while fresh streams of water run along the sides of every street. Most of the houses are surrounded by gardens, and acacia trees line the streets. The city boasts of over twenty thousand inhabitants, of whom one thousand are 'Gentiles.' The whole territory of Utah is said to contain a population of one hundred and twenty-five thousand, of whom not more than five thousand are 'Gentiles.' A year or two ago, 'Gentile' traders began to come in in such numbers as to threaten to put a stop to Mormon exclusiveness, so the 'Children of Zion' defended themselves by setting up a gigantic system of co-operation. According to the rules of the church, Mormon must only deal with Mormon upon penalty of ecclesiastical censure, if not exclusion from the church. Over each Mormon store is set up the token of co-operation. It consists of the words, 'Holiness to the Lord,' underneath which is represented an eye—the All-seeing Eye—and below are added the words: 'Zion's co-operative mercantile institution.' The stores seem to be good, and well supplied. Abundance of fresh fruit is exposed for sale—the product of the fertile gardens around. On the north and east, the mountains approach near the city, looking grand and rugged. In the latter quarter, a few miles from the city, is a camp of United States' troops, kept there colourably to protect the city from the Indians, but really, probably, to watch the Mormons. The political status here is somewhat singular. Utah, being a territory, has a governor appointed by the United States' government, and the taxes are collected by officials similarly appointed. The *real* king, however, is Brigham Young. The system is a complete and powerful hierarchy. Brigham Young is president of the church, and associated with him are two counsellors, or vice-presidents; and then there are the twelve apostles. These together make up the governing body of the church, and, in fact, of the state as well. The police, municipal arrangements, and territorial government, are all in their hands; and, if rumour speaks aright, are all ordered by that master-mind of Brigham's. The Mormons place the most absolute and perfect trust in this man, whose talent for organisation must be immense. The municipal affairs are said to be managed in a highly efficient manner, and the police regulations to be equally good. Brigham has in one respect directly defied the officers of the United States government. He has refused, when called upon to do so, to send in a statement of the church revenues for the purposes of taxation; or, which is the same thing, he has sent in a return which is absolutely ridiculous. It is said that the governors heretofore have been mere dummies, and, in fact, that the Mormon system has never yet met with any serious opposition from the central government. But it is not supposed that this state of things can last much longer. With regard to the Mormon faith, it embraces both the Old and New Testaments; and, while it rejects the doctrines of the Trinity in the form which medieval scholasticism has handed down to us, it strays still further from the purer faith of early Christianity. Still it accepts of the divinity of Christ, as well as His propitiation for human sins. The Father and Son are two Persons in one God; but they are both *material* Persons *with* 'body parts and passions.' The Holy Spirit, on the contrary, is a Spiritual Essence proceeding from the Father and Son, and is omnipresent, and pervades all space. Superadded to their faith in the Bible, is that in that singular mass of incohesive absurdities known as the Book of Mormon. This Book is put on a par with the Bible, as being a later revelation from God. Together with this is combined a belief in modern revelations from God, the major part of which refer back to the celebrated Joe Smith. Under this head the institution of polygamy was introduced. Some of these revelations appear to come with singular appositeness—in fact, just ready-made to meet the wants of 'Saints.' Amongst these may be mentioned the revelation with regard to the incorrectness and falsity of the Mosaic cosmogony. The American pride of the people is flattered in others. Our Saviour has been witnessed upon this continent; while it was here that the Ark was built, which, during the one hundred days it was afloat, ran before a westerly wind; until, at the termination of the Deluge, it was found upon Mount Ararat. The people seem to believe firmly in their creed, for which they are

Digitized by Google

content to make real sacrifices. They are, I should say, below the average in intellect; but, at the same time, they possess moral qualities which cannot but command our respect. That they are most industrious, frugal, and sober, is admitted on all hands. It is part of the directions of the teaching of the church that they should be so, for the necessity of moral virtues is one of her dogmas. And, for the fruits of all this—there are *only four* drinking-bars in the city; and, during the few days I was there, I never saw a drunken person, or heard a blasphemous oath, though I mingled in the knots of young men at the corners of the streets, from whom one would expect, in accordance with all experience, such vices. During all my wanderings, I have never yet witnessed such a high standard of morality in these matters as at Salt Lake City. I know that I should not probably be in a town half the size, either in America, or in the colonies, or in our respectable old country—in fact, wherever the English language is spoken—for five minutes, before I should have either ocular or aural demonstration of those failings, the absence of which is here so marked. Another of our vices, of which society does not permit the mention, is here almost unknown; while the most insidious of the diseases which afflict the human frame is absolutely unheard of. These are great facts; and, while orthodox Christians may well hold up their hands in righteous horror at the fund of idle superstition which enchains the ignorant and simple-hearted Mormon, they will do well to give him credit for his moral virtues. But Mormonism has its dark side as well as its fair. Like all fanaticisms, it places but small value upon human life, when that life stands in the way of its purposes. Gentiles have come to Utah, and got into quarrels with Mormons, and been shot in cold blood. It is stated that at least eight murders of this nature have been committed within the last few years. It is probable that some of these were, either remotely or directly connected with offences, or supposed offences, bearing upon 'the peculiar institution' of Mormonism and its concomitants. Jealousy is a passion directly encouraged by the Mormon system; and it is not the first church which has imposed the penalty of death upon offences which in a natural state of society would assuredly thus be exculpated.

With regard to 'the peculiar institution,' it would appear that the majority of Mormons have not more than one wife; for no person is allowed to marry a second wife unless he be known to the church authorities to be faultless in his every-day relations of life, honest and upright in his dealings, and a good member of the church; and last, but not least, unless he be able to shew that he has means for the support of his additional spouse. I don't know—nor does any one else that I have heard of—how many wives the great Brigham possesses; but I have heard the number variously stated at from fifteen to twenty-five. Some of the other church dignitaries have, I was told, as many as twelve wives; while ordinary well-to-do people have two or three. It is the system of polygamy which prevents the entrance of Utah as a state into the Union, one of the amendments to the constitution of the United States being to the effect that polygamy shall not exist in the United States. Otherwise, Utah has a sufficiently large population, and would doubtless be admitted as a state. It is said that Brigham Young is anxious for this admission, and that he maintains, moreover, that the amendment in question is contrary to the fundamental constitution of the Union, as being an interference in a matter of religion; for polygamy he claims to be part of the Mormon religion. Be this, however, as it may, the future cannot fail to be watched with interest; nor can there be a doubt but that, whether for weal or for woe, the little primitive community in Utah will have ere long to succumb before the advancing tide of nineteenth-century civilisation. Moreover, there is on the subject of polygamy a schism at the present time. Joseph Smith, the son of the prophet, preaches against the practice, and has a certain following, who are nicknamed 'Josephites,' and against whom the invectives of the orthodox are directed. It is said, too, that many of the young men are opposed to the system; while women have been known to speak of it in the bitterest terms. 'Gentile' writers have been accustomed to lay stress upon what they term the 'dejected' appearance of the ladies of Salt Lake City. I don't know that too much may not have been made of this; for the absence of the bold, and really unfeminine countenances which we have grown used to meet in our modern towns, may have contributed to produce in their minds the notion of female dejection. The women did not strike me as looking so much dejected as shy, and reminded me in their ways emphatically of the country population in our rural districts in England. But that the system of polygamy engenders domestic broils and bickerings, there cannot be the least doubt; and the fact of men having two or three separate entrances to their houses, and, in fact, in many cases, two or three separate houses for their wives, is not suggestive of domestic peace.

Salt Lake City is suffering at the present time from a commercial depression, caused, in some measure, by the diversion of the through travel to California, which, before the opening of the Pacific Railroad, used to pass through it. A branch railroad is now in course of construction, which, it is hoped, will serve to right matters.

But, to return from this digression to the Pacific Railroad. From Uintah the line passes through a gorge, called 'the Devil's Gate,' thence up the narrow valley of the Weber, with its refreshing patches of cultivation, and grand red rocks overhead. 'Echo City' is the principal station of this district, which is a mining one. Soon after this, it passes through a country where there are coal-mines, and leaving Utah, wends its way through the neighbouring territory of Wyoming. We have now left the mountains, and with them all traces of vegetation. There is again the old sage bush, and the alkali dust of the desert. One or two deep sluggish streams, the water of which looks green and foul, and is, I believe, scarcely fit for drinking purposes, are crossed by the track. Close to one of these, on a small patch of meagre vegetation, was an encampment with ox-drays. I also noticed some cattle being driven over, I suppose to California. The time consumed in the transit across the plains in this manner is very considerable, and consequently trying to the temper of those undertaking the journey. The most desperate quarrels have been known to take place, and murder has sometimes ensued. A man who had himself driven over cattle from the Missouri River, in the early

Digitized by Google

days of gold-mining, described to me a somewhat amusing incident to which he was witness. Two partners who were utterly unable to settle their differences, had come to a halt in the middle of the desert, and had determined upon then and there dissolving partnership, and making a partition of the property. They carried out their intention so literally as to saw the wagon into two pieces straight through the middle, one of them going off with the fore, and the other with the hind wheels.

We were now commencing the fourth day of the railroad journey, and on this day we passed the highest point on the whole line, being 8424 feet above the sea-level—the highest point reached as yet by any railroad in the world. The ascent to this point is very gradual, and presents few engineering difficulties. The land bears an even surface, interrupted only by patches of red rock. There are no peaks visible, and nothing but the light mountain air to indicate the great height at which you have arrived. Just below is a forest of pine trees, which serve for supplies of fuel for the line. Sherman, accordingly—for so the summit is named—is a dépôt for wood, and it contains a few stores and bar-rooms. From Sherman, the course of the railroad is one unbroken line of descent, the first portion of which is very rapid. There are many walls hereabouts, built to protect the track from the winter's snow-drifts. The next station of importance is Cheyenne. This is a real town, and decidedly the most important place we have passed through since leaving Sacramento. From hence stages start for the important and rapidly rising town of Denver, in the state of Colorado. Here we altered our time, taking Omaha clock-time. This is the second alteration of time on the journey—that at Promontory being the first. Soon after leaving Cheyenne, we passed an emigrant's train, or rather a goods-train with emigrant-car attached. These people were, to use a nautical expression, eleven days out from New York, and, at this rate of progression, would take at least eighteen days from ocean to ocean. As we proceeded, the country improved rapidly, and there were cattle-stations and patches of cultivation. In the distance, on our right hand, we could clearly trace the course of the river Platte by the trees on its banks. Next day, we were going over the rolling prairies of Nebraska, and had approached close to the Platte, and our country had come within the influence of its fertilising irrigation.

From about sixty miles west of Omaha, the rolling of the prairie ceased, and we were passing through the richest and most luxuriant pasture-country conceivable. Herds of cattle on either hand gladdened our eyes; while little boys passed down the cars offering us of the riches of the land—fresh milk and boiled eggs. The track had improved, and so had the pace of our train. All looked cheerful; and as we hastened along, feasting our eyes on the growing maize or the tall grass, I think we should all, if we had been asked, have said that this was the pleasantest two hours of our journey. We arrived at Omaha at about 1 P.M., on this the fifth day of our railroad journey. Thus, including the passage from San Francisco to Sacramento, the journey to Omaha had occupied nearly five days. The time of the journey will probably be soon reduced to four days, and possibly something less; but I think it will not fall below that point, until considerable improvement is made in the track. The present line is very bad in places, especially on the Union Pacific. I did not see much to complain of on the Central Pacific, and this is the more creditable to the latter company, considering that they have had greater difficulties to contend with.

Omaha is situated upon high land on the right bank of the Missouri River, being something less than one thousand feet above the sea-level. From this point, New York is reached in about three days. There are a great variety of routes. Two rival companies compete for the traffic to Chicago, from which place there are four main lines of travel to New York. The Southern and South-eastern States are reached by taking the rail from Omaha to St Louis, which place may also be reached by steamer down the Missouri River. Omaha is, as I have stated, the present terminus of the Pacific Railroad; but it is uncertain how long it may remain so, as a loop-line proposes to cut it off from the south; while there are other projects afloat which may divert the principal line of travel.

I am not now going to expatiate in hackneyed phrases upon this perhaps the greatest of Yankee enterprises. I wish simply to say that it is one of which the republic has a right to be proud. It is one, it is true, which is incomplete in its details, and at which orthodox railway constructers might well turn up their noses. On our English system of railway construction, such a line would, even if projected, have remained probably incompleted for years to come. The cheap and rough railroads of America are the only ones suitable for such a work. Rapidly, and, as we should say, carelessly constructed, they are nevertheless the proper railroads for a new country. One great advantage they possess is, that an error in the original route is comparatively cheaply corrected. It is probable that an error has been committed in the choice of the route for the present inter-oceanic line. It is stated that to the north of the present route a railroad may be constructed without rising to any higher elevation than five thousand feet, while to the south of it a line is being pushed forward, which is asserted to possess considerable advantages over it. Thus, in a few years' time there will probably be three Pacific railroads, and the public will patronise the best. The present I regard as in some senses an experimental line; and though the experiment gives out brilliant promises as yet, it must be remembered that a winter has not yet been passed, so that the severest trial of the line remains to come. Whether the present line stand the ordeal or not, one can safely predict that there will ultimately be permanent railway communication all the year round between the two oceans. To America herself, this fact is fraught with important consequences. Of these, what is known as the 'Chinese question' is the most important. American civilisation has been suddenly brought face to face with the civilisation of hundreds of years ago. The opening up of the line of steamers in the North Pacific introduced California to the eastern world: the opening up of the Pacific Railroad will introduce the whole of America to it. Englishmen and Americans have often talked about opening up China to Anglo-Saxon enterprise. China has returned the compliment, and opens up America to her enterprise. Western life has been suddenly brought face to

Digitized by Google

face with eastern life. 'The way of the kings of the east has been prepared.' It would seem as though the tide of human life, which has for centuries been flowing westward, were now destined to meet that counter-current, which will sooner or later turn it eastward again. We have long known that the Chinese abound in California. The monthly steamers come over crowded with them, bringing from eight hundred to a thousand each trip, and the cry is still 'They come, they come.'

A contract has just been made for the supply of Chinamen to work the plantations in the Southern States; and the Union Pacific Company are stated to be about to employ them in bridging over the Missouri River. Other companies in the Eastern States are said to be also meditating their employment. Of course, the attraction is cheap labour, the Chinaman being rich on one dollar a day, while the American labourer demands two or three. The trades-unions are scared, and have already taken up the question. They have determined upon attempting the absolute exclusion of Chinese labour. Masters who employ Chinamen are to be struck against. It is probable that these singular and peaceful Asiatics are destined to meet with no small amount of opposition, and even of persecution and physical suffering, in their attempts to open up America and compete with American labour. But no amount of rebuffs will stop a great national movement, as this Chinese immigration appears to be, and the republic will be untrue to her first principles if she attempts to choke it down. I was much struck with the bitterness of the prejudice against the Chinese which I heard expressed in California from men from whom one would have expected larger views. We, in our Australian colonies, to which the Chinamen find their way in large numbers, accord them equal rights; while, in America, an attempt is being made to prevent their naturalisation. That this attempt will be unsuccessful, I have confidence enough in the probity of the American people, as well as in the sacred cause of human liberty, to feel confident. But the strength of the feeling which dictates it is shewn by the rejection of the Fifteenth Amendment by California. Henceforth, American citizens had better make up their mind that there will be a new 'element' in the country. The Chinese 'element' will, in the future, take its place beside the Irish, the German, and the negro element; and it will need, like these other elements, to be Americanised. Personally, I do not believe that there will ever be a total extinction of any of the elements to be found in the States; but I do look forward to the time when these shall be so mollified as to possess a social and traditional rather than a political importance.

Possibly, before this meets the eye of the reader, the scheme of a line of steamers to run between Sydney and San Francisco may have been developed. The journey across the Pacific Ocean is some eight hundred miles shorter than the old Panamá route, while the danger of yellow fever will by the new route be avoided. The transit across the Pacific will be accomplished in about twenty-five days, while the fares will be considerably cheaper than by the P. and O. route. Ever since the break-up of the Panamá line, the want of a new steam-service to England has been much felt in the colonies, especially in New Zealand. It is probable that the proposed line will call at Auckland, or another of the northern ports of New Zealand, and supply the much required communication. Should this be the case, there is no doubt that the new company will meet with considerable patronage in that colony.

A LIMITED HORIZON.

IN FIFTEEN CHAPTERS.

CHAPTER VII.—THE ROMAN ENCAMPMENT.

Belle had noticed Lalagé's failing spirits, but how to remedy them she hardly knew. There were no outer resources to turn to, and poor Lalagé had few inner ones. She liked reading, but only pretty well; it was not to her the all in all that it is to some women. And work she hated intensely, as most people do who have never felt the necessity of it burning into their souls, or have not been obliged to do it for the comfort of others. She was just an idle, gay butterfly, with wings that had not yet gained their full strength, but were just now drooping and useless, almost a burden to herself.

Life seemed so earnest, and yet so empty out there in the shadow of the eternal, desolate hills.

The sisters were sitting together one October evening—the evenings had begun to grow terribly long—Belle reading, and Lalagé gazing idly into the fire. Presently Belle laid down her book.

'Have you ever been to that Roman encampment, about which Miss Verey was talking?' she asked.

'Yes,' said Lalagé wearily; 'I have been everywhere, I think. It is very curious, but such a long way off, I did not get further than the bottom of the hill on which it stands.'

'I wish you would go with me one of these last fine days,' said Belle. 'Would it be a good place for a picnic?'

'A picnic here!' said Lalagé; 'why, who could we ask? But, of course, I should like going with you very much indeed;' and she brightened up.

'Suppose we have the Vereys,' said Belle with a smile, 'just for the sake of society?'

'Very well,' said Lalagé. 'I feel convinced that I and that wicked woman shall fall out, but I shall like it all the better for that.'

She grew quite animated and like herself that evening, making arrangements for the expedition, and laughing over her intended skirmishes with Mrs Verey.

'We can take the pony-carriage, and get two of those horrible old flies from the *Raven* which always make papa so cross. Let me see: I don't suppose that more than seven Vereys will come; ourselves will make nine; and O Belle, do ask Mr Mitchell, because that cross old thing does dislike him so.'

'Well, I suppose we can hardly leave him out,' said Belle slowly.

'That will be four for each fly, and two for the pony-carriage, and the hampers equally divided. And James may just as well be on one of the boxes, he would be so useful in packing up. Of course we will send all the vehicles back as soon as we get there, and they can come for us again about five in the afternoon.'

'And at what time shall we start?'

Digitized by Google

'Would ten be too early? O yes, I suppose so. Well, twelve must do, and we can have luncheon about one.'

'And one of "those dreadful flies" will fall to my share,' said Belle smiling.

'Yes, and three Misses Verey too, I am afraid,' said Lalagé. 'I wish you would learn to drive, but you won't; so I must take charge of the wicked woman in the pony-carriage, and Mr Mitchell must go in the other fly with the rest of the party.'

'Very well,' said Belle; 'and we ought to go very soon, before the fine weather leaves us. Would not the day after to-morrow do?'

'O yes,' said Lalagé, and sat down to write invitations.

Every one accepted; only, as Lalagé had anticipated, two Misses Verey remained at home to be with their father. The big curate came up to the Hill House, in a state of bewildered ecstasy, to thank the ladies for being so merciful as to give him a clear day before the picnic.

'Otherwise,' he said, 'I could not have come; and I must not stay here, for I have to get two days' work into one: no time for croquet, I'm afraid, Miss Lalagé.'

'Miss Lalagé!' The familiarity of the address a little startled the owner of the name, but after all it was only natural, she argued, he had heard her Christian name so often. As for the curate, he was thrown into confusion as soon as he heard his unwise lips utter that magical name; but as he swung up the drive, he could not but feel the happier for its utterance; he had in no way been reproved for it, and might even, he thought, venture upon it again.

Thursday came, bright, and sweet, and placid, in the calm dying glory of October, and at twelve o'clock the whole party was assembled before the Hill House.

Everybody being ready now, Lalagé pounced upon her 'wicked woman,' and carried her off to the pony-carriage. The man who usually sat behind was on one of the boxes, his place being taken up by hampers, so these two were quite alone.

'I hope you are not afraid of trusting yourself to me?' said Lalagé, when they had driven on in silence for some minutes. 'I am not very fond of driving, but I think I quite understand it.'

'I am not afraid,' said Mrs Verey grimly; 'it is a theory of mine that we are just as safe in one place as another.'

'Yes, of course,' said Lalagé; 'but then again there is such a thing as courting danger, "tempting Providence," as people say.'

She spoke in all courteousness. It had been very well talking over her intended defiance of this lady in her own drawing-room with Belle at her side; but the sole charge of entertaining her during this *tête-à-tête* drive was a very different matter, and one in which there was only weight and gravity.

After a pause of some length, Mrs Verey spoke again.

'I am very glad of being alone with you, Miss Hesketh,' she said; 'there are a few words which I feel it my duty to say to you; it is quite on my conscience that I have not made an opportunity for doing so before.'

Lalagé rapidly ran over in her mind a long list of questions as to what could possibly be the cause of Mrs Verey's laden conscience, but was in no way enlightened; so she only said: 'We are quite alone now.'

'Yes,' said Mrs Verey; 'and I dare not let this chance slip, lest a neglected opportunity should hereafter rise up against me. It is about Mr Mitchell, Miss Hesketh.'

'About Mr Mitchell?' repeated Lalagé blankly.

'Yes, about Mr Mitchell,' reiterated Mrs Verey, and she spoke more quickly, and her reddening face almost startled Lalagé. 'I hear from my servants that you are almost always about with him, and it is my duty to warn you; and you shall hear me, you shall hear me!' she almost screamed, as Lalagé's face, white with hardly suppressed passion, turned towards her.

That lifted voice did for the girl what her own efforts could scarcely have accomplished; she *would not* get loud and angry like this woman. She turned away her face again, and Mrs Verey went on.

'You are always about with him, I hear from good authority; and do you think he means anything, I want to know? Do you think he really means anything? What are you better than other girls that he should not throw you off as he threw them off, break your heart as he broke theirs! And because I warn you, wishing to save you, you turn upon me.'

Then, for the first time, Lalagé spoke, forcing her voice to calm utterance, though even in her own ears it sounded strange and unnatural.

'I do not believe one word you have said; there must be some mistake,' she said. 'I believe Mr Mitchell to be a religious man, more so than most people,' she added, suppressing the 'slanderers and talebearers' that rose to her lips; 'and as for all you have said about myself, I must tell you that it shall in no way influence my conduct. Mr Mitchell is a personal friend of my sister and myself.'

'In no way influence your conduct?' retorted Mrs Verey in her heated way. 'Is it of no consequence to you that your conduct is the talk of all Grimswold?'

'And what is all Grimswold?' asked Lalagé scornfully. 'A handful of servants, and poor people, and—you. Besides, again, I must say that I do not believe you; people, that is you and your servants, cannot talk about me in the way you mean, for I have done nothing to deserve it.'

'Twice you have given me the lie,' said the infuriated woman coarsely; 'and yet I could give you the proofs of that man's perfidy.'

'If they were verbal proofs,' said Lalagé, 'I would not hear them; if they were written proofs, I would not read them. You have insulted me grossly,' she went on with a sudden blaze of passion, 'and you must never do so again—never speak to me on this subject, for I will not endure it.'

Mrs Verey lifted up her voice, but Lalagé interrupted her.

'If you say one more word to me about all this,' she said, 'I will jump out, and leave the reins to you.'

Mrs Verey could not drive, and the girl's face was determined enough for anything; so she thought it best to close the matter with a surly: 'As you please; I have done my duty.'

Digitized by Google

Only once did she break out again, just before they reached their destination.

'Where are my girls?' she asked.

'Three are in the carriage with my sister,' said Lalagé; 'the other three with Mr Mitchell.'

'O my poor lambs!' said the mother. 'If I had only known, I would never have allowed Mr Mitchell to be shut up with them alone all this time without me.'

'You need not return in this way,' said Lalagé in a tone which gave distinct assurance that she would by no means be allowed to do so.

This drive was almost unendurable to her: she could not bear the unavoidable vicinity of her foe. For a disagreement of any sort, surely few fields of battle can be worse than a pony-carriage; that 'can't-get-away' feeling is so dreadful.

At last they arrived at their destination; but there were still some minutes more of endurance till succour, in the shape of the *Raven* flies, should arrive, for Lalagé had driven almost fiercely, and had the lightest vehicle.

When the big curate came to help them out, she held out her hands to him with a show of eagerness, in a mute defiance of Mrs Verey, who got down on the other side unassisted. They had agreed to lunch at the foot of the encampment, so here they had the cloth spread; and whilst James was busy with the hampers, they walked round the hill, waiting to ascend it until their repast was over. Lalagé was in a silent rage. She had thought that the very loneliness of this place made it free from human bitterness, though it might be somewhat desolate, but her foot had trodden on a nest of vipers such as she had never known in her London home, and their venom made all the air poisonous to her.

She was too just and liberal to visit her anger towards the mother upon the children, so she tried hard to make things pleasant to the Misses Verey; but they gathered together like frightened sheep, and had nothing to say. They avoided Lalagé, for any contiguity with the curate was evidently tabooed, and the curate was always by her side. She was glad of it. It was an opportunity of openly taking his part before this woman, and of shewing, too, that her words had in no way daunted her.

Thus, with the petty thoughts of To-day surging through her mind, and destroying all its calm, she stood on ground where, probably, in the distant Long-ago the flower of English bravery lifted up fearless hearts to the God of battles. But that was Past, and this was Present; so the living dog swallowed up the dead lion.

'Two armies—Charles I.'s and Cromwell's—lay here opposite to one another for some time,' said the curate; 'but I don't know if they came to actual blows.'

His words conveyed no idea to silent, gloomy Lalagé: he could not but notice her changed manner, and wondered what caused it. 'Perhaps she is unhappy. Ah, I am unhappy too!' he thought in his tender sympathy, and the only difference he made was to be more gentle, more watchful of her than ever.

All through luncheon, Lalagé sat in angry silence; whilst Belle wondered, and did the honours, and talked to Mrs Verey. Only once she joined in the conversation, breaking in abruptly.

'Beauty is deceitful and vain,' Mrs Verey was saying.

'Then why was it created?' Lalagé said. 'Ah, I think I like beauty and vanity better than age and wisdom.'

Then, the meal being over, she got up and walked away, making a pretty picture against the grim hill-side, as she moved along in her offended dignity. Her muslin dress was looped up with broad blue bands, shewing puffings and frillings on the petticoat below; and what with her light gold-coloured hair, small hat, and floating veil, she looked the very personification of the youth and beauty against which Mrs Verey was inveighing.

The curate, having finished his uncomfortable and dejected repast, got up and followed her shortly, and the Misses Verey sat silent round their mother and Belle. It was an awkward pause; and, but for the way in which her previous 'duty' had been received, Mrs Verey would probably again have relieved herself of the burden that lay on her conscience; but, happily, Lalagé's lesson had sufficed.

The girl wandered on round the hill-side till a sudden turn hid her from sight: then she paused, and stood gazing out on the landscape with eyes that saw nothing of its beauty. So standing, the curate found her.

'Have you ever been up to the top?' he asked.

'No,' she said shortly.

'Won't you come now? The view is well worth it, and I don't fancy you will mind the climbing. I will help you all I can—if you will let me.'

She had snubbed him, but he would not be snubbed—only crept back humbly to her feet like a loving, ill-used dog. Could she help being touched?

'Let us go,' she said, with her old frank smile and voice.

So they went, clambering up the steep ascent, every now and then pausing to take breath, and all the way those big, happy, awkward hands of the curate were stretched out to help her. At last the summit was gained, and a little cry of joy broke from Lalagé.

'It makes the world feel so large,' she said.

There, stretched out before her, lay that beautiful mouth of the Severn, widening into the sea, and splitting inland into many streams that threw a silver sheeting over the green land wherever they appeared. No distinct course of all these glassy breaks could be traced, just a shining patch marked where they lay, but how they reached the sea at last the eye could not discover. To the right, on flat level ground that looked poor and tame by comparison with Grimswold, lay Gloucester and Cheltenham — further away on still, Malvern, steeped in a blue mist; behind and about Lalagé were the everlasting hills in their mute glory. As she stood gazing with gladdened eyes, anger, and passion, and hatred gradually died out of her.

Then she wandered on a few yards from her companion, who was absently looking down on the well-known scene, and went step by step till she stood at the very edge of the steep declivity. She was on the side of the hill-top opposite the one by which they had ascended, and a bare naked precipice lay below her; she looked down with the usual fatal fascination, then, turning her head away with a strong effort, shut her eyes, and stretched out her hands. 'I cannot move,' she said slowly; 'I am so afraid I shall throw myself over.'

Any other man than that unwise curate would

Digitized by Google

have taken the appealing hands and led her quietly out of danger, but that would not suffice him. With an ejaculation of dismay and apprehension, he plunged forward in his ungainly strength and lifted her in his arms. In an instant, her late terror was forgotten, and if at first she did not speak, it was only because passion stifled her utterance. 'How dare you—how dare you?' she gasped, as he set her down all ruffled and crumpled.

He hardly took in the meaning of her words; he could not read the signs written in her indignant eyes and flushed cheeks; suddenly, as it seemed to him, his great love overleaped the frail barriers he had placed round it, and carried him away. 'I couldn't help it,' he said; 'I was so afraid you would fall. And how pretty you are—prettier than any one else in all the world;' but even whilst he was speaking a sudden chill came over him, for as Lalagé walked away from him, he could not but be conscious of her displeasure.

'Forgive me,' he said, recovering his lost ground with a great stride, and his voice changed, a tone of humble penitence coming into it; 'oh, forgive me, Miss Lalagé.'

'How dare you be rude to me?' she said turning round. 'Everybody is rude to-day, I think.'

'Not I,' he cried—'not I. I could not do anything to hurt or vex you;' and the pain in his voice was not without a subtle flattery.

She stood looking at him half-puzzled, and then she said: 'Are you sorry?'

'Very sorry,' he said earnestly; 'I would rather do anything than vex you—anything in the world. If you only knew—if you would only let me say half I feel—I have been so unhappy'——

'Hush!' said Lalagé, but she spoke more gently; 'if you and I are to be friends, you must not talk in this way.'

'I won't, if you don't like,' said the easily daunted man dejectedly, 'for I could not get on without your friendship.'

'And my friendship you shall always have,' said Lalagé.

Thinking over those stories of jiltings and broken hearts of which Mrs Verey had told her, she at once dismissed them from her mind as totally improbable in connection with a man so easily repressed. 'I don't think he'd have courage for it,' she thought, half scornfully, yet assuring herself that she liked him all the better for his ready submission.

They walked on in silence for a few minutes; but the awkwardness wore off when they began to climb down, and help was needed and given; then the curate talked to her about his work and her district, and that common ground was very pleasant to both.

It was nearly time to set off on their homeward way when they rejoined the rest of the party; by this time Lalagé's spirits had risen, and she walked up to them talking and laughing, more than she would have done had not Mrs Verey been present. And when the carriages arrived, she drove him off triumphantly under the very eyes of her foe, giving rise to an amount of foolish bliss on the part of the curate, which this unexpected circumstance was never intended to produce.

Arrived at home, she told Belle she had behaved very ill in leaving her alone all the afternoon with those horrible people; 'but I could not help it,' she added; 'I should only have been rude to that odious woman if I had staid. She was so horrid all the way going out, that was why I took Mr Mitchell back; she said she was afraid he would contaminate her lambs.'

Then she went wearily up-stairs. She could not tell her sister all that had passed; that unwise outbreak of the curate's forbade it. She could not afford to lose her only friend, she thought, and if a third person knew of what had passed, their intercourse would be necessarily constrained; besides, she wished to prove herself his champion in Mrs Verey's sight. She was lonely and hurt, and the curate's friendship seemed almost indispensable just then. A little cloud had obscured that friendship that very day; but surely she had dispersed it. She would not look up straight, or she must have seen that it was there still, hanging over her head, the dark cloud of his love, ready to break into big, sudden drops of passionate words that could not be recalled. By not flying while there was yet time, Lalagé was courting the storm; meanwhile, she was only saying to herself: 'He will never be so foolish again.'

CHAPTER VIII.—A BETRAYED HEART.

October was gone; it had rounded itself off in beauty and brilliancy; and sullen November had come, taking revenge for the favour lavished upon its sister month by constant clouds, and darkness, and rain. Day after day, misty sheets came like gray walls over the hills, and then, with advancing march and deepening colour, poured pitilessly over Grimswold, sometimes in sudden gusts, sometimes in wearisome monotony. All colour and foliage had been washed off the trees, leaving only bare black twigs and branches in a dismal fretwork. The hills looked dark, and gloomy, and forbidding; and, for the matter of that, so did the house to Lalagé, who would sit by the window watching the desolate outside world.

That she had no inside world to which she could turn, was, of course, matter of regret; but is it not so with many women? Is there, indeed, one who has not, at some period of her life, found the want of some duty, necessity, obligation for employment—profession, in fact—rise up within her as a terrible lack? Whether it be real kindness or wisdom to provide practical prevention for such dreary blanks, the writer does not say or know; merely stating a fact, which will scarcely be contradicted by those best qualified to judge this question, and trusting that future ages will be wiser than we are, in solving the problem of keeping our women womanly, and yet giving them some occupation to fill up these empty hours; few have either courage, or method, or originality enough to make it for themselves.

Of that happy few, Isabel Hesketh was one; she was a woman very little influenced by outer circumstances. Indeed, bright days came to her with her thirty-five years, rather as a gift, a revelation, a soft temporary gilding given to life, than as a necessity.

But with Lalagé it was just the contrary; she expected a full, bright life: it was not very long since her daily studies had occupied all her time, and then the new life with its bustle and gaiety had come to her, and as long as its novelty lasted was delightful. Sometimes she wondered if she would change places with her old self now, were

the choice given her, but the answer was always in the negative. She felt too depressed for anything of the kind; and yet this present life was depressing too, so utterly lonely. Never mind, she would say to herself; it would be different in summer, it would be all right then; but she could not conceal a certain dim knowledge, that she had already got more of that enjoyment from the beautiful world which summer would create than she would ever get again. She had learned it by heart, but it did not fill her heart; indeed that heart felt very empty just then. She used to think—sitting there by the window whilst the rain poured steadily down—that of course all the old friends had forgotten her by this time: an empty place in London is soon filled again.

She would think, too, that she could now understand the solemn stolidity on the faces of country-people: she used to fancy it was caused by stupidity; but now she changed her mind; she was convinced it came from awe—the awe that the enclosing hills, and the silence, and the loneliness must create—the awe that she felt slowly creeping over herself. 'That is what people call shyness, I suppose,' she said, and remembered that the Misses Verey were shy, very shy. Should she grow narrow, and cramped, and ignorant, like them? Yes, for she was not wise or strong enough to stand against it, like Belle. Should she be always weak and foolish? she wondered, whilst contemptuous tears filled her eyes.

Then her irrelevant thoughts would wander away to the one new friend she had made up in these lonely hills, and unconsciously the remembrance soothed her. Some instinct told her that he was *her* friend, not Belle's, for she felt intuitively that her sister did not like the curate.

He had not been to the Hill House since the picnic; certainly it had rained so incessantly that even that unwise man could find no excuse for breaking into the pretty drawing-room with muddy boots and splashed raiment; but Lalagé would not, in her own mind, accept this fact as sufficient excuse. 'Most likely,' she thought, 'he saw how cross I was that dreadful day, and will never come again.' Meanwhile, the rain dripped a mournful accompaniment to her gloomy thoughts, and made her feel very sorry for herself.

But that very evening the curate came. He had been busy all those wet days writing sermons in his unnaturally small hand; it was his usual employment in such weather; but having accomplished a satisfactory little pile, he could not resist the temptation, to which he had now yielded. That he had squeezed on gigantic goloshes over those big boots was a necessary sacrifice known only to himself, for he thrust them into his pockets on the steps outside, all wet and muddy as they were.

Lalagé was glad to see him, very glad; and even Belle welcomed any one from the outer world; so all three spent a pleasant evening, and one unwise heart was unduly elevated. Whilst it was throbbing without in its foolish happiness, Lalagé within was feeling brightened and comforted, and very glad that he still seemed disposed to continue her friend.

But next day, and the day after, and the day after that, the rain continued pitilessly, and the gloom grew into her heart again. It is a dreary season, at best of times, that sorrowful November weather, doubly dreary when there is no inner warmth and light to counteract the outer cold and darkness: for the first time in her life this girl without resources realised all this.

Weeks passed before the rain stopped and the dull leaden sky cleared. During those weeks, the utmost that the sisters could do was to creep to the half-empty church on Sundays. The churchyard was deserted; the poor people who lived up in the hills had to do without their weekly holiday; there were no rustic dinners spread out on the tombstones now (in winter the few who came for both services were allowed to go into one of the National schoolrooms); even the Sunday school, the curate told Lalagé, was nearly deserted, so it was of no use attempting to go there.

At last the weather broke, and with a thrill of joy Lalagé woke one morning to find a sunbeam lying across her bed. That it was pale and sickly to a degree, hardly a sunbeam properly so called, was all overlooked, and she put out her hand to lie in it with almost childish delight: she was set free again.

All the morning she was at her district, listening to long stories of sorrow and privation with a sweet patience and gentleness, which shewed that, idle and purposeless as she had but now proved herself, there were yet substrata in her heart that were not utterly worthless. Had her district been even more needy than it was, it would have been better for her; as it was, little but sympathy and patience to listen to long stories was required of her. Pecuniary relief she gave more often, perhaps, than was necessary; but, to her inexperience, it seemed terrible that seven or eight human beings should be obliged to live on eight shillings a week. She did not know that that sum in Grimswold was equal to double the amount in a town.

Lalagé went home to luncheon bright and cheerful after her morning's work. Then she set out for a solitary ramble up over the hills; she walked on till, coming to the little wood visible from their drawing-room windows, she paused, and, after a moment's hesitation, went in.

She knew it well now, having been there many times; but she wanted to see if all the gorgeous summer shimmer of light and shade had really died out. Ah, yes, there was no vestige of it left. Standing on the broad cart-road, which led straight through the wood, she wondered how beauty *could* so die, 'fade as a leaf.' It was damp, and cold, and wretched; the decaying stumps, on which she had often seated herself in summer, were black, and oozing with moist corruption; the fair summer dresses of the trees lay rotting on the ground. The very trunks and branches of the trees looked black and sodden with the constant rain, stretching out their bare arms in fruitless yearnings. Alone there, in the silence, she likened herself to them, and something of the old dreary mood came over her. It was a comfort to think that it might now be walked off, instead of idly endured in the confinement of the house; so, with a little shiver, she passed on.

Suddenly she stopped; she heard steps behind her, and a half-terror of the loneliness so broken made her look round. There, at the entrance of the wood, was the big curate, coming to her as fast as ungainly strength and long strides could bring him. She stopped with a half-smile; that almost comic apparition put her dark thoughts to flight.

Digitized by Google

'How fast you walk,' she said as he came up.

'I saw you before me as you came up the hill,' he said, telling only a half-truth; for he had seen her from the Grimswold street, and had immediately made up his mind to follow her.

Those wet days had done something for him too; the love which had been simmering in his heart for six whole months had suddenly reached boiling-heat, and was now seething and bubbling. The loneliness of the past few weeks had painfully developed his susceptibility. Ah, if only a fresh face had come before him at this juncture, Lalagé's story might have been different; but both were bounded by the same limited horizon, which made present object of preternatural importance.

'Are you walking this way?' was his next unnecessary question, as he strode by her side along the rutted cart-road, full of yellow little pools.

'I think so,' said Lalagé laughing. 'Where are you going?'

'Old Grainger lives at the other side of this wood,' he said; 'but I sha'n't do more than just ask how he is this afternoon. I saw him this morning.'

So they went on, talking of the work which lay close to both their hearts, till Grainger's cottage was reached. Then the curate asked if he might shew her a certain famous view a little further on, and Lalagé consented. 'Though scarcely any view can be worth looking at, at this time of the year,' she said.

Then suddenly—(what brought it on? Was it the dark landscape on which they were gazing?—was it a sudden turn of the path, or the shelter of the hillside on which they stood?—was it the faint yellow sunlight that fell on them in pale dying beams, like a failing voice calling to them out of the distant heavens that life was brief and death was near, and human joy very fleeting, and human yearning never to be satisfied on earth?—or was it just the unwise impatience of a foolish man?) suddenly the curate, in rushing, passionate words, poured out his whole heart to the girl standing beside him.

How he began, he did not know; but having begun, he went on without let or hindrance, in a flow of language which almost astonished him, though he was by no means unaccustomed to such pleading. He had loved before, he said to himself, but never as he loved now; and this belief tinged his words with the passionate pathos of a man who knows but one such love in a lifetime.

He told her he knew he was unworthy of her in every way, but that none could love her better than he did—that he had been so happy, and unhappy too, since knowing her—that all his life had seemed changed—that he had meant to keep all he felt to himself; but suddenly, without warning, his heart had broken out of bounds, and forced him to utter words which he should never regret, 'If—if—you are not angry with me, Miss Lalagé.'

She stood with averted head turned towards the mournful landscape, and her quick faint flush was flitting to and fro over her face, but she made no answer.

So he went on, telling that 'old story' over again, till he was touched by his own earnestness, moved by his own eloquence, and rose to heights that were new to him. He would not trouble her, he did not wish to be selfish; if she bade him, he would keep his misery out of her sight, and live on in hopelessness, but his love he could not part with; that sacrifice she must not desire at his hands—always and for ever he must think her the dearest and best the world contained. He was unworthy—ah, he knew that too well; but in one thing he was supreme—his love for her; none could rival him in that. Sobs came into his voice before he had finished, and there were small tears in his foolish eyes; but it was not till he descended to common ground, and again asked if she were angry, that Lalagé turned her head.

'I am not angry,' she said softly, and his heart gave a great throb, as he saw that her eyes too were misty with tears—'I am not angry, but you must know as well as I do that all you have said would have been better left unsaid.'

'But'—he began, 'perhaps—is it possible that in time'——

'Hush!' said Lalagé; 'let us leave this subject alone for ever; I don't want to lose my friend,' she said with a tremulous smile, looking up in his face.

Lighted up by the dying autumn sunlight, she thought that face looked suffering, and earnest, and truthful, and she was not keen-sighted enough to detect the underlying weakness. That she had saddened him—had, perhaps, laden him with a life-long sorrow, was a thing to be grievously mourned and sorrowed over, and called fresh tears to the violet eyes.

'Good-bye,' she said, holding out her hand: 'I shall go home the other way.'

'Let me come with you,' he pleaded, keeping her hand one unnecessary moment in his: 'I will not trouble you by talking.'

So they went home together and yet apart, with a silence, which Lalagé felt to be very pathetic, lying between them. A more decided man would have wrung an answer from a more undecided woman long before this; but then the curate was not decided, nor was Lalagé, in her own estimation, by any means undecided. How could she be undecided? Did she not know that both her father and Belle would have been only angry if they had an idea of what had passed that day? And apart from this, she could not help feeling, without exactly knowing why, that any hearing of such a case would be altogether out of the question.

And yet she liked him, liked him much, and was sorry, very, very sorry for him. One thing she was vexed about—why, in that first break, when he had asked her if she were angry, why had she not answered him at once? Why had she allowed him to go on with his pleading, when she—knowing that only one answer was possible—had no right to listen to such pleading? Why had she stood on the hill-side with averted head, and no word to say, with pity and liking surging through her heart, and all the air filled with her silence? Ah, why?

With different thoughts the curate strode by her side, his pace obliging Lalagé almost to run, so as to keep up with him. That he had been allowed to say so much, was an unexpected delight, and he was resolved to follow up his attack. The firm fair fortress already had a gap in her walls, where those fervent words of his had entered. The breach should be wider soon; then wide enough for a man, even though a big one, to pass through

Digitized by Google

and take possession. Besides, he could not but be pleased at the way in which he had done his work; he had spoken well, he felt, and that consciousness would not allow him to be quite dispirited. Yes, he would try again, he thought, and heaved a big sigh: 'A man can but try.'

So busy were both with their thoughts, that that long walk was not nearly so awkward as might have been expected; besides, the curate's increasingly accelerated pace greatly shortened it. Still the darkness was gathering over Grimswold when breathless Lalagé reached the Hill House, having parted with the curate at the head of her own district. She went up to her room, locked the door, and flung herself on the bed in a flood of tears.

THE MONTH:

SCIENCE AND ARTS.

Our learned and scientific societies have begun operations for the present session, and now we shall have weekly notices of scientific doings for some months to come, some very dry, some suggestive and animating, but all, we may hope, tending to the advancement of learning and science. The dredging expedition of last summer in the seas off the north-west of Ireland, conducted by Dr Carpenter and Professor Wyville Thomson, supplied a very interesting opening topic to the Royal Society. Science gains largely by this expedition: in the natural history of the deep sea; in questions of geology, besides certain branches of physics, as will appear when the detailed reports come to be published.—The Geographical Society were fortunate in leading off with what seems like a scrap of good news of Dr Livingstone, which implies that not long since the enterprising traveller was alive and well to the southward of the great lakes, and had, as he believed, discovered the true source of the Nile.

The fact that natural science is worth study is growing more and more into recognition at our universities. Cambridge announces that lectures on various branches of it will be added to the established courses of instruction within her walls; Oxford will have to do the same; and our public schools will find out that astronomy, or mathematics, or geology would be an acceptable pabulum to hundreds of minds to which Latin and Greek are absolutely repulsive. But signs of change appear. Eton College and Westminster School are henceforth to be ruled by new governing bodies; and the statute requires that one member of each body shall be appointed by the President and Council of the Royal Society. The condition is attached that the two gentlemen shall be members of the Church of England; but, appointed by the Royal Society, they will of course be scientific, and will no doubt do what they can towards the introduction of science into the two famous schools. At a time when even the sultan is trying to reform the system of public instruction throughout Turkey, it won't do for England to lag behind, in the fond belief that the old ways are sufficient.

Mr Aldis of Manchester has published a few results, from a discussion of the nebular theory, which involve a point in the structure of the earth deserving attention. 'It has been remarked,' he says, 'that there is a tendency in mountain-chains to run north and south, and to present steep slopes to the west, gentle declivities to the east. This may arise from the contraction of the earth. If a portion of unsupported crust sink towards the centre, it will subside on to that which is moving east less rapidly than itself, and, in consequence, will, so to speak, fall over towards the east, the surface forming a gradual slope to the east, and the fractured western edge a precipitous descent to the west.'—Applying the same argument to our satellite, Mr Aldis continues: 'In the moon, too, we see proofs of the contraction carried on long after the stage in which we now find the earth. The spheroid of the moon has contracted since it assumed that shape, and, contracting less in the longer diameter, is now more spheroidal than it should be according to theory, while the thickened crust, no longer crushed down on the interior, has left cavities in which the moon's ocean and atmosphere are entombed for ever.'

Among the expeditions for observing the solar eclipse of last August, was one sent out by the Nautical Almanac Office at Washington, which made their observations at Mount Pleasant, in the state of Iowa. Professor Pickering, in his report thereof, shews reason for believing that the corona seen during an eclipse of the sun does not belong to the sun, but is an effect of the moon's atmosphere. This is assuming that the moon has an atmosphere, and is opposed to the commonly received theory. Allowing the assumption, he remarks, 'the corona would then be caused by refraction, light reaching the observer from parts of the sun already eclipsed.'

An electrical apparatus has been for some years in use for measuring the velocity of a shot or projectile when fired from a cannon; and now an instrument has been invented which measures and records the rate of movement of the shot while it is still within the gun. This instrument, called a chronoscope, is the invention of Captain Noble: it consists of a series of metal discs, which, on the turning of a handle, rotate with great rapidity—one hundred and twenty-five times in a second. When required for use, the discs are coated with lampblack, in front of each one a metallic pointer is placed, and the whole apparatus is connected by wires with an electric battery, and with the gun. But how is the passage of the shot inside the thick heavy tube to be noted? In this way. Holes are bored six inches apart through the substance of the gun from the outside to the bore. In these holes, a kind of hammer connected with the wires is suspended. As soon as the shot begins to move, the hammer in the first hole breaks the wire; a spark from the electric battery immediately flies from the pointer above mentioned, and makes a bright spot on the disc. The same thing is repeated as soon as the shot reaches the second hole, and so on through the length of the gun: and as the rate of movement of the discs is known, the bright spots imprinted thereon become records of the rate of movement of the shot or projectile through every six inches of the gun. With this instrument, and certain kinds of improved gunpowder now coming into use, the supremacy of English gunnery will be fully maintained.

We have on different occasions pointed out the fact, that in the working of railways there is a great waste of power, enormously heavy trains being employed to transport a comparatively light

Digitized by Google

number of passengers, and we have shewn that the true economy of railway management consists in the avoidance of this waste. The question has now been discussed at length in the *Times;* and Mr Fairlie, who proposes a new construction of locomotives and railway carriages, and demonstrates his views by working models, may hope to see them adopted. He does away with the present form of wheels, and mounts the carriages on a 'bogie,' or wheeled truck, in the same way as an ordinary coach is mounted on its fore-wheels. The bogie wheels, running independently of each other, travel easily along curves, without risk of running off, or of grinding the rails to pieces; while the carriage being mounted only on the central pin of the bogie, is saved from the shocks and jolts to which the carriages now in use, with their fixed axles, are liable. The locomotive, in like manner, is to be mounted on bogies: there are to be no buffers; but the carriages are to have circular ends, and be screwed closely up to one another. By this arrangement, they will adapt themselves to all the curves of the railway, the cost of travelling will be lessened, and its discomforts diminished.

Agriculturists have such a grand future before them, that anything relating to improvements in agriculture becomes more and more worthy of notice, especially when it appears to illustrate what may be regarded as the economy of nature. Slowly, but apparently surely, practical men are finding out that sewage should not be wasted, but that when poured on the land, it becomes at once innoxious and a source of fertility. On this point, the latest particulars from the camp at Aldershot are instructive. The wild heath-land amid which the camp is situate contains no vegetable soil, but is composed of gravel and sand, resting on a dense layer of iron sand almost as hard as rock. Of this unpromising soil, one hundred and thirty acres were trenched and broken up; drains were put in, and for a year all the sewage and drainage of the camp was made to run over it in a continuous stream. With twelve thousand men and two thousand horses, the camp had been very offensive; but it was purified by the experimental farm; for as soon as the sewage began to run over the land, it was completely deodorised.

By this thorough saturation of the ground the land became so fertile that it produced yearly per acre, of potatoes, from 4 to 5 tons; swedes, 12 tons; mangold-wurzel, 18 tons; garden turnips, 300 bushels; and 16,000 plants of cabbage. A portion of the land is laid down with Italian rye-grass, which is cut from four to six times a year, for horses and cows, yielding at the lowest an average of 6 tons to the acre, and 14 tons at the highest. By this succession of crops, 40 tons of rye-grass are got from each acre yearly. The quantity of land at present under cultivation is—potatoes, 26 acres; Italian rye-grass for feed, 29 acres; the same for hay, 15¾ acres; and for green crops, 6½ acres. This acreage absorbs the whole summer sewage of the camp and barracks; and in this we have a most instructive example of what may be accomplished by intelligent labour. In whatever part of the world—in the temperate or the torrid zone, camps may cease to be *foci* of disease, and become centres of fertility. Cities, towns, and villages may pour out their foul refuse until all their environment shall exult with luxuriant crops of grass and grain, and with fruits in wonderful abundance.

Mr Palmer, who accompanied the Sinai Survey Expedition as palæographer, to study inscriptions, and subjects connected with the language and history of the country, has presented a report to the senate of the university of Cambridge on his travel and its results. To scholars and students, the particulars cannot fail to be of the highest interest, while they will enlist the attention of all readers of Biblical literature. Mr Palmer has again departed for Egypt, with a view to explore the Tih, or 'Wilderness of the Wanderings,' where he 'confidently anticipates a rich harvest of Biblical and geographical discoveries.' On his return he intends to publish (1) a complete collection of the Sinaitic inscriptions, with translations, and a dissertation on their origin and value; (2) an account of the Bedawin inhabitants of Sinai, their history, manners, customs, and traditions; (3) the history of Sinai as told by the Arab historians; and (4) a dissertation on the nomenclature of Bible lands, and a popular account of the Sinai expedition.

WINTER'S WREATH.

The winter's wreath has charms for me;
The barren heath, the leafless tree,
The holly hedge, the purling rill,
Retain a pledge of nature still.
The fir, the laurel, box, and yew,
Give freshness to the wintry view.

There the brown mead, the swollen mere,
The rime-bespangled forest here,
Declare the wondrous Artist-hand
Which all this varied scene has planned.

Look on the crown of silvery snow
That rests for aye on yon mountain's brow,
While streams glide down to the valley beneath,
Waters of life from the springs of death!
When my head, like his, is withered and hoar,
May my heart its fountains of love still pour!

And see the mantle of white that is spread
O'er the stiffened earth, like a sheet o'er the dead,
Now the golden days of Autumn have fled.

The Frost-king binds with icy chain;
But Spring comes, queen-like, crowned with flowers,
And the tyrant yields to her gentle reign,
And melts at her feet into penitent showers;
And fair Nature, released from her prisoning tomb,
Comes wreathed divinely with odorous bloom!

Thus the shroud shall change its sad glimmer of white
For the rainbow hues of celestial light,
A garment meet for the honoured guest
Whom the Master shall bid to His wedding feast!

Re-issue of

CHAMBERS'S MISCELLANY

OF

Instructive and Entertaining Tracts.

Issued this day,

WALTER RUYSDAEL: POEMS OF KINDNESS TO ANIMALS.

PRICE ONE PENNY.

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 310. SATURDAY, DECEMBER 4, 1869. PRICE 1½d.

TOO LONG A HOLIDAY.

A STORY IN THREE PARTS.—PART I.

I'd got it into my head that I deserved a holiday; so, not to throw away what in a manner belonged to me, I goes an' asks for it; an', no sooner said than done—I got it. Whether I ought to ha' had as long a one as I did have, I leave you to be the judge, when you have heard my account.

You see I'd been a hard-working sort all my lifetime, an' so had my father before me; an' so, for all as I know to the contrary, had his father before him. Not as I would wish, you understand, to represent that as any particular merit of ours; we worked hard just because we were compelled to it, leastwise we couldn't help it, not unless we'd had any fancy for starvation, which none of us, so far as I ever heard, did have. So long as I can call to mind, such victuals as was eat in our family any one week depended on what work had been done the week as was past. So we come, o' course, to reckon holidays rather uncommon—a sort of special perquisites proper for our betters in a general way—but I can't say it ever entered my head, so to speak, to consider 'em dangerous, till the time I'm going to tell about.

Talking of my father, you must know he was a warehouseman, and one o' them contented sort o' souls that, I do believe, from the first day when he was big enough to carry a parcel till he left off warehousin' the month before he died, neither knew nor cared anything to speak on about that part of the world that does not lie exact between Lower Thames Street and Tooley Street, by way of London Bridge. But it was the opinion o' some o' them as knowed me when I was a little un, that I'd got a bit of a headpiece, and ought to be put to a trade. My father, he said he'd never, as he could tell on, heard of any one of all his family as had been sent to a trade; but at last, after he'd had on his studying-cap, as you may say, for a week or two, he gave in as that was no reason why none of 'em ever should, provided they had the ability and a place could be found for 'em. The old man—not that he was, rightly speaking, old, only it comes natural-like to call him so—had his weak side; and though he never would allow it—not he—he'd have agreed to drive a night-cab first!—I've always fancied his pride was a bit flattered by the notion. However, inquiries was set on foot, it being agreed I was to have a chance above warehousing and portering; an', after a time, I was sent off to make a start as a riveter's boy, in a ship-building yard, down about Blackwall way. A touch of reading an' writing, as I got from an old soldier that had set up a night-school at Shadwell, helped me along slippin'; and, in the course of time, I rose from helping riveters to being a riveter myself, and so got forward to boiler-making. With this and that—making an effort now and then, and getting a few good chances—by the time I was five-and-twenty year old, I was doing well as a working-engineer, and had no call to grumble; for I was making good wages, and had as comfortable a little house, as good an' tidy a little wife, an' two as pretty little mites o' boys (one of 'em a babe in arms), as e'er a working-man in the Isle o' Dogs.

'Jim,' says my wife to me, just as I'd finished my breakfast one Friday morning (it was at the latter end of May, three year agone)—'Jim,' says she, 'to-morrow's your birthday.'

'Is it, Mary?' says I, putting on my cap, and laying hold of the door-latch.

'Is it?' says she, a little scornful-like. 'Why, I don't believe as you'd ever know you'd been born at all, if it wasn't for me a-remindin' of you.'

'It's enough for me to remember as you an' them two babbies o' yours 'as bin born,' says I again—not to be done, an' taking a rap at her in turn.

'There, go along wi' ye!' says she. 'Look 'ere, Jim, can't you just ask off for the day?'

'What for?' I says.

'Why,' she makes answer, 'there's a van a-goin' to Eppin' Fores' to-morrow, an' I've a got enough put by to pay for a out; so we might go an' enjoy ourselves—just for once in a way.'

I stood thinking a minute, when she comes up to

Digitized by Google

me in that coaxing way as she always had wonderful strong, and puts her arm round my neck, and says she: 'We ha'n't a had never a 'oliday since the week we was married, Jim; an' this blessed darlin'' (meaning my eldest son), 'as were three year old last We'n'sd'y was three weeks, ha'n't a got no more idear o' what the country 's like nor them there fire-irons. So do, Jim; there 's a dear!'

That was what put it all into my head. Still I don't know as I should have done it, but for her kissin' me, to bind me over like—you understand? Not that I ever had the heart to go an' tell her as much, God bless her! though it all did turn out so bad. Off I goes to the yard at Poplar, and at dinner-time I asks the foreman, an' gets leave, an' goes home with the news as merry as may be.

So, on the Saturday morning, away we rides in the van, and rarely pleasant it was for a certainty. There was Mary, in a new merino gown, as she 'd been getting ready on the quiet, you see—as women will, just to surprise them as they've a liking for. And there was my son an' heir, decked out superfine in his Sunday's frock—a sky-blue with velvet trimmings—and a straw hat with a blue ribbon round it. And there, as a matter o' course, was King Baby, a-crowing and a-spluttering as you never did and never could imagine, you know, hardly; with a smart new feather in his hat, and a pair of red shoes on his little mites of feet, as I could scarcely have got my two thumbs into. And—you may believe me or not, just as you please—if Mary hadn't been an' bought a pink tie for me (she says: 'It 'll improve your looks, Jim,' which, it seemed, wasn't good enough for her, that being a subject she was crotchety on, and I being a trifle pale-like)—and if she hadn't made me put a geranium in my button-hole! So I was as fine a dandy as e'er a one there, an' as light-hearted a buck as ever got took to Eppin' on a summer's day.

Then we had a few neighbours along with us, and so made out a tolerable social party. Not as I should have cared much for company, being well satisfied with Mary an' the boys, but that Harry Winter was among 'em, with his wife and their three well-grown children—two fine, promising boys (one just coming into the yard at Poplar), and as handsome a girl of sixteen as you might wish to see. Harry was a fitter; and a smarter man at his trade there wasn't, not in all the Isle o' Dogs. He was a reserved sort of a man was Harry, and some called him proud and stuck-up; but he could be open-hearted and free enough with them he liked. It wasn't long after that trip to Eppin' as we found out what sort of pride there was in him and his wife. No working-man's family was better dressed, or better looked after at home, than theirs. Many 's the time I 've heard men as were drove to the public by their wasteful sluts o' wives, say: 'Look at Sarah Winter, how she keeps her husband's house with no more money than I bring home;' and many 's the time, too, I 've known poor wasted, wretched women, as would have kept their homes and families comfortable, but for the selfish, bad habits of their husbands, say: 'Why can't you take example by 'Arry Winter, as makes no more nor you do, an' yet can keep 'is wife an' child'en in good victuals, good clothes, and comfort?' And never a one could say that Winter owed any man a penny-piece.

How Harry did talk that day! The light he could throw on many things in our trade that had puzzled my brains nearly out of my head, I shall never forget; and he did it in such a kind and quiet sort of way, without a word of boasting or a sign of a grudge. And with all this, he was as polite, in his unassuming, easy style, to my wife and his own, and the other women of the party, and did many little unthought-of things to make things pleasanter to us all, that no gentleman as society ever made could have equalled him.

Well, as my wife said to me when we got back at night, we had 'a day in a thousand,' and 'enjoyed ourselves perfect an' thorough, as never was.' My little Jim was fair mad with wonder and pleasure. I couldn't tell at first what ailed the child, that he sat down on the grass and pulled his boots off, and then ran about dancing, with 'em in his hand; but when I told him to put them on again, he shook his wise little head, and said: 'No; dey 'll 'poil de p'etty carpet.' You see, we had a carpet, as Mary set great store by, in our parlour at home; and Jimmy had had many a lesson about taking care not to soil it when he came in from the muddy street. But after a while, when Mary and Mrs Winter sat down under the trees, and we got out our baskets and spread handkerchiefs for tablecloths, the children got quite used to the green grass and the pretty field-flowers—so different from such as they were used to in town, where they could only look at 'em from a distance, and couldn't pluck 'em without paying for 'em—and they got as merry as crickets. Then Carry Winter began weaving daisy-chains and necklaces of buttercups, and decorated the little uns till they were near growing into May-day sweeps. The birds all come hopping about to pick up the crumbs we had left; and the youngsters wanted to catch 'em, for they were all sure the little whistlers had flown away from their homes, and got lost, never having seen any but dingy, dusty London sparrows out of cages before. We grown-up people drank each other's health, and Winter sung a song, *Under the Greenwood Tree*, as being suitable to the occasion; and my Mary followed with a simple ballad that had first made me think about her, and taught me to love and win her. When dusk came on, we were as happy as only hard-working townspeople out for a country holiday can be; and most of us felt inclined to agree with little Jimmy when he declared that he 'wouldn't do 'ome no more.' However, we got the little urchins packed away in the vans, most of 'em fallen asleep by this time; and jogged comfortably back to London. That night, I wouldn't have changed places with any king as wore a crown! though perhaps that 's not saying much; for some of 'em were having but a poor time of it just then.

Now, you would suppose, when we got home on Saturday night, my holiday was over; but it wasn't: I only wish it had been.

PART II.

The next day after our out to Eppin' Forest, being Sunday, Harry Winter he come round after dinner-time to our house. Well, he seemed to be as pleasant-like in his ways as he 'd shewed his-self the day afore; an' so long as he stopped talking afore the wife, an' playing with little Jimmy, you wouldn't ha' thought he 'd got anything particular

serious on his mind, as the manner of speakin' is. But when him an' me goes out after a while for a bit of a stroll, all of a sudden he turned gloomy an' down-spirited, for all the world as if he 'd a got a sentence of penal servitude for life. Poor Harry! it warn't much less as he had got, if only any one on us had a-knowed the meaning o' what he 'd heard.

'Jim, my boy,' says he, 'I 've been hearing bad news.'

'What about?' says I.

'About trade,' he makes answer.

Then he goes on an' tells me what all the world come to know soon enough—how there 'd come about the biggest smash in trade as ever was; and a run on the banks as was like to bring some o' the strongest on 'em down. How 'twas said as many o' the best houses in London would break up, and thousands on thousands of honest, willing, hard-working people would be thrown out of their daily labour and ruined; and all because of the foolishness of traders and speculators as had overrun the safe mark, and the villainy of schemers as had been calculating on the blindness of people that would risk anything to get bigger profits for the use of their money than they could get in fair, straightforward trade. Harry begins to talk of starvation for innocent women an' children; and, says he: 'Jim, I 'm afeard it 'll come on us very nigh first of all.'

Well, you see, I couldn't see, not so far as he could; so I makes light of his fears; and though he kept on shaking his head when I talked of hoping better things than what he was prophesying, I hoped all the more. I can't say as I thought much more about it after we parted; and he went his way home, and I went mine; for, you understand, politics an' general money matters was a touch above me; and so long as my weekly wage come in all right, I wasn't likely to be fearful for the future. So it didn't make no difference, to speak on, with me an' mine that night; and we talked away the Sunday evening, and then went off to sleep as light-hearted as you could wish—talking (me and Mary) about the long holiday we 'd a had since Friday night.

However, when Monday morning came, there was thousands of us workmen standing outside the yard-gates; and we found as there was no more chance of our making a living in the Isle of Dogs. I don't say as most of us made this out all at once; because we didn't. Some of us was weeks before we could believe it, and weeks more before we could understand it. But, by degrees, to some sooner than to others, but to every one of us sure enough an' black enough in time, the terrible truth was made plain. It was made plain by empty cupboards, and empty pockets, and empty stomachs; by empty houses and empty shops; by sad, sickly faces, hollow eyes, and pinched, half-starved women and children all round about our doors; by crowded workhouses and relief-rooms; and by all the signs of famine and disease in the midst of one of the greatest and richest cities in God's world.

'Round about our doors,' didn't I say just now? Well, yes, we held on pretty hard an' tight to 'em, as you may say, an' to what was inside of 'em, just as long as ever we could. But them among us as held out longest found the 'longest' terrible short. Them as was best off had to help them as was poorest; and, afore we could turn ourselves round, up went the rates, and made paupers of them as, only a week or two before, had been what we considered well off. All the rates that ever could be collected, and all the subscriptions that begun to come in, was very little use—as Harry Winter said to me: 'Only a bucket o' water, like, to quench the thirst of a desert;' leastwise that was the way it seemed to us as were in it.

I 'm not a-making any special complaint against anybody in particular. It was natural that landlords should begin to look sharper than common after their rents; for I was given to understand as we working-men was only feeling part of the distress; and that them as had been 'counted rich before found theirselves as poor as we were all of a sudden. Still, it was hard enough for some men, that had paid their rent reg'lar week by week, or quarter by quarter, for years on years, to be turned into the streets, and have their furniture seized, almost without any notice at all, the instant their work stopped, from no fault of their own, you understand, and, as far as any of us could see, no fault of anybody else's as could at least be made anyways accountable.

The change as came over all the district in a few weeks, was to be compared to nothing I ever heard on, but one o' them blights as we are told happens in eastern countries from locusts or droughts. As you walked about the streets in the daytime—fine summer weather all round you—you might see scores o' men, such as had been industrious, honest, respected, an' happy all their lives before, slinking round the corners, and trying to hide theirselves from all as had known 'em, just for all the world as if they 'd a been convicts. Tradesmen as had been prosperous was broke, and shut up their shops by the score a day. Even the publics lost their trade at last, and put up their shutters, and hung out bills with no more on 'em than the two words 'To Let,' and the name of the agent as was to be applied to by nobody—for nobody wanted to take no houses there in such times as we had fallen on. The pawnbrokers lasted out longest, and very good bargains most on 'em made—though no doubt some was honest, and gave as much as they could for pledges; but even they gave in at last; and I daresay very few of them as pledged their last bits of clothing or furniture have ever been well enough off since, to want to look 'em up and redeem their property.

If I was to try all I could, I never should be able to give you an idea of half the poverty and misery I see growing up round me, an' breeding sin an' crime day by day, and night after night, all through that summer. I 've heard a deal of talk among people as know a sight more nor ever I did about the poor-laws and such things; but I never could see the good of making hundreds of honest, broken-down men, as had 'starvation' wrote plain on their faces, go to work breaking stones an' picking oakum in the workhouse yards, before you would give 'em the value of sixpence in bread an' threepence in coppers, to keep their families on for a week. At other times, I make but little doubt that may be a good plan to see if them as asks relief are idle and wilful vagrants; but when there 's no honest work to be done, and a whole township is distressed, and you know very well as them that comes for relief has been paying rates theirselves for years, it do seem hard to treat 'em as if they was prisoners, or at the least impostors.

Digitized by Google

Well, however, that was how it was; and when, after a time, it went about as there was work to be got in the country, up in the north, you may be sure them as could go wasn't long setting off to look for it. By that time, many a man was down at his worst—lost his last penny's-worth of goods, starved and sickened till he could hold out no longer. Some that had friends in other parts, had got help, and gone away and turned to any kind of work they could get to make a penny by. And I will say this for some of the gentry in our neighbourhood—more especially the clergymen and their families—that they did all they could, and got up funds, and, as far as the money would reach, helped them as was best known for good character and hardest up to go to places where there was a chance of earning anything at all. But most of the men as had been best off stood out, independent-like to the last; and when there seemed to be a chance in the north, set off to tramp the road, rather than take charity. Them as afterwards was left behind had no choice worth speaking of; and though most of 'em would rather have taken relief out of the rates that they thought they had a right to than take the money of the relief committees, the parish authorities, in most cases, made it so difficult and degrading to get anything at all—even a loaf of bread—that the agents of the relief committees was looked on as the only hope of most. Why, I've seen men that was used to making three and four pounds a week at their trades when times was good, actually break down and cry like babes when the minister or the district visitor has come to their houses of a night to give their wives a sixpence or a shilling's worth of orders on the baker or the grocer. And no wonder; for the strongest and the cleverest in those days was so starved and worn-out they hadn't the strength of children. The women held out best—God bless 'em; they was so hopeful, and tried so hard to keep up the spirits of the men. Ah, I've seen many a good wife or daughter of a broken-down artisan put on a cheerful smile, while there wasn't strength enough in her to keep the life in her body for another month.

But I'm forgetting my story. I was told there was work to be had at Liverpool, and off I went, leaving just a roof and part of the old furniture and a few shillings—the last of our little savings—with Mary and the two little lads. My holiday wasn't over yet, you see.

There's not much call for me to tell you how I footed it from London to Liverpool—getting a lodging at night with old trampers and thieves in casual wards, or falling down under the hedges or haystacks by the roadside, when I was too knocked up to reach a town; and picking up a penny or two in the daytime, when I was lucky, by holding a horse, or sharing the coppers with some other mechanic I might happen to meet on the road, not quite so hard up as myself. More training was wanted, one might suppose, to break down my proud spirit; and I got it, and no mistake, before I'd done. I dragged myself into Liverpool one night without a farthing in my pocket, after a day and a night without a mouthful of food or drink. It was too late to get into the workhouse; and if it hadn't been, I was told I was a good two mile off from it, in that part of the town they call Toxteth Park. I won't say what sort of a park it seemed to me; only I'd just as soon a been anywheres in St Giles's. Well, I couldn't do nothing but crawl into the nearest shelter I could see, which was the doorway of a sort of chapel, an' there try to get a bit of sleep. Time was, as I've heard it said, when religious places used to give help to worn-out, poor travellers; but I didn't find it so that night. I hadn't a been long laid down—I couldn't scarcely have dropped off asleep, because, you see, summer's night as it was, there wasn't so much as a sign of morning—when I was collared and dragged out by a policeman, as took me off to the station-house, and locked me up for not being able to give any account of myself. So I did get a sort of shelter, after all. Next morning, when I was brought before the magistrate, I told my tale; an' he let me go, telling me he thought I hadn't done much good for myself by coming to Liverpool. And so I found it. Why, there was hundreds of men, as good men as me, hanging about the shipyards and the docks, every one of 'em willing, as I was myself, to turn a hand to anything as could be done, to earn a living, or, so to speak, even half-a-quarter of a living. The yards was all full, though the wages was ever so much less than we'd been used to in Poplar and Limehouse; and as for work as a dock-labourer, or anything else, it wasn't to be got.

Still, I wasn't altogether done, though, as you may suppose, a good bit dashed; and I set off again, and tramped it to Glasgow. But there I found only the same state of things. Then back, the other road, to the Tyne, and never a day's work all the way. When the last chance was gone, and I turned Londonwards again, I think my spirit was gone. It's a hard thing for a man like me to say; but, if you'll believe me, I, as had never before been beholden to any man or woman for more than I worked for, was glad to beg a crust of bread. There wasn't much flesh left on my bones then, nor much hope in my heart. I'd only heard once from Mary since I left home; and after I left Liverpool I hadn't the heart to send her word how I'd only found failure everywhere, even if I could have paid the penny postage, which I couldn't. So I tramped it back again, taking all the towns on my way, and asking for any work as such a man as me could do; but they was full everywhere, and not so much as a hand's-turn could I get. Yes, and there was hundreds of men on the road, as I met all along, just as bad off as I was. So the autumn months had gone by, and winter was far on, and my long holiday was as far from an end as it was on that pleasant day in summer when Mary and little Jimmy and the baby and me went for a out to Eppin' Forest.

If you'd a been in Poplar one foggy afternoon in January, anywheres near where my comfortable home used to be in the happy old times, you might ha' seen a skinny skeleton, pinched and blue with the cold, with a long ragged beard, and matted hair, limping along, footsore and lame; without shoes or shirt, or neckerchief or waistcoat; but only a tattered coat, tied with a piece of string across his naked breast, and leaving the arms almost bare, a poor old pair of trousers, worn to shreds from the knees down, and a shabby, greasy bit of a boy's cap on his head. If you'd a been my own brother, you wouldn't ha' known me. I'd hungered all day, and was making for the old spot, with a feeling like a starved wild beast for

the bit of food I was foolishly thinking there might be in the old cupboard.

You may conclude for yourself whether I'd been miserable before, and whether I was wretched then. What I'd gone through, no tongue can ever tell; and no book would ha' made me believe till I went through it myself. But that night I could ha' been thankful to the merciful Providence, if I'd been allowed only to fall dead in my misery before going on to my own door. You'll excuse me; but when I think it over again, it's almost more than I'm man enough to bear.

I went up the old street. There wasn't a shop open, nor a house-window lighted. When I came to my old place, and saw it dark and lonely, I hadn't got the courage so much as to turn the latch or knock at the door. While I was leaning against the outside, I heard a low moaning sound, as seemed to come from the room we used to call the parlour; and, with a fit of trembling as I could no more account for than you could, I all but dropped on the step. It wasn't as if I'd a known what to think or what to be afraid of; but, you see, I was weak, and I felt lonely and bewildered, as you might say; and, what with the change in myself and the change in the place, and my being so out of heart—why, I wasn't like myself. I believe I should have fainted, but for a woman that opened the door and came hurrying out. She seemed to be very nigh as weak and shook as I was myself; and when she saw me she started back, with a sort of cry, like as if she was afraid. But she mastered herself, as it were, and tried to pass me; but not before I'd struggled with myself, and found strength to say to her in a whisper, as I put my hand on her arm: 'Does Mary Brydges live here?'

'Yes, yes,' says the young woman, speaking in the frightened way she had looked at me; 'she lives there now; but only the Lord above us knows how soon she may die there.'

She turned as she spoke, to hasten down the street, but I laid my hand again upon her arm, and, feeble as I was, I was strong enough to hold her.

'Die!' I cried; 'what do you mean?'

'O God!' she exclaimed, 'is it Jim?'

'Yes,' I makes answer, wondering who she could be; her face seemed so strange to me, and yet as if I ought to know it.

'Jim, Jim,' said she, 'it's no time for smooth words—you must be told: poor Mary has just brought you another child into the world, and there's neither bit nor sup in the place, nor a bed to lie on. I'm going for help.'

She was away before I could speak again. I tottered into the room that was once our prettily furnished, neatly kept parlour; and there, in the deep gloom, I found my Mary, cold and deathly pale, lying on the bare floor, with nought to cover her but one poor thin cotton skirt, that now was folded off herself over the wretched little creature she had just brought into life. Her head was laid in the lap of another woman, pale and starved and almost without a rag to cover her, like herself. What I said or did, I don't know now, and never shall; only, I recollect that after a time, I had her white, cold lips held fast to mine, and a shudder—a weak sort of convulsive shaking—passed over her poor worn frame; and that was all that gave me hope I hadn't lost my Mary.

Sometimes since that night I've thought of one or two sayings I'd oft-times heard, but little thought of before. 'When things are at their worst, they must mend,' is one. But that wouldn't hardly have give me any comfort then, because, you see, nobody can tell what is the worst he may have to come to. You'll be able to understand that I'd found out something of that. But there's a better saying, though I don't know rightly, to speak to, where I could have heard it: it's this: 'Man's extremity is God's opportunity.' It came into my head then, as I held my poor wife in my arms, and looked, almost in the darkness, at the little shadow of the new life she had brought into so much misery. Not that I could understand its meaning fully, as I can now, that I've got stronger; but it gave me the spirit to do what I hadn't had the heart to do for many a day—to put up a little prayer. I fancy, somehow, it was the sight of that little creature, so helpless and so weak—my child—as made me think how helpless and weak I was, and put me in the mind of my Father.

Well, well, we don't seem able—at least I don't—to understand these things. While I was thinking something like what I've just put down, the door opened again, and somebody came in. I heard two voices whispering, and a lucifer was struck, and a candle lit. Then I saw the clergyman of my district, and a lady, plainly dressed, and the woman that had passed me at the door and spoke to me. The minister had a rough old blanket on his arm, and his wife (that was the lady) had a basket in her hand; and as the light fell on the face of the young woman, I saw it was Harry Winter's daughter. Perhaps I didn't see this all at once; for the face was so haggard and wild, the figure so wasted and weak, that it was hard to know her for pretty, merry Carry Winter, who had played with my little Jimmy and the other little ones, and made strings of flowers for 'em at Eppin' Forest. While I was looking on this woman, so changed in eight short months, from the picture of a laughing, happy girl to the mocking image of sinful despair, the lady took my wife gently from my arm, Carry began to cover Mary with the blanket, and the clergyman took me quietly by the shoulder and led me into the next room.

PART III.

To be honest with you, I must say as I did feel hot words coming ready to my lips, when the parson an' me was alone; an' I daresay as I should ha' said 'em fast enough, but for the misery that seemed to stick in my throat. You see, I couldn't make out how any poor creature like my Mary could ha' been left to pine away and sink to such a state as I'd found her in, if the clergyman an' them as professed to be so anxious to help poor people had ha' done their duty. But the parson, he says to me, before I could get a word out: 'O Jim, my poor fellow,' says he, 'why did you not let me know before this? We would have done something, however little, to save your family from such dreadful suffering.'

Why didn't I let him know? Why, just because I wasn't there, an' didn't know myself. Then I found tongue, an' up an' told him all about it—where I'd been, an' what I'd tried to do, an' how I'd failed everywhere; an' how I'd thought all the time as there was friends an' charitable people in the old place as would never ha' let them as was left at home undergo the misery that I'd had

Digitized by Google

away. But it seemed poor Mary had felt she would be disgracing me if she took charity or tried the parish till the very last; and her time had come on her sudden, before she expected to be took ill; an' it was all God's mercy in sending Carry Winter to the house, as you may say, in the nick o' time, as she hadn't died there, an' her baby with her, all alone. I ought to be a thankful man when I come to think that worst sorrow of all was not laid on me. My Mary was saved—but only just saved; an' it'll be many a year yet before ever she gets strong again. I think it was the parson's kindness that made him try to draw off my thoughts from my own troubles, and begin to talk about other people's; because he must have known there was more for me to hear than had been told to me yet, you see. Being the clergyman, he'd of course buried little—— But I'll tell you that after. Just then, he kept me ignorant; and he says: 'You knew Harry Winter, didn't you?'

'Knowed him?' says I. 'I know he's one o' the best men an' best workmen as lives.'

The clergyman shook his head, an' says: 'Not that *lives*,' says he; an' he looked so solemn, I got frightened, an' asked him what he meant.

Then he told me how my noble old friend had kept proud to the last; wouldn't ask for relief, or take it when it was offered; but always went on saying he'd hold up his head, an' have nothing he didn't work for, as long as he lived. One day, somebody got asking among the neighbours what had become o' the Winters. Some thought it likely as Harry had a-heard o' some work, an' gone off to look for it. But others, as knowed all his savings had gone long before, said, how could he ha' took his family with him? Then they put questions to the relieving officers, an' made inquiry at the relief committees; an' at last the police was told, an' they took it up. Well, when they went an' broke into the house, they found Harry an' his wife, an' the two boys, an' Carry all huddled close together, without hardly any clothes on, lying on the floor of one o' the empty bedrooms; an' all but Carry, poor girl, was dead. At first, they made sure she was too; but after a time she come round. It'd been as well, may be—only we foolish mortals don't always know what's best in the end—if she had a-died with the rest of 'em. It's a blessed thing as the father an' mother, that was always so proud o' their pretty daughter, didn't live to see what came to her after. I don't know which was worst even to me, that wasn't her father, nor any relation at all to her—to know I had but little reason to hope my wife and her baby could be brought round; or to know as that young girl, that was tending and nursing 'em in the other room with the parson's wife, had come to be one of them as honest women can't speak about without shame. So, you see, what starvation spared, vice took. Yet neither me nor Mary has been able to think of Carry Winter since without praying the Lord above to be good to her. We have good reason!

When they let me go and speak to my wife again, there was a fire in the room, and she was wrapped up comfortable; and the good woman was giving her what little she could take to revive her strength. I hadn't seen her in the light yet, you understand, only for a moment; an' now, when her eyes were open, waiting to give me a smile out of all her suffering, oh, what a face my Mary's was! But for the weak little smile, it was just such a face as one might say would come back from the grave to haunt a guilty conscience—so pale, so haggard, so like Death. When her head was resting on my breast again, and I thought she could bear to speak, I said: 'Mary, where's the youngsters—the other uns?'

When I asked her that, the tears come rushing into her eyes. She couldn't answer a word at first, and I didn't know what to fear next. But after a time, she whispers, so gentle and kind: 'Dear Jim,' she says, 'poor baby's gone to rest—a better rest than this world could give him. I had no strength, and the poor little fellow died on this breast. But God is good still, dear, an' has given us another little angel in his place,' says she, lifting the cover off the new baby's face, and kissing him in her tender way; 'an' brave little Jimmy is left to us still.'

Yes, the lamb of the flock, the dear little chap I'd carried with such pride an' joy in my arms, was lying in his little grave. Here was my Mary, for aught I knew, just at the point of death, with the weakly, sickly child of sorrow on her bosom. An' my bold boy—my first-born—where was he? Out in the streets, away westward in the streets of the Great Unfriendly City—a withered, starveling four-year-old—trying to sell fusees, to get a few coppers to buy bread for the mother that might not be alive to see him come back. If I'd ha' only lost my trade, my little worldly goods, my health, my strength, an' my hope of making a living in my native country, I could ha' borne it. But to lose my darling little son, that had crowed an' leaped on my breast; to see my wife brought to death's door; to know the only one I could hope to keep had been away since daylight, in all the dangers of the town, his brave little heart trying to remember his mother's lesson, that it was honest to earn, but wrong to beg—was it a wonder my heart gave way, an' I couldn't bring myself all at once to say 'Amen!' to Mary's whisper: 'O Jim, now you've come back, we can thank God!'

Well, I can say 'Amen!' now with a quieter mind, for I've come to the end of 'My Long Holiday.' Yes, my holidays is over; an', please Providence, I'll have no more like 'em. I'm a-writing this account, as I promised to give you to judge by, from the new home as we've found, right up the old St Lawrence River. The clergyman as brought the last thin blanket out o' the charity store at Limehouse, he set about direct to try to find if this big world had a got any place where such as me could make a living. The good gentleman, with all his trying, an' all his friends to help him, didn't find as he'd got a easy job. You'll understand, all I wanted was good work to do, an' I could do it, an' right glad o' the chance. But then, you see, it wasn't me alone, but thousands more, as ready with their hands, an' as willing as me. I've been told as all England was tried before they gave it up in that direction, an' I can well believe it. Hadn't I tried all England myself before the gentlemen began? As a 'bus-driver said to me, the very day before I saw the last of old London streets—he says: 'It do seem a pity, arter all, as a man can't get a decent living in this big town, not without a-going an' taking other men's bread out o' their mouths; an' not even then sometimes.'

Digitized by Google

There was a-many of us as would ha' been content to do anything we could ha' turned our hands to, rather than come away from the dear old country where we was bred an' born. But you see, it wasn't to be. The gentlemen found out, after a time, that men was wanted over here, an' them as would come work would be found for. So they kep' us till they could get money from one an' another, to give us a little plain outfit, an' till the government was found determined not to do anything for us (I 'm not a-blaming o' the government, because I don't rightly understand such things, an' it may be they couldn't), an' then one or two o' the old masters found ships for us, an' away we come. And here we are at last—Mary an' me an' our Jim, three left out o' five—just got a fair start, in a part o' the world where honest folks don't crowd over-close on one another.

I 've nothing to say against England; but it do seems to me a pity—more, it seems a shame—that in such a great, grand, old country, a few (or even, for that matter, a many) reckless or unprincipled men, looking only to their own profit, should be able to upset trade, and bring thousands of hard-working men and women to ruin, an' starvation, an' sickness, an' death; and, even worse than all, to drive hundreds to crime an' sin—ignorant men to prison, weak men to suicide, an' girls an' women as would ha' been good an' pure, to the streets an' all manner of misery.

I haven't written this on my own account; though I make no doubt but you 'll think my holiday was both longer and worse than I deserved it should be. You don't know me, and never will; I only want you to think how many more than us suffered as much, and was less fortunate in the end than Mary an' me and little Jimmy was. There 's thousands left at home as will go on suffering for years yet—not unlikely to the end of their lives; unless them as have the power will lend 'em a hand in the old country where we 've left 'em behind us. Perhaps you yourself, reader, may be able to do them *some* good.

DAMAGES.

'A VERY sensible principle, sir,' said Mr Bong.

This was in reference to the custom of compensation in money as applied to the redress of grievances. Your thumb gets pinched off by the banging of a railway carriage-door; or, on counting your limbs at Euston Square, you miss one of your miserable third-class legs, that has been left somewhere on the line; or, somebody inserts a pig-sty and a cow-house in the landscape in front of your drawing-room windows; or, you 've sustained internal injury, in your affections, for instance—broken heart and impaired appetite for solids—whatever accident it may be, you have a claim for compensation on somebody—or ought to have.

Now, I had taken a sentimental view of the question, arguing that no recompense in money could make reparation for the loss of arms and legs, and hearts and things.

'Nonsense, sir,' said Mr Bong, with much coarseness: 'money is a balm for every wound. I don't care what it is. It is a balm legally, and also a balm practically. You commit an assault, and outraged Justice theoretically requires you to tread a pilgrimage of one calendar month on her wheel. Nevertheless, a payment of five pounds will equally appease the stern goddess, that being the precise sum at which she estimates the pleasure of your company, and consequently the amount of compensation she must receive for being deprived of it. I once possessed,' continued Mr Bong, 'two of the wildest, drunkenest, and most disreputable rapscallions of nephews that man ever had. They went to Japan. The Japanese people killed 'em both. Yes, sir; a sad thing indeed for an uncle. However, our government stepped in, and, by way of compensation, they got a lot of Japanese hung up, and made them pay ten thousand pounds to the nearest relative of those young men. That nearest relative, it so happened, was their uncle. Oh, my poor nephews! never did I know your value till I lost you! I regret,' he went on, in an injured tone, 'that people of your sentimental turn of mind don't expend a little of your superfluous sentiment on money. It 's what I call a highly sentimental subject. It is Poor Man's Friend, Gold-beaters' Skin, and Royal Court Plaster for all the ills of humanity. When you authors attempt to bully and worry us capitalists, as you know you do, in print, it always makes me laugh. I say to myself: That poor chap hasn't got any money, but he means he should dearly like to have some. Dogs, my friend, bark when they are hungry, especially when they see other dogs with bones. Now, the only thing about which I do go in for sentiment, is money. Money, we know, is counters, nothing more; but then the counters represent a power about which you may be as sentimental as you please. A piece of money will always buy just as much as it cost to earn it. And, because a coin represents oftentimes good nature, and sympathy, and affection, which have been expended in earning it, that coin, properly spent, has the capacity to buy back as much more. This is just the ingredient which prevents charitable contributions in aid of those suffering bereavement by sudden calamity, from becoming a wanton insult to misfortune. And, since money does represent tears, and love, and gratitude, and all manner of good feeling, it is no such very unsuitable plaster, after all, to apply to wounds of the mind as well as of the body. As to the body, sir—in the case of arms and legs, for instance, the compensation is perfect. Say your right arm earns you two hundred a year, and a railway accident absconds with it. The company has only to ascertain your age, turn to an insurance table, find the amount required to purchase you an annuity for that sum, throwing in perhaps a trifle for personal inconvenience, and there you are. It is so perfect a compensation, that, if there *is* a choice, it is in favour of a wooden arm and a fixed income. Indeed, this will shew you how practically perfect is the monetary compensation for accidents. The Accidental Insurance Companies based their calculations on statistics of previous averages of accidents occurring to people; but they find six pounds per week in case of total disablement so generally acceptable, that the number of disabling accidents to the assured *far exceeds their most liberal calculations*. Now, if money compensation for injury be not satisfactory to the public, how do you account for this?'

'Easily enough,' said I: 'many of the cases are moonshine. There 's Mr'——

'No, sir,' returned Mr Bong; 'slander and libel I can-*not* allow, and it speaks very poorly for your

Digitized by Google

argument if you are obliged to descend to such things. You may argue till doomsday, but money, sir, will compensate for anything.'

'Never!' said I. 'What amount, for instance, of your vile earthly dross could compensate me for the faithlessness of an adored being who has ruthlessly torn my heart-strings asunder, and lacerated a loving breast?'

(Mr Bong is a man of coarse nature—no refinement nor delicacy—and I feel bound to apologise for him.)

'A very trifling amount,' he replied—'a mere nothing—perhaps a fiver. A jury would soon assess the damage done. For my part, I should think if man or woman could get rid of a faithless lover by *paying* a five-pound note, let alone *receiving* one, it would be a capital bargain. There is a class of people, like yourself, who don't agree with me, or *think* they don't; but it is a mere question of amount after all. Our office, sir, is very liberal in the settlement of all claims, and I can assure you we should not quarrel about a few pounds, with a paid-up capital of three-quarters of a million.'

'What office?' I asked. 'I didn't know'——

'That I was an insurance agent? You compliment me. It is our business, as insurance agents, to approach these matters with delicacy and caution. Allow me to give you our card.'

He looked at me benignly as I read it.

BLIGHTED AFFECTIONS ASSURANCE COMPANY (LIMITED),
MOON STREET.
MR BONG, *Agent.*—London, E.C.

'The object of our office,' he continued, 'is to guarantee the affection of lovers, or, in cases of Blighting, to offer suitable pecuniary compensation. Its advantages are manifold. Pecuniary compensation *is* grateful to a wounded spirit; the law recognises its justice, and continual cases of Breach of Promise testify to its popularity. But then the public exhibition of heart-strings involved, and the publication of gushing correspondence in the newspapers, have their little unpleasantnesses. We avoid all that. There is no publicity. The compensation is liberal, and the security undoubted. Testimonials from Bereaved and Blighted—small book of Cases, and forms of application, gratis.'

Mr Bong gave me a little book, and a form. This is the form.

BLIGHTED AFFECTIONS ASSURANCE COMPANY (LIMITED).

Form of Application.

1. Sex.
2. Age next birthday.
3. Name of Present Object of Affection.
4. State if either of you has been Blighted before. If so, which, and why, and generally how about it.
5. Say if your family have suffered much from Blight.
6. State the greatest number of Blightings to be covered by this Assurance.
7. Fill in the value you set upon your Affections, L.—s.—d.
8. Also the value Present Object sets upon them, L.—s.—d.
9. State if sane, and (if possible) get a friend to state so too.

The little book contained some touching cases. I am sorry I have only room to extract a couple.

H. D., aged 22, met F. A. at a picnic. Began immediately to adore her in secret. Thought she must be aware of it. All the symptoms of a bad case—off his head and off his feed for weeks. Obtained her address, and at last summoned up courage to call. Horror! She was another's—had a husband and small family. Became utterly inconsolable, world a blank, &c.; would have had nothing left to live for, but was fortunately insured in the Blighted Affections Assurance Company (Limited), and attributes his recovery entirely to that. Compensation, L.8, 15s.

M. L. E., a young person, aged 18. Misunderstanding with her young man: saw him walking with another female. Not believing it was his aunt, she put on her bonnet immediately, and was seen to go out in the direction of the Regent's Canal. Suddenly remembering she was insured in the Blighted Affections Assurance Company (Limited), better thoughts triumphed. She came to our office, and drew 35s.

'THE LADY OF THE NILE.'

SHE was a boat—a large, low, deep-lying, comfortable boat, and she carried a motley load. Mr and Mrs Petherick were on board;* many Arabs, a black boy, and a little black handmaiden, two secretaries, a *reis*, and a mate, seventeen sailors, and two women, who were to grind corn between flat stones, as they did in the time of the Pharaohs, and before it, and the little black babies respectively belonging to these women. On the deck of the *Lady* were two four-pounder cannon; in her cabin were rifles, muskets, and fowling-pieces. Under hatches were all sorts of preserved provisions, a vast quantity of grain, stores of every description, and clothing. The *Lady* was escorted by a small flotilla of four boats, a *sandal*, a *dahabyeh*, and two *nuggers*—the last being the name for small boats, and having indeed a slighting and contemptuous sound. The escorting boats were also deeply laden—the sandal carrying sheep and poultry; the dahabyeh carrying two doctors, an Italian elephant-hunter, their numerous servants, eight sailors, a reis, a mate, and the inevitable corn-grinders, also twelve donkeys. A third boat carried a large number of soldiers, two horses, and their grooms, the crew, the corn-grinders, and a quantity of grain and ammunition. The last boat carried ten soldiers, and twenty-eight donkeys—beautiful desert donkeys, be it remembered, strong, swift, and intelligent. The *Lady* and her attendant flotilla were launched upon the waters of the mystical Nile at Khartoum, and they were bound for Gondokoro, there to meet Captains Grant and Speke, who were exploring the wondrous N'yanza district.

The start was imposing, and very enjoyable; but before Mrs Petherick reached the British consulate at Khartoum, a strange, distant home for an English bride, she had made a desert journey from which any woman might have shrunk, appalled at its fatigue and its wildness; and she

* *Travels in Central Africa, and Explorations of the Western Nile Tributaries.* By Mr and Mrs Petherick. London: Tinsley Brothers.

had looked undismayed upon the prospect of the Nile voyage, destined to bear her into unknown scenes of uttermost desolation, and of danger, it might be, which there existed no means of appreciating. Quiet courage, quick intelligence, great love of nature, and unselfish cheerful readiness to take her full share of the exigences of such travel, were, as her simple journal proves, her invaluable qualifications for the position. At first, there was peaceful sailing through scenes such as the earliest ages of the world beheld, down the broad, calm river, with hippopotami for spectators; past islands without a tree, but covered with luxuriant herbage, on which thousands of cattle grazed; by flat plains, where 'the sons of Moses' congregate, and pasture immense flocks and herds; where distant ranges of hills are dimly seen, and groves of mimosa cluster by the river, gazelles bounding beneath the trees, and monkeys leaping from branch to branch. Day after day goes by, and the cloudless Egyptian sky is serene by day; and the Southern Cross, low in the heavens, looks upon the mysterious river by night. But the *Lady* nears wilder regions, and they meet a trader's boat, bound to Khartoum with ivory, and learn that the country between them and the Sobât is in a disturbed state, the powerful Shilloohs having been scattered far and wide, and sold by hundreds into slavery. Then it was told the travellers that they should meet boats coming down stream laden with slaves, which was fulfilled in one very unexpected and undeniable instance afterwards, fraught with most unpleasant consequences to Consul Petherick.

Soon the traces of the horrible traffic became evident in the deserted villages. Formerly, the people came fearlessly to the boats to barter cattle, hides, and ivory for beads; now, not a human being was to be seen. But one night, while Mrs Petherick and her husband were on deck, nine boats laden with slaves passed them, and at dawn they saw thousands of cattle driven along the west shore. Some days later, when the *Lady* appeared in sight of one of the villages on the shore, a multitude of negroes fled from their homes panic-stricken, the women carrying their infants in their arms and on their hips, and on their heads pitchers of water. The little ones able to run kept close to their mothers, but there were no skirts to hold by, so that they often stumbled and fell. The men brought up the rear, bearing shields and lances. It is pitiful to think of such terror-haunted lives. Now, sudden storms became frequent, and the *Lady* met with many accidents, trying to a woman's courage, with the elemental accompaniments of thunder and lightning. The other boats did not suffer so much, an exemption which one of Mr Petherick's secretaries, a pious Mohammedan, proposed to balance by nailing a written prayer to the *Lady's* mast, which was done. Mr Petherick frequently landed, for the purpose of trading with the unknown tribes, and was always well received.

Here is an account of a 'deal' with the Jangars, who, desiring beads, had conveyed to the consul that they were prepared to barter ivory. 'Petherick remained fearlessly with them whilst the attendant in advance came to assort the goods. Soon Petherick approached in the midst of his rude and new-made friends. They were armed with lances. Their bodies were covered with a powder, which they obtain from the ashes of wood-fires, which, when cold, they roll themselves in. Some had the hair stained red, and others had it covered with a coating of grayish clay, elongated at the nape of the neck. One tall youth, the chief's son, wore with an air of satisfaction a pair of garters. The Jangars seated themselves on the bank, forming a semicircle, Petherick fronting them. Our men advanced with baskets of beads, &c.; and the negroes, with great coyness, put down a small ivory tusk. The pipe of peace was smoked, and then a busy hum commenced. Three tusks were bartered for beads, lance and hatchet heads. The chief gave Petherick a goat, requesting that he would spit in the hand of his son, expressing a belief that if he did so, his son would be enabled to throw a spear with power. Petherick cordially did so, amid the acclamations of the tribe, and the youth received the congratulations of all.'

Presently, the little exploring fleet found itself in the lake called Bahar il Gazal, and during an entire week, vainly sought an outlet, during which time no one could land, owing to the density of the weeds. At length an outlet was found, and the *Lady* floated through it, and soon came in sight of two important villages, where the natives were reported friendly. The villages lay well inland, under the shelter of solitary palms and sycamores. Petherick went on shore; and presently two chiefs arrived, one of whom had his hair dyed red, and tousled about his forehead, just like a girl of the period, and wore a blue calico robe, which he carefully tucked up under his arms when he seated himself. The other chief was tall, and old, and wore a panther-skin robe. Their suite were tall, high-shouldered, spare men, their bodies covered with ashes. They behaved politely, and inspected everything with grave attention, sitting silent on the shore, watching Petherick, who was in sight, banging away at birds. The party was soon joined by a lady, whom Mrs Petherick describes: 'A magnificently formed young woman stepped on board, the second wife of the chief who wore the panther-skin; she brought to her husband his pipe. Her dress was a straw *rachat* descending from the waist to the knees; beads hung in profusion round her neck, completely covering her bosom; many iron bracelets, brightly polished, encircled her arms, and similar ornaments were worn round the ankles. Her hair was in short crisp curls, which clung closely to her well-shaped head. She tormented her husband and made him jealous by talking and laughing with the soldiers and crew.' A 'frisky matron' by the banks of Nile. She ran away from the panther-skin-clothed chief next day, and took refuge on board the *Lady*, declaring that she was ill-treated and starved, but her appearance was against her, and Petherick decided that she must go home, and had her carried on shore, kicking and screaming. When set down, she ran off, in a contrary direction to her village, hotly pursued by her husband, who threw off his panther-skin for the race. This scene was good fun, of which the Nile voyagers were destined to very little more. Troubles came thick upon them; contrary currents, adverse winds, rendering their progress intolerably slow; blinding rain, so that no fires could be kept alight, inhospitable shores, and no news of the expected travellers. And, worst of all, the boats they encountered, and with which they spoke and transacted exchanges, were, they discovered too late, crammed with slaves.

Digitized by Google

The animals got into bad condition, the donkeys especially, and several died. Dr Brownell fell ill. But now the shore became beautiful, and in fine weather the travellers landed, and rode or walked long distances, under the palms, and through the various luxuriant grasses. In the river, exquisite creeping-plants clustered among the reeds, and gorgeous butterflies alighted on the *Lady's* rigging. Once a negro catches some flowers as they float by, and they are like, though larger and richer, the English heart's-ease and forget-me-not. Soon Consul Petherick had to sustain a severe trial, whose effects have lasted ever since. This was the discovery that a man in his employment, named Abd il Majid, whom he had despatched to Gondokoro with supplies for Grant and Speke, had disobeyed his instructions, abandoned his post, and actually engaged in the slave-trade, under the British colours. The discovery forms quite a dramatic incident in the narrative. One day the reis announces three boats carrying the English flag coming down the river. Surely they are the boats of the expedition, with Grant and Speke on board. The excitement is intense, and much powder is wasted in firing salutes. The boats are soon recognised as Petherick's own, sent for the relief; but no matter. Of course, they have fulfilled their purpose; of course, the explorers are there. Drums are beaten, and festive preparations made, and Mrs Petherick ponders how she shall tell the news, of death and of marriage, with which she is charged, to the wanderers. 'The coming boats anchored, and the agents and reises were soon on board, but not the travellers so ardently looked for. . . . . Abd il Majid entreated a patient hearing. He said that upon his arrival at Gondokoro from Khartoum in December 1861, he disembarked, leaving the boats amply furnished with grain, &c., there to await his return, or the advent of Captain Speke. At the Wayo, he was seriously ill, and unable to proceed. In consequence, he made over his mission to the agent at that place, a trustworthy man, named Mussad. Mussad, well supported, made a seventeen days' march south to a place called Warija, in Bakoa. A frightful famine was raging in this district, and for some days Mussad and his men subsisted only upon gourds and roots. His followers refused to proceed, and reluctantly he was compelled to return. Of the Speke expedition he had heard no tidings.' Mrs Petherick then relates that while Abd il Majid was making this statement to the consul, she was talking to a negress named Toto, who had left Khartoum in November, with the boats for Gondokoro, as a bread-maker. 'Her child was in her arms, and I remarked that the babe was ill and cold, and ran up a flannel shirt for it. Whilst I was thus employed, she looked at me tearfully, and at length exclaimed: "O sitté [madam], Abd il Majid is a bad man. He made us all promise not to tell, but I must. There are slaves in his boat. He did not think that he should meet the consul; and when your boats appeared in sight, he concealed them all." She then kissed my hands, and withdrew.

'I went on deck, and asking Petherick to refrain from expressing any surprise, lest, though the men with him could not understand a word of English, they should read his countenance, I said, averting my eyes from Abd il Majid's evil face: "That man has brought down slaves, and they are in his boat." "Impossible: are you sure?" was Petherick's rejoinder. I beckoned him into the cabin, and there told him all. We agreed that to disarm suspicion, he would continue his conference with Abd il Majid a short time longer. And so he returned on deck; and after chatting some moments more, he proposed to accompany Abd il Majid to his boat, to see in what condition she was. Anxiously I watched Petherick step on board the boat alongside, closely followed by Abd il Majid, who appeared gay and unconcerned: he was speaking of two panthers on board one of the other boats which he had brought, and made a proposition to visit the animals. I heard Petherick's assent: "*Badaen*" [by-and-by], and for a short time he remained on deck, examining the cordage, and speaking freely to all. He then went below, and remained, it seemed to me, an interminable time. At last he came up, Abd il Majid with him, and I saw by his face, pale with anger, that he had made a discovery; but he said calmly to the reis: "Take down your flag" (the union-jack). Then he called for a pair of handcuffs, and fettered the hands of Abd il Majid, who looked abject and livid, but made no resistance. And now from below stepped up one by one the discovered slaves (but slaves, thank God, no longer), giddy from excess of light, emerging from the dark hold, staggering as they were led, eighteen in number, to the *Lady of the Nile*. With outstretched hands and tearful eyes I received them.' The guilty Abd il Majid was imprisoned during the remainder of the voyage in the den whence the slaves had escaped, and ultimately handed over to the Turkish authorities for punishment.

The *Lady* is in constant trouble, and evidently wearing out; weather is bad, and progress very slow. Many leaks are sprung, hunting is dangerous and unprofitable, the animals suffer much from disease, and fever and ague begin to shew themselves among the sailors and hunters. The news from the shore is that there is a wide-spreading inundation, turning the country into a mere marsh. A plague of flies sets in, large, stinging, very beautiful flies, the body a bright yellowish brown, the head emerald green, the wings delicately tissued, with a black spot in the centre. They inflict much suffering on the men, and torture the horses almost into madness. Fever and ague gain upon the little company; every kind of supply is failing; the leaks are frequent; and the men are tired out; the towing-ropes are worn out; and the grain and biscuits are mouldy. The rains are beginning, and the mosquitoes are unendurable. They reach Lolum, where Mr Petherick hopes to find palm-trees, from which cordage may be made to help them forward: but there are no palm-trees, and the travellers despair, especially when the morning discloses another leak. The boat is unladen, and the extent of the loss is ascertained: books, stationery, powder, and stores of every description are spoiled. Then the travellers resolve to march to Gondokoro, through the Aliab and Bari territories—a direct route, but very dangerous and difficult, because of the inundation.

It was a dismal beginning to a terrible journey, when the soldiers brought the news that a lion was ravaging a neighbouring village, but there was nothing for it but to face the dangers of the land. The Nile would have no more of the travellers for

Digitized by Google

the present. So Mr Petherick assembled his company on the 1st August, and addressed them, not making light of any of the difficulties which awaited them, and asked them: 'Now, men, are you ready to follow us onwards? My wife and myself go.' Their leaders replied: 'When a woman can venture, are we girls, or are we men, that you should ask us?' At noon they were ready. 'Then,' says Mrs Petherick, 'a gun was fired, and the first detachment marched, headed by one of the soldiers bearing on a lance a small union-jack I had made. The women accompanied them, and our liberated girls. When the thrilling *zachareet*, which they commenced as they moved on, was heard by me, I could not help but weep, we seemed so responsible for their wellbeing. A group of our people were assembled to offer their prayers for our welfare: we passed through them with many a fervent "God bless you," and were soon in the saddle.'

Thus began a journey full of danger, unbearable fatigue, exposure to terrific weather, physical suffering of many kinds, borne with truly wonderful patience and courage; full of interest too, and destined to add to the treasures of science, and to our national collections of natural history very considerably, but immediately productive of mortification and injustice to the travellers. They journeyed by strange ways, and among extraordinary people, noting the curious differences and degrees in savagery among them; sometimes their way lay amid much beauty, but generally it was gloomy and dangerous, and always difficult and fatiguing. The story of that long trial of a woman's strength of mind and body, of her patience, trust, and courage, extends in time to more than a year, five months of which were passed on board the floating home the travellers never saw again; for, on her return voyage, disabled, slow, and worn out, the *Lady* went down into the Nile.

A LIMITED HORIZON.

IN FIFTEEN CHAPTERS.

CHAPTER IX.—FALLEN VERY LOW.

Lalagé woke next morning with a dim, uncomfortable sense of 'something' having happened. What the 'something' was soon came to her with a vague sense of pain. She was so sorry about it all, that, as she lay in bed, the slow tears gathered in her eyes, and trickled down through her fingers. She had never meant to do him any harm. Ah, how sad it all was, and how lonely she felt!

And he was so unhappy, very unhappy, she knew. She wondered if at that very moment he was thinking of it as she was doing. 'Not crying, though,' said Lalagé, taking her hands from her face, and quickly brushing her tears away; and then she wondered: 'Do men cry?' Perhaps all that novels said about their inability to do so was not true, and they really did indulge in that weakness. There had certainly been tears in the curate's eyes yesterday; but instinct told her that, even if the popular delusion about men's tears were incorrect, they would not cry as women do, with great sobs that shake every nerve, and make every limb feel powerless, that come gasping up from the very depths, and reveal a world of possible suffering to the weeper. Then Lalagé exemplified to herself the sort of 'crying' she meant.

'And just for nothing,' she said after a while, making an indignant protest against herself.

But was it for nothing? It was not nothing that the love of a lifetime—'for,' said Lalagé, 'people can only really love once'—should be wasted, thrown away, poured out like water on the arid desert sand, that was in no way benefited by the gift. 'And a good man, too,' she said with fresh tears. She thought over all the scene, as women always do; and with the dim veil of a day cast over it, it appeared even more pathetic, more touching than it had done at the time.

She had had two 'proposals,' as young ladies say, before the outbreak of yesterday, which indeed was scarcely a proposal proper, but nevertheless she compared it with those former experiences, and found it very different from either. The first man who had sought her hand had been a well-known fortune-hunter, to whom all heiresses were alike dear, and who fancied Miss Lalagé Hesketh a better 'catch' than she really was. His proposal had been made and declined as a mere matter of business. With her cousin, George Wriothesley, it had been very different. He had come to her himself—which that other man had not done—saying to her words which, if he had only put into them one spark of fire, would perhaps have kindled a corresponding glow in the girl's heart; but the utter absence of any such spark annoyed, even offended her, as indeed was only right. A man with a *nonchalant* manner should renounce such before he makes an essay of this sort.

And yet George Wriothesley was good and true, his failure chiefly arising from that humble estimate of himself which he wisely kept to himself. He had never thought himself worthy of Lalagé, and so was too ready to acquiesce in the cold, decided refusal he received; whilst she was thinking he did not care, for his inward wound was only represented by outward coldness.

That he had suffered, Gertrude Cleather knew well, but Lalagé did not, and she felt only piqued when she recalled the circumstance. How different that cold question and answer had been to the piteous pleading of yesterday! Ah, after all, that poor big curate was the only one of the three who had ever cared for her; and at the thought she buried her face in her pillow, and sobbed afresh, for life was so sad, and love was so beautiful, and for that last to be wasted seemed to her, to whom the useless sacrifice had been made, just cause for tears.

Then she busied herself with the question which she had so often asked yesterday, but to which she had as yet received no satisfactory answer: Why, in that first break of the curate's eloquence, had she not at once answered him, and so put an end to his pleading? She recalled her feelings as she stood on the desolate hill-side, and she remembered the sudden soothed sensation that had stolen over her in the midst of her sorrow for the words he spoke. She had been very, very lonely, and life had seemed colourless and useless for her, when all at once she found that, without her, another life would lack colour and beauty, and that knowledge had come to her like balm.

But still, surely that could not be excuse sufficient for a silence which she felt had been cruel. Why had she not spoken at the very first opportunity? Why had she not as soon as possible cut short the words to which it was a dishonour to allow

Digitized by Google

a full hearing, meaning to answer them as she did? Why had she not done so? She asked herself this question over and over again, wondering at herself more and more. To those two others, she had unhesitatingly administered an instant dismissal: what had made her more cruel, or more kind, to this man?

Suddenly she started up in bed with flushed cheeks and blazing eyes: 'Can I like him?' she asked in horror—'like him in that way, I mean?' She sat there, gazing forward into the future with terror, gazing into her own mind with bitter scorn, and ever and anon the question rose up: 'Can I like him?' Was not this the way to solve the question she had been so diligently asking herself? Was not this the cause of that culpable silence? Was not this the secret of her grievous pity? Did not this account for those foolish tears?

'I suppose I do,' she said slowly, after that bitter self-communing, and laid herself down rigidly, then grew suddenly angry. Pity for the curate died out. Did not she herself now need all the pity in the world of her heart? Not the soft, gentle pity which could shed tears; not the mild reproachful pity that had a tender, soothing charm of its own; but the bitter pity of scorn, of a self-despised heart. Intuitively, without acknowledging it to herself, she felt that she was, in many ways, this man's superior; and yet, 'I suppose I do,' she repeated to herself.

It had come to her then—that mystery, that wonderful revelation, that turning-point in a woman's life, of which she had read so much, and thought more; it had come to her thus. Love stood before her, but arrayed in no shining raiment, with no silver wings, and she turned away her face with shame and disgust. Before the high altar of her own soul she stood convicted of an unworthy choice; and though accepting without appeal the sentence of her own degradation, she was immeasurably grieved and indignant. That any such feeling was incompatible with real love, she did not know, poor child, and took this vicarious suffering upon her shoulders with no idea that it was an imaginary burden. She had pitied him; she had liked him very much; it had soothed her to hear his flattering words; she had grieved over his pain as she had done over that of no other suitor; she had felt desolate and lonely as never before in all her life; therefore—she loved him.

What would her father say? What would Belle say? What would any one say who cared for her? Nothing; for no one should ever know anything about it; no one, no one in all the world: she would keep her disgrace to herself. Least of all should he know it—that poor, big, unwise man who had brought all this trouble upon her; he had caused her to fall from her 'high estate;' but of any such fall he should studiously be kept in ignorance. She lay there in a silent rage, wishing she had never seen him—wishing they had never come to Grimswold—lay there, but not to start up gleefully, as she had done only seven months before, at the voice of the cuckoo. The cuckoo had gone; the time for the singing of birds was over; the beauty and brightness of summer were dead; and her poor human heart was fretting and chafing in its unrest and anger.

When she got up, she went to the glass, as though she expected some great change to have come over her 'bodily presence' from that inward revolution and commotion; but she only saw a flushed, angry face; violet eyes, which were blazing and burning, and from which all traces of tears were scorched out; and tangled gold-coloured hair, which had been terribly tumbled during that long consultation. She looked at herself accusingly, reproachfully, then said slowly: 'Yes, I suppose I am what people call "in love;"' and a fresh accession of anger and scorn came over her.

Did she think that that wondrous change ever came to the most leaden-coloured existence without one golden glimmer—without one thrill of irrepressible joy, however dark and impossible the accomplishment and fruition of hope may be? Did she think that 'fallen very low'—the words she kept saying over and over to herself—was the usual confession of a woman who finds that her heart has gone away out of her keeping? Of all this, she thought nothing and knew as little; only that her own fate should have come to her in a shape which she could not welcome, could only loathe and abhor, seemed to her so hard a thing that she thought she 'did well to be angry.' Of the curate, she thought scarcely at all, except with a dumb feeling of anger. One thing, however, she felt, or fancied was due to him; she had caused him pain, she supposed—it was wonderful how that estimate of pain had been lowered since she had discovered that she herself was not without scars—and for this she would formally ask his forgiveness, if ever it was practicable to do so; but of course all intercourse between them must now cease. Then a sudden grief—for herself, not him—made her heart soften a little for a moment. 'I have no friend now,' said Lalagé.

After all, that odious Mrs Verey had not been so far wrong. Had not the curate proved himself a very dangerous young man?

Of what was he thinking on this morning, which had brought such unwelcome revelations to Lalagé Heaketh? He too had waked up with the feeling that something had happened; but on thinking affairs over, no tears had come to his eyes—rather a feeling of rejoicing and self-gratulating arose in his heart. He had done his work well, and he meant to try again—ay, fifty times, if only he could manage it. The fervent expression of his love had a little worked off the pleasant sorrow of it; it was an acknowledged, outspoken thing now, but still very, very dear to him. He said, and truly, that he had never before known a woman so sweet and womanly as Lalagé; and thought, with a gleam of hope and joy, that perhaps this was to be the last trial of his susceptible heart; possibly, possibly—Then the unwise man went off into foolish dreams, and he 'lost his head' again.

He did not meet Lalagé for several days after this, and then she was distant and cold, and his easily impressed heart sank very low, and she seemed to him more than ever lovely and lovable, because farther from him. Live without seeing her, he could not, thought this weak, big man; and so he took to haunting her, going into the very houses in her district where he knew her to be, standing behind her whilst she taught her class at the school. But this she would not allow; so one evening, whilst darkness grew over the heavens, and deeper darkness gathered in Lalagé's face, she broke out. 'I will not have this,' she said; 'I have borne it till I was quite sure that all these meetings

Digitized by Google

were not accidental; but I am certain now, and I will not allow it. It is very, very wrong of you.'

'I cannot help it,' he said, and the foolish bronze face bent down over hers with an appealing look. 'How can I get on from day to day without seeing you? If you only knew—but you don't care.'

'I do care,' she said: 'I care for anybody's being unhappy; but I do not see why that should make you forget what is right.'

'O Miss Lalagé!' he said.

'Yes, you do,' said the girl vehemently: 'you meet me constantly against my will; you stand behind my chair half an hour every Sunday, and it is horrible of you to bring thoughts and feelings like yours into work of this sort.'

'O Miss Lalagé!' he said again.

'I wish you would not say "O Miss Lalagé," so often,' she said; 'it does irritate me so. Sometimes I feel as if I were ever so much stronger than you, though you are so big. I can only tell you, if you come here so often, I will give up my district; if you stand behind my chair on Sunday, I will get up, and go home.'

'Oh,' he said, 'forgive me. What can I do? How can I help it? I can only think of you all day and every day; it comes between everything.'

'And you are a clergyman,' she said, turning upon him with a sudden flash, 'and yet prefer your —foolishness' (she could not bring herself to say 'love') 'to your work! I wish I were a man, and could go quite away from this place.'

'I did not say I preferred anything to my work,' he said humbly; and Lalagé could not help liking him better for not getting angry; 'I put that before everything; it is only rising earlier and going to bed later, so as to have a little time to watch for you.'

'Don't do it again,' she said more kindly; 'don't make me wish myself away. One thing more I have to say, forgive me, if you can, for having brought this trouble upon you; I am so sorry for it;' and again, to her own surprise, tears rushed to her eyes.

'Forgive you!' he said; 'what have I to forgive? Nothing. Why, all day I bless your name. If you only knew'——

'I do not wish to know anything more; you have already told me too much,' she said quickly.

'But Miss Lalagé,' he said, 'if I don't trouble you any more—if I keep it all to myself—will you let me be sometimes with you, just as I was before, neither more nor less, but just the same?'

She was very lonely; he was very earnest; there was no one at hand to guide and counsel her, and of the integrity of her own heart she was very certain; could she be less sure of his honour? After a moment's hesitation, she said: 'On one condition: that on *that* subject'—with a slight flush—'you know what I mean—you promise never to speak to me again; that you won't follow me about in this foolish way; and that you will treat me just as you do everybody else.—Do you promise?'

'There are three conditions, not one,' he said dejectedly; 'but a starving man cannot refuse half a loaf. I promise.'

'Then,' she said, 'we are friends again.'

He walked on in silence, wondering how he should be able to keep those promises; reticence was not his fort. Then he said: 'At least there is one thing I have to say that will not be unwelcome to you—you will be glad to hear that Mrs Cleather has returned.'

'Gertrude come home!' said Lalagé; 'indeed, I am very glad. But when did she arrive?' And she thought, with a softening heart, that Gertrude had liked the curate, and he had been good to her.

'Only this afternoon,' said Tom Mitchell; and by that time the Hill House was reached.

'Do come in and have some tea,' said Lalagé; and he accepted gratefully.

The evening was like one of the old pleasant ones; Lalagé was in high spirits at the thought of Gertrude's return, and felt that she had, for the time being, quelled the curate. Belle, looking on, thought, with a half-scornful satisfaction, the young man's devotion was abated; whilst he was at the very moment giving himself over to a mitigated season of foolish bliss.

The last thing before going to bed Lalagé looked out of her window, and rejoiced to see the dim light in the Cleathers' nursery.

'I shall not be lonely now,' she said.

CHAPTER X.—A TERRIBLE DREAM.

But, after all, Gertrude's return did not make so very much difference to Lalagé; her friend was so often engaged now, that she seldom had time even for the Hesketh. Once, too, Lalagé, waiting outside the door till the servant should open it, heard within the uplifted voice of an angry man, shouting out in rage and fury; she had been so frightened that she would not wait till her knock was answered, but fled away. What could be the mystery which hung over Gertrude's household? After this, she kept away from the King's House, and received no remonstrance from Gertrude on the subject, so she could only conclude that her friend was too busy to see her.

Mrs Cleather was altered, Lalagé thought; the calm sweet face had grown even calmer and sweeter, and gave a perpetual contradiction to the theory of her being an ill-used wife, but the serious brown eyes had a more wistful look in them, and seemed to see farther away than ever; only by so looking towards the Heavenly Hills, from which alone her help could come, did Gertrude Cleather in such steadfast patience possess her soul. The terrible trouble which had slowly grown into her life, had brought with it a wealth of endurance, for which, she felt, she could never sufficiently thank the Giver alike of the blessing and the curse.

Looking at her, Lalagé felt awed, and ashamed of her own feeble, restless life; but still the loneliness and dreariness would come back again and again, and the dark winter months passed slowly and heavily.

Mr Hesketh came down for Christmas-day, and wondered how Belle and Lalagé could endure the utter desolation of the place. 'But I suppose it does not matter to you where you are, as long as you have your books,' he said to his elder daughter. 'And this silly child is enamoured of the place,' he added, turning to Lalagé. 'Do you think you will be able to hold out sixteen months longer?'

'Of course, papa,' said Lalagé brightly. She could not find it in her heart to tell him how dreary it all was; besides, she was so glad to do him service in any way. 'But I don't say that we will stay longer than the sixteen months.'

Digitized by Google

'You think by that time you will be wanting another change, eh?' said Mr Hesketh in his wisdom, with an oracular nod. 'I understand; you *can* get tired of even Grimswold.'

Then he patted her head, and called her a silly, changeable child; but Lalagé only looked up in his face with her loving eyes, and keeping him prisoner, by clasping both hands round his arm, said: 'One thing is, I never get tired of you.'

'Perhaps because you haven't the chance,' said Mr Hesketh almost bitterly. 'But hang me if I can stand more than a day or two of this place; by Jove, I can't!'

Her father's visit made a pleasant little break in that dreary winter, but it was only a little one, and the days, and weeks, and months passed wearily enough to the lonely girl.

'Why am I so unhappy?' she said to herself one day, after a terrible fit of depression. 'Oh, of course I know—because I am what people call in love;' and bitter self-scorn rushed into her indignant face.

That this fatal fact was an imaginary one, never entered her mind. Did she not like the curate very much? Was it not a great pleasure to her to talk and even walk with him? She made no allowance for her utter loneliness and want of companionship; no, the discovery made on that November morning had been treated as final ever since.

I fear my readers will think her a very imperfect woman for making so vital a mistake; a very imperfect woman she may have been, but, O Lalagé, they who knew you best never loved you less on that account!

Winter passed slowly, with halting, feeble steps, and spring arrived with its melancholy beauty—its variable, pathetic brightness—filling Lalagé's heart with infinite yearnings and sadness, coming to Gertrude with her matured soul and elder wisdom with a promise of future strength, and endurance, and even hope. Ah! thank Heaven! when the fervent season of youth is over, with its passionate capabilities of joy and sorrow, the calm middle day brings a juster estimate of all things, and refuses to be recklessly drawn into grief. The divine law of compensation spreads a levelling hand alike over the supreme heights of joy and the deep abysses of woe. Gertrude Cleather's youth had gone before its time, so in quietness she stood as usual that spring, content among her household, ready to meet the evils of everyday life, even though she knew they must necessarily be heavy ones. But a heavier than had yet befallen her was even then hanging over her head. It came about in this wise.

All through that bright, fitful April, Captain Cleather had been even more irritable and excitable than usual. At last things came to a terrible climax. One night he went to bed early, contrary to his usual habit; the moon was at the full, and the restless man went all over the house, drawing down every blind, and saying he hated the ghastly light. Ah! so did Gertrude. He shook up the sleeping children; bent his handsome flushed face over the boy, his especial darling; and terrified the nurse almost out of her senses by giving her a sudden furious lecture on her carelessness with the children. 'I will not have it,' said the angry man, and going to his room along the quaint old passages, he stormed as he went.

Gertrude followed shortly, and, to her surprise, found him quietly asleep in bed. She put out her candle quickly, knowing it would irritate him if he awoke, and, by the light of the moon, which would not be wholly excluded, smoothed the tumbled sheets in her baby's cot—the child always slept by her side—and, after a while, got into bed herself.

It seemed to her she had only been asleep a very short time, though in reality several hours had passed, when she awoke with a sudden sense of unaccountable horror. She had so trained herself, however, that she gave no evidence of being awake, and softly turned her head to the broad stream of light that now flooded the room, for her husband was not by her side, and she must find out why he had risen. She had not far to seek: there, with his head out of the open window, stood Captain Cleather; the moonlight was shed all over him, making every feature and even expression distinct; a cold blast of wind was pouring into the room, over him, over the baby's cot, over Gertrude herself, but he seemed quite unconscious of it.

He was softly chuckling to himself, and turning something over in his hand which he cunningly kept out of the light. 'I will make her,' he muttered, and gave a low laugh. An unutterable fear came over Gertrude; 'the baby, the baby,' was the one cry that wrung her heart, but still she kept very quiet, putting her head back on the pillow.

Presently he began calling her by name, but not loudly. 'Gertrude,' he said, 'Gertrude, I want you.'

She did not answer, but moved as if just waking from sleep. He called again: 'Gertrude, get up; I want you.'

'What is it, John?' she asked in a sleepy voice.

'Hush!' he said, turning round angrily; and as he moved she saw the Thing he held in his hand—a long glittering carving-knife. 'Hush! you will wake the baby; I won't have the child disturbed.'

One terror faded from her mind only to give place to another; but her baby was safe, and even in that awful moment the mother's heart gave a cry of thankfulness; it was not the child who was in peril, only herself.

'What is it?' she again asked more softly, and taking the opportunity to loosen the bedclothes with her feet, so as to be in no way hampered. But if the very worst came, whither could she fly, how could she escape? In all the whole wide world, was there no asylum for her in her hour of need?

'Get up,' said Captain Cleather, in a voice of gleeful cunning; 'it's a beautiful night, and we'll have a drive.'

'Isn't it a little late, John?' said his poor wife.

'There—I knew it,' he said savagely, and at one bound he had left the window, and stood by the baby's cot. 'I knew you would thwart me—I knew you would cross my path, and, by Heaven, if you do, I will kill you!' and he triumphantly brandished the knife he held.

'Hush!' she said; 'you will wake the baby.'

'You are not stirring,' he said: 'get up, I tell you; your life is in my hands.' And in the midst of his rage he gave a low chuckle.

'Shut the window then,' she said in the same low undertone, 'or I shall catch cold when I am dressing.'

He turned, and, as he did so, she sprang out of

Digitized by Google

bed and flew to the door; she had hardly opened it, when she knew he had seen through her ruse, for a low sound of rage, like the growl of a baffled beast, smote upon her terrified ears.

She fled along, not knowing whither she was going, or why she had yielded to the human instinct prompting her to fly, fly, even though she had nowhere to fly to. Along narrow passages with countless turns and corners, but all possible place of concealment rendered bare, and open, and profitless by the glaring moonlight; past the rooms where her home-life had been spent for many months; where she had eaten and drunk, and sat in peace amongst her household, but which could give her no shelter now; and all the time with those terrible footsteps following her. Once she heard them stumble and fail as they came in their unnatural haste down a narrow flight of steps, and fresh speed came into her failing limbs—fresh strength into her quivering nerves. She flew with supernatural power along the familiar passages till she came to the drawing-room, then, with a flash of inspiration, she remembered the secret door which Lalagé Hesketh had discovered, and which had never since been opened or spoken of by her in her busy occupied life. After all, an unseen Hand had guided her along that terrible, purposeless flight.

She stood before the door gasping with terror, lest it should not yield to her efforts; she remembered how stiff it had been on that former occasion, which suddenly stood before her in sharp, bright relief, for she found herself picturing the whole scene: the sunshine, the warmth, the curate, Lalagé's bright hair, even the pattern of her muslin dress, all came with sharp, biting, photographic accuracy to the mind, which extremity of terror had rendered so comprehensive.

But such visions—forced as they are against the will—take no time; and they had scarcely begun to fade ere, putting forth all her strength, she found herself, as Lalagé had been, flung inside on the staircase. The pursuing steps were very near the drawing-room now, and she had barely time to get behind the awkwardly placed door and close it, before her husband entered. But the passive time of agony that followed was hardly less awful than that previous flight had been; she heard him walking to and fro in his baffled rage, cursing and swearing, searching under sofas, opening ottomans, and remembered that only a door stood between her and him. What if he found it out? That it was unfamiliar to him was her only hope of escape, but would that avail? She put up her hand in the darkness, and felt along the edge of the door—surely there must be fastening of some kind. She found two rusty old bolts; but the catch of one was broken off. She moved the other softly along its unused groove; but it was impeded and rendered noisy by the rust of years, and before she had accomplished this slight defence, cold beads of agony stood on her brow. Then she sat down; she had done her utmost, and could only wait the result.

The church clock struck one, two, three, and still Gertrude Cleather sat there in her dumb agony. She heard the glad chimes ring out the grand old Easter hymn, as was their wont every third hour, and slow tears came into her eyes as she heard the familiar sounds in the unfamiliar place; but then another sound greeted her ears, and made her start up in the darkness and stretch out her useless hands. It was her baby's cry. Her husband was still walking up and down, but not quite so fiercely as at first, and the savage words were abated; indeed, his mood had changed, for she heard him chuckling, and saying that he knew she was somewhere in the room, and would wait till she came out. But what if this fresh sound should revive all the fearful evil passions, and draw down on her baby the vengeance intended for herself? What should she do? What should she do?

She got up, turning her back to the door, and flinging herself against the wall in her speechless pain; and suddenly, noticing the thin ray of light that cut the darkness in two, she remembered the window fitted into the wall, and which had been behind her till the baby's cry had roused her. Had not terror stifled every faculty after that first supernatural energy, she must have thought of it before.

With eager but steady hands she took hold of the two bolts, which the curate had fortunately left unfastened, and gave one vigorous pull, steadying herself by placing her foot against the opposite wall: the shutter gave way directly; but, alas, the noise had attracted Captain Cleather.

'I heard you,' he said; and it seemed to her that the voice sounded close at her elbow; then, with a cry of rage, he recommenced the search he had left off.

She stood there, dazzled with the flood of light she had admitted, and wondering if she was so to be murdered, with the holy, helpless moon looking placidly down, and watched by the hundred eyes of the distant stars.

But her husband grew quieter, and evidently thought it was sufficient to be very watchful and cunning; so, after a minute's pause, she put down the shutter and climbed on the window-sill. She had said in the broad daylight that the descent before her was by no means impossible, but it seemed difficult enough in the ghostly night-season. A spouting ran down close by the window, and fantastic gargoyles stood out from the stonework; but these were all the aids on which she could rely. As before said, the gardener's shed was directly below this window.

She shut her eyes with a silent prayer, and then, putting both hands on the spout, began the perilous descent; she slid down, and thought it was nearly accomplished, when a straggling rose-branch tore her foot sharply: the sudden pain was so great that she nearly let go her hold. At last the roof of the shed was reached, and Gertrude, clinging to a gargoyle, looked up and saw great blood-drops hanging from the rose-leaves. And then she looked down, and wondered how she should reach the ground, when unexpected help presented itself in the shape of the gardener's ladder, which had been left leaning against the shed, just under the spot on which she stood; so it was comparatively easy to get down. She had expected to find this ladder inside the shed, and had intended by means of it to get into her room—which was at right angles with the one in which she had been imprisoned—she used it now, and in a very few minutes was back in her room.

She bound up her foot hastily, and then took up her child, hushing it, and carefully guarding it from contact with her icy hands. At last the baby was quieted; and what should she now do? Leave

Digitized by Google

it again she could and would not. After a little thought, she got into the crib herself, cramping her limbs painfully, and covered and encircled both the baby and herself as well as she could with bed-clothes.

And there she lay, and watched, and waited, and thought for another long hour, at the end of which Captain Cleather came back with slow exhausted steps, and flung himself down on the bed in a sudden resistless sleep with heavy animal breathings. After a while Gertrude crept back into bed; she knew by experience that the danger was over for this time at least. After a violent outbreak, he would for days, even weeks, be unusually quiet and reasonable; she knew, too, that the waning moon would bring comparative peace to the poor troubled captain.

In the early morning, he woke again, and sat up in bed, burying his face in his hands.

'O my God!' groaned Captain Cleather, 'I am going mad.'

A sudden flash of truth and light had broken in upon the gathering darkness of the poor bewrayed brain, and wrung his heart with agony. Gertrude lay quite still in her feigned sleep till he put his arms round her and lifted her up.

'O Gertrude,' he said, 'my love, my darling, what is the matter? what has happened?'

'What do you mean, John?' she said, stroking his face as his children did. A puzzled look came into his eyes.

'Was it a dream?' he said, and then gave her a somewhat incoherent account of the events of the previous night. She only said: 'What a terrible dream!' and nestled closer to him. He was growing restless again, but evidently trying to keep calm and sane.

'Gertrude,' he said, 'whatever happens, don't leave me; I should be worse without you; indeed, I should, my love, my dear.'

'John, I will never, never leave you,' she said; 'haven't I promised you so before? But what should happen?' So she coaxed and soothed him. Ah, if only tears could come into the poor strained eyes she knew relief must accrue, but all moisture seemed to have dried up in the burning balls.

No; she would never leave him. Had she not known of this, and hoped against hope all the long years? Had she not kept the knowledge from all the world, his own family included, lest means should be taken to separate them? Happily, she thought, she herself stood alone in the world, so no one had authority to take her from her old, only love; but if his brothers placed him where she could not follow, she felt she would be desolate indeed. Thoughts such as these filled her heart, lying there by his side, followed her into the drawing-room, where she stole in the early dawn, and looked at the scene of her troubles. No one must know what had happened; somehow she must get the door open, and replace the shutter. How very slight an effort was necessary in order to accomplish this she soon found; her first essay was successful, the rusty bolt giving way, and proving how very frail was the defence behind which she had intrenched herself on the previous evening.

No; she would never leave him. But what should she do now? The bare fact that her life had been attempted, stood out before her in plain, horrible relief; she could not again risk the existence which might still be of use to her husband; and besides, her children were not safe. Help she must have—but from whom? The captain's two brothers, Scotch lairds, living up in the Highlands, were too far off, she said to herself, with a secret dread of them still lurking in her heart; besides, they had never shewn any great affection for this younger son of a wealthy house. No; she who was most deeply concerned would take the matter into her own hands, and seek assistance in her own way.

After breakfast, she wrote a long letter to an old college friend of her husband's, begging him to forgive the rudeness received two years previously from an irresponsible man. That excuse she could never bring herself to acknowledge before; but all the truth came out in that miserable letter, written with burning tears and many prayers, and which asked for help—help to be given secretly, and kept even from her husband himself.

'I know you will arrange some way of coming to my relief,' she wrote; 'and I will get him away from Grimswold next week, or even sooner, if possible. We will go to Sydenham, or some place equally near to London, so that it will be easy for you to come to me.'

With a great sense of relief, with a sure hope of assistance, she sealed and stamped her letter, addressing it to 'George Wriothesley, Esq.'

THE OLD BOOK.

Quaint poems of a far-off age,
In binding dark and old,
But strewn o'er each discoloured page
Sweet fancies sweetly told,

That seem, as though a child were I,
To take me by the hand,
And lead me through the years gone by,
Back to a much-loved land,

Where sunshine falls in golden bars,
Through woodland labyrinths;
And frail white wind-flowers lie like stars,
'Mid purple hyacinths.

Now, though I softly close the book,
The vision with me stays:
On green young leaves and rippling brook,
On flowers and sky, I gaze.

O poet! dead and gone thou art;
But this, thy magic lore,
Doth enter in the reader's heart,
And live there evermore.

O poet! that didst sing so sweet,
To gladden weary men,
Perchance some day we twain shall meet,
And I may thank thee then.

Early this month will be issued a Christmas Extra Double Number of *Chambers's Journal*, entitled

BEGUMBAGH,

Being an Episode of the Indian Mutiny.

The number will be issued at THREEPENCE, and will, besides, be included in the Monthly Part to be issued at the end of December.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH. Also sold by all Booksellers.

CHAMBERS'S JOURNAL

OF

POPULAR

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 311. SATURDAY, DECEMBER 11, 1869. PRICE 1½d.

A POPULAR TOPIC.

THE oldest subject of conversation, and the one whose popularity shews the least signs of decay, is without doubt the Weather. In early times, there must have been scarcely anything else to talk about, and the importance of it to those who lived by agriculture only must also have been intrinsically much greater. During the period of the Deluge, the topic must have been paramount, even more so than we find it now during that uncomfortable quarter of an hour before dinner. Besides its general acceptance as a medium of conversational introduction, the weather in these times has also its special ministers — meteorological fanatics, who idolise it, and pay it scientific worship, not with incense and organ music, but with barometers and wind-gauges. These erect altars upon mountain-tops and other out-of-the-way places, to calculate the rainfall, and keep collections of instruments sacred to this Culture in their back-gardens. While other folks are content to rub their hands, and say: 'Cold, to-night,' these will tell you to a fraction how *their* thermometer has sunk, and what was its behaviour on the same date for the last ten years. I suppose there are hundreds of these devotees in the suburbs of London, whose waking thought is where the wind is, and whose last act before retiring to rest has been to look at the Bulb.

A full score of them are regular contributors to the *Times* newspaper, which, to meet the taste of this considerable sect, has of late years established a Meteorological Department. By means of this, the intelligence is communicated that the wind at Aberdeen is blowing from the north-east, which is at least so far interesting as being quite in harmony with human experience; and that the waves at Brighton are 3. Of course, there are more than three, but that is the figure by which a certain height of wave and roughness of sea are indicated. To discover this, with other enthralling phenomena, is quite an intellectual feat, from the abstruse abbreviations employed, and produces the same excitement as a perusal of *Bradshaw's Guide*, or the formation of a Chinese puzzle. In to-day's *Times*, for instance, there are twenty-one English, and eleven continental towns, from which these data have been collected, and a dainty feast is thereby spread for these weather epicures. The *pièce de résistance* is the force of the wind (which will stand a good deal of chopping); but there are many delicate side-dishes. '30·03 *r*,' for example, a slice from the under-cut of the barometer, is enough to make your mouth water; *c b*, though a garnished dish, is not the mere title of honour with which we are all acquainted, but means a beautiful blue sky with clouds detached; *p q* is a *suchet* of showers and squalls; *r*, a *purée*, all rain. Some cruelty (as in *paté de foie gras*, and other delicacies) appears to be practised in order to pamper the appetite. *T* means that the thermometer (which, like the salamander, delights in heat) is 'exposed in shade,' and it is served both Dry and Wet; while the barometer, which is wont to be somewhat intractable, is 'corrected and reduced' before it comes to table. There is no society for the Prevention of Cruelty to Scientific Instruments, at present; but the way in which the mercury is treated might come under the head of vivisection. This is too painful (as well as unintelligible) a subject for us to dilate upon, but *f* and *s* are the mysterious letters used in connection with it. The repast does not conclude with ice-pudding, but with *s* (again), for snow.

There is also an Afternoon Weather Report of a lighter character, which seems to be identical with Kettledrum. Yarmouth is considered an extra (just as a bloater, served immediately before the wine, is not in the *menu*), but has a report in very small type all to itself; and there seems to be always 'pressure' at this neglected spot. Large districts, however, are sometimes also very cavalierly treated. 'The lowest readings are in the south-east of England,' for instance. Is it possible that even our Penny Readings are underbid in that locality? The following statement seems to be a contradiction in terms: 'Pressure has risen somewhat, and storms in Ireland have subsided.'

Digitized by Google

The above are all quotations from the ordinary reports, but these by no means satisfy the more advanced of the devotees of the weather. These write long letters dated from 'the Observatory, Tooting,' or from 'Aneroid Cottage, Camberwell,' calling the attention of the public to the most delicate vicissitudes of their scientific instruments; or now and then announcing some astounding behaviour of the same, which, it seems, is an omen of the direst significance. These last predict, with a confidence beyond that of Dr Cumming, the most alarming catastrophes, and that without giving themselves a sufficient interim to gain any reputation as prophets in their own country, much more in any other. The day of doom occurs, and nothing comes of it, before their warning has time to circulate; and we don't hear from Aneroid Cottage for the next twelve months. The Weather-sage of Tooting, however, takes care to make it known that his brother-philosopher has made a fool of himself, and publishes a tabulated statement of his own observations, which had led him to expect, with the calmness of certainty, the exact sort of weather which took place on the day in question. He then takes the opportunity of reminding us that 'yesterday was unusually' hot or cold, as the case may have been, and gives us a Selection from the readings of his thermometer for the last two-and-forty years. Also, happening of late 'to glance over the Temperature Table of the Royal Society, extending from 1794 to 1849,' he extracts for the public benefit the maximum heat recorded in London for the current month throughout that period.

These are the high-priests of the thermometer, the very ministers of the temple (of the winds); but there are also many amateur meteorological fanatics, to whom (especially in the long vacation) the editor of the *Times* is very complaisant. These are always on the watch for comets and shooting-stars, and probably only sleep in the daytime. 'Sir—It may be interesting to many of your readers to learn that while driving with my wife last evening from Diss in Norfolk towards Norwich, in a gig, we both perceived what had every appearance of a ball of fire descend in the western quarter of the heavens. It was also noticed by many persons to whom we mentioned the occurrence; and you will doubtless receive a report of it from more able sources; but if this should not be the case, the above is entirely at your service. I enclose my card (in accordance with your regulations) as a guarantee of good faith, and remain your obedient servant,

A Humble Observer of Nature.'

Again: 'Sir—I have the pleasure to inform you, that from nine till midnight on the 2d instant there was brilliant aurora borealis.—Yours obediently,

A Looker-on.'

These enthusiasts are all perfectly harmless; and it would be the height of cruelty to debar them from these simple utterances. But they are not affected by the moon alone, like other lunatics, but by every vicissitude of the weather—cold as well as heat forces them into activity; and even 'an unprecedented continuance of calm' will cause them to rush into small type.

But, after all, the weather has a great attraction for us all, and particularly when the occurrence of anything monstrous and abnormal is promised to us by its priests and ministers. For weeks, Mr Saxby, who predicted the great tidal wave, was a public benefactor; and more than one newspaper is probably indebted to his prophecy for its having survived the last Long Vacation. None of your namby-pamby dabblers in Weather matters, this man of science stood by his Wave to the very last; the railway companies sent excursion-trains to see it; the lodging-house keepers exhibited their prudence in providing for its reception; the comic journals made pictorial material of it for weeks; and, after all, it did no harm to any of us. In America, of course, the Tidal Wave rose to a colossal height, and submerging a cultivated area of about the size of Yorkshire, did a great deal of damage. There is a certain chivalry of imagination among that great people which causes them to embrace with enthusiasm all sublime ideas; while the immense extent and remoteness of their territory even enables the Portent to come to pass without much difficulty or fear of investigation. In England, from the crowded state of the population, anything satisfactory in the way of phenomena is exceedingly rare.

A good strong sensational work, such as *The Meteorological Prophet, or Weather or No*, would, however, be received with rapture in this country, since even the twaddle of old Moore and Zadkiel has great acceptance. In the meantime, we gladly welcome a sober, sensible little volume called *Weather Lore*,* a collection of Proverbs, Sayings, and Rules concerning the Weather, compiled with much carefulness and judgment. They are culled, of course, from very various sources—from the Bible, from Shakspeare, from the Shepherd of Banbury, who, in the last century, wrote a list of out-door signs of atmospheric change. The New Testament, indeed, contains some excellent weather lore; and in one instance, Christ himself has not thought it unworthy of Him to confirm a popular adage about a cloud rising in the west and producing rain, for after mentioning the saying, he has added, 'and so it is.' The writings of Job are also very rich in allusions to the winds, clouds, and tempests. In one case, however, Solomon flatly contradicts him. 'Fair weather cometh out of the north,' says Job xxxvii. 22. 'The north wind bringeth forth rain,' says Proverbs xxv. 23, Sharpe's Translation. So that, we see, folks began to differ about the weather at a very early period, just as they do now.

Well, Duncombe, how will be the weather?
Sir, it looks cloudy altogether;
And coming across our Houghton Green,
I stopped and talked with old Frank Beane;
While we stood there, sir, old Jan Swain
Went by, and said he knowed 'twould rain.

* * *

The next as came was Master Hunt,
And he said surely: 'No, it wun't.'
And then I met with Farmer Blow,
He plainly said he didn't know.
So, sir, when doctors disagree,
Who 's to decide it—you or me?

Again, it is generally understood that we have quite as much damp in England as is good for us; and there are many proverbs to that effect—as: 'A dry summer never made a dear peck;' and,

Whoso hath but a mouth,
Will ne'er in England suffer drouth.

* *Weather Lore.* By R. Inwards, Fellow of the British Meteorological Society. Tweedie: Strand.

Digitized by Google

Yet there are also proverbs which assert the direct contrary, as:

After a famine in the stall (that is, bad hay-crop),
Comes a famine in the hall (that is, bad corn-crop);

And, 'A famine in England begins in the horse-manger.'

French, Scotch, and English, however, agree in many particulars, and notably with reference to Candlemas-day and the early part of February. 'It seems that, according to the notions of our ancestors, this part of the year could not be too cold; and no statistical evidence will ever make our farmers believe that a warm Christmas bodes well for an English harvest.' They also imagine it to be unhealthy: 'A green winter makes a fat churchyard;' to which assertion the doctors and the Registrar-general very strenuously oppose themselves. It is universally allowed, however, in Europe at least (for Egypt delights in an overflow), that flood is a great evil; and 'Under water, dearth; under snow, bread,' is a saying that is echoed even in Italy. It is generally held, too, that the year's crop will depend upon what weather we get in the first two months of it.

January or February
Do fill or empty the granary,

is a French proverb; and 'January commits the fault,' say we, with also a wise application to human affairs, 'and May bears the blame.'

The weather that is most popular is, upon the whole, what is considered 'seasonable,' no matter how disagreeable; as, 'A dry and cold March never begs its bread;' 'A peck of March dust is worth a king's ransom;' and,

A March without water
Dowers the hind's daughter.

Here is a wise precept for those who are in a hurry to exhibit themselves in the summer fashion:

Till May be out,
Leave not off a clout.

And, indeed, it is evident from many an old saw concerning this month, that it never was a warm one in England, or to be held as summer, in spite of all that the poets would have us believe on that point.

May; come she early or come she late,
She 'll make the cow to quake;

And again:

Shear your sheep in May,
And shear them all away.

Our author mentions as one feature of interest in these old sayings, that they 'give evidence of the slowly changing climate of this country;' but we do not see any proof of this in the examples quoted, and he has many a brother-meteorologist who will deny that it is changing at all. Weather-wise folks have always entertained fancies of this sort. Lord Bacon states that it is an old opinion that the weather changes repeat themselves after forty years; but there is no scientific condonation of that idea whatever. Most people believe that a change of moon brings about a change of weather.

A certain honest high-sheriff, finding himself shut up in his own coach with the late Justice M., whose reputation as a 'rough customer,' though a keen wit, had preceded him on the circuit, was rather at a loss for conversation; there was another judge, of course, in the vehicle; but he was a silent man, and so the poor sheriff was left to his own resources.

'My lord,' said he at last, 'the moon has changed, and so I hope that we shall have fine weather.'

'Are you then such a fool, sir,' growled great M., 'to believe that the moon has anything to do with it?'

Here the silent judge, who was a courtly man, interposed with: 'Really, Brother M., I think you are very hard upon our friend Mr High-Sheriff. I confess that I, for my part, believe that the moon has a very considerable influence on the state of the weather.'

'Then, all I can say is, brother,' rejoined great M., 'that you are as great a fool as the sheriff.'

The author of the present useful volume takes the same view as the crusty judge. 'One frequently hears,' says he, 'of the weather altering at the change of moon; but careful observers have been unable to detect any real differences in the state of the air at such times.' The sun, indeed, is a better prophet; but then his predictions only refer to the coming few hours. 'When it is evening, ye say, It will be fair weather, for the sky is red; and in the morning, It will be foul weather to-day, for the sky is red and lowring,' Matt. xvi. And this is corroborated by many a popular saw:

Sky red at night is the sailor's delight;
Sky red in the morning is the sailor's warning.

Most weather beliefs, however, notwithstanding that they may be both ancient and far diffused, are illusive and unfounded. There is a nautical proverb which arises from a supposed clearance of clouds which takes place when the full moon rises: 'The full moon eats clouds,' and there is also an Indian saying almost identical: 'The full moon grows fat on clouds.' Yet close observation has proved that there is no fact of the sort. Again: 'The west wind is a gentleman, and goes to bed' (that is, drops in the evening), says the proverb; but Cornish-men know better. It 'drops on' to their ships, and behaves in a manner anything but gentlemanlike. Weather proverbs are, in fact, as a general rule, only to be trusted when they are quite local; they are almost all empirical, and founded on insufficient data; and it is only on a limited area that anything like certainty can be attained. Thus: 'The glare of the distant Ayrshire ironworks being seen at night from Cumbrae or Rothesay, rain is expected next day;' and again:

When Largo Law puts on his hat,
Let Kellie Law beware of that;
When Kellie Law gets on his cap,
Largo Law may laugh at that:

which, when we are informed that Largo is to the south-west of Kellie, we may easily understand and credit.

The fact is, however humiliating it may be to own it, that many kinds of birds and insects know a deal more about the weather than we do; and indeed, 'since it is of much more importance to them, it would be wonderful if nature had not provided them with a keener prophetic instinct in this respect.' Utter destruction would occur, for instance, to the nests of some birds if

Digitized by Google

the tenants were absent during a gale of wind, or a pelting shower; while *our* houses, even though 'run up' by the most enterprising of building speculators, will stand little shocks of that sort. To insects, again, 'the state of the weather for the fraction of a week may determine the duration of their span of life.'

'When the fieldfare, starling, swan, and other birds of passage arrive soon from the north, it predicts an early and severe winter.' This is really important, if true; whereas, unfortunately, these winged prophets can in general see but a very little way into futurity, however clearly.

'When sea-birds fly out early and far to seaward, moderate winds and fair weather may be expected; and when they hang about the coast or fly inland, we may look for rough weather.'

Similarly: 'If rooks stay at home, or return in the middle of the day, it will rain; if they go far ahead, it will be fine.'

'The drumming of the snipe in the air, and the call of the partridge, indicate dry weather and frost at night to the shepherds of the Garrow.'

Finally: 'A bee was never caught in a shower.'

The vegetable world has its not untrustworthy prophets; and especially the pink-eyed pimpernel (or ploughman's weather-glass), which so certainly closes before rain, that it is more credited, by those who know it, than any instrument. It is mentioned among the other natural signs in Dr Jenner's celebrated *Rain Forecast:*

> The hollow winds begin to blow,
> The clouds look black, the glass is low,
> The soot falls down, the spaniels sleep,
> And spiders from their cobwebs creep.
> Last night the sun went pale to bed,
> The moon in halves hid her head;
> The boding shepherd heaves a sigh,
> For, see! a rainbow spans the sky;
> The walls are damp, the ditches smell,
> Closed is the pink-eyed pimpernel;
> Hark how the chairs and tables crack!
> Old Betty's joints are on the rack;
> Loud quack the ducks, the peacocks cry;
> The distant hills are looking nigh;
> How restless are the snorting swine;
> The busy flies disturb the kine;
> Low o'er the grass the swallow wings;
> The cricket, too, how sharp he sings;
> Puss on the hearth, with velvet paws,
> Sits wiping o'er her whiskered jaws;
> Through the clear stream the fishes rise,
> And nimbly catch th' incautious flies;
> The glow-worms, numerous and bright,
> Illumed the dewy dell last night;
> At dusk the squalid toad was seen
> Hopping and crawling o'er the green;
> The whirling dust the wind obeys,
> And in the rapid eddy plays;
> The frog has changed his yellow vest,
> And in a russet coat is dressed;
> Though June, the air is cold and still;
> The yellow blackbird's voice is shrill;
> My dog, so altered in his taste,
> Quits mutton-bones on grass to feast;
> And, see yon rooks, how odd their flight—
> They imitate the gliding kite,
> And seem precipitate to fall,
> As if they felt the piercing ball.
> 'Twill surely rain—I see with sorrow
> Our jaunt must be put off to-morrow.

Dr Jenner's *Forecast* has truth as well as rhyme to recommend it; but, after all, what a small thing it is to predict, even with certainty, that it will presently rain, and much beyond *that* no meteorologist has yet got. All atmospheric predictions are still but gropings in the dark, as even our weather-wise author frankly confesses.

'The most learned Meteorologist, armed with the thousand delicate contrivances of modern science, is not more able to predict the weather for a week to come, than were the ignorant shepherds, who, in ages past, watched the spreading and drifting of the clouds from Chiltern or Cheviot top, while science was still in its cradle, and meteorology a thing unknown.'

FIELD-GARDENS FOR LABOURERS.

It is now twenty-six years since the subject of allotting small portions of land to the independent poor for cultivation upon their own account—in cases where no gardens were attached to their cottages—came before the country, in the Report of a Select Committee of the House of Commons. That committee reported strongly in favour of the system; but in the interval which has elapsed since the publication of their Report, the subject has been suffered to remain in abeyance. It is, however, one of the greatest importance to the labouring poor; and it will certainly be difficult for us to enable persons who have not read the vast body of evidence which Her Majesty's Commissioners appointed to inquire into the subject have succeeded in collecting, to realise the almost vital interest which it possesses for a large section of the agricultural poor.

In the early years of the present century, the experiment of allotting small portions of land to cottagers was extensively tried by the Earl of Winchelsea; and his lordship reported, as the result of his experience, that the labourers and their families were both vastly benefited thereby. They lived better, from the income which the produce of their little patch of land brought them, and also from the vegetables, &c., which they were able to rear in their gardens for their own consumption. They likewise became contented with their situation, and attached to it, and feeling the advantage of possessing a little money, their industry was thereby stimulated.

In the year 1830-31, Captain Scobell—the labours of whose life has been devoted to advocating the advantages of the allotment system to the poor, and who, from his self-denying labours in the cause, may fairly be termed the apostle of the movement—introduced allotments into the parishes of High Littleton and Midsomer Norton in Somersetshire. He carried the system into effect in these two parishes upon a large scale, and with great success, and from them it has spread into fifty adjoining ones.

Several acts of parliament have been passed in favour of allotments; but still they are not nearly so extensively adopted in this country, as the benefits which they confer upon the labouring poor would lead us to desire. By the provisions of these acts of parliament, the churchwardens of

Digitized by Google

a parish are empowered, with the consent of the inhabitants in vestry assembled, to purchase or take on lease, on account of the parish, any suitable portion of land not exceeding fifty acres, and let any portion of such land 'to any poor and industrious inhabitant of the parish,' to be occupied and cultivated upon his own account, and for his own benefit, 'at such reasonable rent, and for such term' as might be fixed by the vestry.

As public attention has been little called to the subject since the inquiry by the parliamentary committee of 1843, we shall now state briefly the arrangements and regulations under which the allotment system is, according to the Report of that committee, most advantageously carried out. Firstly, as it is desirable that the profits of an allotment should be viewed by its holder rather as an aid to, than a substitute for, his ordinary income accruing from wages, the allotment should be of no greater extent than can be cultivated during the leisure moments of the labourer and his family. The exact size which will meet this condition must necessarily vary according to the nature of the soil, the number of his family, &c., but one quarter of an acre is the size usually adopted, and the one found to be best suited to average cases. Secondly, the allotment should be near to the dwelling of its occupier, because much of the benefit depends upon the man and his wife and children being able to devote spare moments to the care of their ground. Thirdly, though the land will yield larger profits under this mode of cultivation than under the usual method of tillage, the proprietor who wishes to benefit the poor man should not exact more rent than he would expect to receive if he let it out to be farmed in the ordinary way. Fourthly, tithes, parochial rates, taxes, and all other charges should be included in the rent, and be paid, not by the occupier, but by the owner.

The net annual profit of a quarter of an acre allotment has been found to be, for poor land L.4, and for good land L.5. The most profitable, as well as the most beneficial employment of the land is by growing vegetables upon it. 'I have known children,' said one witness to the parliamentary committee appointed to inquire into the subject of allotments, 'of ten and eleven years of age announce that they had tasted vegetables since they had these grounds, which they never saw on their father's table before; they go almost daily to fetch something for the dinner.' Nor is the benefit to the agricultural labourer of allotments to be measured only by the profit which he is able to make out of the sale of their produce; for, in the words of another witness, Sir Henry Fletcher, 'the good of them is seen not only in the money they put into the pocket of the labourer, but in the money they keep there, by inducing him to go and work at his allotment, instead of sitting drinking in the public-house.'

Some readers may be inclined to urge that any direct pecuniary advantage to the labouring man from his allotment would be neutralised by its value being taken into account in the rate of wages offered to him; but it was clearly proved by the evidence taken before the committee of 1843, that the allotments had had no effect upon wages, and that they had, in fact, been a clear addition to the labourer's resources. If this were the case in 1843, then assuredly it is much more so now, when there is a far greater demand for agricultural labour than there then was. One objection to allotments was formerly often urged by landlords—namely, that there would be great difficulty in collecting their rents from so many small tenants, and that they would have to suffer much loss from arrears. The evidence, however, which was taken before the commission of 1843, shews 'that the great desire felt by labourers to possess this means of adding to their income made them careful not to lose it.' One witness testified that 'during twelve years he had not lost a quarter per cent.' Another witness 'never had a difficulty about a farthing of rent.' A third states that his tenants 'bring the money on the appointed day without being called upon;' and a fourth says 'he has not had a defaulter to the amount of a penny.' Farmers also were afraid at first that the men would work in the early morning hours at their allotments, and so exhaust their strength, but this has not been found to be the case. It appears, too, that the farmers themselves are indirectly benefited by the allotment system, for the labourers are frequently kept off the poor-rates by consuming the produce of their allotments, and, moreover, they become, as labourers, more steady, more skilful, and, it may be added, more 'stay-at-home.'

Captain Scobell, R.N., recommends any gentleman who may wish to adopt the allotment system upon his estate to proceed in the following way: 'Announce your intention of letting field-gardens in your parish. Exclude no labourer for previous bad character; he may be reclaimed. Do not include any pauper. Let no parish officer have anything to do with the arrangements. The quantity of land (which should be good and fresh) to be granted to each family should be from 20 to 50 poles, according to the size and strength, &c. of the family. Divide the fields in strips from top to bottom, abutting against the highway. The fields should be as near as possible, and of easy access. A copy of your rules should be given to each tenant. The rent should be precisely that which a farmer pays for similar land, and should be paid in one payment in the autumn: condition—not to dispossess your tenants except on conviction by law of some crime, or on account of some wilful breach of the regulations. The effect of this guarantee will astonish you, even in those who have previously borne the worst characters. For the first year or two, contract, if you can, for some one to cart the manure provided by the tenants at the lowest possible price, making them pay by the measure of their field-garden, and not by the load. Cause an account to be kept of the quantity found by each; you will find it to be ample to uphold good or even fair land. Have no fear of the trouble; it will be but a light amusement.'

Not only are agricultural labourers deeply interested in the allotment question, but the working-men in many towns have shewn the greatest anxiety to avail themselves of similar allotments, whenever they have had an opportunity. From

Digitized by Google

the evidence taken by the parliamentary committee of 1843, it appears that there were then about 400 gardens held under the corporation of Nottingham. The 'Northern and Midland Counties Artisans' and Labourers' Friend Society' had at that date caused 853 acres to be let in allotments in the neighbourhood of large towns. Societies were formed, each member of which put by a penny a week to form a fund to meet the outlay upon first entering upon the land. A large portion of the evidence taken in the inquiry of 1843 is devoted to pointing out the benefit which artisans derive in regard to health, comfort, and rational recreation, as well as in additions to their pecuniary means, from the possession of small plots of garden-ground on the outskirts of towns.

One great reason for encouraging the allotment system is to be found in the gravity of the fact that, during the last century and a half—and especially during the last one hundred years—there has been going on throughout England a gradual alienation of the class of agricultural labourers from the soil they till. The extent to which waste lands have been enclosed under the Enclosure Acts has without doubt greatly tended to prevent the agricultural labourer from acquiring little portions of land which he could cultivate upon his own account. Now-a-days, there is, unfortunately, scarcely any method provided for him whereby he may hope to bridge over the gulf which separates him from the great farmer. Since the passing of the first Enclosure Act in the year 1710, there have been, up to the year 1867, 7,660,413 acres enclosed—that is, above one-third part of the grand total of 25,451,626 acres which were under cultivation in England and Wales in the year 1867. Of this total of 7,660,413 acres enclosed since the year 1710, only 334,974 acres were enclosed between the years 1710 and 1760, thereby leaving 7,325,439 acres as those enclosed in the last one hundred and seven years. This statement of the total number of acres enclosed shews how large a portion of land has been removed from out of the reach (so to speak) of the agricultural labourer, and from which he now can derive no benefit except as a day-labourer upon it. It cannot be doubted that the enclosure of waste land is beneficial to the country at large, but it is equally certain that in many instances—we might almost say in the majority of instances—the enclosure has deprived the cottager of the benefits which he enjoyed from the waste land, without his obtaining any compensation. It is true that if the cottager be the holder of a freehold cottage, and if, as such, he had enjoyed rights over the waste, or if such rights had accrued to him by an uninterrupted user of twenty years, then by the General Enclosure Act of the 8th and 9th Vict., c. 118, a portion of such enclosed lands would be allotted to him, but he is immediately subject to the strong temptation to sell it to the farmer who may own the neighbouring land. It must also not be forgotten that the peasant who thus disposes of his plot of land is disposing not only of his own property, *but of that of his successors*. The right to have a pig, for example, upon such common lands is for ever after extinguished; and this may prove, and in many instances does prove, a serious loss to the successor of the agricultural labourer who has thus rashly sold his birthright. Those who are best acquainted with this subject know well that the higher wage which the agricultural labourer may have been able to earn upon a large farm (which has thus been enclosed) has not compensated him for what he has lost by the enclosure. It must not also be forgotten that higher wages are not a never-failing accompaniment of large farms, for many instances could be cited of large farms upon which the rate of wages paid was very low. No doubt, the enclosure of waste lands does afford to the capitalist a remunerative employment of his capital, to the agricultural labourer a wider market for his labour, and to the community at large an increased supply of food; but whenever such enclosure of waste lands takes place, care should be taken by the government officers to see that suitable gardens are annexed to the cottages of the commoners, and that a certain portion of the common should be allotted, wherever it is necessary, for the special purpose of providing the cottagers with fuel.

In the twenty-two years between 1845 and 1867, 484,893 acres of waste lands were enclosed in England and Wales. Of these 484,893 acres, the Enclosure Commissioners had power by act of parliament, in the case of 320,855 acres, to allot gardens to the labouring poor. Of these 320,855 acres, 259,136 acres were assigned to the lords of manors and other persons having titles to a portion of the land enclosed; 59,600 acres were declared by the assistant Enclosure Commissioners to be, for various reasons, ineligible for public allotments; and *only two thousand one hundred and nineteen acres were actually assigned as public allotments for gardens to the labouring poor*. When we remember that waste lands were originally granted to lords of the manor, not for their own benefit, but for the benefit of those who held lands within the manor, the difference between the number of acres (259,136) allotted to lords of the manor and others, and the number of acres (2,119) allotted to the poor, becomes even more suggestive and startling. Mr Cowper, M.P., wisely said upon the second reading of the General Enclosure Bill of 1844: 'In former times, every cottage almost had some common rights from which the poor occupants derived much benefit: the privilege of feeding a cow, a pig, or a goose on the common was a great benefit to them; and it was unfortunate, when the system of enclosing commons first commenced, that a portion of the land was not set apart for the benefit of every cottager who enjoyed common rights, and his successors; but the course adopted had been to compensate the owner of the cottage to which the common rights belonged, forgetting the claims of the occupier by whom they were enjoyed.'

Considering the great advantages which, as we have already pointed out, these allotments are to the labouring poor, and considering also that something like three million acres of waste land yet remain to be enclosed in England and Wales, is it too much to hope that henceforth, in the case of every such enclosure, a portion of land shall be reserved to every cottage of the parish in which it takes place? Is it likewise too much to hope that the day is not far distant when every labourer in England may have a means of bettering his condition afforded to him by his being allowed an opportunity of cultivating an allotment or field-garden? Landowners who may wish to benefit agricultural labourers may rest assured that, by setting apart a small portion of their

Digitized by Google

estate for the purpose of its being divided into allotments, they are assisting the agricultural poor in the best possible way—namely, by helping them to help themselves.

UNDER THE FIRS.

'BETTER, decidedly,' said our doctor. 'You'll be all right in a day or two.'

'Thank goodness!' said I.

'I want a rubber of whist,' said our doctor smiling, 'so I shall put you to rights as soon as possible.—Down, *Hec.!*—I say, Scribe,' he continued, patting the head of his great dog, 'I ought to apologise; and I would, if I had brought him up; but he slipped in unseen.'

'By the way,' said I, 'how did you get that animal?'

'Patient of mine—death-bed legacy—thereby hangs a tale.—But, my good sir, what are you scrabbling that note-book from under your pillow for?'

'To take notes, to be sure,' I said: 'tales are scarce in the market.'

'Didn't I say that you were to stop all work for the present?' was the severe apostrophe.

I fell back with a groan.

'Stop a few days, and I'll tell you all about it—that is, if you will condescend to get well first under my treatment.'

'I'll do my best,' I said; and I really did; so that, a week after, my friend the doctor was sitting with me, ready to relate the promised tale, while I was all attention.

'I had a patient down in Surrey some time since,' he said, 'with a complaint that regularly baffled me. He was a bailiff, or something of that sort, living entirely alone as to human society; but he had for companion that great white dog—now mine, you know. Well, I attended him for weeks; and then one day I said to him: "Now, frankly, it's a regular robbery for me to keep on coming here when I can do you no good. The long and the short of it is, medicine won't touch you—your mind's diseased. You have something upon it. Now, what is it?"

'The poor fellow was silent for a few minutes, and then rising upon his elbow, his pale, drawn face all wild and scared of aspect, he caught me by the arm, whispering: "How did you find it out?"

"By your manner," I replied; "and, depend upon it, you would be all the better if you relieved your brain of the stress."

"Master," he said, with a wild look, "it's that dog;" and he pointed to the great animal.

"That dog?"

"Yes, and something else. He knows it all, and I'm afraid of him; but, before I go, I'll tell you all about it."

'He seemed to be struggling for some moments with a great emotion, and then fixing his eyes on mine, he began, pointing as he spoke towards the dog:

"I tried to kill him again and again, sir, but I couldn't, and I'm sorry now that I ever tried, for he was always a good and a faithful beast.—Come here, *Hec.*;" and the great dog came up to the bed-side, and licked his master's thin white hand. "I'd ask you to forgive me, *Hec.*, old fellow, but you are only a dog, and would not understand me; but though I'm a man, and you're but a dumb beast, I'd be glad to change places with you this moment.—You know, sir, when my wife went away, and she was supposed to have gone to her father and mother?"

'I nodded.

"Well, sir, it was not my poor wife, but her sister, who had been staying with us, whom I saw into the train that morning, at Hindley Station; and it was directly I reached home that a tiny spark, that had been pricking and tingling in my heart for months past, suddenly burst out into a fierce flame—so fierce that I could not quench it—and I did a deed that no one ever suspected. I need not go into all that now, but I had had little suspicions for long enough—suspicions that I know now to have been false; while, when I returned that day, I fancied something more, and angrily accused her. I don't even know now myself how it happened, more than that she retorted fiercely, and ran up-stairs, where I followed her; and then, more words passing, I struck her brutally with my fist—a cruel, cowardly blow—and with a loud cry, she pitched backwards from top to bottom of the stairs; and then, after the heavy dull crash with which she fell, all was quite silent, for I stood still listening, till old *Hector* there burst into a low, whimpering howl.

"Then, all trembling, I went down slowly to find her lying in the little passage, quite motionless, with the dog licking her face; while, when I drove him away and spoke to her, she did not answer. Then I went down upon one knee to alter her position, for she was lying, stunned as I thought, with one arm bent under her, and her head turned in a strange, awkward way. I trembled violently, for though I thought her only stunned, with possibly an arm broken, all the time there was a dull, horrible, black dread coming up like a cloud to cover my soul, though as yet I could not understand what it meant.

"I shuddered, though, as I moved her, for her head hung back horribly, while, when I fetched a chair-cushion to rest it upon, her neck seemed to give way too easily. But I saw the next moment that her arm was broken; and laying it in what I thought to be an easy position, I fetched water, and began to bathe her face and temples, stopping once to threaten the dog, who kept on howling in the kitchen.

"Being a bailiff, ours is a lonely place, and there was no one near, or I should have called in help; for, as time passed on, and she did not revive, the strange black feeling seemed to grow thicker and more dense, though I would not give way to it as yet. I tried salts, brandy, burned feathers, chafing her cold hands, every remedy that I could think of, persevering for quite an hour; when all at once the black cloud seemed to cover me, and I jumped up, trembling worse than ever, for I knew that she was dead—that I had murdered her!

"I've suffered since, sir, every torment and pang that can come from a man's conscience—such stings as I could hardly have thought a human being could bear, and not go mad; but they have all been as nothing, compared to the horrible feeling that came over me when I first knew the dreadful truth. First knew it! I had known it all along, from the moment after I struck the blow; but there was something within me that kept beating it off till now, when it came upon me like blasting lightning.

Digitized by Google

"At first, it was a frightful feeling of remorse and sorrow, and I would have given my own life to have brought her back, as I threw myself down by her side, calling her by name, begging her to forgive me, and kissing the face that was fast growing colder and colder. Then came a sense of fear, and I shrank back, scarcely daring to be near her, and glad at last to lay my handkerchief over her face; while that soon changed to a cowardly feeling of dread—not of her, nor even of future punishment for my unthought-of deed, but for the present, and the time when it would be found out.

"For a few moments my head swam, and I nearly fell, while thoughts crowded into my head of the police, the handcuffs, the prison, the judge, and last of all, of the gallows. What could I do? How could I hide the deed? Could I not say that she had fallen from top to bottom of the stairs, and would not that have been sufficient? Quite, I thought; and putting on my hat, I was about to run off to the town for a doctor, when I recollected that it was more than two hours since she had fallen, and that she was growing cold; while as soon as the medical man began to question me, I knew that I should betray myself.

"I dared not go; I dared not stir from the house; I dared not stay; and in my dread I got the dog close to me, and struck him when he looked in my face and howled. At least a dozen times I went and looked at the body lying there, so horribly still, but, in its very silence, speaking to me in a tongue, ignorant man that I was, that I could readily comprehend. But now a profound feeling of selfishness had taken possession of me, and I was pondering as to how I should conceal the deed. I had been a great reader, living so much in a quiet retired part, and I tried to recall whether I had ever read of any man being in a similar position to my own, fixing at last upon Eugene Aram.

"Whenever the dread seemed greater than I could bear, I kept telling myself that I had never meant to do the deed; and having spirits in the house, I drank—drank deeply; but without producing the effect I wished.

"Towards evening, first one and then another person came to the cottage, and as I heard their steps I trembled; for it seemed to me that some one was coming to ask me the question: Where is your wife? But no: I faced them one by one—the baker, the woman who brought us yeast and milk, and a hawking gipsy.

'I saw you and your missus at the station this morning, sir,' said the woman who left the yeast. 'Is she goin' to stay away long?'

'Yes,' I said; 'for some time;' and my heart gave a great leap, as these words suggested to me that other people might have made the same mistake, and it would be generally supposed that she had left home on a visit.

"But about the body—what should I do with it? I tried to think what I should do; but now there came a fresh struggle—a new horror to contend with. Something was urging me; voices seemed whispering to me, guiding me to the place where I kept my guns, and then, trembling in every limb, I loaded one—two barrels, and sat down thinking for a while. It seemed the best thing I could do; but I rose to take one more look at her as she lay in the passage so cold and still. I laid down my gun, and crossed the room, but for a long time I could not remove my handkerchief from her face, while, when I did, it was but for a moment, and I dropped it again shuddering. Then I seemed to have heard voices outside, and I ran out, and looked up and down the lane, and round the house, but I was alone; and once more I entered, closed the door, and took up my gun.

"But I dared not: I was a coward, and I feared to meet the future. I wanted to live on and repent; to try and make amends, if it were possible; and thus I waited hour after hour—hour after hour, always haunted by the dread of voices which seemed whispering round me. Twice I thought she called, and I started and answered trembling, going each time as far as the passage, to come back shaking like a leaf, after touching the hand, by this time cold as marble.

"I had put the gun back in its corner, merely keeping the ramrod in my hand, with which from time to time I struck the dog, to keep him quiet, for the poor beast would go to the room-door and howl dismally, till I forced him to lie at my feet; while now he seemed afraid of me, and I of him, for he kept looking in my face, and whining, and then looking towards the door; and had I not struck him, he would have kept by it, tearing to get it open.

"The dim light of evening came at last, with the dread growing more and more upon me as the darkness increased. I dared not light a candle—I don't know why; but I felt a sort of fear that I should see more than was really in the house, and besides, I should have had to go in the dark along the little passage to the kitchen, though I tried to persuade myself that it was on account of the dog, and a dread that he should get out of the room.

"And then came the night, windy and stormy, with the rain riding upon the gusts of wind, to be beaten against the window-panes. There was but little moon, and the clouds were heavy, and drove quickly along the sky; while, now, in the intervals of the gusts of wind, it seemed to me more and more that there was a voice calling me, as if from a great distance off, so that the sound came faintly upon my ear. I listened again and again, opening the door, and standing bareheaded in the rain; but I could hear nothing.

"Hours passed, and then I had made up my mind what to do. I locked the door of the room where I was sitting, went round to the back, so as not to pass through the passage, and locked the back-door. Then going back to the front-room, I found *Hector* whining, and tearing at the door to get to his mistress; and I called him away, but without effect; when, after a fierce battle, I dragged him out of the house to the shed, where I locked him in, after taking out a spade.

"The dog began to howl as soon as I had closed the door; but I knew that there was no one to hear him; so I went back to the house, closed and locked the door, and carried the spade to a spot I had determined on; after which I again returned to the house, hesitating at the door, however, half afraid to enter. *Hector* was quiet now, only scratching restlessly at the door of the shed.

"After waiting perhaps a quarter of an hour, passed in listening, I roused myself, and went in, drank furiously from the brandy I had in the closet; and then tearing open the inner door, I stooped, seized the body, which seemed like lead, and staggered with it out into the lane.

Digitized by Google

"I can't tell now how I got along, with the long low howl of the dog ringing in my ears, as he heard my heavy staggering footsteps. I seemed, as I went on, to have the strength of ten men, and the fears of a hundred. The bramble tearing at my coat was some one staying me; the bole of a tree, some one watching over the hedge; every gust of wind bore cries of fancied pursuers; and, half-mad, I pressed on, reeling from side to side of the road, till I reached the gate which led to the path I had chosen; and after getting through, I was obliged to stay here and rest.

"Rest! What a word! Rest!—that which I was never to know again. I dared not place my dreadful burden upon the ground, but stood leaning on the gate for a few minutes, before I turned and pressed on along the narrow grass-grown path for a few yards, striking then into the great fir-wood, where the path was slippery with the fallen needles, and save here and there, where there was a tuft of green moss, all bare. Trees everywhere—tall straight fir-trees, like the pillars of a great temple, and close together, so that I had to thread my way carefully as I slowly climbed the rising ground, the darkness being at times so intense that I had to hold one hand stretched out in front, to prevent striking against some trunk.

"Up still, higher and higher, a long toilsome walk with so heavy a load, my feet slipping from under me as the ground sloped more—the pine-needles making the path at times seem like glass; while once I tripped over a pine-stump, and fell heavily. But I was now close to where I had laid my spade, for I knew the ground well; and leaving my burden where it had fallen, I hurried to the spot I had fixed upon—an open space where a few trees had been thinned out—and then, seizing my spade, I carefully scraped the needles into a heap, ready to spread over the ground again, and then began to dig.

"At times there was such a lull of the storm, and all was so still, that the strokes of the spade echoed back to me, and then directly after I would stop, shivering, as the wind seemed to shout and wail amongst the tree-tops, roaring and hissing, and making branches creak and groan as they ground together. It was horrible; for the one word Murder, Murder! seemed to ring in my ears as though ten thousand voices shouted it; but I toiled on, digging furiously, throwing out spadeful after spadeful of earth, till I stood knee-deep in the black earth, making the heap at my side higher and higher.

"How the wind thundered in those fir-tops, and what a strange, ghastly gloom there seemed around! Now it would grow pitchy black, and the rain would come hissing and pattering down; then there would be a pale light steal through the tall trunks of the trees, so that I could see for some little distance round. At one of these times I turned cold, the sweat stood in a chilly dew upon my forehead, my hair was wet, and I dropped the spade, for there, in the strange gloom, was something white, staring horribly at me; and then I saw it apparently steal away, and melt into the darkness amongst the trees.

"As soon as I could sufficiently recover myself, I seized the spade again, and dug on to deepen the rough hole I was making, when again my blood seemed to freeze as I saw the same white figure indistinctly in the dim distance, before I made out that it was *Hector*, seated now, as I could tell, where I had left the body, and howling most dismally.

"Relieved of my fears, I hurled a piece of earth at the dog, when he disappeared once more; and after a few more strokes of the spade, while trying the blade too strongly against a pine-root, the handle snapped in two.

"There was nothing else for it; so, tearing off, I ran back to fetch another, and found, as I expected, that the dog had broken the shed window, and leaped out; while upon once more reaching the pine-wood, I stopped short, for there came a dreadful cry from its depths—a horrible, long-drawn, echoing cry, which was repeated twice before I knew it to be *Hector*, whom I found sitting by the body.

"Could I have reached him, I should have killed him with the spade I carried; but my approach drove him away, for he knew me, and would not come near, though I tried hard to get him within reach, calling him again and again.

"It all seems like a dream, a horrible nightmare, that night: the strange whisperings amongst the trees; the voices; the shouts, wails, shrieks, and cries; the rushing noises; the echoing sound of my spade; and the occasional lulls, when all was as still as death. But I deepened the hole, dragged in the body, covered it level with the surrounding soil, beat it down frantically, to hide my crime from the sight of men, and then laboriously scattered about the spare earth, before I again spread the pine-needles over the spot.

"Day was faintly beginning to break before I had finished, for from time to time I had to leave my task to drive away the dog, who came first on one side, and then upon the other, to watch me, so that I felt afraid of him, lest he should betray me by coming back as soon as I was gone, and tearing up the earth until he had laid bare my dreadful secret.

"And now that all was hidden from sight, I turned to go, when, shivering with fear, I remembered that I had not got the broken spade-handle, and felt that it must be covered up in the grave, ready to tell its own tale of the murder, and who was buried there, for my name was branded on it in full. But, found or not, I could not—I dared not attempt to dig it out then; but calling to the restless, watching dog, I strode through the wood, and back to the shed, where I hung up the spade, and found, to my great relief, that the broken handle lay upon the floor, where I had cast it down with the blade.

"*Hector* had not followed me, but I dared not go back, though there was not the slightest likelihood of my meeting any one; so, cleansing my hands, and changing my clothes, I threw myself dressed upon the bed, and tried to sleep.

"Tried, but tried in vain, as I lay there listening to the glad song of the birds, and saw the bright sunshine reflected into my room, for the morning had broken as beautiful as the night had been rough. But sleep was not for me; and at last I sprang up, and unable to resist the inclination, walked into the fir-wood, when, upon nearing the spot, I turned cold once more with dread, on seeing *Hector* tearing away at the earth.

"But he ran as I approached; and after carefully looking round, I once more levelled the ground, trampled it, and scraping up a capful of pine-needles, sprinkled them over the place.

Digitized by Google

"Twice that day I returned to find my work to do over again; and the last time I brought my gun, and would have shot the dog, could I have got within reach; but as soon as I was in sight, he fled. This went on for weeks after: either *Hector* had scratched up the soil, or it had settled down a little, so that I was always in dread lest the spot should be discovered. More than once, I determined to dig the body up, and bury it elsewhere, but I dared not; and besides, I felt sure that the dog would either be watching me, or else would scent out the fresh place. I tried again and again to shoot him, but he never let me get within range, and the poisoned fragments of meat I laid about for him were never touched. How he lived, I never knew, but there he always was, wandering about the wood.

"I gave out that my wife had gone to visit friends at a distance, and I contrived that a black-edged letter should be sent to me, and then I left the town for a few days, to come back in deep mourning; and people were satisfied with my lame tale—such few as knew me—for mine was a solitary life in a wild part among the Surrey hills, and heaths, and pine-woods.

"That *Hector* seemed to lead a charmed life; and at last I came to the conclusion that his visits to the spot in the pine-wood were now paid only by night, for I seldom used to see him; and it seemed likely that getting to live after so wild a fashion, he followed the habits of his fellows, and slept the greater part of the day. But though I scarcely ever met with him, I constantly found proofs of his recent presence; and one night, when I went purposely to try and see him, as soon as I reached the gate I could hear his doleful howls, and I knew that he must be seated upon the grave. The night was perfectly still, and every howl came echoing back from the sandstone cliff where the martins built; and as I looked through the long alleys where the moon was casting hundreds of shadows, there was something so solemn-looking in the scene, that I had not the courage to proceed.

"I went on, though, at last with a strange trembling in every limb; but only to stop once more as a long echoing howl came ringing through the tall fir-trunks, when leaning my gun up against the one nearest to me, something seemed to draw me towards the old spot. But there was no fierce rage now against the dog, for a feeling of pity for him was making its way to my heart.

"Could the dog have known that? Who can say. But as I crept slowly nearer and nearer, till I could see him, there was no movement; and at last I was close to him where he lay—his muzzle resting upon his paws, save at times when he lifted himself a little, and gave out one of those long doleful howls—and the next minute, sobbing like a weak child, I was down upon my knees watering that poor unsanctified, but solemn grave with my tears.

"Repentance? If at that moment I could have changed places with the dead, I would have done it gladly; and then it was that, for the first time, something like prayers for forgiveness were muttered by my cracked white lips.

"I don't know how that night passed; but it seemed to me in one great awful stillness. *Hec.* howled no more; and he was quite forgotten, till all at once I started, for there was a touch upon my hands; when, as I looked up, day was breaking in a weird solemn way amongst the fir-trees; and, afraid of me no longer, *Hector* was licking my hands.

"Then I laid one hand upon his shaggy head, looking into his great honest truthful eyes; and as I said to him: '*Hec.*, old fellow, you won't betray me!' he raised his muzzle, and gave one low whimpering howl, and it seemed to me that we made friends, for with a last longing look at the grave, I stood up, and began to walk away, with the great dog following close to my heels.

"We seemed to understand one another then, and to feel that we had a great secret to keep. He did not shrink from me, even when I took up my gun all wet and rusted with the night-dew, but followed me home. We had become friends once more, and, as it were, made a solemn compact over the grave; but, you see, sir, he has borne the secret better than I. He'll want a master soon, sir, for you are right—your medicine is useless for my complaint. Time back I'd gladly have killed him; but now I think I should be easier if I knew he would have a good master when I'm gone; and I know no one more likely to make him one than you."

'He ceased speaking; and having several other patients to visit, I rose to take my leave, promising to call again. And the next time I did so, he was dead; while *Hector* followed me home.'

'But that seemed rather an easy way of taking leave of a man who had just confessed to the perpetration of a horrible murder,' said I.

'Well, yes, it does,' said my friend; 'but how would you have me end it?'

'Do you know,' I said, laying down the pencil with which I had been taking voluminous notes, 'this sounds not only very improbable, but uncommonly good language for a man who was only a poor bailiff or gamekeeper. Now, how much of the story is true?'

'Ask *Hector*,' he said; 'there he lies at your feet.'

I looked at the great white dog, my friend's favourite, and then at the slight raising of my *vis-à-vis*' eyebrows.

'Why, what was the good of humbugging, when I asked you to tell me how you obtained your dog?'

'Did you want it to be true, then?' he said with pretended surprise. 'I invented it, every bit, myself.'

'More shame for you!' I exclaimed, indignant at having had my sympathies aroused upon such false pretences. 'I hold Truth above all things.'

Still, you see, I have written the story.

SAILORS' SHANTIES AND SEA-SONGS.

I ONCE heard an old salt remark, that a good shanty was the best bar in the capstan; and he spoke truly. A good voice and a new and stirring chorus are worth an extra hand on board a merchantman, which, as a rule, is manned with the least possible number that the law allows, and often goes to sea short-handed, even according to the parsimonious calculations of its owners. The only way the heavier work can be done at all is by each man doing his utmost at the same moment. This is regulated by the shanty, the true song of the 'toilers of the sea.' It is not recreation; it

Digitized by Google

is an essential part of the work on shipboard. It is the shanty that mast-heads the topsail-yards, when making sail; it starts and weighs the anchor; it brings down the main-tack with a will; it loads and unloads cargo; it keeps the pumps going; in fact it does all the work where unison and strength are required. A good shanty is to the sailor what the pibroch is to the Highlander—invigorating, soul-stirring. At the capstan, on the topsail-halliards, in port and at sea, in calm and in storm, the ropes run smoother, the work is done quicker, when some twenty strong voices sing:

Haul the bowline, the fore and main top bowline;
Haul the bowline, the bowline haul;
Haul the bowline, the bully, bully bowline;
Haul the bowline, the bowline haul.

I remember well, one dirty black night in the Channal, beating up for the Mersey against a stiff breeze, coming on deck near midnight, just as the ship was put about. When a ship is tacking, the tacks and sheets (ropes which confine the clews, or lower corners of the sails) are let run, in order that the yards may be swung round to meet the altered position of the ship. They then must be hauled taut again, and belayed, or secured, in order to keep the sails in their places, and to prevent them from shaking. When the ship's head comes up in the wind, the sail is for a moment or two edgewise to it, and then is the nice moment, as soon as the head-sails fairly fill, when the main-yard and the yard above it can be swung readily, and the tacks and sheets hauled in. If the ship is short-handed, or the crew slow at their work, and the sails get fairly filled on the new tack, it is a fatiguing piece of work enough to 'board' the tacks and sheets, as it is called. The crew are pulling at one end of the rope; but the gale is tugging at the other. The best plan in such cases is to put the helm down a little, and set the sails shaking again before they can be trimmed properly. It was just at such a time I came on deck as above mentioned. Being near eight bells, the watch on deck had not been over-smart, and the consequence was that our big main-course was flying out overhead with a might that shook the ship from stem to stern. The flaps of the mad canvas were like successive thumps of a giant's fist upon a big drum. The sheets were jerking at the belaying-pins, the blocks rattling in sharp snappings like castanets. You could hear the hiss and seething of the sea alongside, and see it flash by in sudden white patches of phosphorescent foam, while all overhead was black with the flying scud. Our second-mate, a Yankee, was stamping his feet with vexation, and without any regard for his As, was storming away at the men. "An'somely the weather main-brace there; an'somely, I tell you! Now, then, what the —— are you all standing there for? 'Alf-a-dozen of you clap on to the main-sheet. Here, look alive! Down with 'im. 'Andy there! 'Aul 'im in.' But although he ran through all the most forcible expressions in his vocabulary, the sail wouldn't come. 'Give us a song, boys,' cried out our old skipper, who had just come on deck. 'Pull with a will, boys; all together, boys.' Then a strong voice sang out:

Haul the bowline, the bowline, the bowline;
Haul the bowline, the bowline haul;
Haul the bowline; Polly is my darling;
Haul the bowline, the bowline haul.

At the last word 'haul' in each couplet, every man threw his whole strength into the pull—all singing in chorus with a quick explosive sound. And so jump by jump the sheet was at last hauled taut. I daresay this description will be considered spun out by a seafaring man; but landsmen like to hear of the sea and its ways; and as more fresh-water sailors read this *Journal* than sea-water ones, I have told them of one shanty and its time and place.

The above is what we call a hauling shanty. Shanties are of two kinds—those sung at the capstan, and those sung when hauling on a rope: in the former, the metre is longer, and they are generally of a more pathetic nature. To those who have heard it, as the men run round the capstan, bringing up the anchor from the English mud, of a ship outward bound for a two years' trip, perhaps never to return, what can be more sad or touching, although sung with a good-will:

To the Liverpool docks we'll bid adieu;
To Suke, and Sall, and Polly too;
The anchor's weighed, the sail's unfurled;
We are bound to cross the watery world.
Hurrah! we're outward bound! Hurrah!
we're outward bound!

More stirring is the following:

Steer, boys, steer, for California O;
There's plenty of gold in the land, I'm told,
On the banks of the Sacramento.

There is an air of romance about California, the Brazils, and Mexico, that has a peculiar charm for Jack; and he has made them the subject of many a favourite shanty, as *Rio Grande*, *Valparaiso*, *Round the Horn*, and *Santa Anna*. *Rio Grande* is perhaps the greatest favourite of this description of songs, but all the beauty lies in the mournful air:

To Rio Grande we're bound away, away to Rio;
Then fare you well, my pretty young girls;
We're bound to the Rio Grande.

The deeds of the bucaniers of old are held in great admiration by sailors—ballads descriptive of piracies, of murders by cruel captains, and of mutinies, with a sprinkling of sea-fights, dating from the last war with France and America.

There are many more capstan shanties, which I can only mention by name, such as *Oceanida*, *Johnny's Gone*, *The Black Ball Line*, and *Slapandergosheka*. The last mentioned, with the incomprehensible title (repeated at the end of every line), is addressed to 'All you ladies now on land,' and may seem rather egotistical; it commences—

Have you got, lady, a daughter so fine,
Slapandergosheka,
That is fit for a sailor that has crossed the line?
Slapandergosheka, &c.

I remember once hearing a good shanty on board a Glasgow boat; something like the following was the chorus:

Highland day, and off she goes,
Off she goes with a flying fore-topsail;
Highland day, and off she goes.

It was one of the most spirited things imaginable, when well sung; and when applied to the topsail halliards, brought the yards up in grand style.

We now come to the hauling shanties. First, there is the hand-over-hand song, in very quick

Digitized by Google

time; then the long-pull song. When there are a number of men—perhaps twenty or thirty—pulling on a rope, the reader will perceive that, to be effective, the pull must be made unanimously: this is secured by the shanty, the pull being made at some particular word in the chorus. For instance, in the following verse, each repetition of the word 'handy' is the signal for a long pull, a strong pull, and a pull all together:

Oh, shake her up, and away we'll go,
So handy, my girls, so handy;
Up aloft from down below,
So handy, my girls, so handy.

For heavier work, or when hands are few, one of longer metre is used, such as *Land O, Boys, Land O; Haul away, my Josey; O long Storm, storm along, stormy.*

These are some of the working-songs of the sea. They are not chosen for their sense, but for their sound; they must contain good mouth-filling words, with the vowels in the right place, and the rhythmic ictus at proper distance for chest and hand to keep true time; and this is why the seaman beats the wind in a trial of strength. The wind may whistle, but it cannot sing; the sailor seldom whistles at sea, but always sings.

Besides the working-day songs, there are others for the forecastle and dog-watches, such as Dibdin's, Barry Cornwall's, Tom Campbell's, Allan Cunningham's, Gay's, Shield's, Stevens', and others.

There is no doubt that the inimitable sea-songs of Charles Dibdin have done much towards keeping up the *esprit de corps* of our British sailors; they are, in fact, an inheritance which the nation will never, it is to be hoped, undervalue. Whatever form naval warfare may hereafter assume, however the technicalities of the maritime profession may be altered, the spirit of the English seaman will be unchanged. He will be the same hearty, fearless, generous, and simple being that Dibdin describes him. He will love his country and his flag with the same ardour; reverence his ship in the same way, whether it is propelled by wind or steam; and adore his *Bonny Kate* or *Charming Nancy* in the same enthusiastic fashion. Not only, however, have these songs been popular with seamen, but they have obtained a deep hold on the national heart. There are few who are not familiar with some at least of Dibdin's songs, fewer who have not at least heard of those pathetic ballads, *Poor Tom Bowling*, *'Twas in the Good Ship*, or that famous ditty, *'Twas post-meridian half-past four.* How thoroughly wise, good, brave, and gentle are the sentiments expressed in the ballad of *Poor Jack:*

I heard our good chaplain palaver one day
About souls, heaven, mercy, and such;
And, my timbers! what lingo he'd coil and belay:
Why, 'twas all one to me as High Dutch!
But he said how a sparrow can't founder, d'ye see,
Without orders that come down below;
And many a fine thing, that proved clearly to me
That Providence takes us in tow:
For, says he, do you mind, let storms e'er so oft
Take the topsails of sailors aback,
There's a sweet little cherub that sits up aloft,
To keep watch o'er the life of Poor Jack.

And yet the whole is so mixed up with frequent and quaint technical phrases and expressions, as to render it perfectly characteristic and inimitable. The following is also sweet and tranquil, and a great favourite in the forecastle:

And on that night when all the crew
The memory of their former lives,
O'er flowing cans of flip, renew,
And drink their sweethearts and their wives,
I'll heave a sigh, and think on thee,
And as the ship rolls through the sea,
The burden of my song shall be:
Blow high, blow low, let tempests tear
The main-mast by the board,
My heart, with thoughts of thee, my dear,
And love well stored,
Shall brave all danger, scorn all fear,
The roaring wind, the raging sea,
In hopes on shore
To be once more
Safe moored with thee!

Had Dibdin written merely to amuse, his reputation would have been great; but it stands the higher, because he is always on the side of virtue, humanity, constancy, love of country, and courage; these were always the subjects of his song, and the themes of his praise. Most of Dibdin's songs have become permanent favourites both in the navy and the merchant-service, and there is not the least doubt but their influence is still strongly felt, and is one of the chief means of supplying her Majesty's navy with seamen. When a ship leaves any British port, for the first week we hear bits and scraps of songs and chorus, such as *Champagne Charley*, *Tommy Dodd*, and such fast shore-songs, that the men pick up at the singing-rooms in port; but they soon die out at sea, and give way to the old favourites, such as, *The Anchor's Weighed*, *Isle of Beauty*, *Heaving of the Lead*, *Minute-gun at Sea*, *Slave-chase*, *Death of Nelson*, *Sailor's Grave*, *The Storm*, *Black-eyed Susan*, *White Squall*, *The Sea*, *The Pilot*, and many other good old songs of this class, that have braved the storm by sea and land for the last half-century.

A LIMITED HORIZON.

IN FIFTEEN CHAPTERS.

CHAPTER XI.—A 'LAST APPEAL.'

THE Cleathers were going away again, so Gertrude came in to tell the Hesketh's one bright May morning. It was just a year since the Hesketh's had come to Grimswold, and she could not help noticing that it had told upon Lalagé, the girl looked so white, and her former peculiarly bright expression had given way to a yearning unsatisfied, serious look, which was quite pathetic. Those dreary months had left their mark upon the woman who was not wise enough to find occupation for herself. Gertrude was quite touched by it, and by the blank look which came into Lalagé's face when she had told her news. Belle noticed the look too.

'I wish you would leave little Dinner Bell under our charge,' she said.

'O do, Gertrude,' said Lalagé, with a grateful look at her sister. 'I should like it so much; and we really would take great care of her.'

'You are very kind,' said Gertrude slowly, thinking over what was best for the child, 'and it would be a great help to me. Her papa will miss her terribly at first, but I think I may as

Digitized by Google

once accept your offer. You won't find her troublesome, she is getting such a helpful little woman!'

'I am so grateful to you,' said Lalagé, as she bade her friend good-bye.

So the following week, little Isabel Cleather took up her abode in the Hill House. She came without any attendant, being now four years old, and 'big enough to put herself to bed,' as she boasted to Lalagé, though she was never allowed to make good her words.

This little girl's advent was a great boon to Lalagé; she required such constant attention, and was able to walk so far on those sturdy little legs, that she in no way hampered her guardian's movements. The bright summer days, too, cheered the girl's heart, though she no longer found the wonderful beauty which daily unfolded itself before her eyes sufficient for her. She regained somewhat of her old gaiety, and no longer felt the oppressive awe of the overhanging hills.

The big curate noticed the change: she seemed happier than she had been all the winter; and he, who was impervious to all atmospheric influences, could make nothing of the alteration; he could not account for it by the presence of a little child, and the coming of brighter weather. 'She is getting to like me less,' he thought with a superhuman sigh, and resolved to make a gigantic effort to recover his lost ground.

He did not exactly forget the promise that bound him, but he put it aside for a while; at least, he said to himself that if a sudden impulse came upon him, why, a man could not always resist impulse. So he went out one day to seek an impulse. He soon found it, in the shape of Lalagé and her charge wandering slowly down to the 'Bottom,' as the poor people called it—the green valley lying at the foot of the hill on which Grimswold was built; they were in a soft, green-lined lane, Dinner Bell gathering flowers and weeds alike as she dawdled along, babbling incessantly, as did the brook at their side. A few of the curate's big strides soon brought him up to them.

'You mustn't walk so fast,' said Lalagé with a smile, when she found he intended accompanying them: 'you forget that this young lady is not so richly endowed with walking materials as you are.'

'Will you have a ride, Dinner Bell?' he said to the child, who had recklessly flung her arms round his legs in a close embrace.

An eager assent was given, and she was soon perched on his shoulder in great content. But after a while she got tired, and tried to slide down; so the curate released her. She strayed apart from them, either in front or behind, talking to herself with great satisfaction, whilst the other two conversed more soberly, and walked more discreetly. All at once, the curate said abruptly: 'I am going home in a very few days, Miss Lalagé.'

'Are you?' she said, with no tremor in her voice, no quickening at her heart. 'You did not take your holiday till much later last year.'

'No; I could not bear to leave the place,' he said; 'and, for the matter of that, I hate the idea now, and wish I could put it off as I did then, and make such a short business of it; but I shall be away fully a month this year.'

'That is a long time,' said Lalagé, looking behind to see if Dinner Bell were safe.

'A very long time it seems to me,' he said with a sigh; 'but my mother and sister want me. They fancy I am unhappy.'

'Do they live far off?' she asked.

'Down in Devonshire,' said the curate; but he was determined not to be baffled in this way. 'They think I am unhappy,' he went on, 'and I don't know that they are so far wrong. I am very, very unhappy.'

'I am really very sorry to hear it,' said Lalagé coldly.

'You are not sorry—you do not care,' said the curate, irritated out of his usual placidity; 'and you are the cause of it all.'

Then he broke out again—this unwise man—saying in the fair summer light all he had said in the gloomy autumn darkness, and not saying it so well either. She was perfectly silent, but that silence was very different from the soft speechlessness that had been hers on that former occasion. The stern stillness of repression was on her face now; but to him, who was no quick reader of human tablets, it was all the same. She had not been angry then, she would not be angry now; and so he went on with his foolish outpouring. She heard him out to the very end, till he had nothing left to say, till he stood speechless, though unabashed, before her, and then she turned and looked him full in the face.

'You have broken your word,' she said, bitter anger and scorn flashing so plainly into her face, that even he could read the characters; 'you have spoken as you promised never again to speak.'

His foolish eyes fell to the ground, as those accusing ones met them.

'I could not help it,' he said weakly; 'it is for the last time. I am going away; and I am very wretched.'

'And does your wretchedness destroy your honour, your truth, your manhood?' she said with a blaze of passion. 'You have thrown all away to-day.'

'I do not care,' he said, with the recklessness of a weak man. 'If only I can get you to like me, as I believe in time I could, I would risk anything, everything!'

'Hush!' she said, repressing her anger with a great effort; but her caution came too late.

Little Dinner Bell—forgotten by both in the heat of the discussion—ran forward, fully equal to the occasion, and thoroughly appreciating it. She caught hold of the clerical trousers of her pastor, and thus armed, addressed Lalagé.

'Will you mally him?' said the child, looking up. 'Do mally him. Nurse says you must—always walking, always talking, must mally at last, nurse says.'

Lalagé turned to the poor curate. 'You see what you have brought upon me,' she said.

He lifted the child in his arms. 'But you are to be my little wife, Dinner Bell.'

'And Laladyee your big wife,' persisted the child; 'and live in one house, with my Noah's Ark, and hens and chickens outside the door. Only'—with serious, wide-opened eyes—'you must not go swarring, swarring all over the house, like poor papa, when his head is bad.'

'No; I don't do that,' said the difficultly-placed man.

'Come, Dinner Bell,' said Lalagé, 'you and I must go home; and Mr Mitchell has to walk ever

Digitized by Google

so much farther: run and pick that big blue flower for me.'

The child struggled out of the curate's arms, and ran off; then Lalagé turned to him. 'I have already told you my opinion of your conduct to-day,' she said stiffly; 'I have only to add that, if it is once more repeated, I shall complain to my father. The "walking and talking," as nurse says, are all at an end.' She paused, but no answer came. Looking up in his face with proud, indignant questioning, she found there no expression of anger or resentment, only bitter, bitter pain.

'I am really sorry to speak to you in this way,' she went on, a little softened; 'but what can I do? No words can be too harsh for what you have done to-day, no condemnation too strong.'

'Forgive me,' he said; and turning his back to the child, who was now some yards ahead, he put one big hand over his face: 'then there is no hope for me?'

'No hope,' she said firmly; but she could not bear the sight of his sorrow, for, though feeling he was very weak, she was too nearly concerned to perceive how utterly unworthy a grief it was, suffering without strength.

In that moment, standing there by his side, a temptation arose. Something said to her that it would be only fair to tell him that she too had been wounded in the battle which seemed to be unfavourable to him alone. Such a confession would have been so utterly repugnant, so unspeakably painful, that the chivalry of youthful self-abnegation declared loudly in its favour; but feminine instinct would not, could not suffer it, so she turned and walked away. No; that unworthy love of hers—never felt to be more unworthy than now—should be locked up in her heart all her life. She chafed over it in silence; it galled her spirit and fretted her pride; but still she acknowledged the shadowless existence which had come to her, as she fancied, so joylessly.

She turned away and left him, taking the child with her, never again to meet him till the current of both foolish hearts had been utterly changed; till he had grown content and satisfied with his fate; till she had cast from her the error under which she was now labouring; till new scenes, and wishes, and hopes had come between them.

But that future comfort was far from her now; and as she walked up the hill-side, with the hot sun behind her, she felt her old wretchedness come back to her. Albeit he had been so wrong—she was so sorry for him—poor pitiful Lalagé; and all the sorrow, all the pity, were only, as she scornfully told herself, fresh proofs that she was 'what people called in love.' She grew angry at the iterated thought, and wondered what the curate had meant by words which were still keeping up an indignant echo in her heart.

'If only I could get you to like me, as I believe in time I could,' he had said.

What had he meant? Could he guess the secret she had so jealously guarded? Anger alone, to the exclusion of every softer feeling, filled her mind at the bare idea.

But no; she would not let this torment her; he could not have meant it; he did not know what he had been saying; for surely no man, with ever so faint a hope on which to build, would have accepted the verdict she had pronounced. In her secrecy at least she was safe.

CHAPTER XII.—A CHANGE IN THE MINISTRY.

The big curate's heart was very heavy. There was 'no hope' for him, Lalagé had said; and she had reproached him with being dishonourable, with having broken his word, and he could not help feeling that there was truth in her words. He was not stung by them—he was not a man capable of being stung—but he thought them over slowly, and came to the conclusion that she was not altogether wrong.

He was very sorry; he could not bear to do wrong; and yet all his life, in almost all his foolish, susceptible 'affairs,' he had been doing wrong—sinning in the blindest ignorance, but still sinning. That his easily involved and variable affections might be the cause of suffering to any of the goddesses whom he by turns worshipped, never entered his short-sighted and really humble mind.

For he was humble, with the provoking humility which thinks its possessor free to act as he chooses, being of so little consequence in the world, and which often does more harm than the most offensive conceit.

Most of the curate's goddesses had indeed escaped scathless as he himself, quickly learning the real value of his changeable love. Only in one case had the iron entered the soul of a woman, and branded her heart with life-long scars. Down in his native Devonshire, five years before meeting Lalagé, he had been engaged to a certain wealthy brewer's daughter, whose charms had found him an easy victim. Her father, not so sure as herself of the stability of the ardent, unwise young man, had determined to test it by an eighteen months' engagement. Alas, the big curate had not proved equal to the trial. Before one half of the time was over, his *fiancée* heard from good authority that he was sighing at the feet of another. She wrote to him accordingly, breaking off the engagement very gently, but firmly. There was not one word of upbraiding or of her own pain in the letter; she was too deeply wounded for that. The curate accepted his doom meekly, feeling rather that he had been injured than that she had been. He answered her note, humbly acquiescing in her decision, but asking no questions as to what had induced it; and with that letter the matter had come to a conclusion with him.

But not with her. Year after year she brooded over that first love of hers, and slowly grew to the knowledge that it would likewise be her last. And his letter had been a mystery to her: he had attempted no justification—had in no way palliated his conduct. Perhaps, after all, it had only been a mistake, and she had sacrificed the happiness of her life to a rumour. Ah, if only she could see him again, thought poor Mary Hope, it might all come right even yet. But he had gone up into Gloucestershire, and been buried in the wilds of Grimswold; and during his brief visits home, fate had always found the brewer's daughter absent from the scene of action.

Then her father had died, and left her, a wealthy heiress, without kith or kin in the world except a cross old aunt at a distance, with whom she was to take up her residence. She must leave the town where Tom Mitchell's mother and sister lived, and this was a great grief to her, for another Mary, Mary Mitchell, had taken the keenest

Digitized by Google

interest in the affair, and knew all her friend's mind on the subject. If only she could bring 'It' all right again, she felt she should not have lived in vain.

She kept her brother steadily before the mind of the poor, lonely girl who loved him; said fifty times a day: 'I daresay it was all a mistake;' talked much of the depression ('unhappiness,' she called it) of which Tom was complaining, and finally begged the brewer's daughter to stay with them a month or so just at the time that the curate was expected.

Such was the combination of circumstances into which the unwise man walked one day in the June of this same year. He had written to say by what train he would arrive, but Mary Mitchell had kept this knowledge from her friend, and so managed that the brewer's daughter should be alone in the tiny drawing-room when the curate arrived, his sister and mother—who was in the plot—being out. So the unsuspicious man with his burdened heart turned the handle of the well-known door, and went in his ignorance to meet his fate.

But once inside the room, he paused. Sitting in the low window-seat was a woman in deep mourning, with a good, sensible face, which was not without a charm of its own, and soft, smooth, brown hair. She rose with a bright blush as he entered, and went forward to meet him; she thought it was diffidence that kept him hesitating at the door, whilst in reality he was vainly striving to remember who she was.

'Tom,' she said, holding out her hand, 'the past is all forgiven.'

And then he knew her, and said: 'Thank you,' not quite knowing what she had to forgive, and stupidly put his large carpet-bag on the small table, and sat down by it.

She sat down too, and then there was an awkward pause. Presently she said timidly: 'You have been very unhappy, I know.'

'Very unhappy,' he said; and then the thought of it all came over him, and putting his arm on the table, he rested his hidden face on it. Speak out he must, just to relieve that foolish heart.

'I have been very unhappy,' he repeated slowly; 'and what is worse, I am afraid I have been very wrong.'

She got up and stood by him. Tears broke her voice as she said: 'Not wrong: you shall never say that to me or any one else. Perhaps you have been a little foolish and mistaken in your feelings, but not wrong; no, not wrong. And you have come back now, and all the past is forgiven, as I told you before.'

Slowly, into his unwise heart, the full meaning of her words penetrated: the silence that followed helped to reveal it to him ere his attention was claimed again. He was thinking of Lalagé; she was speaking of herself. There was no mistaking the tender grandeur of that forgiveness. She, then, had suffered from that former episode in their two lives, which had seemed to him but a slight and passing thing; she had suffered, and through him. The thought pierced his soft, foolish heart, and he felt glad that his face was hidden, for he was ashamed as well as sorry. But then, why had she written that renouncing letter? He would have given years of his life to know, for then he could better have understood his situation; but instinct, dull as it was with him, told him it was not the time to ask. He still kept his face hidden and was silent.

In that silence, seeming to her so full of pathetic repentance, she went closer, and put her hand on his shoulder. Then he looked up.

'You are very good to me,' he said.

'I mean to be only good to you,' she answered.

'And you have suffered too,' he said, taking the hand which had dropped to her side.

'Suffered!' she said with a shiver. 'O Tom, it was terrible; but it is all over now. And what does it matter? I have you back again.'

What could he answer to this—the man who bore Lalagé Hesketh's image in his heart? Happily, reply was spared him, for the door opened, and Mary Mitchell, who had been sobbing on the staircase for the last five minutes, and could restrain herself no longer, burst in.

'Oh,' she cried, 'it is all right, and you two are together again, and I 'm sure I 'm as happy'—with a sob—'as I ever was in all my life.'

If she had known, as she afterwards did, that the train had been very late, and the interview consequently a very short one, she would probably have allowed them more time, and possibly would have been too late to prevent the curate's committing himself. The one thing for which she blamed herself in the day's proceedings was the one thing which probably saved the whole affair in which she was so deeply interested; but, as she herself said: 'What did it matter, now It was all right?'

'It' was all right to every one but the poor dazed curate, who stumbled up-stairs in his awkward fashion, and wondered how it had all come about, and what was to become of him; for dearer than any former love was the image of that bright, sweet Lalagé, the golden glint of whose sunny hair dazzled his eyes as he looked into the future, and found he could not yet put any woman in her place. But still, whilst getting ready for the early dinner, he could not but acknowledge to himself that time had before this done much for him.

But how had all this come about? Not daring to ask, he yet longed to know; and gradually the desired knowledge came to him. He gleaned it from the loud boasts of the sister who had brought 'It' all right, and who told the story fifty times a day; he gathered it from the fond reproaches of his mother to a son who, she told him, had been too shy to come forward long before, as he should have done; last, and most surely of all, he learned it from the calm acquiescence in a past, long sorrow, with which the woman, with regard to whom he stood in so strange a position, met his awkward questions. It was a revelation to him, but one which admitted of no doubt, he quite felt that, when, three weeks later, Mary shewed him an entry in her diary, made the day after his return home: 'Happy once more.'

'My poor Mary,' said the curate.

Yes, it came to that; the days and weeks did so much for him that he could call her his 'poor Mary.' Still, Lalagé's image kept floating before his dazzled eyes; but she was absent, and Mary present; and his heart was very weak, and Mary's love very strong.

And this wisdom the unwise curate had—never to let her find out how matters had really stood when he turned the bolt of the drawing-room door

Digitized by Google

on that eventful day; he locked up the secret in a heart which happily grew more torpid as the years went on. He alone knew that his every thought was not loyal; that a fatal, fair face—a memory of 'ancient grace'—would at times come between him and his present, and bewilder him with unforgotten loveliness, and he had the grace to be ashamed of such visions; for, after all, he was only a weak man: perhaps the worst that can be said of him is the moderate comment which Mr Froude passes upon Henry VIII., in some such words as these: 'In his relations with women he was singularly unfortunate; it would have been well for him if he could have existed in a world where they were not.'

Yes, the days and weeks did much for him; Mary was always with him, soothing and calming his heart, shedding a sanctifying influence over him, and accepting, with no possibility of doubt, the relation between them which so bewildered him. Was he engaged to her, or was he not? Or was she engaged to him, without his being engaged to her? Formally engaged to her he could not be; it was impossible to take so decided a step without informing Lalagé of his intentions, and yet he was daily treated as only an engaged man is treated. Then he ought to be engaged. But how was it to be done, how could it be managed? In what manner, in what fashion, with what words could he inform his late—and yet not his late—goddess that she was dethroned, and another reigning in her stead? So short a time had elapsed since he had stood before Lalagé, pleading earnestly for her regard, that it was almost impossible to tell her without insult that that regard would be no longer acceptable. How should he do it? Was ever poor man so plagued and worried before? thought the big curate.

And yet the thing must be done; the letter must be written; for the days were slipping by, and each one found him more deeply involved, and Mary kinder and dearer. He used to sit up at night, beginning countless epistles, only destined to be burned, and left in thin, gray, unsubstantial piles on his fireless hearth; using long pieces of candle, which made his sister shake her head over the diminished columns, and say: 'See what comes of being in love!' with an oracular nod. As indeed it did, though she knew nothing of the discordant duet which was being performed in the curate's susceptible heart.

Not till a month had passed—not till he had obtained a fortnight's extension of leave—was that unhappy letter posted. When it was fairly off, his spirits rose, and he quite entered into the enjoyment of the hour. After all, it was not his fault; circumstances had been too powerful for him; a groove had been set for him, and who was he that he should refuse to run in it? Mary was good and sweet beyond expression; no difficulties of position or rank came between him and her; and this union would make both his mother and sister very happy. 'Kismet,' said the curate, and devoted himself to his new, yet old love, and was very moderately happy.

Then came the answer to his letter, and woke up the old feelings, for Lalagé was generous and delicate, and could not help shewing it even in that short stern note. 'Fair, and good, and sweet,' sighed the curate, 'but not for me;' and a sea of regret rushed through his heart, sweeping away the landmarks which Mary had so carefully piled. However, she was there to build up new ones with patient unconsciousness, so he addressed himself manfully to the present, and found it very soothing.

He had begged that Lalagé's letter might be addressed to the post-office, so no one but himself knew of its arrival; he had felt that anything touched by or belonging to her must bear some distinctive mark, and in this he was not so far wrong; a violet monogram and scented paper were certainly unusual at the widow's cottage, and might have provoked comment.

At last, his time was up, and he left his mother's house a re-engaged man.

He was whirled back into Gloucestershire, and none but he knew of the trepidation in that foolish heart. 'How shall I meet her?' he constantly asked himself, and the 'her' was not his betrothed.

MY SECRET.

Bend your heads, ye tall trees, above;
Listen, O listen, sweet flowers, below—
He 's mine for ever—my love, my love!
My secret of secrets now you know.
Gaily rustle the leaves as I pass;
All the blossoms smile in the grass;
Carol the birds upon every bough:
'Happy,' they all say—'happy art thou.'

Dear little birds, throughout all the land,
Ye will tell this secret of mine ere long,
But none will be able to understand;
They will only say: 'How sweet is the song!'
And the flowers will whisper my tale to-night
To the fairies that come in the clear moonlight;
And the leaves will murmur it soft and low
To the summer-winds that among them go.

O birds, will you leave us when days are cold?
Will the flowers wither, the leaves grow sere?
Little brook, will the frost your wavelets hold?
Will the earth be sad, as it was last year?
To the world shall winter come by-and-by;
But when leaves shall fall, and when flowers die,
And the woodland singers are over the sea,
This summer-time still in my heart shall be.

Early this month will be issued a Christmas Extra Double Number of *Chambers's Journal*, entitled

BEGUMBAGH,

Being an Episode of the Indian Mutiny.

The number will be issued at Threepence, and will, besides, be included in the Monthly Part to be issued at the end of December.

On Saturday, January 1, 1870, will be commenced

GWENDOLINE'S HARVEST.

By the Author of *Lost Sir Massingberd* and *A Perfect Treasure.*

Printed and Published by W. & R. Chambers, 47 Paternoster Row, London, and 339 High Street, Edinburgh. Also sold by all Booksellers.

DRAWN FROM THE LIFE.

HUNTING EXTRAORDINARY—A PERSONAL REMINISCENCE.

It was my misfortune in early life to have to go a-hunting three days a week. My father kept a pack of harriers (or, as the *Times* alone correctly spells it, hariers), and I was bound in filial duty to perform this penance. I had a pony of my own, called *Lightfoot*, and it was only proper that I should make use of him. My brothers were all sportsmen—or sportsboys—and even my mother was famous as a horsewoman, and especially gifted with an eye for seeing hares sitting. Forty hares might have sat under *Lightfoot's* nose; and their cunningly contrived 'forms,' with that sloping roof of grass above them, would have hidden them all from me; but my maternal parent never missed one. Often and often would her uplifted hand call the attention of her degenerate son, and at a nod from her I would gallop off to the huntsman, and tell him *I* knew where poor puss was in hiding. But I never was able to deceive that man.

'You mean your mamma knows, Master Jemmy,' he used to say; and then he would chuckle in the brutal manner so characteristic of his profession, and with a 'Come up, will you!' addressed to his old roan, lead the dogs to their victim. I see him now 'tooting' away on that battered horn of his, while his horse's hoofs cast up the wet soil of the turnip-field behind him, and very often into my eye.

It is impossible that *every* boy can take delight in hunting, and be so devoted to horses and dogs as they pretend to be. Of course, many are honest enough in this predilection; but because it is un-English not to like such things, a good many of them fall into another un-English habit, and tell lies about the matter. I was a sharp boy, but I can't believe I was the only sensible one that ever was. As we grow up, there are many amusements about which everybody is more or less of a hypocrite. It is permitted to profess an attachment beyond what is actually felt for the legitimate drama, for 'a little music after dinner,' for the sermons of a popular preacher, and for truffles: but in early life, Hypocrisy is surely to be deprecated. Why, then, is the Youth of this country compelled by public opinion to affect an interest in horses and dogs, which may not be felt, and in some cases may be even repugnant? For my part, I greatly preferred cats. At nine years of age I was a student, so far as exciting works of fiction were concerned, and I found relaxation in teaching the nursemaid cribbage.

Why, at least in so unimportant a matter as recreation, should not everybody be permitted to follow his own line? It was surely hard that, on account of my simple and inexpensive tastes, I was stigmatised in the family circle as Molly. It was a marvel that this inconsiderate treatment, combined with the private opinion which I could not help entertaining of my friends and neighbours and their tastes, did not make me a Cynic.

Imagine a dark day in late November, half-fog, half-mizzle, and evidently designed for the perusal of the *Last of the Mohicans* over the school-room fire, or a quiet little rubber with pretty Susan, while the younger children took their peaceful morning's sleep around us—imagine, I say, on a day like that, having to mount *Lightfoot*, and trot through the damp woods or over the wet turnips in search of a poor animal, whom Nature (and, I may add, good sense) had taught to lie snug and warm at home in her form. She was not easy to find, even by my accomplished mother, and our situation in the meantime was melancholy in the extreme. All soon felt cold and dreary, and I, for my part, having a rapid digestion, was very quickly hungry. I used to take an immense piece of cake with me, so large that it seemed (at first) that I could never get through it, and some of it I would share with the young puppies. But this was objected to. In spite of their pretended fondness for dogs, I never saw one of my people give them a crumb, and they even found fault with me for my humanity. I kept it to myself, of course, for the dogs' as well as my own sake; but there were one or two of the younger hounds who always preferred hanging

Digitized by Google

about in my neighbourhood to poking among the wet turnip leaves after a creature that was invariably caught, if it was caught at all, by their seniors. When I say 'invariably,' there was one exception. *Grudgeon*—a wise dog, who would have been a turnspit, if he had had his choice—and I were once in a solitary spot together, and found a hare all by ourselves. I forget the technical term of reproach for his conduct, but *Grudgeon* snapped her up in her form, and ate her, body and bones and fur and all. It is my belief that all those dogs were half-starved, but I must confess that *Grudgeon* had acquired his name from an exceptionally healthy appetite.

When the toad has swallowed the duck's egg in Mr Dumaurier's never-to-be-forgotten picture, it is with a very distended appearance that he replies to the agitated and inquiring mother: 'How should *I* know?' and this was just poor *Grudgeon's* case after he had bolted that hare, which was within an inch or two as large as himself. He sat down and whined in my face with a look of pain and penitence which it was pitiful to witness. It was evident he wished, too late, that he had shared that gorgeous banquet with another. I did my best for him, but I was young and inexperienced. I rode up to my eldest brother, and asked whether I had not better take poor *Grudgeon* home, because I thought he was —well, in an interesting situation. Of course I was wrong, in every way; and I got no credit, not even from *Grudgeon*, who, I verily believe, imagined that I had told upon him, and got him his beating, for after that time he never hung about me as before, with an eye to lunch.

Well, I say, until the hare was found all was despondency: when she was started, there was madness, a helter-skelter of ten minutes, during which I almost always lost my hat. I never fell off *Lightfoot*, unless I wanted to do so; but often and often I would guide him away, despite his efforts, from the maddening crowd, and in a solitary spot dismount, and put clover in my hair, to shew that I had been pitched off, and then ride home, with a good excuse, to the *Mohicans* and Susan. It was Duplicity, I own, but she is the natural (if not the legitimate) daughter of Oppression; and was not *I* oppressed? It was indeed attempted to shew that I ought to be thankful to my tyrants, to welcome the whip and the chain—that is, the hunting whip and the curb-chain. 'There is many a boy of your age, sir,' urged my father, 'who would jump at a pony such as *Lightfoot*, and hail your three days a week with my harriers as the highest joy.' 'Very good, papa,' said I cheerfully; 'give *Lightfoot* to some poor boy, and make him happy.'

At which very reasonable and benevolent reply, my father was exceedingly irritated, and muttered something to mamma which implied a doubt of my parentage, and made *her* angry. He couldn't believe I was his own son, it seemed, because I didn't like 'thistle-whipping.' If I had been an impertinent boy, I could have made use of that sarcasm, for I knew very well what hare-hunters are thought of by fox-hunters. Perhaps stag-hunters in their turn have some depreciatory epithet for the infatuated followers of Reynard. The littlenesses and jealousies of Sporting folks are beyond belief.

Sometimes, by-the-bye, as *a great treat*, we boys went out with the fox-hounds, which was a much more serious matter to me than going with papa's pack, and, as it were, in the family way. The meets were much farther off, and the fox would generally take an opposite direction from home and Susan. They might call me Molly; but nothing could exceed the effeminate vanity which distinguished my elder brothers upon such great occasions; they were never tired of looking at themselves in their highly polished top-boots; and they took as great delight in their spotless cords as any girl in her first ball-dress. They did not sport scarlet (though they wanted to do so above everything); but my father exhibited a weakness, exactly the reverse of theirs, for wearing the oldest and shabbiest red coat, with the tails looking—though, as a general rule, I doubt whether fox-hunters use pens—as if he had wiped his pen on them.

Those meets, indeed, struck me, even as a boy, as a ludicrous exhibition of dandyism and conceit; young gentlemen in velvet caps riding their hacks, though it might be but two miles to cover, and exchanging them for their glossy hunters; and ladies in carriages smiling upon them, and affecting the most absorbing interest in their bays and browns, not without an eye for becoming that sort of gray mare themselves which goes by the name of 'the better horse.' Of course folks may dress in red if they please, and spend a thousand a year apiece in riding after a useless beast, whose evil smell is its only recommendation, and these remarks would never have been penned, if I had not been, so to speak, dragged out to swell their pageant. But as it was, my indifference to such a spectacle became in time contempt. It was impossible that I could retain my respect for 'the county,' or even the chairman of quarter-sessions, when I saw them under such circumstances as these. I often think, when I read the radical papers, that certain editors in embryo may have been treated in their youth as I was, and hence their bitterness against the unpaid magistracy. I picture one, in particular, mounted upon a donkey, following, or attempting to follow, the X. Y. Z., as that famous pack ran round and round in their courses. Foxes almost always run in a circle, and, in my opinion, a vicious one.

Dear me, what discomforts I suffered in those days; partly from vexation, and partly from hunger (for we did not get home till I don't know what time), I used to eat the fingers of my gloves. I had sufficient good taste, however, to affect to share in the pleasure of these good people, and I remember the high-sheriff coming up to me on one occasion, and after a favourable criticism upon *Lightfoot* (for these folks always put the cart—I mean the horse before the man), saying: 'Well, young gentleman, this is your third season with us, is it not? You seem to enjoy life as much as most people.' He was a good-natured man, and we were all sorry when he dashed out his—I mean broke his neck at a stone wall.

I never took a jump myself—not if I knew it; but once *Lightfoot* took me in and out of a sheep-fold, over the hurdles. 'How well your young un sticks his horse,' observed one who witnessed this involuntary feat to my father; and he was so pleased, that he bought me a new hunting-whip, which, by-the-bye, I could never crack, though I often got the thong round my neck and the lash in my eyes. Of course my dear father meant everything that was kind, but I could never forgive him having *Lightfoot* clipped. They laughed at

Digitized by Google

me when I expressed my fears that he would catch cold; but, in reality, my apprehension was, that they would cut his mane, which was of the utmost consequence to me to take hold of at a crisis. I should never have got in and out of that sheepfold but for *Lightfoot's* mane; and when this cruel edict was put in force, I had to remain indoors—from indisposition—until his mane grew long again. Nothing would have induced me—no, not all Scott's novels bound in morocco—to go out hunting on a horse with a clipped mane (such as they wear in the Elgin Marbles), unless I had been tied on like Mazeppa. The pommel, as an element of adhesiveness, is greatly overrated, though, of course, a drowning man will cling to a straw.

It is not my habit, however, thus to dwell upon my own wrongs, and I have only done so as a fitting introduction to the circumstance which has given the title of 'Hunting Extraordinary' to this unpretending paper. There was one occasion on which I thoroughly enjoyed a day with my father's pack. We had been led rather farther afield than usual, and the family, consisting of my mother and two brothers, my father, the Huntsman and Whip, were returning home, after what *they* called an indifferent day's sport; only one mad scurry of ten minutes. The 'field' had melted away, and we were jogging along a lonely lane, all, with one exception, rather disconsolate and crest-fallen, when suddenly poor puss started up from a ditch in the roadside, and Babel and Bedlam at once broke loose together. I had got in my studies to somewhere in the fifth volume of the *Mysteries of Udolpho*, and was endeavouring to evolve the dénouement out of my own head, when *Lightfoot* suddenly plunged forward in pursuit, and dissipated my dreams. Of course I lost my hat; but if I had stopped for it, and was left behind, I might also have lost my way, for we were in an utterly strange country, and the hare, being fresh, was inclined to shew us a good deal of it. She presently led us by a bare cottage, on the skirts of a large coppice, or spinny, at the door of which there stood a woman, wringing her hands and weeping bitterly. The hunt, of course, went on; human misery is not to be considered, where the chase is concerned; but my quick ear was always open to tale of woe, and, besides, this poor woman would probably direct me home by a much shorter route than a mad March—no, January hare was likely to take me. So I pulled up *Lightfoot* by a superhuman effort, and inquired What was the matter.

'Oh, good young gentleman,' cried the widow, for such her cap and threadbare but decent suit of mourning announced her to be, 'I have just been robbed of all that I have in the world by a villain. He has taken everything worth having out of my little cottage, and has run away into yonder wood.' Now, an incident of this sort was worth more to me than all the hares in the world. My mind at once recurred to Rudolfo of the Redhand, the Bandit of the Black Forest, and how he was hunted down and slain by the heroic young villager of St Goar and his faithful retriever.

'Upon my faith and honour as a kni—I mean as a gentleman,' cried I, 'you shall be avenged;' and with that I dashed the rowels—but no, I was much too sagacious to wear spurs; I laid my hunting-whip about *Lightfoot* in a manner that must have astonished him beyond all measure, and flew after the hare-hunters like a fireman who sees flame about my Lord's mansion, and knows that whether he is really wanted, or it is only illuminations, he will get well paid for making his engine speed. 'The family' rode well, however, and it is doubtful whether I should have caught them up, had it not been for that most delightful of hunting incidents called a check, which happened to have just occurred; they had overrun the poor creature, I believe, and the huntsman was about to make a cast—an expression borrowed from the art of statuary—as I galloped up.

'Papa,' cried I, 'there's a robber in the wood, and you must catch him;' for, being a magistrate, I knew he would not dare neglect the interests of justice for the excitement of the chase; nor, indeed, did he evince any wish to do so. We all galloped back to the widow, and heard her story. The villain, she said, had beaten her cruelly, and run off with a bundle, in which he had rolled her clock, her teaspoons, her only pillow, and even her wedding-ring. My father had a great objection to villains, grudging me even the few biographies of them which I possessed, on the ground that they should be neither seen nor heard of, and took up the poor woman's cause with the utmost enthusiasm. He stationed mamma, my brothers, and myself on the skirts of the wood, while the dogs with himself and the two men went in to draw the place, exactly as if they were after their natural quarry. 'As for you, Master Jem,' said he, 'don't go "heading" the wretch, as you did the fox the other day, to the eternal disgrace of your family; but if you see him, let him get well out before you give the view holloa.'

I never was so excited in my life, nor certainly so happy since I had been on horseback; and I willingly promised obedience. The poor widow locked her door, for fear the creature should take to earth in that direction, and, retiring up-stairs, kept watch at her bedroom window. It was a pity that the field had left us, as we were obliged to place ourselves at such a great distance from one another, but we all determined not to miss the gentleman. It was my good fortune first to catch sight of him. The hounds had been in the cover about five minutes, and got about half through it, when the game was started so near to *Lightfoot* and myself that we both started too. I think I see him now. He was a big burly man, with a billycock hat slouched over his evil face, and with a large blue bundle slung over his shoulder. Seeing only a boy on a pony, he took no notice of us beyond giving us a wicked scowl; and in accordance with my instructions, I let him run off across the field for about fifty yards, and then I gave the view holloa with a will. Instantly the villain turned, and made at us, probably in the hope of getting back to the wood, but, as I imagined, in order to wreak his vengeance with clasp-knife and bludgeon. For the second time that day did *Lightfoot* feel the unaccustomed whip-lash, and off I galloped to my 'supports.' Neither mamma nor the boys would have been much good against so formidable a ruffian; but just as he reached the edge of the spinny my father and the huntsman sprang out of it, on horseback, and Rudolfo surrendered himself, without conditions. I remember, as though it were yesterday, his *wrist* being tied to the thong of the huntsman's whip, and thus secured, his sullenly accompanying us to the little country town, to be placed in durance; while

Digitized by Google

the dogs sniffed about his heels (and especially *Grudgeon*), as though they had been robbed of a perquisite, and would have enjoyed a change of diet exceedingly.

That was the only day's hunting which I ever really enjoyed, and it was almost the last; for very soon afterwards, it fortunately happened that we became reduced in our circumstances, and those family harriers were 'put down.'

THE BULGARIAN RAYAHS.

BULGARIA may be reached from England in six days; but it is nevertheless a country so little known, that almost any information beyond the fact of its existence, and the vague notions concerning it which people derived somehow, from somewhere, at the time of the Crimean War, has at least the interest of novelty. Two gentlemen,* who have resided for three years among the hills of the Balkans, where they have become intimately acquainted with the Bulgarian Rayahs, have combined, in a jointly-written book, their common experiences; and it is undeniable that these are calculated to create some surprise, and to upset the vague notions already alluded to, which comprise a belief in the patient virtues of the Christian, and the ferocity of the Mussulman populations. The writers, perfectly understanding the severity and unpleasantness of the shock which they are about to administer to British prejudice and preconceived opinion, are careful to advance their claims to credibility. Their stay in the country has thrown them into close (and, in most cases, very pleasant) relations with the Mussulman populations—Turks, Tartars, Circassians, and Arnaouts. Not requiring the aid of an interpreter, and trusting to their guns as escort, they have had opportunities of hearing the unvarnished truth from Mussulman and Christian, such as would scarcely fall to the lot of a traveller accompanied by a dragoman or an escort of soldiers. They arrived in Bulgaria, and started on their mission of investigation, with strong prejudices in favour of oriental Christianity and its professors; and anything more complete than their conversion, it would be difficult to find in the annals of change of opinion.

The Bulgarian Rayahs are much more amusing to read about than to live amongst. It is to be hoped there are not many races, outside the circle of the acquaintance of the noble army of African explorers, so utterly good for nothing, so swinishly ignorant, and so preposterously self-sufficient as the Christian Bulgarians, who are complacently supposed by some persons in England to be the salt of that part of the earth. There is not much variety in the aspect of their villages; the description of one will stand for all. 'A sandy ravine sloping down to the Lake of Varna between ranges of low hills, covered with the remains of once magnificent forests; some three-score of mud houses, or rather huts, each surrounded by irregularly shaped enclosures of hurdle-work in every stage of dilapidation; two or three fountains; many wild cherry, plum, apple, and pear trees; buffaloes, pigs, and innumerable cur-dogs of every size, wandering about listlessly in search of food.' Such, making the necessary allowance for difference of position, is the aspect of every Rayah village in the Bulgarian Balkan. The main road is the resort of such of the village pigs as are not out on the pasture-land, and of the disgusting but useful scavenger dogs. The huts are surrounded by crazy fences, which also enclose in each case a clumsy structure 'resembling a child's Noah's Ark, immensely magnified, and upon raised wooden legs.' This is the granary, in which the Bulgarian peasant stores a small quantity of wheat or Indian corn, reserved for the use of his family. A rude plough, unaltered in form since the earliest days of agriculture; some equally primitive tools; a heap of logs for firewood; a ladder; an *araba*, or springless cart; a few melancholy turkeys; and a brood of famished chickens, are invariable appendages of every house. Each village boasts two or three public-houses, or *bakals*, in front of which the men sit cross-legged on the ground, drinking, smoking, and gossiping. The following is a droll description of a very common incident in these neighbourly gatherings: 'As the drugged wine produces its effect, a dispute arises, and they start to their feet, abusing one another with all the facile eloquence of Slavonic vituperation, and draw their knives with more than Italian gesticulation. The Italian *coltellata* is, however, rarely given in these public quarrels; for woman, the universal peace-maker, appears upon the scene, armed with persuasive words and a thick stick. But though her verbal or manual arguments may stay the impending strife, she shares the proverbial fate of "those who in quarrels interpose;" for wives are as soundly thrashed in Bulgaria as in Lancashire or Clerkenwell. There is another reason which prevents these drunken quarrels from ending in bloodshed upon the spot: the Rayah, instead of trusting his cause to the *jugement de Dieu*, as manifested in a duel with knives, prefers to stab his adversary at an advantage, or to adopt the more silent vengeance of poison, one always safe in a country where the police, seldom seen outside the walls of the town, is looked upon by the Christian as his natural enemy, and therefore rarely appealed to, and where *post-mortem* examinations are unknown.'

A general air of desolation pervades these wretched villages in the daytime; but in the evening the men return from the forest, and the oxen, goats, sheep, and pigs arrive from the pastures. This sounds pretty and pastoral, but it is in reality dreary and savage, for the men are little above the beasts they drive in intellectual faculties, and not nearly so harmless. The picture of domestic life is singularly uninviting; and the huts in which it passes away are extremely wretched, and, even among those of the wealthier peasantry, very small, never consisting of more than three rooms, of which two are bedrooms, entirely destitute of furniture, which serve as sleeping-apartments for the junior members of the family, no separation of the sexes being considered necessary. 'Bedsteads,' says the author, 'are

* *A Residence in Bulgaria, or Notes on the Resources and Administration of Turkey, &c.* By S. G. St Clair, late Captain 1st Fusiliers, and Charles A. Brophy. London: John Murray.

Digitized by Google

unknown; a mat is placed upon the floor, the peasant thrusts his sheep-skin cap over his eyes, makes the Greek sign of the cross, covers himself up with a rug or two, and goes to sleep without further preparation.' A peculiar gloom is imparted to the Bulgarian villages by the absence of windows, of which the houses are entirely destitute; the only channels of light and ventilation being the large chimney, and the chinks and crannies of the ill-joined door. The reason assigned for this is, the universal dread of brigands, who might come at night and fire through the windows (if they existed) at the sleeping peasants, to whom the simple expedient of using strong wooden shutters, such as they may see in any Turkish village, has never occurred. The authors conclude their repulsive account of these people's domestic arrangements by a passage which places them in strong and unfavourable contrast with the cleanly and civilised Turkish peasantry. 'The atmosphere produced by these habits, and the presence of a dozen people who do not take off their underclothing four times during the year, and who are, moreover, redolent of garlic and raki, is not agreeable to the stranger in Bulgaria; for the Rayah, like the negro, diffuses around him a peculiar aromatic odour, by no means Sabæan, which makes one feel inclined to apply to the whole race Dante's description of Geryon: 'Ecco colei che tutto il mondo appuzza;' more particularly as this aroma extends itself in some subtle manner even to the cookery, so that it is easy for any one who has eaten food with both Christian and Mussulman to distinguish, both by taste and smell, the victuals of the one creed from those of the other.'

The ingenuous traveller, cherishing the traditions of eastern hospitality, has them rudely dispelled by the avarice, rapacity, and exorbitant cheating of the Rayahs, and, if he went no further than their villages, would be likely to regard them as myths indeed. But let him extend his exploration to a Turkish village, and he will find that the mere fact of his being a stranger insures him food, shelter, and a hearty welcome. A Mussulman may not receive travellers into the sacred precinct of his own house, but in every village there is a cottage built for their reception, and thither you will be directed. Arrived there, 'you enter a little room, kept scrupulously clean, and furnished with matting and a few cushions; shortly after, some one comes in with coffee and the apparatus for making it, salutes you, and in a minute or two offers you a tiny cup of coffee, such as few but Turks, of the country, can make. Then other villagers come in, each with an offering of bread, cheese, cream, butter-milk, lentils, honey, eggs—in short, to use their own words, as they excuse the poverty of the meal, "what God has given to them." No questions are asked until you have eaten and are satisfied, and are then put in a tone far different from the Prussian-frontier manner of the Bulgarians. No one who has mixed with the true Turks—those of the provinces, uncontaminated by a sojourn at Perá or Paris—can help being struck with their innate tact, refinement, and *gentlemanliness*. In the morning, you are offered a frugal breakfast, and of course coffee; when you leave, no payment will be asked for; and if you offer money in return for the kindness you have received, you will insult your entertainers: the only way of compensating them is to give some small sum towards the maintenance of the mosque or the school, and even this may not be accepted if it be given undisguisedly as payment for hospitality.' The authors think it fair to state that, though, in an extensive series of rambles among the villages of Bulgaria, they have *never* found a Mussulman who would accept payment from his guests for anything his house afforded—they have met with but one instance of a Christian who at first refused money, but even he finally took it without much pressing.

As this contrast between Mussulman and Christian is frequently and forcibly put, and as it extends to everything in the constitution of their lives—to their morals as much as to their manners—as the former are held up to admiration for their enlightenment and civilisation, and the latter are represented as incredibly degraded, it is necessary, in order to avoid imputing to the authors an invidious preference for the Mohammedan faith, to examine what the so-called Christianity of these people really is. The fairest evidence on this subject is that supplied by their own formularies, from which it appears that all the superstitions of the western religions have been tacked on to the ancient paganism of the Bulgarians, and that the moral influence of the combination is of an excessively degrading kind. The clergy of the orthodox Greek Church are very ignorant, and entirely indifferent in matters appertaining to religion, and they openly encourage the ignorance of their flocks. For instance, the authors adduce this: 'When the Papas finds his prayer to St John the Baptist for rain utterly ineffectual, whilst the spells of the village witch (the crudest forms of sorcery prevail among these people) are followed by a plentiful shower, which revives the drooping cabbages, he, being without any belief in the religion which he professes, and yet feeling the necessity of believing in *something*, comes to the conclusion, that certain occult forces are really the appanage of the sorceress, and instead of opposing himself to the powers of darkness, he thinks it better to make a compact of mutual aid and toleration. So, if the Papas's fields suffer from drought, or his wife or children are ill, he sends for the village witch, who performs certain incantations, addressed to the Spirit of Evil, for the benefit of the weather or the sick people, and who carries out her part of the treaty by paying the Papas's exactions, and taking her own infant to be sprinkled with holy water every month.' The practical religion, constructed of the old Slavonic Pantheism, which reigns supreme, combined with the outward observances of the Greek Church, is of the most extraordinary kind. Their festivals are utterly heathen. Thus, on All Souls' Day, the women go from house to house with lighted candles, in order 'that the souls of the dead may have good appetites, and be well fed in the place where they are.' There is no doubt that their only idea of a condition of life after the death of the body is entirely material, and they adhere pertinaciously to the horrid superstition of the vampire, which takes various forms, some ludicrous, and all disgusting. Then there is the Feast of Serpents, the Feast of old Mother March, and a horrid custom of ushering in Lent by catching all the village dogs, and beating them, to prevent their going mad during the year. On the Feast of the Panagia, lambs are sacrificed, in order that the children of

Digitized by Google

the house may enjoy good health throughout the year. On the Feast of St Demetrius, lighted candles are placed in the stables and the place where firewood is chopped, to prevent evil spirits entering into the domestic animals. The confession of a Bulgarian peasant is not an easy matter, for he has to make a mental review of the commands of the clergy, of which one of the latest is, that he must not give alms to a gipsy or an 'infidel.' But the most convincing testimony to the degraded condition in which the Bulgarian conscience is kept, is contained in the following authentic catalogue of 'sins,' which is a popular catechism. It is a sin: '1. To give a child a spoon to play with. 2. To give away or sell a loaf of bread without breaking a piece from it. 3. Not to fumigate with incense the flour when it is brought from the mill (particularly if the mill be kept by a Turk), in order to prevent the devil entering into it. 4. To wash a child before he has come to the canonical age of reason—that is to say, seven years. 5. To sell flour before making a loaf from it. 6. To clean a stable, sell milk, or fetch water from the fountain after dark. 7. To allow a dog to sleep on the roof of the house, as this gravely imperils the soul of any defunct member of the family. 8. Not to throw some water out of every bucket brought from the fountain, as some elementary spirit might otherwise be floating on the surface of the water, and, not being thrown out, take up his abode in the house, or enter into the body of any one who drank from the vessel. Finally, it is a sin to fail in the observance of any of the hundred superstitious practices approved or tolerated by the Papas.' From which it is sufficiently manifest that a pious Rayah cannot have an easy time of it in this world, at all events. They have not the slightest idea of moral responsibility, or even self-respect; they are as abjectly afraid of evil spirits as any African tribe; and their superstitions, entirely devoid of any poetical element, are as gross as those of the Abyssinians, which indeed they resemble in certain unmentionable respects. The Bulgarian vampire is not in the least like the creation of romancers and dramatists, but a creation of fancy as coarse and foul as it is morbid. Here is an account of an occurrence which took place in the village where the authors resided. 'Thirty years since, a stranger arrived, established himself, and married a wife, with whom he lived on very good terms, she making but one complaint—that her husband absented himself from the conjugal roof every night, and all night. It was soon remarked, that although scavengers were and are utterly unknown in Bulgaria, a great deal of scavenger's work was done at night by some unseen being, and that the dead horses and buffaloes which lay about the streets were devoured by invisible teeth, much to the prejudice of the village dogs; then the mysterious mouth drained the blood of all cattle that happened to be in any way sickly. These occurrences, and the testimony of the wife, caused the stranger to be suspected of vampirism: he was examined, found to have only one nostril, and, upon this irrefragable evidence, was condemned to death. In executing this sentence, our villagers did not think it necessary to send for the priest to confess themselves, or to take consecrated halters or daggers; they just tied their man hand and foot, lit a big fire of wait-a-bit thorns, and burned him alive.'

A faith in fountain spirits is universal; and the peasantry are possessed with an invincible belief in the existence of buried treasure, and also with an insatiable desire for finding it, which alone gives them courage to go out after nightfall. The authors have known many who, though they would not do two hours' work to earn a shilling, or to improve their fields, would dig for three or four consecutive nights, with their hair standing on end, and the cold sweat of terror on their brows, in the hope of finding some treasure supposed to have been buried by Alexander the Great. In all the customs of the Bulgarians, there is a monotonous ignorance and degradation; the witch presides at every ceremony; the sole popular notion of enjoyment consists in eating and drinking; the social position of women is very degraded; and the marriage and funeral customs are ludicrously like those prevalent in Africa. Sir Samuel Baker can hardly present his readers with a more absurd and pitiable picture than this: 'At the moment of death, all pots, pans, kettles, and other utensils are turned upside down, in order to prevent the soul of the departed taking refuge in one of them, and therefrom commencing a system of annoyance against the family; candles or tapers are lit around the body, and the head is dressed with flowers: the body is dressed in its best clothes, and the family run outside and scream a lamentation to the following effect:

O Tanaz! Boze! Boze!
Who will cut wood for us now?
Who will kill the sheep?
Who will take care of the poor buffaloes?
Who will carry the corn to the mill?
Who will beat us as you used to do?
O Tanaz!'

Alliteration and bosh.

As the dead are buried before their bodies are cold, it is presumable that premature burial is not uncommon; indeed, the authors knew that it occurred in two instances, and were told of another in which the buried man contrived to escape from his shallow grave, and returning home, gave his wife a tremendous beating, in acknowledgment of her precipitation in getting rid of him.

The political, commercial, and labour systems in this most unattractive country, are execrably bad, for very different reasons than those usually supposed. The Rayahs have too much time, too much liberty, too much land. They abuse all these gifts, having no idea or ambition beyond a life of sluggish idleness; and they are, together with their priests—who rule them in all actual and social respects—sunken in apathetic, contented ignorance. The resources of the country are both shamefully wasted and undeveloped; the farming operations are deplorably insufficient; but little hay is made; turnips are utterly unknown; and the authors believe that if snow were to lie on the ground for two consecutive months, there would probably not be fifty cattle or sheep left alive in the whole of Bulgaria. European Turkey occupies a fifth of the wheat-producing surface of Europe, but thanks to the idleness of the Rayah, upon whom the eastern grain-trade is chiefly dependent, it produces less than one-third of the amount of grain which should be grown upon it—a fact which justifies the authors' denunciation of the interesting Christian of the East as not only a social good-for-nothing, but as an active instrument of evil to Europe.

Digitized by Google

The three years' experience of Bulgaria detailed in this volume, cannot fail to convince the reader that the Christians of the East need a great deal of Christianising.

WASTE NOT!

One of the blessings of modern science presents itself in the form of economy, frugality, utilisation. Things which were formerly thrown away as waste are now applied to man's purposes, to an extent far beyond our general supposition. Dr Lyon Playfair and Mr P. L. Simmonds have frequently drawn attention to this subject, chiefly in illustration of the wonders of chemistry. Mr Simmonds has recently collected a new budget of instances, which he has brought under the notice of the Society of Arts.

Before touching on these, let us refresh the reader's memory by a summary of results already recorded. Beautiful perfumes are produced from substances not merely trivial, but in some cases fetid and repulsive. Fusel oil, putrid cheese, gas-tar, and the drainage of cow-houses, are thus transformed; the result is a triumph of chemistry; but it is commercially shabby and unfair to call perfumes thus obtained by such delightful names as 'oil of pears,' 'oil of apples,' 'oil of pine-apples,' 'oil of grapes,' 'oil of cognac,' 'oil of bitter almonds,' 'eau de millefleurs.' Blue dyes are made from scraps of tin, old woollen rags, and the parings of horses' hoofs. Old iron hoops are employed in ink-making; bones as a source of phosphorus for tipping Congreve matches; the dregs of port wine for making Seidlitz powders; the washings of coal-tar for producing a flavouring condiment for *blanc-mange*. Old woollen rags are the foundation of the prosperity of Dewsbury and Batley in Yorkshire: these musty, fusty, dusty, frouzy fragments being ground up into shoddy and mungo. Other relics of old woollen garments are made to yield flock for wall-paper, padding for mattresses, and Prussian-blue for the colour-makers. Chemicals are employed to destroy the cotton fibres in old worn-out balzarines, orleans, coburgs, and other mixed fabrics for ladies' dresses, and to liberate the woollen or worsted fibres for a new career of usefulness. Woollen rags, when even the shoddy-maker will have nothing to do with them, are choice materials for the farmer as manure. That bones are used for knife-handles we know very well; but it appears they are also used for bone-black by colour and varnish makers, for size by dyers and cloth-finishers, and for manure by farmers. Horns and hoofs are a very magazine of useful products in the hands of the scientific chemist. Whalebone cuttings yield Prussian-blue; dogs' fat is (shamefully) made into sham cod-liver oil; wool-scourers' waste and washings reappear as beautiful stearine candles; bullocks' blood is used in refining sugar, in making animal charcoal, and in Turkey-red dyeing; ox-gall or bile is used by wool-scourers and by colour-makers; fishes' eyes are used for buds in artificial flowers; bladders and intestines are made into air-tight coverings and into musical strings; all the odds and ends of leather and parchment dressing are grist to the glue-maker; calves' and sheep's feet yield an oil which is doctored up most fragrantly by the perfumer; stinking fish is always welcome as manure to the farmer; and a brown dye is extracted from those small bedroom acquaintances whom few of us like to talk about, and none like to see or to feel. At least fifty thousand tons of cotton-waste, the residue and sweepings of the mills, are annually utilised, by being worked up into coarse sheeting, bed-covers, papier-mâché, and the commonest kinds of printing-paper. Sea-weed is used as a material for paper, as a lining material for ceilings and walls, and as a source whence the chemist can obtain iodine. Various kinds of seed, when the oil has been squeezed out of them, are useful cattle-fatteners as oil-cake. Grape husks yield a beautiful black for choice kinds of ink; raisin stalks constitute a capital clarifying agent for vinegar; bran or corn refuse is valuable in tanning, calico-printing, and tin-plate making; brewers' and distillers' grains are fattening food for cattle. Bread-raspings are in France sometimes used as a substitute for coffee, and as a tooth-powder. Tan-pit refuse is valuable for the gardener's hothouse. Damaged potatoes, and rice and grain, are made to yield starch. Ground horse-chestnuts are not unknown to the makers of cheap maccaroni and vermicelli. Cork cuttings and scraps are eagerly sought for stuffing and for buoyant purposes. Pea-shells are used as a food for milch cows, and spirit may be distilled from them. Sawdust is now applied in a prodigious number of ways, for making paper, distilling oxalic acid, smoking fish, clearing jewellery, filling scent-bags, stuffing dolls, &c. Tobacco-ashes are made into tooth-powder. The coal-tar from gas-works is made to yield sulphate of ammonia, sal-ammoniac, printers' ink, lampblack, disinfectants, naphtha, benzole, paraffin, and the magnificent series of aniline colours for dyeing and calico-printing. The sediment in wine-casks is made into cream of tartar. Old kicked-off horse-shoe nails yield the best of all iron for musket-barrels. As for the shops in which gold-workers, jewellers, and goldbeaters work, not only is the very dust on the floor precious, but a refiner will gladly give a new waistcoat or apron for an old one, for the sake of the auriferous particles thereby obtained.

Mr Simmonds's new batch comprises many instances of substances recently transferred from the domain of waste to that of utility, and many suggestions for a similar transference in other quarters.

First, for the animal kingdom. Horse-flesh is certainly not waste so long as dogs and cats eagerly feed upon it; but the French say that we ought not to leave it to the dogs and cats, by reason of the excellent qualities it possesses for human food; however, we must leave this matter to the hippophagic admirers of 'chevaline.' Fish are applied to many more useful purposes than was customary a few years ago: shark fins are prized as food by the Chinese; shark liver is boiled down by them for oil; shark skin is dried and used for polishing wood and ivory; dried shark heads are given by the Norwegians to cattle as food; smoked and dried dog-fish is eaten as food, as are also the eggs, while the skin and the liver are applied to the same purposes as those of the shark. The French procure useful medicinal oil from the liver of the skate, which used to be thrown away, but which is now found to be nearly as efficacious as cod-liver oil. A French firm, Messrs Souffrie, make large quantities of useful tallow or fat out of the pickings and waste of slaughter-houses, the dead cats and

Digitized by Google

dogs found floating in the Seine, and the used-up grease of railway wheels; when doctored by means of steam and hydraulic pressure, this fat becomes available for stearine manufacturers. Leather scraps are made into 'shoddy leather,' by grinding and macerating them into a pulp available for the inner soles of shoes and such-like purposes. There is another leathery composition much used in America under the name of 'pancake.' Thin bits of leather, the odds and ends cut off by the tanner and currier from whole hides, are interlaid with paste until they accumulate to an inch in thickness, and then heavily squeezed between two iron rollers; the mass comes out as an oblong pancake twelve inches by four, and half an inch thick, looking very much 'like a cross between a sheet of gingerbread and a cake of tobacco;' it is used for inner soles, heels, and stiffeners. The albumenised paper used by photographers is subject to much waste in its manufacture; this waste, instead of being consigned to the pulp-vat, is now converted into beautiful marbled paper, by a peculiar application of aniline colours to the albumen.

Next, as to the vegetable kingdom. We are told that the using up of what was formerly considered waste, in the textile manufactures, now reaches the enormous quantity of a hundred thousand tons annually, in the three forms of cotton, flax, and hemp waste. If we include animal fibres, such as shoddy wool and silk waste, the aggregate becomes largely increased. The French make firewood or fire-lighters of the cones of pine-trees and the waste cobs of maize, saturated with any cheap resinous substance. Messrs Souffrie (already named) buy all the waste and pickings of vegetables from the twenty-five hospitals of Paris, cook them by steam, and feed a piggery of seven hundred head of swine —the vegetables being enriched with the greasy slops from the same hospitals. The same firm also produce beautiful white fat from the black residue left after purifying colza or rape oil; and another residue from the treatment of *this* residue gives them a useful varnish for cheap out-door purposes. The oil retained in olive oil-cake is now extracted by chemical means, and converted into capital stearine; and by this improvement it is expected that seven million pounds of olive oil, now annually wasted at Marseille, will be utilised. Old account-books, letters, invoices, envelopes, cheques, insurance policies, and other kinds of *writing* paper (not *printing*), are now bought at about twelve pounds per ton, and worked up with other materials into pulp for the penny newspapers. Besides linen and cotton rags, cotton-waste, old writing-paper, straw, and esparto or Spanish grass, wood is also now much used for making into paper. Large factories for this purpose have been established in Italy, Würtemberg, the United States, and other countries; the wood is rubbed down into dust by friction against rapidly revolving roughened wheels, and then treated by chemical processes until it forms a pulp suitable for paper-making. There is one wood-pulp paper-mill in Pennsylvania that can work up thirty thousand pounds of wood or of sawdust per day. Nearly all the German newspapers now have a percentage of wood in the paper on which they are printed. The *New York Daily Tribune* is said to be printed on paper made of bamboo; and other American journals are printed on paper made chiefly of a kind of wild cane that is found in vast abundance on the shores of the Mississippi. A German chemist has found a mode of distilling spirit out of a residue left after chemically treating wood-pulp for paper. A French manufacturer converts sawdust, by intense pressure, into beautiful little boxes and other ornamental articles. The seed in the cotton pods or tufts, which used to be an annoyance to the cultivators, is now most usefully employed as a gas-fuel, as a source of oil for lamps, as a chief substitute for olive oil, as oil-cake for cattle-food, and as a source of good hard grease or stearine for soap and candles. The refuse molasses from beet-root sugar, formerly used only as pig-food, are now distilled to obtain alcohol, and the residue crystallised to obtain potassium salts. Spent dye-woods, after the colouring matter has been extracted from them, are sold in France to a large manufacturer, who mixes them with tar refuse, and forms them into compressed cakes for fuel, which has a very large sale. The acicular leaflets of the pine-tree are converted into what is called tree-wool, in France, Sweden, Holland, and other parts of the continent; this wool is used for wadding, stuffing for mattresses and other articles of furniture; a cloth made from its fibres is used for inner vests, drawers, hose, shirts, coverlets, and chest-preservers; the membranous fragments and refuse are compressed into blocks for fuel; the resinous matter contained in them is distilled for gas; while by various modes of treatment there are produced an essential oil for rheumatism and skin diseases, an ethereal oil useful as a curative agent and as a solvent, and a liquid for a medicated bath—all useful substances from a material which not long ago was utterly disregarded.

And now for the mineral kingdom. Mr Mill and other thoughtful men are cautioning us that, as our stock of coal cannot last for ever, we should do well to utilise the thirty million tons of small-coal and dust which is allowed to go nearly to waste annually at the pit's mouth; and attention is drawn to what Belgium is doing in this matter. Near Charleroi, eight hundred thousand tons of coal-dust had accumulated, a burden to the colliery owners, and an injury to the health of the workpeople. Whereupon a Company was formed expressly to utilise this refuse. The coal-dust is sifted, mixed with eight per cent. of coal-tar, heated to a paste by steam at a temperature of three hundred degrees, and pressed into blocks and cylinders about twenty pounds weight. These blocks form excellent fuel for locomotives and steamboats, productive of great heat and very little ash. In various foreign countries where paving-stone is scarce, the slag from iron-furnaces is brought into use, by being run into pits eight or nine feet in diameter, and cooled into slabs for paving. The cuttings of tin-plate, and worn-out tin kettles and saucepans, are subjected to processes which yield pure tin, good weldable iron, ammonia, Prussian-blue, and stannate of sodium; and as the make of tin-plate in England and Wales amounts to more than half a million tons annually, there must be a very large store of material available in the old tin-plate which is replaced by the new. The waste flux, such as borax, used in galvanising metals, finds a ready market among refiners and for making paint.

But there are mounds of things still waiting to be utilised, waiting for the day when some clear practical minds will find out what to do with them.

The Cleveland iron sells for a comparatively low price in the market, because it is contaminated with phosphorus. Now, the iron would be worth seven shillings per ton additional if the phosphorus were out of it, while phosphorus itself is worth sixty or seventy pounds per ton; what would not be the national gain if the two could be easily and cheaply separated! Nearly a hundred thousand tons of sulphur a year are wasted in our alkali manufactures; means have been discovered for recovering this sulphur, but the system has not yet been sufficiently adopted to prevent the sad waste of a vast quantity of spent liquor in which the sulphur exists. Cinders from refineries and puddling-furnaces, and scale from rollers and hammers, contain from thirty to fifty per cent. of good iron; it is known that the metal can be obtained from them, and converted into good iron and steel; and iron-masters are now waiting anxiously for chemists to shew how such extraction can be managed cheaply. Mr Frank Buckland has pointed out that we destroy millions of wholesome fish every year, by poisoning the waters of the Tees, the Wear, and the Dovy with lead refuse, the Dee with petroleum refuse, the Usk with sulphuric acid refuse, the Camel and the Fowey with mud from the Cornish clay-works, the Exe with chloride of lime from the paper-mills, and many of the rivers of the northern counties with waste from the chemical works. As to substances useful for food, there can be no doubt that enormous waste occurs. We will conclude with a few observations by Mr Warriner (teacher of cookery to the army) concerning this important subject: 'The refuse grease and kitchen stuff in Paris is utilised to a great extent; but in London, there is an immense amount of waste. I have been studying this subject for the last three years, and can therefore speak with confidence upon it. I am quite sure that as much material is wasted as would feed *one million pigs*. There are sanitary laws telling people to burn their potato-peelings and cabbage-leaves, simply because we lack municipal regulations which would provide for the removal of these things every day. To shew the loss which is thus sustained, I may mention that at Aldershot each regiment of about five hundred men get about four pounds per month for their refuse of this description. I calculate that from every family of twelve individuals, living at the rate of three hundred a year, there is enough refuse to keep two pigs.'

A LIMITED HORIZON.

CHAPTER XIII.—A SECRET DISHONOUR.

'My dear Miss Lalagé,' the unwise curate had written, 'I don't know how to begin this letter, for I am afraid what I am going to tell you will make you very angry; but I couldn't help it. You yourself told me there was no hope for me as regards the subject on which I spoke to you some time ago. I now write to say that my feelings are changed—at least, I don't know that they are really changed, for never in all my life shall I think any woman half so sweet and beautiful as you are; but at anyrate I must try and keep down all that, for I am engaged, or as good as engaged, to a lady to whom I stood in the same position some time ago; but she and every one else went out of my head when I saw you.

'She gave me up four years ago; but has been good enough to reconsider her verdict: so she has given me to understand; but I cannot make up my mind to take the final step without writing to tell you. Don't be angry with me. I have been very unhappy, and am now, as I believe, only doing what is best; and you know you said there was no hope.

'Mary is very good—too good for me, I feel—and she does not know I have ever cared for any one but her; she fancied so once, and that made her break off the engagement; but now she thinks it was all a mistake, and I have not the heart to undeceive her: she would be so unhappy, and is so good, and has had so much trouble all her life. Do be kind enough to write and tell me you are not angry; and may I ask you to direct your letter to the post-office here?

'My substitute has promised to let me have another fortnight at home, so I shall be here till the middle of July.—I am always, dear Miss Lalagé, yours faithfully, T. Mitchell.'

The bright summer morning that brought this letter to Lalagé found her in the garden with little Isabel Cleather. She was in quite high spirits, holding the child in her arms, and running with her to look for the postman. It was a daily excitement of which Dinner Bell was very fond; Lalagé was more careless about it, having few correspondents.

At last the man came up in his leisurely country fashion, and delivered two letters: one, a big blue envelope, directed to Belle, Lalagé gave the child to take to her sister; the other, she put quickly into her pocket with a faint angry flush. With amazed eyes she had recognised the big curate's small hand, and a dark presentiment of evil came over her. What business had he to write to her?

With all her gaiety dashed to the ground, she went back to the house, and looking in at the drawing-room door, asked Belle if she would take charge of Dinner Bell for the morning.

She went up to her own room; with slow, unwilling fingers opened the unlucky letter, and read it through once, twice, three times, her quick, faint flush coming and going over her face all the while. Then she crushed up the envelope in her angry fingers, and flung herself on her knees by the bed—not to pray, only to keep down with hidden face and stifled sobs the passion she felt she must suppress.

She was very angry, very angry indeed. That she, Lalagé Hesketh, should have received such a letter from any man, was a humiliation, an insult. And what should she do? How should she resent it? Where should she turn for help? She had hitherto been protected, guarded, defended from the outer world; but this bitter arrow reached her standing alone and helpless on the terrible hill of isolation on which she had placed herself, and there was none to draw it out, and prevent the poisonous wound from festering. Her first impulse was to rush down and tell her sister everything; but this was instantly rejected. She could not bring herself to do it. 'Belle would only despise me,' she thought, in her blind misunderstanding of superior wisdom; and self-scorn was easier to bear than the scorn of that other, dearer one.

Digitized by Google

And this was not a thing to be prayed about—an insult which, she said to herself, had been brought about by herself; it could not be well to lay such a petty humiliation before the awful throne on high. No, there was no comfort anywhere. But a sudden divine impulse came over her, and she stretched out her hands, poor Lalagé, and sobbed out: 'Make haste to help me, O Lord!'

A little softened, she got up, and smoothed out the envelope and replaced the letter; then put on her things hastily, and went out. Up the hot hillside, Belle saw the light figure moving swiftly on, goaded by the inner pain, and followed her with fond wishes and tender fears.

'She shall not stay here much longer,' said Belle to herself; 'Grimswold is too dull for her.'

All through the burden and heat of the long summer day, Lalagé wandered with quick unconscious steps, seeking rest and finding none, repeating to herself that she had been insulted, and bearing about her the curate's written testimony of his own instability and unworthiness. At four in the afternoon, she found herself back in the little wood, through which she had passed in the morning. She did not yet feel tired out, and was still very angry; but she sat down at the foot of an old brown trunked tree, and leaning her head against it, looked like a white withering flower in the gloomy shade of the wood. Near that very spot, only eight months before, she had heard the curate's steps as he came up to her on the day when he made an appeal which had touched her very heart. Nothing touched her now but a sense of outrage and insult, which made the brightness of the day, the beauty of the trees, the songs of the birds, a mockery and a bitterness. So only had the fair summer landscape spoken to her on that day when the smallest ray of comfort would have been a godsend. The beauty and brightness had thrown her back upon the heart in which was neither, only blackness and anger.

She heard footsteps approaching, but did not open her eyes to see who caused them, telling herself she was out of the way of any passer-by. But they paused when they reached her, so she turned and looked up. In her highly strung, unnatural state of excitement, it would not have seemed strange if the curate himself had stood beside her, so it was with no expression of surprise that her eyes met those of her cousin, George Wriothesley.

'Lalagé!' he cried, startled out of his usual nonchalance by her strange, ghastly appearance. 'What is the matter?'

In the shadow of the trees, with the marks of the day's heat and weariness upon her pallid face, she looked more like a fading white lily than the bright, assured girl who had been his old love.

To her, the sympathising human voice, breaking for the first time the silence of many hours, came with a comfort and appeal that she was not strong enough to resist. She looked up at him, standing there in his cool, carefully arranged summer dress, with his regular features, and long fair whiskers and moustache, and compared herself, suddenly worn and weary, and faded and bedraggled, with the well-appointed figure before her. But even that disparaging contrast could not repel the flood of pain within her which strove for utterance, and which had been invited to confidence.

'George,' she said with a sudden burst of tears, 'I have been insulted.'

There—it was over; the words had been said, the confidence had been given beyond recall, and she was glad of it. Some one stronger than herself was near to guide and help her, some one whom she knew to be good with the best goodness; her sudden prayer had already been answered.

'Insulted, Lalagé?' he said; 'who has dared'—

She interrupted him.

'O George, it was all my fault. But you had better read the letter.'

She took it out and gave it to him, crumpled and worn like herself. He read it through, and then returned it in silence.

After a pause, he said: 'The fellow hopes you won't be angry, and you tell me it was all your fault. Am I to understand that you liked this man?'

'Of course I liked him,' said Lalagé with bitter self-scorn. 'I suppose I was what people call in love with him; I used to walk with him, and talk with him, and I liked him very much.' Her manner suddenly changed, and she looked at him with eyes which grew questioning and wistful. 'Don't you think I must have liked him very much if I did all that?'

He was startled, confounded. Was Lalagé, his ideal woman, wanting in all delicacy—in all feminine reticence? Abashed, he turned away his face. In that pause, she was having hard measure dealt out to her. He felt that, man as he was, he could never have so openly spoken of his feelings on a subject of this sort. At last, he said slowly: 'I suppose if you chose him out as your companion from all the world, you must have liked him very much indeed.'

'Chose him out from all the world!' she said, with wide-opened eyes. 'There is no world here; there was no one but him to speak to, not one human being, except a wicked woman whom I detest, and I was so lonely! I know I was very wrong; I am not excusing myself; I know I ought to have stopped him more firmly the very first time he spoke so foolishly; but I can only say the old thing over again—I was so lonely, so lonely!'

He was silent, not well knowing what to say. She looked up.

'George,' she said, 'you do not understand; you do not see that the insult lies in his having written to me on what he calls "that subject." I had desired him never to allude to it again; I had told him I would appeal to papa if he did, he made me so angry with his foolishness. I had forbidden him to speak to me at all, and then he goes away and takes advantage of the post to make me read words to which I would never have listened; telling me'—with a throb of wounded vanity—'he must give me up! Give up what he never had!'

'But if you liked him so much,' said George, 'why was all this so distasteful to you?'

'Because I knew him to be unworthy,' she said; 'he had broken his word before, speaking when he had promised to be silent; and though in liking him I had fallen very low, there was no reason for falling lower by encouraging him.'

'Does he know you liked him so much?'

'Of course not!' said Lalagé, getting up and standing before him in a blaze of passion. 'What do you take me for? Oh, I wish I had never

told you; you don't understand; and you don't care, you don't care!'

She was stung and angry. The unworthy man, who, as she thought, would have been faithful to his hapless love all his life, had turned from her, and written to tell her that her regard was no longer a thing to be desired; the worthy man, to whom in her need she had looked for help, stood aloof coldly, only seeming shocked and bewildered. Ah! he had a right to be shocked—she herself was shocked, thinking of the position in which she stood. But why should he be bewildered, and helpless, and stupid? However, her last words roused him.

'Lalagé,' he said—and she was forced to acknowledge to herself that his voice was earnest and kind—'I do care very much; so much, that I do not know how to help you, or what to say, till I have thought it over. But that I will help you I give you my word. I will write to the man myself, as soon as I see my way clearly. Will you give me this evening to think it all out?'

'Yes,' she said, as one who did not much care, for all at once she became exhausted; the active exercise and the long fast were telling upon her.

'Now, we must get home as soon as possible,' he said gently: 'you are quite overdone.'

They walked through the wood and down the hill, he all the while accommodating his steps to her feeble ones, as that other man had certainly never done. When they were about half-way home, he made her stop and rest for a minute or two, mounting guard over her jealously, and looking to the right and left, not knowing, as she did, how very rare were passers-by. He was kind—yes; but somehow she felt as though she were a prisoner under humiliating circumstances. Slow tears, which she was too weak to resist, came to her eyes, and through them she saw her cousin move away with his foot a black impeding log which was fretting the course of a fair little brook.

At last home was reached. George told Belle he had found Lalagé quite tired out, and advised her going to bed early; so, soon after dinner, she got away to her room. She had meant to think it all over, and come to some conclusion as to the answer to that fatal letter; but she was so tired that her head had scarcely touched her pillow before she fell asleep.

Down-stairs, Belle and George spent a very quiet evening; he was silent and preoccupied, and very early returned to the homely old-fashioned little inn in which he had taken up his quarters. Going through the streets on his way thither, he could not help noticing the utter desolation of the place. 'She must have been very lonely,' he said.

Late into the summer night he sat in the tiny inn parlour, smoking a contemplative cigar, and gazing out into the summer darkness, not in the least looking hurt and wounded, as he really was. Yet Lalagé had disappointed him sorely that day, and, besides, an unacknowledged hope had been stifled ere it rose to life.

The whole affair which he had promised to think over was very vague, but he was resolved to help her—help her he would. A dull anger burned in his heart against the foolish weak man who had written that letter, and who was, he found out from Belle, the curate of Grimswold. But he was the man whom Lalagé had liked very much, so he must not be too hard upon him. And yet she had never pleaded for any such leniency; she had only been angry, and outraged, and insulted, and had always spoken of it in the past tense, never in the present. Was that all the love of which she was capable? he asked himself with a sigh. Love which could be destroyed at a single blow—however deadly that blow might be—was to him a mystery.

No flush had risen to her pale face when she had uttered that scornful, self-condemning sentence; no tender reticence had made the words falter on her lips. Then he remembered the questioning eyes that had met his when she had startled him with the query: 'Don't you think I must have liked him very much if I did all that?' Her face, her attitude, as she had said those words, came back to him, and suddenly it seemed as though a child, whose heedless feet had carried her where she would not, and who wept over her wanderings with bitter, undue lamentations, had stood before him then, asking that strange question, instead of a conscious woman, who was incapable of reticence or delicacy.

A sudden revelation laid bare the truth before his delighted eyes, and, taking the end of his cigar from his mouth, he flung the red-hot spark far into the landlord's peaceful kitchen-garden, where it lay for a few seconds before it went out, hissing and seething on the top of a bedewed cabbage.

'By Jove!' said George Wriothesley, 'it is all a mistake; she doesn't like him in that way, poor innocent child, and she doesn't know the difference. And she must have been very lonely, very lonely indeed; poor little Lalagé, poor little child;' and the 'Thank Heaven!' which he uttered in his brief, soldierly fashion, was no mere exclamation.

Then, to make up for all the hard thoughts he had bestowed on her, he gave himself up to the recounting of her various good qualities—not a difficult task, and one on which he had been engaged at intervals ever since she had really been the 'little child' he was now calling her.

It was a strange mistake for a woman to make; but then she was hardly a woman in mind yet, he said to himself, and had been placed in a very trying position; utterly without friends or acquaintances, she who had been all her life accustomed to society. He rejoiced over his discovery with a great joy.

'The truth shall make you free,' kept running in his head betwixt pitiful mental glimpses of her whom he had wronged in thought; yes, the truth should make Lalagé Hesketh free, and no selfish joy marred the beauty of his exultation.

Before he went to bed he wrote a short, stern letter to the curate, to be copied and sent, or destroyed and not sent, just as Lalagé liked.

'Sir,' it ran, 'surprised I was at the letter received from you on the —th instant. I have no comment to make on the contents, which in no way concern me, but beg that no repetition of the offence be committed, or I shall feel obliged to take more severe methods of enforcing your silence.—With every wish for your future welfare, I remain, &c.'

This epistle concluded and approved, he went to bed, feeling happier than he could have believed possible eight hours before.

'Poor little Lalagé, poor little child,' was his last thought; in her weakness and helplessness, she seemed dearer than ever to him.

CHAPTER XIV.—SET FREE.

And how had George Wriothesley found himself in Grimswold just at this particular juncture of Lalagé's life? She asked herself this question next morning, thinking, with a little shame, that she had never made any inquiries on the subject on the previous day. It had not seemed strange to her to find him standing by her side in the wood; but looking back, after the pause and calm which sleep had brought to her excitement, it did appear very odd.

She grew more and more ashamed, as she remembered how suddenly and abruptly she had forced her troubles upon him, and marvelled at his having been so ready to receive her confidence. How long ago it seemed! Was it indeed only a day, a single day since she had received the curate's letter? Both in body and mind she felt as if the wear and tear of weeks had gone over her head. And how strange it was, that just when he was so much wanted, her cousin should have come to her aid! How had it all come about?

To answer this question, we must go back for a while, and shall then be able to tell the reader more than George confessed to Lalagé in reply to her subsequent queries. He had answered Gertrude Cleather's letter immediately on its receipt, and appointed a suburb of London which would be easily accessible to him, to which he begged her, if possible, to repair at once. Thither he had gone to see her, accompanied by an attendant from a lunatic asylum, dressed as his groom. He and this man went and returned from the Cleathers' house several times, so that the captain grew accustomed to the supposed servant, without suspicion of any sort. Happily, too, all memory of the insulting way in which he had treated George last time they met had faded from his failing mind; so the two were on moderately friendly terms, though Captain Cleather confided to Gertrude that he hated men about him—any one of them might be an infernal doctor, for anything one knew—for they, doctors, were equal to any mean subterfuge or disguise. But Gertrude reassured him, giving him her word of honour that neither George nor his groom was a medical man; and he believed in her more than in any one else.

After a few weeks had elapsed, George begged to be allowed to leave the man at the Cleathers, whilst he took an imaginary journey.

'These fellows are always in the way when one is travelling, Cleather,' he said; 'and I don't want to dismiss him, he's such a good servant.'

'I don't mind keeping him,' growled the captain, 'if he'll only make himself useful.'

'That I'm sure he will,' said George, and went his way, leaving the man behind him.

Either this man's presence exercised a beneficial restraint over Captain Cleather, or he 'managed' him without the patient's cognizance; for certain it is that Gertrude's husband was quieter and more reasonable than he had been for many months. He constituted himself Captain Cleather's body-servant, and soon the poor irritable man could not do without him.

Once, indeed, he could do nothing right in his master's eyes, and storms of rage burst upon his head. Such high words were spoken, and such terrible threats uttered, that Gertrude, in alarm, wrote for George, who answered her summons instantly. He was met at the door by the infuriated captain.

'You've come back, have you?' cried the angry man. 'It's quite time, I can tell you. That man of yours is downright insolent; you'd better take him away.'

'I wish you'd let me have a few words with you,' said George; and Captain Cleather, gratified by the confidence implied, willingly assented.

'The truth is,' said George, as the two paced up and down the small garden-walk, 'the man is insolent—an overbearing fellow, almost too much for me to manage. I wish you'd take him in hand for a year or so, and keep a sharp look-out upon him; it would do him all the good in the world, for he's too good a servant to be got rid of.'

'Why don't you do it yourself?' asked the suspicious man, but in a calmer tone.

'I'm such an awfully soft fellow,' said George with a laugh; 'besides, you are more fit for that work than I am; higher up in the service, and all that.'

'But I never was in the Guards,' said the pacified captain.—'Well, I'll see about it: he wants a tight hand over him.'

This new view of the subject afforded him much gratification, and, to Gertrude's surprise, he proposed that evening that the man should take up his quarters for the night in the dressing-room adjoining his own room. This had actually been the case ever since the keeper's arrival, but without Captain Cleather's knowledge; so Gertrude's path was now comparatively smooth.

Only comparatively, however, for she knew that her husband was not radically better—never could be radically better—and the future lay before her black with horror and pain. Into its gloomy recesses, however, she would not let her spirit dive, simply receiving each day, with its endurance, trials and anxieties, from the merciful heavenly hands, which would never inflict on her more than she was able to bear.

George asked many questions about the Hesketh, whom he had not seen for a year; and Gertrude's account of Lalagé by no means satisfied him. 'She was looking very delicate,' her friend had said, and the thought haunted George.

He had now fairly established Gertrude's protector; so felt at liberty to follow his own inclinations, and pay his cousins a visit. He called on his uncle previously, and heard from the blind busy man that his daughters were both well, and Lalagé charmed with the place.

'I am thinking of running up to see them,' he had said, and Mr Hesketh had answered: 'Ah, do!' hence it was that the day which had brought Lalagé the curate's letter had found George Wriothesley standing beside her in the little wood, whither he had followed her, according to Belle's directions.

The next morning, he went over to the Hill House, and found Lalagé alone in the drawing-room. Belle, contrary to her usual habits, had gone out for a drive, taking little Dinner Bell with her. She thought something was going on between her sister and George—as indeed there was, though a different 'something' from what she imagined—and resolved not to be in the way.

Lalagé was lying on the sofa, white and exhausted, with the traces of the dead passion of the day before on her face.

'I am afraid you are very tired,' he said.

Digitized by Google

'Very tired,' she answered; 'so tired, that I can scarcely think of anything.'

'I am sorry for that,' he said, 'for there is something I want to ask you to think about. Do you know, Lalagé, I fancy you have been making a great mistake?'

'About what?' she asked, lifting her clear wistful eyes to his face.

'What an awkward business it is to talk about,' thought George to himself; 'but it must be said out somehow;' so he went on in his straightforward fashion, though his very forehead was red. 'About your feelings with regard to this man—I am very sure that you do not care about him in the way you have been imagining.'

'That is what I said to myself when that dreadful letter came,' said Lalagé eagerly. 'I said: "It is all a mistake; it is not true that I ever cared." But then I sent it away as a mean, wicked thought, shewing I was anxious to escape from all the trouble I had drawn upon myself; and, George, I think it still, for I was so sorry for him, more sorry than I have ever been for any one else.'

'That may be,' said George Wriothesley, turning away his face. 'Some men shew their feelings more than others, and find it easy to enlist ladies' sympathy in that way; others can't. But, Lalagé, that has nothing to do with it; the real thing goes deeper than the deepest pity, and has nothing to do with anger, and yesterday you were angry.'

'Very angry,' she said.

'You could not have been angry if *that* had been the case,' he went on; 'only hurt, and sorrowful, and wounded.—You see,' with a forced laugh, 'I know all about it, and you don't, and that was why you made the mistake.'

'If it only were so,' said Lalagé with tears, burying her face in her pillows. 'But I don't deserve to escape in this way, and I am not sure you are right.'

'Indeed, I am right,' he said earnestly: 'your very saying that proves it. If I were wrong, you would not wish to escape, thinking those chains dearer than liberty.'

'But oh, I am so ashamed!' she said with a sudden cry. 'If a mistake, it is such a dreadful mistake for a woman to have made.'

'I daresay lots of women have made it before,' said George sententiously; 'only they have kept it to themselves, instead of acknowledging it, as you have done.'

'I wish I had kept it to myself,' she sobbed.

'Don't say that,' he said gently, though he could not help liking her the better for the sentiment. 'It has been such a happiness to me to help you to a knowledge of the truth; besides, if you had gone on thinking you had that fancied pain, it would have been so hard upon you—nearly as hard as a real sorrow, I think.'

Her distress touched him, but not to the extent to which it would have softened the curate, for he was a just man, and could not help feeling that it was only natural, and even deserved. She felt that he was judging her righteously—not passing over her weakness, as though it were utterly guiltless, but still pitiful and kind; and this made her trust to him, and give his opinion due value.

Presently she said: 'I hope it is as you think, but I don't deserve it.'

'I am sure I am right,' he said heartily; 'and as for not deserving the freedom, poor little Lalagé, you have not been very wise; but no one can say worse of you than that; and few women have been placed in so trying a position.'

She, a tall, slender girl, considerably overtopping the average height to which women attain, had perhaps never been called 'little' before; and somehow the epithet, acknowledging her weakness and unwisdom, did not displease her: it was true she did feel very little just then.

'I was very lonely, George,' she said.

'I am sure of it,' he answered; 'and you felt it so much that it was pleasant to have any one to speak to: isn't it so?'

'Yes,' she said; 'and he was a clergyman, and really is so good.'

'I don't know about that,' said George illiberally.

'Yes, he is,' said Lalagé; 'only weak and foolish: he is very good to the poor.'

'Then he should confine his attentions to them,' said George loftily.—'By the way, Lalagé, will this letter do?' And he drew the document from his pocket.

She read it over, and then said, almost with a laugh: 'O no. I will write to him in a day or two, and you will see that my letter will answer the purpose better than this, which would frighten him nearly out of his senses.'

'Well, just as you like,' he said, more careless about the curate now that Lalagé had been brought to look upon her freedom as a possible fact; and then both left the unwelcome topic, and talked about George's coming to Grimswold, and other indifferent subjects.

'O George, isn't it a lonely place?' she exclaimed. She could not help saying the words over and over again; it was so pleasant that that which had caused her so much suffering should be acknowledged as an evil.

'Very lonely,' he said. 'But did you never try to give yourself some special home-task—work, or something? What do women always do?'

'Needlework,' said Lalagé; 'and I hate it. And they read; but I am not clever, and don't care for reading more than two or three hours a day, and every day is fourteen hours long, you know. But I am trying to be better,' she added with earnest humility. 'Ever since Dinner Bell has been here, I have done every single thing for her: mended her clothes, put her to bed, dressed her in the morning, taken her to walk. It has been such a pleasure.—And besides, I must shew you something,' she said, jumping off the sofa, and opening a chiffonier drawer. 'I made all these myself;' and she displayed five or six little blue print pinafores, over which she had painfully laboured for as many weeks: 'these are for my district.'

'I think you have been very good,' he said, examining the work minutely, as if he knew anything about it.

'But I only did all this quite lately,' she said. 'At first, I did nothing all day, when I could not go out, but sit at the window and watch the rain, and feel so wretched and lonely; and then that horrible business came on. O George, I wonder why it all happened: it did no good, and is such a humiliation.'

'Little Lalagé,' he said, 'perhaps you needed humiliation.'

'I hope it will make me better,' she said softly.

Then Belle came in, and had to be told all about George's adventures in Grimswold; and they all

Digitized by Google

talked and laughed in a way to which two of them were hardly accustomed, till it was time to take little Dinner Bell up for her noonday sleep.

'Lalagé is not looking well,' said George to Belle.

'Not at all,' was the answer: 'I am anxious to get her away for a little change.'

'I don't suppose you will be here much longer?' asked George. 'I should think my uncle had economised enough to set him up for life.'

'I don't know about that,' said Belle; 'but papa's affairs are much more favourable than he at first supposed, and Lalagé, poor child, has spent next to nothing on dress.'

'She has had no temptation to do otherwise, I suppose,' said George; 'and you are just as blue as ever, Belle.'

'Just as blue,' she said with her rare sweet smile; 'only I hope my petticoats are long enough to hide my stockings, as somebody says.'

'I think they are very pretty stockings,' said George affectionately.

He was very fond of Belle, and she quite reciprocated the feeling. Women older than himself generally liked George Wriothesley, being able to give him his due value; those of his own age, or still younger, did not appreciate him. He was perhaps a little dogmatic, and almost obstinate in his freely spoken opinions; and to girls in all the one-sidedness and illiberality of youth, this just, righteous man seemed only cold and hard.

In general society, he did not shine, being one of those people who require a wide margin of their own, so as to do justice to themselves, and give their peculiar characteristics due value. Iron cannot float; no more could George Wriothesley adapt himself to the froth and foam of society, as women—even though they be the best and wisest—so easily do; consequently, he was only silent and *nonchalant*, or, when he spoke, seemed cynical and disapproving. All this had tended to make Lalagé, bright and brilliant as she was, rather dislike him than otherwise, though she respected him to what she called a terrible extent; but in her trouble she found the qualities of which she had thought so little the very ones which helped and comforted her. He was just and truthful, so she could safely trust her cause in his hands, and with trembling joy accepted the verdict he had pronounced, for her own heart told her it was a true one.

She was free; at her own expense to be sure—for she had made a mistake of which it was a humiliation even to think—but still, that greater trouble, that deeper humiliation was spared her, and she was grateful to the cousin who had shewn her a truth to which she would scarcely have dared to open her own eyes.

In that brief visit—he was only with them ten days—she learned to know and like him as she had never done before; he was very kind, listening with keen interest to all the petty details of her uneventful life, and admiring the surrounding landscape with such artistic appreciation, that they had new charms for the girl, who had looked on them so often and wearily that she had forgotten they were beautiful. And in those brighter days, the curate's letter was answered. It ran as follows:

'Sir,—With much surprise I received your letter of the —th instant, and you must forgive my saying that it was not an honourable letter. You, who were, as you say, "as good as engaged," should never have written such, as it was quite unfit for the eyes of the lady to whom you are betrothed. However, I at once beg to assure you that its contents shall never come to her knowledge; and I sincerely hope both she and you may be very happy. That your feelings in regard to that other subject—on which, if you remember, I had forbidden you to speak—are changed, can be only matter of rejoicing to me; and yet, at first, your writing to acquaint me of the fact seemed so unjustifiable an intrusion that I was very angry. However, you are now fully forgiven; and with every wish for your welfare, I remain, faithfully yours, Lalagé Hesketh.'

When this letter was fairly despatched, Lalagé felt more light-hearted than she had yet done; but soon after an event occurred which again shadowed her horizon.

One bright July day, whilst the small party at the Hill House was seated at luncheon, a boy came leisurely up the drive, where the broad shield ferns were standing bolt upright in the sun, and the glowing peonies were drooping their heavy heads; coming up to the door, he handed in an envelope, and asked for sixpence. The telegram—for it was nothing less—was directed to George, who opened it quickly, his thoughts flying to Gertrude. It was from her, and ran: 'Come to me at once; my husband is very ill; bring Dinner Bell with you.'

This missive spread consternation all round.

'Poor Gertrude,' said George; and the two women were eager in their inquiries as to whether either or both had not better accompany him.

'I think not,' he said decidedly: 'it is a peculiar case; but I will write immediately, and tell you if you are wanted.'

There was just time to catch the two o'clock train; so he went to the *Raven* to make his few preparations, whilst Lalagé got the child ready. Great tears fell on her hair as she brushed and smoothed it for the last time. 'I shall miss you so, Dinner Bell,' she said.

'Dear Laladyee,' said the child, flinging her arms round the girl's neck.

'We must make haste, Dinner Bell,' said Lalagé, disengaging the soft hindering hands; 'poor papa is so ill, you know.'

'Yes,' said the child; 'and he will be swarring and swarring—he always does when his head is bad.'

When Dinner Bell was ready, Lalagé took her down-stairs, and found her cousin George alone in the dining-room; the child ran out to see if the pony-carriage was coming, and he went up to Lalagé at once.

'Lalagé,' he said, 'there is something I want to say before I go. Do you remember something I asked you on the 5th of December, year before last?'

'I do not remember the date,' she said, flushing; 'but I know what you mean.'

'Is there any change in your feelings?' he asked. 'Will you try to think more kindly of me than you did then?'

'George, how can you ask it?' said the girl, turning away her head; 'it is not like you. I am only just getting free from a dreadful mistake;

Digitized by Google

how can you expect me to be able to think of anything else? I have been weak and foolish enough to justify your asking this, but indeed I am not weak and foolish enough to be able to turn round so quickly.' Her voice shewed that she was pained.

'You are right,' he said: 'I have made a mistake.'

Then an awkward five minutes followed, broken at last, to the infinite relief of both, by the arrival of the pony-carriage.

'Good-bye,' said Lalagé, holding out her hand. 'Thank you for being so kind.'

Bitter thanks they were to him; and all the way down to the station, he upbraided himself with his stupidity for that inappropriate appeal, which had burst from a man who was not wont to act upon impulse. 'I shall never win her,' he said with a sigh. And Dinner Bell, by his side, prattled of the father whom she expected to find with his head 'very bad.'

But the poor captain was not 'swarring and swarring,' and would never more offend with his lips. Late that night, when George reached Eastbourne—whence the telegram had been dated—he found his old friend lying white and speechless in a living death. The eyes, more sane and quiet than they had been for very long, wandered about with a pathetic wistfulness, but further power of expression there was none. Paralysis had laid its iron bands upon him, and he was never more to be released till Death, the healer, had touched him. By that awful bed, whereon was stretched, in such dire extremity, her first, last, only love, Gertrude Cleather watched—calm, gentle, ministering as of old. To her, this death in life seemed but the step to another, larger existence, where God, the recompenser, would make good to the poor captain all that had been wanting in this world. The wistful eyes grew more contented when they rested upon her, and a glimmer of intelligence seemed to come into them when she spoke of that calm fair heaven whither he was preceding her.

'I shall try to come to you, John,' she said, 'and I believe I shall.'

For him, of course, there was no doubt, only for her to whom remained further trials and a greater length of journey.

There was little to tell George. The poor bewrayed captain had, a fortnight before, wandered again to the sea, drawn thither by the irresistible attraction which the mighty ocean—yet more restless and unquiet than himself—always had for him, and there he had been 'very good,' as Gertrude said. There had been one slight outbreak the day before, and he had gone out for a long, hot drive; shortly after his return home he had been struck down by the foe who was yet waiting to give his final blow.

It was not long in coming: in the gray, early morning, when the first chill rays of the sun fell upon his dying bed, the spirit of Gertrude Cleather's husband passed away, to be 'made perfect' by One who, when on earth, healed them that were lunatic and sore distressed.

George wrote to give Lalagé the last news of Captain Cleather. 'I think,' he added, 'after a while, Gertrude would be glad if you would come to her; so hold yourself in readiness for a summons. I know you will do all you can to comfort her.'

'So that was the secret of her life,' sobbed Lalagé, as she read to Belle the letter which had revealed so much. 'Poor Gertrude, poor Gertrude!'

CHAPTER XV.—THE LAST.

Belle and Lalagé were once more left alone in the Hill House. On the evening of George Wriothesley's departure they were sitting as usual in the drawing-room, when Belle said abruptly: 'Have you nothing to tell me, Lalagé?'

'O Belle,' cried the girl, 'I will tell you everything.' She went and sat on a footstool at her sister's feet, and poured out a confession very different from the one her auditor expected. All the pitiable story, with its weakness, its foolishness, its pain, was told, interrupted by sobs, and tears, and vivid blushes. 'I am so ashamed to have made such a mistake,' said Lalagé, lifting up repentant dewy eyes.

'My darling,' said Belle, whose eyes were likewise wet, 'I cannot bear to think you should have been in all that trouble whilst I knew nothing of it.'

'You are not vexed that I did not tell you before, are you?' asked Lalagé. 'O Belle, I *could* not, whilst it was all going on; and till I found George so kind, I thought you would despise me; but after his goodness, I knew you would be only more good, more kind, just as you are dearer and better than any one else.'

'I do not blame you, dear,' her sister answered; 'I know how hard it is at times to give confidence; besides, young people are so reticent about their troubles.'

'I am so thankful it is all over,' said Lalagé with a deep breath.

Yes, it was all over—the secrecy, the torment, the self-reviling; but the poor foolish little heart had learned a lesson which it never forgot in all its after-life. People used to say she had lost her high spirits, but Lalagé would laugh, and say it was only the shadow of the Cotswold Hills still hanging over her.

But to return. The loss of little Dinner Bell made a great blank in Lalagé's life, but she was resolved not to let it run into a waste of idleness, as she had before done; she went on diligently with those painful little pinafores, and laborious little dresses for her district; and even that dry, uninteresting work brought its reward. She was no longer wretched, and lonely, and *ennuyée;* the thousand pricks which her awkward fingers inflicted upon themselves with her unmanageable needle were the sharpest sorrows she had then. But still she felt that hers was not a very happy life, so many capabilities being unemployed, and she longed for the time when Gertrude would send for her. The ardent, sympathetic heart longed to comfort and help the woman who had been left alone in the world at so early an age. Belle had proposed that they should leave Grimswold at once, but Lalagé had earnestly entreated that they might not do so. 'I cannot even seem to run away from the curate,' she had said.

The first meeting with him she rather dreaded, but it passed off without awkwardness, for the moment she saw the unwise, embarrassed man, her own courage returned to her. 'I am glad to see you back again,' she said, 'for I am daily expecting a summons from Grimswold, and cannot bear to leave my district unbefriended; you will look after it, I know.'

And the big foolish man stammered, and grew red, and promised fifty things, and went back to

Digitized by Google

his house again bedazzled and made miserable by that sweet, pure face in all its beauty of forgiveness.

This meeting took place out of doors, for never again did the curate enter the Hill House, never again walk and talk with Lalagé as he had been wont to do; she brought about this change of course, but it gave her pain; she knew that Mrs Verey would notice it, and say bitter, cruel things of her; but she accepted it all humbly. 'I have deserved it,' she said; 'I am glad to be punished for it;' and soon she had ample foundation for her fears.

'So t' parson be going to marry,' said an old district woman to her. 'I do hear tell as he hasn't just done right by you—threw you over, like.'

'Indeed, he has done nothing of the sort,' said Lalagé earnestly; 'you must not think such a wicked thing of him.' And disregarding her own pain, she tried to soothe the old woman, and convince her of the untruth of the report. But it was useless; with the pertinacity of old age, she clung to the idea.

'Mrs Verey, she says "Just what I thought;" but I don't call that proper on her, for t' parson be a good parson, and I thowt you and he would have got on well together—ah, dear, ah, dear.'

'So we shall get on well together as friends,' said the poor girl.

'Friends!' repeated the old woman scornfully. 'You won't settle down and live along o' t' parson because you and he be friends; you'll be making off and leaving we poor folk just when you 'n got tired on us.'

The 'making off and leaving them' was so near at hand that Lalagé had not the courage to acknowledge it. She went out of the cottage feeling sick at heart. She had been kept from the slander of the world all her life, and now—though Grimswold consisted of scarcely more than a handful of cottages—it was dreadful to think that her name was being carried from mouth to mouth as that of an injured woman, and to feel very sure that the curate was not spared any comments, most likely hearing all she herself had been told. 'Never mind,' she said to herself that night as it all crowded upon her; 'I don't deserve to be helped; but I believe something will come to my aid.'

And the very next morning proved she was right, for she received a letter from Gertrude Cleather, begging her to come and stay with her for a long time. Lalagé went; and as she and Belle drove down to the station next day, she looked out over the peaceful landscape with eyes which, though full of a painful recollection, did not know they were gazing on it for the last time.

Nothing could have done the girl who had so lately been absorbed in her own troubles more good than a visit to one so heavily afflicted as was Gertrude Cleather. Her own foolish griefs seemed so small by that great sorrow, that she soon learned to give them their due estimate, and all her ardent sympathy and unselfish love were exercised to lighten her friend's sufferings.

She was very sweet to all who were in trouble, poor Lalagé, who thought herself so useless; and Gertrude mentally thanked George Wriothesley twenty times a day for the suggestion of sending for one who proved so great a comfort. The two women would sit together talking for hours of the poor dead captain, Lalagé's quick intuition making her understand the hundred perils through which her friend had passed.

'But I was with him to the last, just as I hoped and prayed,' said Gertrude.

To the children, Lalagé was a source of great delight, her patience and goodness to them being inexhaustible. Little Isabel grew fonder than ever of her. 'I wish you could give me the child,' she said to Gertrude one day.

'I wish you could live with me always,' replied her friend.

'Live with you!' said Lalagé; 'why, I must be going back to Grimswold very soon; I have been away too long already; Belle is all alone.' And she thought, with a sigh, that the dreary winter months were drawing near. But to Grimswold she never returned.

Mr Hesketh threw up his seat in parliament; he was getting an old man, he said, and anxious to be quietly settled at home with his children; that was his original excuse; but subsequently he found that travelling on the continent would be more to his satisfaction than any amount of home comforts; so he wrote to Belle and Lalagé, begging them to be ready to accompany him to Italy in the beginning of November. The sisters accordingly met in London, neither of them sorry that their Grimswold life was over.

And now I must stop writing about her, my Lalagé, with the dear violet eyes—my Lalagé, of whom I grew so fond during the few months of our acquaintance, for she is no longer bounded and confined by a Limited Horizon, but has passed into a sphere where every capability is called forth. George Wriothesley's wife is a busy as well as a happy woman, and has no time now to look back upon the girlish episode which darkened her life under the shadow of the Cotswold Hills.

A STORM.

THE zigzag silver flashes, and the boom
With loud long rattling stuns the darkened meads;
A universal sound of rain succeeds,
And torrents running in the silent gloom;
And lo! the dreadful-threatening hand of doom
Hath spared the world; a grayer light is shed;
And unexpectedly the storm is fled,
Leaving a weight of silence in its room;
For the tense ear of all things aching waits
With dazzled eye to hear a cannonade
And crash intolerable from every part;
But nothing stirs the green expectant glade;
And now a sweet bird calls its scattered mates,
And gaily hearkens the unburdened heart.

Now Ready, in a wrapper, price 3d.

A Christmas Extra Double Number of *Chambers's Journal*, entitled

BEGUMBAGH,

Being an Episode of the Indian Mutiny.

The number will be included in the Monthly Part to be issued at the end of December.

On Saturday, January 1, 1870, will be commenced

GWENDOLINE'S HARVEST.

By the Author of *Lost Sir Massingberd*, and *A Perfect Treasure.*

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH. Also sold by all Booksellers.

POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 313. SATURDAY, DECEMBER 25, 1869. PRICE 1½d.

MONOGRAMS.

WHAT is a monogram? Oh, it is your initials twisted together, so that nobody can read them, and then stamped on your note-paper.

This is a fair description of a monogram according to the received notion in this nineteenth century. Most people would be greatly astonished to be told that these interlaced letters are not monograms at all. They may be polygrams—but monograms they are not.

The word monogram, as every one knows, signifies a single letter or symbol (*monos*, single; *gramma*, letter). Strictly speaking, then, a monogram is a combination of two or more letters combined so as to form a single symbol. The diphthongs Œ and Æ, for instance, are pure monograms, and so also is the ampersand (&).

Diphthonged letters were probably first used in translating from Greek into Latin. In Greek writing, when vowels were written side by side, but sounded together, the vowels were kept separate; but in Latin writing, some of them were joined together, as in the diphthongs just quoted. Indeed, the medieval monks employed numerous contractions, some monogrammatic, some not, principally for the purpose of saving labour and space. The most familiar example of these contractions is the ampersand, which is a pure monogram of the Latin word *et* (and), so contrived that it can be written by a single stroke of the pen. In the italic ampersand (&), still employed in typography, the letters E T can clearly be traced. Similar contractions are common in oriental writing. In Hebrew epistolary correspondence, which commences with 'By the help of God' (*Beesrath Hashem*), these words are represented by a pure monogram composed of the letters B H.

The foregoing examples shew what is meant by a pure monogram. They are not given as illustrations of the early use of monograms, or of joined letters. These are of much higher antiquity. Mr Berri, in his *Monograms Historical and Practical*, gives it as his opinion that such devices took their origin from Egyptian hieroglyphics. Take, for example, the triple *tau* or T, which among the Hebrews was the sign of security. The origin of the *tau* is lost; but some writers assert that it was the form of the Egyptian Nilometer, used to ascertain the height of the waters of the Nile, upon which depended the sustenance and lives of the inhabitants of Egypt. But, remarks Mr Berri, 'whatever might have been its origin, whether it was derived from the Nilometer or the Egyptian Trinity, that simple mark has been handed down from age to age.'

The Israelites bore this symbol on their banners, sometimes singly, sometimes triply. It is said to be referred to in Ezekiel ix. 6: 'Slay utterly old and young, both maids, and little children, and women: but come not near any man upon whom is the *mark*.' This mark was also called the letter of life, and among the Greeks the token of absolution, because prisoners or culprits upon whom this mark was placed had their lives spared.

In modern times, the same sign or monogram, if it may be so called, is, according to some authorities, found in heraldry in the form of the St Anthony's cross, so called because that saint always bore this device on his habit. This form of the *tau* implies that 'he who beareth it is a stay or supporter of his prince, and an upholder of the Christian faith.'

Astle, in *The Origin and Progress of Writing*, informs us that monograms were anciently used in Syria, Egypt, and Greece, and he gives numerous examples of joined letters taken from early Greek manuscripts, though none from Syriac or Egyptian.

Joined letters are also found on early Greek coins. Prior to the Macedonian epoch, it seems to have been the custom to stamp on coins the first two or three letters of the name of the place of minting. These letters were all distinct and separate; but the Greeks, not having the advantage of steel dies, the letters in the later impressions became more or less joined together, owing to the softness of the matrix. It is possible, and even probable, that this accident gave rise to the idea of saving lines by engraving the letters in a monogrammatic form. Be this as it may, it is well

Digitized by Google

known that about the time of Alexander I. of Macedon (500 B.C.), the practice of stamping monograms on coins first came into vogue.

From the Greeks, the practice of monogrammatic abbreviation descended to the Etruscans and Romans, and through them to all the nations of civilised Europe. Ducange, in his *Glossarium*, gives a plate with numerous examples of monograms used by emperors, popes, &c. from the time of Hadrian (beginning of the second century) downwards. The sacred monogram or *chrismon* was extensively used by Constantine (fourth century). The principal banner of the army under that emperor, supported at the summit of the pike a crown of gold, enclosing the chrismon or mysterious monogram, at once expressive of the figure of the cross and of the name of Christ (Gibbon, *Decline and Fall*, chap. xx., Note). The 'mysterious monogram' was nothing more nor less than the letters *Chi*, *Rho* (X P), the first two letters of the word *Christos* joined together. It was used by Constantine probably as a political measure for increasing his popularity, when he saw that the Christian religion was extending in spite of the fiercest persecutions; but the legend is that this emperor saw a vision in the heavens, composed of the words, '*In hoc signo vinces*,' surrounding the cross or monogram referred to, and that he then adopted this symbol to mark his conversion to Christianity.

The chrismon is said to be of much more ancient date than the time of Constantine. It is supposed by some to symbolise the Egyptian deity Osiris. However this may be, modern critics are of opinion that similar signs were stamped on Greek coins, and displayed on the *labarum*, or Roman standard, before the date of the vision of Constantine. The chrismon certainly appears carved on tombs in the Catacombs at Rome, which belong to a period anterior to that of Constantine; and the inference seems to be that that monarch merely brought the symbol into more general use. It is said by Mr Berri that the sacred monogram never appeared on the coins of Constantine, though it did on those of his sons and successors. Barclay, in his *Monograms*, gives facsimiles of two coins of the Constantine period, on which are seen figures of the emperor bearing the labarum, and displaying the chrismon.

The use of this symbol was continued by the popes. In the time of St Augustine, it was generally placed at the beginning of letters; and in the middle ages (beginning, according to Hallam, 486 A.D.), the chrismon was often added to signatures at the foot of deeds. It was thus employed by way of oath on the part of the writers or signers, as was the cross afterwards used by the Saxon kings. This was similar to the cross which in the present day is attached by Roman Catholic prelates to their signatures, and to the mark used by illiterate persons.

Monograms are frequent on Roman coins of the fifth and subsequent centuries, where they not unfrequently fill the whole field. About this time, monogrammatic treatment of names seems to have become common, the early kings of France and Italy, and other sovereigns, using monograms for signatures. The early French kings left the monograms to be written by their secretaries, except where the first person was used, when the signature was made by the king himself.

Charlemagne (742—814 A.D.) had a variety of monograms, as is shewn by examination of the manuscripts of his time. The sacred monogram appears on his coins. It is said that he was the first to sign documents with a monogram made by means of a thin perforated plate, as in stencilling, or by means of a stamp with the characters engraved in relief. Pope Leo III., who was contemporary with Charlemagne, incorporated the chrismon with his name. An example is given by Ducange. Indeed, about this period (ninth, tenth, and eleventh centuries), kings, nobles, and the higher clergy almost always used monogrammatic signatures. The scaffold-like look of the perpendiculars of the Roman letters gave the monograms of this date a very ugly appearance. The later the period, the more crowded, unconnected, and unreadable monograms became, until, at the end of the tenth century, monograms as royal signatures began to fall into disuse. Robert II. of France (996 A.D.) did not always use them; Philip I. (1060 A.D.), rarely. Their use finally died out in France in the time of Charles IV. (1322 A.D.).

In Italy, monograms went out about the same time; but in Germany they were in vogue for some two centuries later. They, however, lost their imperial dignity, being freely used by merchants to mark their goods (merchants' marks).

Monograms were scarcely ever used by the kings of Spain or England. Monograms did not come into general use in England till the fifteenth and sixteenth centuries, when they were commonly associated with merchants' marks. These marks were, as a rule, very obscure and ambiguous, and constructed without any system. They were used by wool-merchants and other traders, and examples of them may still be found scattered about the country, especially carved in churches, in commemoration of the individuals who contributed to building those edifices. Some of the earliest, belonging to the first half of the fourteenth century, are to be found in Norwich (see publications of the Norwich Archæological Association); and many, a little later, at Hitchin Church; St Margaret's, Lynn; St John the Baptist and Redcliffe churches, Bristol; the old church at Doncaster; the old church, Hull; and elsewhere.

Printers' marks seem to have been suggested by merchants' marks. In the first instance, they were generally of the kind called the *rebus*, such as we now see when a bee is put for the letter B. Printers' marks were soon after most elaborately decorated, the monogrammatic portion only occupying a small shield in a large field of ornament. The use of printers' marks still continues; indeed, one can hardly take up a book now-a-days without finding the initials of the publishers (who are also frequently the printers) embellishing the title-page in the purest style of nineteenth century art.

The last use of monograms in this country, prior to their recent revival, was upon tradesmen's tokens, where they not unfrequently appear.

So much for the history of the monogram. In a pure monogram, such as those used in contracted writing, the point aimed at, as before remarked, is a saving of lines. But where ornamentation is the object, as in the modern so-called monogram, but more correctly polygram, there is no occasion to save lines, if a more agreeable effect can be produced by using them. Now, it is a fact well known to designers that interlacing lines and

Digitized by Google

broken surfaces are pleasing to the eye. Why this is so, can scarcely be explained; but if the fact is admitted, then there can be no reason why we should not gratify the sense of sight by designing polygrams rather than pure monograms. The only pity is that the word should be so loosely used, and that we should persist in speaking of designs which are not monogrammatic, as though they were.

A few words on the principles to be followed in constructing these so-called monograms will appropriately conclude this paper. It is a great fault with the designers of these devices in the present day that they follow no rules, but string together higgledy-piggledy the letters they purpose to honour, and then endeavour to convince themselves that they have elaborated a strikingly beautiful monument of art. It has probably never occurred to them that in order to render such work of the slightest value in an artistic point of view, some principle should dictate it, some idea should pervade it. And if they have not considered this fact, they have probably overlooked another—namely, that a knowledge of principles results from study, and that their successful application is the consequence of ability aided by experience. It is not to be wondered at that persons who have never studied the subject should fail to evolve out of their inner consciousness compositions that will bear examination.

The first requisite in a thing which has to be read is *legibility*. Here we at once join issue with many monogrammatists who are of opinion that the monogram should not be decipherable at the first glance, but that it should involve some sort of puzzle. No doubt, where many letters, as of an entire name, for instance, are interlaced, a momentary bewilderment may be experienced even by the most apt monogram reader. This enigmatical condition, however, should not be sought for by the designer, but rather as much as possible avoided, and the monogram rendered as legible as the materials permit. Also, there should be an *order* in which the letters are to be read, otherwise the same design might stand for A Z and Z A. To this end some rules should be adopted that appeal to the common sense of the reader.

Now, it seems only reasonable, in a language which is read from left to right, that a combination of initials, or of the letters of a name, even though ornamentally written, should be read by the same rule. Hence, we place the letters in our monogram in such a way that the one to be read first is to the left, and so on to the right. Sometimes, as where several letters cluster round the initial J, it is more convenient to draw the monogram so as to read from above downwards.

In monograms containing but two letters, the letters should be of equal size, and the reading is from left to right.

In monograms containing more than two letters, one letter, the most important, generally has more *prominence* given it than the others.

The important letter in an initial monogram is the initial of the surname; in a word-monogram, the initial of the word. Just as we write May, and not maY, so we should, in designing a monogram of this name, make M the prominent letter.

In a name-monogram, the principal letter is to be read first; in an initial monogram, last.

The necessary prominence is obtained by causing the important letter to embrace all the others, or, at all events, the external letters right and left. In order to do this, the letter must be broader than the others; it should also be a trifle longer from above downwards, and somewhat stouter in outline. In illustration of what is meant, take a pencil and a threepenny-piece, and draw round the latter a circle, pressing gently with the pencil. Then move the coin so that it covers rather less than one-third of the first circle, and draw the pencil round it as before. Then take a sixpence, and place it over these two circles, so that the outer edge of one appears as much to the left of the sixpence, as the outer edge of the other appears to its right. Then draw a circle round the sixpence, pressing rather more heavily than before; and on removing the sixpence, a rough monogram of the letters O, O, O will be seen; which will shew what is meant by order and prominence of letters.

The *shape* which the monogram should assume has to be considered. It is the opinion of most monogrammatists that the general outline of the design should have reference to a circumscribing figure, such as an oval or a circle. This is sound doctrine enough if a circular or oval field has to be filled, as in the case of a coin or of a ring. Barclay's designs for marking silver-plate shew well the importance of filling the field, and the advantage to the design when arranged with that object. So, when a button, brooch, scarf-pin, or other article which presents a small circumscribed field has to be ornamented, undoubtedly the design should have reference to the shape of the thing. But when a piece of note-paper, or a soup-tureen, or a chair-back has to be marked, where only a small portion of the field has to be filled, it is out of all question to attempt a design with reference to the outline of the object. Nor need any imaginary circumscribing line, in our opinion, be drawn. If the design is neat and compact, and not straggling, it does not matter, in our view, what shape it assumes, when small on a large field, for the eye does not then connect the circumference of the design with the circumference of the object. Compactness is the only important element. A design which goes flying about all over the place, defeats the intention of covering only a small portion of the field.

The *size* of the monogram, under these circumstances, is a question of individual taste, just as much as the size of the type in which a book is printed. Personally, for note-paper, we like uncial letters; but most people prefer smaller letters.

The *compactness* of the design depends to a great extent on so arranging the spaces between the lines that they shall be nearly equal in area, otherwise the drawing will look crowded in one part and straggling in another. A good deal of practice and ingenuity is required to manage this nicely, so as to avoid the appearance of effort in the contrivance. In addition to this, the letters should be interlocked. This is effected by taking care that in all cases where lines cut each other, the crossing should be over and under alternately. Flourishes and other ornaments may be sparingly introduced, if equality of areas and alternate crossing cannot be compassed without their aid. But it is higher art to contrive the effect of compactness by modifying the letters themselves, lengthening here, widening there, pinching, adding a finial, and so on, to adapt each to its special position. In our opinion, monograms

Digitized by Google

cannot be too severely drawn; profusion of ornament makes the composition heavy; ornament should only be allowed where the design *requires* its addition. Experience alone, and what, for want of a better explanation, is called taste, can guide the draughtsman to distinguish between the use and abuse of ornament.

Lastly, a *balance* should be aimed at in the finished work. What constitutes balance can hardly be explained, any more than what constitutes harmony in colouring. It may be replied that certain saturating proportions of the primitive colours satisfy the eye and produce harmony. That is true theoretically; but practically, it is found that in the conceptions of genius there is constant departure from rule, which pleases the educated eye; just as in music an occasional discord, or in poetry a spondaic verse, pleases the educated ear. The same applies to balance in designing. *A* balance may be got by working equally from both sides of a centre, but yet the work may not please the artist's eye. If it does, it is most likely good, whether truly balanced or not. If it displeases such an eye, there is probably some lack of feeling in it; though, possibly, the artist may not be able to point out exactly where the defect lies. But he knows that he would have done it differently.

Reversed letters are totally inadmissible in monograms which are to be read in the ordinary way. If intended to be deciphered by holding before a looking-glass, then a reversed cipher would be in excellent taste. In some cases, as of pierced monograms—as, for instance, in the G.R. on the gates of the Marble Arch—the reversed letters are correct, because there the intention is that the monogram shall be read from either side.

As for *eccentric monograms*, and the unfortunate bee which always creeps in where one of the initials happens to be a B, the less said the better. They are but puns, mostly without even the redeeming quality of humour. The rebus is not a monogram; it is a puzzle *by things* represented; figures or pictures being employed instead of letters. The rebus, as Camden has it, is the device of those who lack other wit to express their conceit.

In making choice of an *alphabet* to work from, whatever period is selected, its leading features must be adhered to, or the harmony of the composition will be marred. Nothing is more distressing than a design which has the appearance of having been commenced in one century and finished in another. As an illustration of the bad effect of mixing styles, take the *chiffre Napoléon*, which is fashionable in Paris. Nothing can be more hideous.

Individuals will, of course, fix on the period they prefer as a basis of operations. In our judgment, no letters are so graceful, none so elastic, and none, therefore, so suited to decorative purposes as those in vogue in the thirteenth and fourteenth centuries. Choice of the alphabet of this period, too, gives the alternative in many instances of using round or square letters, in accordance with the exigences of the design. The round letters are the more elegant, and are more characteristic of the period, and should be used by preference; but the Roman or angular D, E, H, M, N, T, and V, may be introduced without mixing the style.

In monogram dies for stamping note-paper, we prefer the letters to be slender and cut solid. Shading should not be attempted except by experienced hands, possessing an intimate knowledge of the style imitated; and, certainly, all the letters in each design should be alike, whether solid, shaded, or in outline.

ON HER MAJESTY'S SERVICE: SPECIAL.

When I was first appointed one of Her Majesty's Inspectors of Machinery, I thought myself a considerable personage. I was but a young man; but it seemed to me that I was set for ever above the troubles, and certainly the dependencies of life; that there was no need to *kotow* to any man, and that, by no possible combination of circumstances, could I ever be 'put in a funk.' It was fated, however, that within a very few months of my appointment, I was to endure a greater fright than I had suffered in my lifetime before; greater than when I was a schoolboy told to 'stay' at Eton (which was the delicate introduction to the flogging-block); and greater than when I went in for my Civil Service examination, choked with dates to the throat-gate. As in the latter case, it was a moral fright, and not a physical one. I was not caught in the machinery which it was my duty to overlook (as has happened to a brother-inspector), and dragged slowly in by the coat-tails to an assortment of cogs and wheels, which I only escaped by the skin—of my teeth; but I am not sure I would not have preferred the brief agony of such a position to the slow mental torture which I did suffer.

When inspectors of machinery were first appointed, many manufacturers resented it exceedingly. They contended that their mill was their castle, and that a tyrannical government had no right whatever to send its minions to pry into their goings on. If the machinery *was* unfenced, and the workmen did occasionally lose limb or life in consequence, that was *their* look-out, not ours. Such misadventures made people all the sharper—that is, those who were left alive. The principle of free trade was invaded by this meddling in its most vital part. England was not worth living in under such a system of espionage; and if it was persevered in, they (for one) would throw up their business, and leave this benighted land. However, as a general rule, they did not throw up their business; they remained where they were, and 'took it out' of the inspectors.

The stories I have had to listen to from Masters with respect to the certain ruin that awaited Trade under such circumstances, would have been terrible, had not the stories of their workpeople concerning matters that had happened, before the law stepped in, in the way of mutilation and death, weighed so much more heavily in the opposite scale. Of course, I was well treated. There are no more hospitable people in the world than your merchant-princes; and the cases were few indeed where those whom it was my duty to visit, and perhaps to rebuke, failed to dissociate me personally from my unwelcome office. Mr Wolfton, however, a great Leeds manufacturer, proved an exception to this rule. He not only

Digitized by Google

resented government interference, but mine. He was almost rude to me in the presence of his workmen; and not content with expressing himself very strongly upon the 'unfenced machinery' question, actually addressed to me, from his country-house, a letter, couched in the same violent terms, which I had the honour to receive some days afterwards at my residence in London. I wrote him, as it was my duty to do, a temperate and reasonable reply; but his epistle tickled me excessively, and happening to be corresponding that day with my college friend, Jack Rawlings, who has a very keen sense of humour, I epitomised Mr Wolfton's communication for his benefit, adding a few lively comments of my own!

There was not the least harm in my doing so, of course. It was a 'privileged communication.' It would be hard indeed if one might not discuss the character of our fellow-creatures with one's friend. Mr W. himself would scarcely have expected that I should write to Jack about unfenced machinery and the natural rights of employers of labour as I did to him. But it was essential not to *put the two letters in the wrong envelopes.*

Let me here adjure any young hand at business who may read this dreadful story, never to begin a second letter until he has finished the first, and placed it in its properly directed envelope. In the days of sand-bottles, the saving of time might have been some object; but by help of the blotting-paper, the time that may be lost in arranging matters in their right order is so infinitesimal, that it should always be done. For only imagine the risk that may be run if you do otherwise! You may be ordering hearth-rugs of your correspondent at Cape Coast, and trying to import ivory and gold-dust from Manchester. Your African agent will, of course, imagine you are making heartless jokes upon his climate; and your Lancashire friend—who makes millions out of old bones and devil's-dust—will resent your pleasantry as still more offensive. But even then you will not have made such a mistake as *I* made. It would have been the height of rudeness in any man to have written such a letter as I was involuntarily sending to the magnate of Leeds; but in an official—an inspector! I protest that even at this distance of time it makes me damp to think of it. You will ask me, perhaps, how was it that I came to know that I *had* put the letters into their wrong envelopes? I can scarcely answer that question satisfactorily in a logical sense; all I know is, the fact flashed upon me hours afterwards, as I sat in my office in Whitehall, and I felt at once as certain that it had occurred as I did of my own existence. I cast one agonised glance at the clock, and saw that it was not yet four—that there was an hour and a half before the country mails left the receiving-office in Bayswater, and I called a Hansom, and drove thither at top-most speed.

Yes, I remembered it all now; my quiet but firmly expressed communication to Mr Wolfton had been laid on the right hand of my desk to dry, but the envelope addressed to him I had tossed to the left; then I had scribbled off my facetious letter to Jack, and addressed *his* envelope; then, without enclosing either letter, I had fallen into 'a brown-study,' a dream of college-life, with its palmy days of friendship and careless joy; and then—mechanically—I had folded up the letters, and put them each into the nearest envelope, which was the wrong one. That was how I worked it all out in my head, as I flew through the air in that rapid Hansom; but however the thing had come to pass, I felt quite sure that it had done so; the means were now of little moment, but the consequences? For one thing, I should lose my inspectorship—that was a dead certainty; for another, I should lose Louisa. Upon the strength of my appointment, I had ventured to propose to the very dearest girl in all the world—so dear, that her father could hardly be induced to part with her to me, even at the considerable figure which I was then able to command; and now, or at least in a few days, if I could not stop that letter, I should be almost penniless. How I cursed the 'facilities' afforded by the perfection of our post-office system! The idea of that letter, now lying in its drawer at Beak Street, Bayswater, being at Shoddy Hall in Yorkshire—Mr Wolfton's country residence—at seven A.M. next morning, was almost insupportable. Fortunately, the envelope was an official one; O.H.M.S. was printed on the left-hand corner of it; and on this circumstance I greatly relied. I had only to explain, I thought, that I was an official personage, and that that letter was *my* letter, to get it back again out of the post. I was soon undeceived, however, upon this point. The head of the little postal establishment at Beak Street would not even so much as let me look at it. Under that long white bib—for he was a grocer, and wore one—beat the heart of a true patriot. He was there, he said, to do his 'dooty;' a certain grave charge had been assigned to him, under conditions, and he was not the man to break faith. 'But, my good sir,' urged I, 'I am really the person I represent myself to be. You can come to Whitehall with me, and satisfy yourself of that fact. I am in the Queen's service, like yourself—and I shall make a point of representing in the proper quarter how resolutely you have stood by your regulations. But there is a point beyond which Determination becomes Obstinacy. To refuse me this letter is to obstruct the Public Good.'

'Sir,' replied the intrepid wretch, 'if the Queen herself, in person, was to say to me: "Mr Binks, I've made a mistake, and dropped a letter into your box as ought not to go," I shouldn't let her have it back again. "Parliament may do it, ma'am," I should say to her; "and it is to parliament as you must apply; Binks has not the power."'

I was desperate by this time, for it only wanted twenty minutes of the mail leaving, and I took out of my purse a five-pound note, and looked at him significantly.

I saw that there was an inward struggle in his British heart, and whispered, like another Mephistopheles: 'I will give you Ten.'

'It's as much as my place is worth,' said the little man, with a sigh, 'though nobody likes "turning away money" less than I do. I can't do it. And let me tell you, sir,' added he, with genuine dignity, 'it's a mean thing in a gentleman, as you profess yourself to be, to tempt a poor man like this.'

I honoured him in my heart, though I also felt I could have strangled him on the spot.

'You are as incorruptible,' said I bitterly, 'as Robespierre.'

Digitized by Google

This evidently pleased and flattered him. 'Anything that I can do for you, sir,' said he, 'without prejudice to the public service, I am sure I shall be most happy. Any information'——

'What offices will this Yorkshire letter have to pass through?' inquired I, with a sudden gleam of hope.

The little man produced his postal books at once. 'It will leave the mail-train, sir, at Dodgely Junction, where it will be stamped; then it will go by mail-cart to Milbeck, which must be a small village, for there are no post-office orders issued at it.'

With this meagre help I was obliged to be content, and I resolved at once to go by that mail-train. There was still time, of course, by paying extra postage, to send a letter of apology to Shoddy Hall, which should arrive coincidently with my unfortunate despatch; but I felt that that would be worse than useless. Mr Wolfton was not the man to accept an apology; he was rather the man to come up by special train to lay his case before my superiors, and avenge his outraged dignity at all hazards: he was rather the man to rise in his place in parliament (for he was an M.P.), and denounce me as the insolent minion of a tyrannical government; and I seemed to see him doing it, with that suicidal letter in his clenched right hand.

I started by the mail-train that night, with my thoughts as burglariously fixed upon the post-office van, as though I was a second 'Jem the Penman,' bent on a bullion-robbery: but, of course, *that* was not in my programme. Notwithstanding my failure in Beak Street, I determined to try my luck with the Dodgely postmaster; a provincial official was more likely to be acted on by a semblance of authority, and was I not on Her Majesty's service, travelling special to stop a letter with O.H.M.S. in the corner of its address?

It was five o'clock in the morning when I arrived at the Junction, and a more dismal spot it was impossible to imagine; the Dodgely mail-bags had a carriage provided for them, but there was none for me. I ran after it wildly for a mile and a half, and reached the post-office within a minute or two of their arrival, hot and panting—though it was in the depth of winter. They would have thought me mad, had I gone in as I was, so I staid outside to cool body and mind, suspiciously eyed by a rural policeman. Then I rang the bell, and demanded to see the postmaster. That official himself, in dressing-gown and slippers, opened the door. 'I am come on particular busi'——

'Can't see you now, sir,' interrupted he curtly, 'whatever it is; we're sorting the mails.'

He would have slammed to the door, but I thrust my umbrella in, and prevented that. 'It is about the mails that I am here,' said I. 'I have come down special from London, on Her Majesty's Service. There has been a letter sent by mistake.'

'Have you an order from the postmaster-general?'

'Yes—at least not exactly.'

He would not hear another word. It is my belief that he thought I was a person of bad character.

'You had best be off,' he said, and he looked significantly at the policeman. It was most humiliating to an assistant-inspector of machinery. But I took his advice, and went off—to the inn. Everybody was in bed, of course; but I knocked them up, exhibited a purse full of sovereigns, and ordered a post-chaise-and-four to Milbeck. This was eight miles off; and the mail-cart rattled through the empty streets before my horses were brought out. It would have been shorter work to have taken a gig, but I trusted to my four horses to produce an impression. We did the eight miles in three-quarters of an hour, and met the mail-cart coming out of the village.

The Milbeck post-office was also an establishment for the sale of children's toys, half-penny balls of string, starch, cheap periodicals, and lollipops. It was kept by a widow woman of about eighty, and excessively deaf. She did not even hear the thunder of my equipage-and-four as it dashed up to her humble dwelling. But she could see with tolerable distinctness, and when her attention was drawn to my turn-out by her daughter and assistant, she ejaculated: 'Lord ha' mercy!'

'Madam,' said I, with a lofty air, 'I have been despatched by Her Majesty the Queen to recover a communication which has been sent by mistake by this morning's mail. Your letters, I see—for they were all lying in a heap on the little counter—have not as yet been delivered.'

'No, sir, no: you may take your pick on 'em, I'm sure.'

'Not at all, madam,' said I. 'I am not empowered to do that.' For it began to strike me for the first time that I might be getting into as great a hobble for meddling with 'the property of Her Majesty's Postmaster-general,' as for outraging the dignity of the proprietor of Shoddy Hall. The old lady, on the other hand, could get into no trouble, through being imposed on by so authoritative a messenger; and even if she lost her post, I had only to pension her and her daughter for their natural lives. 'The letter, madam, which I have to request you to hand over is enclosed (as I am instructed) in an official envelope, with O.H.M.S in the corner.'

'Here it is, mother,' cried the younger woman; and the old lady fortunately snatched it out of her hand before she could read the address, and put it into mine, as though it had contained some explosive substance. 'It wasn't *my* fault,' pleaded she, 'as it got there, I'm sure.'

'No, madam, no; you are not to blame in the affair at all,' observed I, in a tone of patronage, as I placed the precious missive in my breast-pocket. 'What pretty toys you have, and what exceedingly tempting lollipops! I must take some back to my young friends at home.'

I invested five shillings in those two articles of commerce, thereby buying up almost her entire stock, and then the old lady and I parted upon the best of terms. As I left the shop, I heard her say to her daughter: 'Now, Eliza*beth*, make haste with the squire's letters; you know what a caddel he makes if they beant sent over to the lodge at once.'

So it really had been a very narrow shave indeed.

I wonder my hair didn't turn gray during these dreadful twelve hours, and I shall never forget the worry and anxiety I suffered during them as long as I live. But the worst of it was, when I came to look into the epistle, about which I had been put in such a state, I found that I had placed Mr Wolfton's letter in the right envelope after all! My alarm had been entirely without foundation; I

Digitized by Google

had travelled one hundred and sixty miles by railway, hired a carriage-and-four, and bought half a shopful of toys and lollipops—and all for nothing.

KEEPING CHRISTMAS.

Your true Briton is an inconsistent creature. At home, nothing pleases him better than running down things English, and grumbling that they manage this, that, and the other much better abroad. Send him abroad, and he is never so happy as when exhibiting his native habits for the behoof of benighted foreigners. The very man who votes Christmas a bore, its customs out of date, and partakes of its pudding under protest, if Christmas-bound in some land where holly is unknown, and the proper purpose of mistletoe ignored, will move heaven and earth to keep his Christmas after the manner of Englishmen, taxing his resources and exhausting his wits to obtain a plum-pudding for his Christmas-day's dinner. Whether he be freezing in the icy regions of the arctic zone, or sweltering in the heat of tropical sunshine, however incongruous his surroundings, the coming round of the great feast brings with it a hearty desire to celebrate it duly; and if he cannot contrive to do so exactly home-fashion, he makes himself as merry as circumstances allow, congratulating himself, like Mark Tapley, on being jolly under difficulties.

In this spirit did our soldiers keep Christmas-day in Abyssinia, with the thermometer at seventy-five in the shade, tying bunches of fir and what green branches they could get to the poles of their tents, as substitutes for more orthodox evergreens. Mr Henty, who dined with the officers of the Third Native Infantry, was quite satisfied with his entertainment. Two enormous fir-branches hung aloft, beneath which the dinner-party made themselves comfortable upon chairs and boxes of every possible height; one man's chin appearing just above the table—said table consisting of packing-case lids—while his neighbour had his knees on a level with his plate. The guests brought their own plates, knives, forks, and drinking-ware, so that the table when set out had the merit of variety at least: enamelled iron, tin, pewter, glass, and crockery, all putting in an appearance. As to the provender, there was enough and to spare—spur-fowls, guinea-fowls, venison, mutton, and—sole representative of traditional dishes—a joint of roast beef. Beer there was none, not a single bottle being procurable in the camp; but each diner had a bottle of champagne to himself, so that, all things considered, the feast was not unworthy of the season.

Thanks to General Muddle, the Crimean Christmas of 1854 was anything but what it ought and might have been; and the knowledge that plenty of good things had been provided by thoughtful hearts at home, but which were anywhere but where they were wanted, did not add to the merriment of our poor overworked, under-fed army; and although some desperate efforts were made to be jolly on dreary outposts and in uncomfortable trenches, they only resulted in miserable failure. The following Christmas was doubly enjoyable by comparison. The stubborn fortress had fallen at last to its more stubborn assailants; habit had deprived frost and snow of their terrors, and every hut ran over with hams, preserves, vegetables, and mysterious tins, till it resembled a grocer's store. The valleys of Miskomia, too, were rich in mistletoe, to be had for the trouble of gathering; but few cared to undergo that trouble for the sake of what only reminded them of unattainable sweets, and made them sigh for the girls they had left behind them.

The saviours of our Indian empire were nearly cheated out of their Christmas. The army was encamped at Intha, within sight of Nepaul, waiting for the rain to clear off and the tents to dry, ere it moved on to drive the sepoys into the Raptee. The skies cleared on Christmas-morning, and Lord Clyde was for marching at once, but relented in time to save the men's puddings from being spoiled—not only relented, but himself gave a Christmas banquet, at which the favoured guests sat down to well-served tables, laden with barons of beef, turkeys big enough to draw a gig, grass-fed mutton, game, fish, truffled fowls, and all the triumphs of the French cuisine—plum-puddings and mince-pies not being forgotten. To allay the thirst such substantial fare created, appeared beakers of pale ale from Burton and Glasgow; porter from London and Dublin; champagne, moselle, sherry, and old port, 'rather bothered by travelling twenty miles a day on camel-back.' Following the chief's example, each regiment had a glorious spread, and throughout the wide expanse of tents sounds of merry rejoicing were heard long after the shades of night descended.

The blue-jackets are generally better hands than the red-coats at improvising a jollification—Jack at anyrate does not take his pleasure sadly. The gallant bands that have from time to time gone forth to a bloodless campaign in the icy north, have always managed to keep their Christmas right joyously. Certainly they could not complain of uncongenial skies or unseasonable temperatures; while, so far as snow and ice are necessary to thorough enjoyment, the supply in the arctic regions is on a scale sufficient to satisfy the most ardent admirer of an old-fashioned Christmas. The frozen-in Investigators under M'Clure kept their first arctic Christmas soberly, cheerfully, and in good fellowship, round tables groaning with good cheer, in the shape of Sandwich Island beef, musk veal from the Prince of Wales's Strait, mince-meat from England, splendid preserves from the Green Isle, and dainty dishes from Scotland. Every one talked of home, and speculated respecting the doings of the dear ones there; and healths were drunk, not omitting those of their fellow-labourers sauntering somewhere in the regions about, but how near or how far away none could tell. When the festival came round again, the *Investigator* and *Enterprise* were alone in their glory, and they were separated by miles of frozen sea; but they had solved the great problem. On board the *Investigator*, frost-bound in the Bay of Mercy, things went as merry as the proverbial marriage-bell. After divine service, everybody took a constitutional on the ice until dinner-time; then the officers sat down to a meal of which the *pièce de résistance* was a haunch of Banks' Island reindeer, weighing twenty pounds, with fat two inches thick, and a most delicious flavour; while the crew were regaling upon venison and other good things, double allowance of grog included; and dinner discussed, dancing, singing, and skylarking filled up the holiday hours till bedtime; the fun being kept up with unflagging humour, and with such propriety withal as to make their leader wish the anxious folks at home could

have witnessed the scene created amidst so many gloomy influences, by the crew of a ship after two years' sojourn in those ice-bound regions upon their own resources. Another Christmas found the brave fellows still confined in their snowy prison; but their table boasted plum-pudding rich enough for arctic appetites, Banks' Land venison, Mercy Bay hare-soup, ptarmigan pasties, and musk-ox beef—hung-beef, surely, seeing it had been dangling in the rigging above two years. The poets among the men wrote songs making light of the hardships they had endured; the painters exhibited pictures of past perils; comic actors were not wanting; and the whole company, casting all anxiety to the winds, enjoyed themselves to the utmost.

Sir Edward Belcher was waked up at midnight on Christmas-eve, to hear his gallant crew sing a Christmas ode of their own concoction:

Awake, awake! the Old Year's going:
Time flies apace;
Awake, awake! the New Year's coming
To take the old one's place.

Arise, arise! good shipmates all,
And do not danger fear;
Arise, arise! good shipmates all,
To welcome the New Year.

God bless our brave old commodore,
And our good commander too;
Not forgetting all our officers,
And our true and gallant crew.

Sleep on again, and on your brows
May oft repose be seen!
Sleep on again, while in our lay
We 'll sing, God bless the Queen!

They had begun their celebration of the holiday season by making the shortest day still shorter by a performance in the 'Queen's Arctic Theatre,' the programme consisting of a comedy and an act of *Hamlet*, in which one amateur played Laertes and the Ghost; and another, more ambitious yet, doubled the parts of Hamlet and the lady of his love. They finished by drinking Victoria's health in some of her own port, and doing justice to a joint of Her Majesty's own beef, with sundry adjuncts suitable to the occasion.

But in the matter of comestibles, the Christmas show made on board the little *Fox* stands alone in arctic experiences. The ship's tables were laid out like a confectioner's counters: here piles of apple and gooseberry tarts, there pyramids of sponge and plum cakes, divided attention with puffs of divers sorts, and cakes and loaves of every size and shape; delicacies set off by a background of nicely browned hams, meat-pies, and cheese. In the afternoon, the officers were enticed to join the men; and later on, Captain M'Clintock himself joined the party, and found them all perfectly sober, singing songs in turn, and in the best of humours with themselves and all the world. They were destined to spend a second Christmas amid the same scenes, but amid weather considerably worse—with a fierce north-wester howling through the rigging, the snow-drift rustling swiftly by, and the thermometer ranging between seventy-six and eighty degrees below freezing-point. But these trivialities did not affect their nerves or their enjoyment; and if they could not display such well-garnished tables as before, they contrived, by judicious setting out, to make a show formidable enough to support the delusion all were anxious to impose upon themselves—namely, that they were in a land of plenty—in fact, all *but* at home.

The plucky explorers of the North-west Passage by land had considerable difficulty in satisfying their desire to be jolly in the jolly season of the year. Lord Milton dared the dreary dangers of a journey through the snow to join a Christmas party at Fort Carlton; spending his Christmas-eve companionless and uncheerily over a supper of pemmican and galette. He might have enjoyed plum-pudding with his comrade Cheadle and his faithful La Ronde, for Canadian friends had supplied them with the ingredients; but Lord Milton's modesty would not then allow him to try his culinary skill in such a serious matter. Dr Cheadle, however, naturally envious of his companion's Christmasing, at last worried him into hazarding the attempt. The doctor's strong box was opened; and with some trouble, the precious materials were separated from the loose shot, tobacco, soap, and other undesirable matters with which they had ill-naturedly fraternised. The pudding was made, tied up in a cloth, and put in the pot. Oblivious of the saying, 'A watched pot never boils,' the anxious pair concentrated all their attention upon the progress of their dainty dish towards perfection. Let the doctor speak for them. 'Many a time was it taken out, and its state examined by point of fork before it was, at last, after boiling all day, pronounced thoroughly cooked. We had a brace of prairie-chickens also, but all interest was centered in the pudding. No one who has not been restricted to one species of food for a long time can form any idea of the greedy eyes with which we viewed that plum-pudding. It proved delicious beyond all anticipation, in spite of certain drawbacks in the shape of caps, buckshot, and fragments of tobacco. We had fondly hoped to finish it all at one sitting; but it was a very Brobdingnagian pudding, and we were reluctantly compelled to leave a portion unconsumed. We passed the night somewhat restlessly, partly caused, perhaps, by the indigestible character of our evening meal, but principally from impatience for the morning to arrive, that we might repeat the delights of the previous evening. When day began to break, each watched the movements of the other with anxious distrust; and before it was fairly light, both jumped out of bed at the same moment, each fearing he might lose his share of the delicious breakfast. Never did schoolboy view with such sincere regret the disappearance of his last morsel of cake, as we felt when sighing over the last mouthful of that unequalled plum-pudding!'

Mr Whymper, who could think of no better way of expending his superfluous energy than by taking a trip to what was until lately Russian America, had to put up with a Christmas dinner in which the pudding was conspicuous by its absence, a circumstance not to be wondered at, considering that Uncle Sam's latest territorial acquisition has yet attained but a moderate pitch of civilisation. Mr Whymper had the advantage of pleasant company, and sat down with a gay, free-hearted French Canadian, a jolly New Brunswicker, and an enthusiastic naturalist hailing from Boston, fully determined to do justice to the feast provided by his clever Indian cook. A big log-fire blazed in the oven, the room was decorated

with spruce-fir boughs, flags and Indian trading goods, and the table tastefully set out with iron mess-kettles, tin platters, and cups. The 'high-toned and elegant-natured' repast consisted of soup *à la Yukon*, arctic grouse, Alaska reindeer meat, Nulato cranberry sauce, Californian preserved peas and tomatoes, dried apple-pudding, gingerbread, iced cheese, coffee, tea, and iced water; followed by rum punch (limited), and pipes, songs, and recitations *ad libitum*. Doubtless, each one of the merry quartet had spent less cheerful Christmases than that celebrated on the banks of the broad, frost-bound Yukon, blessed with only a couple of hours' sunlight in a winter day.

Very different were the surroundings of Mr Hutchinson when he passed his Christmas in the Soledad Valley of El Chaco. Misanthropical folks, he says, might imagine, from the name of the locality, that it was something worse than a Christmas in Newgate, or at the bottom of a coal-mine; but although his party of eighty was composed of men from all nations of the world, the happy family inside the bars at Charing Cross might have learned a lesson from them. The travellers encamped in a pretty spot overlooking a well-timbered valley. Here and there stood out the tents of the soldiers; round one fire reclined groups of guachos, sipping their 'maté;' the soldiers chatted and smoked round another; while Mr Hutchinson and his friends sat outside the principal tent, recalling the memories of past festivals while busy preparing for doing due honour to the present. The thermometer was at 100 degrees Fahrenheit, and not a drop of fresh water was to be had, while snow and ice only existed in the thirsty imagination. However, a good dinner afforded some consolation, and every justice was done to a magnificent piece of beef cooked camp fashion, with the skin on, an omelet of ostrich eggs, and a perfect beauty of a plum-pudding. It was too hot to toast healths in wine or brandy, so their good wishes were washed down with dirty water, sucked through a patent filter.

Mr Bates spent many Christmases in South America, but says little about his own manner of holiday-making, giving us, however, a picture of Christmas at Serpa, on the Lower Amazons, where the ceremonies observed are those taught by the Jesuit missionaries a hundred years ago to the aborigines they induced to settle there. In the morning, all the feminine population turned out, dressed in white chemises and showy calico petticoats, went in procession round the town, picking up on their way the stewards of the festival, who carried long white reeds decorated with gay ribbons as tokens of their office. In front of the procession marched three old squaws, carrying a large semicircular frame, covered with cotton, and studded with bits of looking-glass, ornaments, and finery. This, the 'sairé,' they danced up and down to the accompaniment of a monotonous whining hymn; turning round now and again to face their followers, who immediately came to a halt. This sairé is said to have originated in a device of the Jesuits, who found the savages would follow a mirror anywhere for the pleasure of viewing their own sweet selves magically reflected, and took advantage of the weakness to entice the natives into church—the destination of the procession we have described.

In the evening, revelry, boisterous but good-humoured, was the rule of the place; the negroes singing and dancing to the music of the drum and the caracasha; the drum being a hollow log, having one end covered with skin, played by the performer straddling it, and drumming with his knuckles; the other instrument being merely a notched bamboo tube, producing a harsh rattling noise by the passing of a hard stick over the notches. The Indians could not get up a dance on their own account for lack of ladies, the pretty girls they would have liked as partners being carried off by the whites for their ball; while the old squaws preferred looking on, to exercising their own grace and agility, leaving their husbands who were dancing bent to join the negroes. But the redskins generally preferred getting drunk, which they did in a wonderfully short time, becoming amazingly voluble under the operation. Negroes and Indians, when reproached for their liquoring-up propensities, replied that they only got drunk at one end of the town while the whites were getting drunk at the other; an excuse more truthful than satisfactory.

A certain young man about town once forsook the sweet shady side of Pall Mall for the sake of smoking his cigar in savage Africa; but when Christmas came, he was seized with a desire to spend it in Christian company, and this is how he did spend it: 'We English once possessed the Senegal; and there, every Christmas-eve, the Feast of Lanterns used to be held. The native women picked up the words and airs of the carols; the custom had descended to the Gambia, and even to the Casemanche, where it is still preserved. A few minutes after I had ridden up, sounds of music were heard, and a crowd of blacks came to the door, carrying the model of a ship made of paper, and illuminated within; and hollowed pumpkins, also lighted up for the occasion. Then they sang some of our dear old Christmas carols, and among others, one which I had heard years ago one Christmas-eve at Oxford:

> Nowel, Nowel, the angels did say,
> To certain poor shepherds in fields as they lay—
> In fields as they lay keeping their sheep,
> One cold winter's night, which was so deep.
> Nowel, Nowel, Nowel, Nowel,
> Born is the King of Israel.

You can imagine with what feelings I listened to those simple words, sung by negresses who knew not a phrase of English besides. You can imagine what recollections they called up, as I sat under an African sky, the palm-trees rustling above my head, and the crocodiles moaning in the river beyond. I thought of the snow lying thick upon the ground; of the keen, clear frosty air. I thought of the ruddy fire which would be blazing in a room I knew; and of those young faces which would be beaming still more brightly by its side; I thought of—oh, of a hundred things, which I can laugh at now, because I am in England, but which, in Africa, made me more wretched than I can well express.'

Next day, sadness and sentiment gave way, for a while at least, to more prosaical feelings. When Mr Reade sat down to his Christmas-dinner, he must have wished, with Macbeth, 'May good digestion wait on appetite,' as he contemplated the fare awaiting discussion, and to which a boar's head grinned a welcome. Snails from France, oysters torn from trees, gazelle cutlets, stewed

Digitized by Google

iguana, smoked elephant, fried locusts, manati-breasts, hippopotamus steaks, boiled alligator, roasted crocodile eggs, monkeys on toast, land-crabs, and African soles, carp, and mullet—detestable in themselves, but triumphant proof of the skill of the cook—furnished forth the festival-table, in company with potatoes, plantains, pine-apples, oranges, papaws, bananas, and various fruits rejoicing in extraordinary shapes, long native names, and very nasty flavours; and last, but not least, palm-cabbage stewed in white sauce, 'the ambrosia of the gods,' and a bottle of good Bordeaux at every man's elbow. When evening came, Mr Reade and a special friend sought the river: 'The rosy wine had rouged our yellow cheeks, and we lay back on the cushions, and watched the setting sun with languid, half-closed eyes. Four men, who might have served as models to Apelles, bent slowly to their stroke, and murmured forth a sweet and plaintive song. Their oars, obedient to their voice, rippled the still water, and dropped from their blades pearls, which the sun made rubies with its rays. Two beautiful girls, who sat before us in the bow, raised their rounded arms and tinkled their bracelets in the air. Then, gliding into the water, they brought us flowers from beneath the dark bushes, and kissed the hands which took them, with wet and laughing lips. Like a dark curtain, the warm night fell upon us; strange cries arose from the forest; beasts of the waters plunged around us, and my honest friend's hand pressed mine.' And Christmas-day was over. We might seek long for a stranger contrast to an Englishman's Christmas at home, although—to adapt some seasonable lines—

Where'er
An English heart exists to do and dare,
Where, amid Afric sands, the lion roars,
Where endless winter chains the silent shores,
Where smiles the sea round coral islets bright,
Where Brahma's temples sleep in glowing light—
In every spot where England's sons may roam,
Dear Christmas-tide still speaks to them of Home!

A CHEAP MARKET.

On a spot, in London, that was once butter-cupped field and daisied meadow, there is still held a weekly market. Brooks bubbled on there, not so very long ago; trees whispered; kine sunned themselves, and looked wise and weighty over their quiet chew. For that matter, trees are even yet not so very far away; near waters still give back a darkened picture of the sky; and by the side of them, sheep still keep the grass well cropped, and they and their lambs answer each other with their tender and melancholy baa. It is true that the grass is cut away there with a prematurity that is ugly if it is not sad; that the brook has been so widened, and shallowed, and 'ornamented,' its water does not flow much ever, and has little ripple on it, save when tiny men and women stab at its thick and glassy face with a heavily planted stone. It is true, in short, that we call these few acres of land Park. Park—that means Nature so much deteriorated, it has turned sullen, and shews other colours than it should, out of deep spite. But, though this slice of the country has been caught thus—imprisoned, trapped, bottled up (it might be), as a specimen of what wood, and herbage, and running rivers are, under a high heaven and a pure air—it *is* a hint of what used to be there; and whilst it lingers, the memory of the green slopes and lowly hills that London stands on cannot entirely pass by. But for the market!—the little clustering-place where maids took their butter, where farmers carried their hay and cattle, where fruit and fowls, and eggs and geese, were spread invitingly, under the shadow almost of the homesteads they had come from, and certainly with the fragrance of flowers about them, and the fleeting chirp of birds in the clear sky—it is *so* unlike the thing it used to be, that the most imaginative person might be defied to recognise it. Where there was once a placid cheapening, there is now a pandemonian din. Where there were once the dazzle of snow-white dairy-cloths, and the savouriness of butter-women's rosy cheeks, there are now such dirt and squalor, such a curious and unhandsome mixture of wares and produce, the marvel is what the needs are that bring them there, and what sort of a living the venders can hope for, even if they find purchasers for all they so strangely bring.

Going to this market a few days before Christmas, a sketch was made of what was heard and seen there. There was much fun, some pathos, and such a great deal of what was strange and suggestive, that it was an interesting study. The interest begins, indeed, before the market is quite reached. It lies in a nest of small streets, inhabited by the poor people who use it; and reminiscences of long-left country homes exist there on first and second story window-sills, where mimic field-rails are put up as balcony, with cross-bar gate, and a tiny layer of grass, and wooden toy-cows to seem to nibble it; so that *only* the sun and air, and peace and rustic indolence, may be lacking to make the thing complete. Hawkers, too, pass through these streets on their way to the loud and dirty market; not filling them with their tearing cries, as they would on any other day, but trundling on in silent file, a poor famished set, the most of them; their wives, with burst shoes and draggle-tails, trudging faithfully beside them through the mud, to take their share in the day's cold toil.

It is not all toil, either, as may be seen the moment the market itself is entered. A good feeling exists among the dealers, who give each other quiet nods or vocal how-d'ye-does. Some have their usual stand-places, and go to them, without any elbowing or strife from those around; some help each other to unpack their cheap goods, or look on with interest and pleasure as the articles are carefully revealed. ''Ave a tatur, Jim?' one young fellow tenderly offered to another—just because Jim was dejected and disconsolate. 'Come on!' said a peep-show man to a dealer at his side. 'You may look at 'em if you like! *I* sha'n't charge you!' And he pulled his little strings for the behoof of his neighbour, omitting only the *pomposo* narrative he would have ground out to those who paid him for it with a small copper coin. 'How's business? Doin' much?' a second dealer inquired kindly of a third. 'No,' was the answer, in confidence and gratitude. 'Dead low.' 'Ah!' verified the other, 'so *I* find. Wouldn't a come if I'd a known.' This was, indeed, a statement heard on all sides. It was a general verdict; though Heaven knows

Digitized by Google

where the subsistence of the utterers would have come from, if they had stayed away. One blind man was particularly certain that the market would have been *minus* him. He was a large, old, sandy-coloured individual, well known in London streets, and he confided his decision to a smooth, young, dark-haired woman, standing immediately at his side. *He* sold stay and boot laces; *she*, children's little flags for Christmas-trees; and both cried out their wares at stated intervals, like half or quarter minute guns.

'Ape-neach—toup-enny!' let off the old man. And then he bent his head a little towards his fleshy lady-friend. 'You only took *what?*' was his question, as chatty as anybody. And then in his bleat or blur: 'Ape-neach—toup-enny!' and immediately after: '*How* much did you say?'

The woman held her flags up on high (they were stuck into a great raw turnip, by way of a convenient and inexpensive pincushion), and she screamed their price out: 'Six a penny!' in a thin shrill shriek. And then she confided to the old man, quite lowly and placidly, that fifteen shillings had been her 'takings,' but that to-day she had taken nothing at all.

'Ah!' went the old man. 'Ape-neach—toup-enny! Too bad, isn't it? Only wish I'd a known it! Ape-neach—toup-enny! You wouldn't a got *me* from home!'

Some of the dealers looked, like the blind man, melancholy over their no-trade; others seemed made by it more loquacious, and gained by their loquacity a well-merited reward. Indeed, if speech were not silver here, it brought in copper, and to call silence golden was an egregious mistake. Those who asked had, in this strange community; and those who did not ask were supposed not to want, and were heedlessly passed by. The most successful man by far in this day's sale was one who kept the part of the market where he stood alive with his merry talk. He sold strips of muslin with holes punched in them for embroidery, and he vaunted these up to the leaden and near-hanging sky.

'This way, buyers!' he cried out, as if he were herald of a show. 'Here you are, buyers! This way! This way! Only a penny! Just look! Did you *ever* see such stuff as this for a penny! Take 'em round the market—and if—you—can—bring—me *one* stamped on a better muslin than this, I'll give you sixpence! Now, go round the market! It's all you've got to do!'

Of course, the bystanders did *not* go round the market; and of course the embroidery-man knew they wouldn't. Precisely as he had calculated, they thronged round his table, they lifted up his wares and felt them, they held them between their finger and thumb, looked up, looked down, and finally put their hands in their pockets for their money.

'Sold!' the man shrieked out, in a frenzy of delight. 'Sold again! Sold! Lor! This way, buyers! This way! Look here! Three strips, threepence; two strips, twopence; four strips, fourpence; quite right. Sold!'

Immediately behind him was another noteworthy man. Immediately behind him were *two* men, would have been, however, a better description, for they performed their business as a duet of advertiser and master, though the brilliance of him who advertised quite paled the owner's fire. He was about forty—tall, strong, fine; so eloquent, he never once faltered for a word; so well educated, he used every word properly, with precisely the emphasis required. How on earth he was there *en cette galère*, was the puzzling question. His *galère*, or rather his master's, was a well-to-do one, too. It was a bright, glossy, and well-lamped dog-cart;' the horse (a good one, and in excellent condition) taken out, the shafts set up against a wall of wagons, and itself serving as a rostrum or stage. On this stood the speaker, in good clothing, and before a good audience (for the sort of thing and the place), and there he held forth.

'I am here again,' he began, in a loud clear voice, 'to tell you of the virtues of my friend the doctor. I am here again, to make you the same little drawing that I made before.' Black board handed up here by the medical man in question. 'You know quite well that a man has lungs'—a chalk curve put down—'and that if any foreign substance gets in those lungs'—more chalking, and a lung getting well defined—'it makes us coff We call this coff sometimes a cold'—more chalking—'and we think nothing of it; but, my friends, cold produces coff, coff proceeds to asthma, asthma entails consumption, and consumption brings on death! Now, my friend, Dr Dulcamara, here'—bottle of medicine with wonderful alacrity and precision handed up—'understands this coff so well, he has produced something that will cure it as soon as it has come. The price for this size that I hold in my hand is sixpence. Sixpence! Good Heavens, friends, I am speaking surely in a country where there is *no* coff! where there is *no* lung-disease! *no* asthma! *no* consumption! Why, friends, three-fifths of the people in this country die every year of lung-disease! There is no end to the diseases of the lungs of humanity, and these fall beneath this medicine like the summer leaf before the autumn wind! Ah, perhaps you are not prepared!'—Small box of lozenges handed up with the same miraculous co-action.—'Here are lozenges from the same herbs; hyssop, ground-ivy, marsh-mallows, sugar, honey; and the price of these is only a penny a box—a penny a box. If the dear child at your breast has the hooping-coff, give it one of these, and it will be well directly.'—A few pennies handed in here to the medical man, who exchanges them for lozenge-packets promptly and silently.—'Here are your lungs, my friends'—more chalking—'and here is the tube that leads to them. You must be aware'—of a quantity of fresh facts well elucidated, during the enumeration of which more pennies poured in, and Dr Dulcamara looked sharply out for the gathering of a larger harvest of pennies still.

To this great man there was a rival. A poor puny one, it must be confessed; one relying on getting rid of *his* cough-lozenges, not by elocution, but by the display of a boldly-executed oil-colour picture. This shewed an attenuated man dying of a 'pulmonic cough,' and then (after swallowing a lozenge) swollen to Banting-like proportions, and clapping everybody hilariously on the back. But this pictorial mode of appealing to the public failed. The evidence might be crushing, but the lozenge-boxes remained in their little piles hour after hour, and were scarcely once disturbed. Better far, was the clear conclusion from this, a mouthful of the most arrant trash, so that it were

Digitized by Google

but uttered, and uttered loudly. Never let your tongue be still; no, not a minute.

So indeed thought a crockery-seller in the same avenue of the market. 'Sort 'em out! Sort 'em out! Sort 'em out!' was his cry. 'Here you are, ladies! Half-price to-day!' and he was so impressed with the importance of a jingle, he filled up all his pauses with the rattle of plates and cups, and gave his upheld dishes a testificatory ring. A neighbour of his understood the world just as well. 'Don't go away, ladies!' went his perpetual *reveillé*. We're bound to serve you well, ladies! Don't go away!' And a toy-man, within the touch almost of his elbow, accompanied him excellently. 'Farthing each!' he sounded out, in the fashion of a bass. 'Farthing every one! No mistaking here! All one price!' and he spun his clay angels on their india-rubber string, and blew on his scarlet trumpets their most vivacious squeak. Then there was a lady facing him who sold caps and ribbons; and had the former strung up with their empty faces where they looked most winning, and where there could be the least discovery that they were on no heads at all. 'You can't have *that!*' she exclaimed, unhooking the very specimen of fascinating millinery that was the object on which all eyes were fixed. 'How foolish of me to have brought it out. That's sold!' And the stimulus this artful touch gave to dilatory judgment, brought such an accession of outstretched arms and calculating eyes, the cap-lady knew that that was the time to fling down another stroke. 'Take care of your purses, ladies!' ran her brisk and shrewd advice. 'A rare market is this for gittin' your pockets picked. And a rare market, too, for gittin' my goods stolen if I don't look sharp!' And this was the signal for her to give a broad sweep of all her ribbons from the fingers that were testing them, and for customers to be so startled by the hint, they made their purchases hastily, and got gratefully and carefully away.

In the open area which this lively avenue surrounded was another dealer aware of the value of a tongue. He was a fine old man, hale, and gray, and bearded, and substantially clothed and shod. 'Tate-zut!' was his cry, with, after, a moment's pause. 'Tate-zut!'—and then a pause again. And 'Tate-zut!—Tate-zut!—Tate-zut!' till time had come to take in his surroundings, and discover the meaning of his cry. The keeper of a potato-can, of course; his stock in a covering so large it stood on four massive wheels, and, hearty as he was, he was not enough alone to ply his trade. His wife (a little woman, of course) was with him; and whilst he submitted himself to the exertion of his mangled cry, and to opening the door of his 'establishment' every time there was a bite, she cut the released potato in half, and cooled its smoking bosom with a generous sprinkling of salt.

A small child had set up, within eye-shot, as a dealer for herself. She had a tray half a yard square, perhaps, on a stand half a yard high; and laid here were two shillingsworth, it may be, of toys. Suppose she sold them all, how much would be her reward? Suppose she had some stolen, what would be her starved living then? *Would* any one steal from a poor, cold, painstaking little girl? Yes; absolutely. That was the cause of her humble goods having the protection round them of a thin garden trellis-wire.

'You see,' she said, in matter-of-fact explanation, 'I've had some stolen often. When your back's turned, or when you're not a-watchin', the boys they sneaks round!'

Not far off was an avenue devoted to cast-off clothing. In one of the niches in it there was especial skill displayed in attracting—the system, indeed, must have been almost enough to have driven excitable ladies mad. The proprietress (a large, grave, *silent* woman) stood on her shop-floor, with her hands at the neck of a monster sack or bag; her mate (a thin young man, pretty-featured and fair) stood upon her counter, as designedly mute as she, and hung up her treasures as she placidly handed them out. The woman lowered her hand into the gigantic bag; drew it up; spread out what she dug out; and looked at it with a ruminating eye. It was a silk jacket perhaps, or a braided gown; it was a frilled skirt, or a child's much-bedizened coat; second-hand, everything, and with unmistakable marks of wear and tear; but whatever the make or the material, there was no variety in the solemn show. Madam bent over it, mused on it with a serene smile, marked its shape, its trimming, its quality, found all satisfactory, and—handed it up to the expectant young man. The women looking on were frantic. They struck out at the garment as it was being handed up; they caught the hem of it, they felt it, they flipped it out to get a glimmering of its width. No use. It was raised, and raised, and raised (slowly? Ah! with a sloth that made the aggravation), till it was on the high level, and safe from the contamination of any but buying hands. Then those most vulnerable to this tantalisation were pricked to the right point. 'How much?' they asked, in lowly and subdued tones; and the price was whispered to them, and they thought it best to pay it, without any of the usual long and noisy 'bate.'

Among the second-hand clothes-sellers was a woman with but an umbrellaful of garments, and these so patched and old, it seemed impossible they should be thought good enough to sell. But they were, though; and a poor woman came up and asked the price of a thin scant flannel petticoat, as if it had been a gem. It was a shilling, a twelfth part, perhaps, of the poor creature's weekly earnings; and it was more than she could spare. She might get it cheaper, though; and the best way for that to be accomplished was to inspect the garment at its weakest part. It was very thin—worn almost to a vapour—in front, where the wearing would be sure to come, and the would-be purchaser turned that uppermost, and gave a little depreciatory smile.

'It's only where the stays 'as been, ma'am!' chirped out the dealer, perfectly up to the manœuvre. 'It's only the rubbing of the busk!' as if, because the busk had made the thinning, it was *no* thinning, but something almost to be admired! But to this the customer's experience did not lead her, and she still held the petticoat very hesitatingly in her hand.

'You can't expect it to be *new*, ma'am!' argued the stall-keeper, stepping on to fresh ground as she found the former would not hold.

And to this the poor woman gave in. 'No,' she said, giving a feeble shake of her head. The words, perhaps, had a double meaning to her. She could *not* expect—she dared *not* hope for the bliss to have *new* clothes; and that was the cause possibly

Digitized by Google

of the little hopeless sigh. Anyhow, she put down the petticoat, and walked away.

Close to where these two women went through their no-negotiation, there was a perfect bower of holly. It was heaped up into glistening trees, and the pale mistletoe hung on it, and shewed up its rich colour excellently. 'Penny a bunch! Penny a bunch!' was heard all round; and many were the pennyworths carried away. One smart, plump, young woman leaving the market with her portion of prickly leaves, observed with self-complacency: 'It's a good job it isn't mistletoe!' as if, if it had been, the young men *must* have jumped at her, and kissed her, and, for her life, she could not have thought they were to blame! Other women bargained that their pennyworth *should* contain some mistletoe, and walked off with a deep impression of their skill. This necessity for things to be purchasable for a penny was acknowledged from the beginning of the market to the end. There were penny hillocks of different-sized nails; penny heaps of small screws; penny gridirons; penny hanks of rope; pennyworths of wash-leather; of muffins; penny bottles of scent; penny dozens of all sorts of buttons; quite a skein, for the same price, of braid; a triplet of reels of cotton; two lemons, and sometimes three; a regular assortment of blue, and starch, and spice—four packets, and each as neat as though it cost a pound; a thick bunch of onions; a brace of herrings; a bundle of burnished sprats; and finally, a whole dozen of tin skewers, being, as the woman screeched who sold them: 'Twelve a penny! Twelve a penny! and every one of 'em with a good pint!' Besides which, there were traysful of old keys, each one a penny, kept on the chance that they would fit old locks; and old tooth-brushes—in much request, if supply is any criterion of demand, for there was a hideous spread of them; old tools, which workmen took up cannily, and tested with faces that were very acute; old mended china, old music, old books, old shoes, old jewellery, and, if such may be added to a list of things that were second-hand, penny basins of pea-soup.

This latter was a commodity that, in conjunction with the halfpenny baked potato, formed, the favourite meal among the men. They were to be discovered—just glimpses of them—behind some tall article on their stand, sipping as much as they could get, between attending to the demands of their customers and watching every approaching pair of hands; but, for the women—they clung, as women always do, gratefully to their tea, and had a particular little lounging-place of their own. It had a fireplace—an open cylinder of glowing coal on a pedestal three feet high, roast-chestnut fashion—and round this the women drank their tea, and chatted. A penny a cup was, of course, the price; and even at that the taste of the drinkers was consulted. The *marchande*, who was fat, and tall, and very dirty, asked each lady whether she took milk and sugar, and found some of them with so sweet a tooth she trembled for her profit. 'There!' she cried to one *exigeante* young woman as she handed her her cup, 'you have a'most a 'aporth of sugar in *that!*' And considering the young woman had a warm of her finger-tips in for her penny as well, it must be admitted she knew how to make the best of a bargain.

From this unlovely lounge, it was but one step out of the market into the street; it was a step, however, not quickly trodden. It must require some courage to set up a stall, even within the wide gates of a market, to judge from the number of traders who inconveniently try to do their business without. It is true, some of these may be astute geniuses, who have taken up their position there of artful intent, calculating on the timidity of the class of buyers who may be caught before venturing into the hurly-burly, or on the indecision of those who may wander through the mazes, and come out yet with their money in their hand; but there they were. There, also, were the usual stock ladies and gentlemen who strive to win the compassion of a crowd: the men who stand on two dwarfed wooden legs; the *artiste* who plays tom-tom sort of tunes on his jaw-boneless and mobile chin; the other gentleman, who has a ghostly fiddle-bow instead of a right arm, and finds he can execute polkas and valses nimbly and quite well. But to give a list of these would be to compile a catalogue of no inconsiderable part of the gratis exhibitions of London, and that shall be let alone. Sufficient for the sketch is the subject thereof; and the Cheap Market has been drawn.

A SECRET OF THE SEA.

We had battled round the Horn, and up through the 'roaring Forties.' Decks had just been washed down, and both passengers and crew were rigging themselves out in smarter togs than usual, in honour of our first sunny, quiet Sunday at sea, when one of the men on the forecastle sang out: 'A sail!' It was the first that we had seen since we had fairly got away from Sydney, and therefore it excited unusual interest. The captain bade the man at the wheel change the course a point to the westward, that we might make sure of speaking the welcome stranger; and when we came on deck again after breakfast, every glass on board was levelled at her, and the signal-box was got out in readiness. We made the stranger out to be a low black brig, with a round stern, a white quarter-rail, and very rakish masts—the lower masts painted white. The spanker was brailed up, but all other canvas, except studding-sails, was set—even a cotton main sky-sail. The brig flew no bunting of any kind; but something in the cut of her double topsails, and the build of her hull and white deck-houses, led the experts on board our ship to pronounce her a Yankee. In vain did we run up our fluttering lines of gay, party-coloured, little signal-flags. Up and down they went with good-tempered patience, but the brig's gaff still obstinately continued dumb. Not a man or boy could we get a glimpse of on board her; and the way in which she was sailed was most un-Yankee-like, unless there were some piratical purpose in it. Now she was kept full, now she fell off her course with flapping canvas, and sometimes she slewed round, head on to the wind, and was regularly taken aback. Then presently she would forge round, fill again, and slant off on another tack. If vessels could get tipsy—and one *has* heard of a 'tight ship'—you might have said that the brig had taken too much grog on board. Her remarkable manœuvres puzzled us sorely at first, but presently our captain said, contemptuously: '*Pirates!* Not much of that, I reckon. It's my belief that every man

Digitized by Google

Jack on board is drunk. They were drinking "Sweethearts and wives" a little too deep last night, I guess; and now they're all skulking, from the skipper to the cabin-boy.—Mr Largie'—to the chief-officer—'lower away one of the quarter-boats, and board her. I'll stand off and on till you've found out what's up.'

'There's room for you, if you like to come,' said Largie to me as he went over the side; and I followed him down into the boat.

The excitement of the trip was attractive after the confined monotony of shipboard life; but, not wishing to make myself out to be braver than I am, I will acknowledge that I felt 'rather queer' at first when the davit-blocks were unhooked, and we had pushed off and were pulling away. For one thing, as the light boat was sent up like a foam-bell on the unfathomed waves, I began to fear as to whether I had not boasted too soon of never being sea-sick. For another, the waste of weltering waters, with no visible bottom or shore to reassure a landsman's eye, seemed so drearily boundless, in spite of the sunlight on them—the countless golden spangles on the countless ever-washing waves, indeed, rather intensified the feeling—that I more than half fancied that I had foolishly thrown away my chance of ever getting home across the watery wilderness, when the little boat danced off from the big ship; itself looking so insignificant, when seen from the outside, heaving on the vast ocean, beneath the vast sky, that had only one another to limit them, and *that* with a dreamy vagueness which suggested limitless sea and sky beyond. I gazed ruefully at the familiar faces clustered along the bulwarks, and when these faces vanished, as the boat slid down into the trough of the sea, I seemed to be sinking down, down to the centre, or farther, as one seems to be falling through the bed in the same direction on waking from a momentary snatch of dyspeptic sleep. 'Use is everything,' however, and use is soon full grown. After some half-dozen sledge-like dips and cork-like rises, I ceased to look back regretfully at our good ship, and reserved all my curiosity for our 'chase.' A nice chase she led us, jigging and reeling about as she did. Time after time the mate had to alter the direction of the boat's nose. At last, however, as we topped a ridge crisping into white foam for its fall, we saw the brig bearing right down upon us. She was clipper-built below the water-line, but had bluff, almost apple bows above; and the spray which her sharp cut-water threw up, painted their blistered tar with rainbows. About she staggered again, when she had almost run us down, and we pulled under her stern. 'Heave us a line, you lubbers!' shouted Largie, as the boat bumped against her weather-side. But no line was thrown; so the man in the bows hooked on to the main-chains; the boat was made fast somehow, and we scrambled on board.

The first thing Largie did was to send a man to the wheel, which was 'bobbing around' in a very eerie fashion. The tiller-chains ground up and down; the spokes went backwards and forwards, as if unseen hands—some ghostly mariner's—were pulling and pressing at them. When the flesh-and-blood man at the wheel had had his course given him, the rest of us commenced our inspection. The brig looked most dismally lonely both aloft and alow. The only living thing above deck was a big ape in the foretop, which shewed its teeth, and jabbered down at us, as if it had been frightened out of its wits, and then slipped through the lubber-hole, and curled itself up between the mast and the futtock-shrouds. Both the deck-houses were empty. The bunks had been stripped. A pair of sea-boots, a sea-chest with the lid smashed in, a black cutty-pipe, and a litter of rubbish, were the only contents in either. In the galley was half a bucketful of burned rice; and a pannikin, with a drop of something brown in it that tasted like rum and coffee, stood on the stove. The main hatch-way was open; the combings and part of the deck close by were charred; a very little of the cargo had also been burned. When we had cleared away the greasy black ashes that lay on the top, we came upon charred hides. There were brown-red splashes and spots, plainly of dried-up blood, upon the deck; a sailor's greasy knife-sheath; a pewter watch-case, trodden out of shape; a heap of biscuit-crumbs, with footmarks in it; and a half-burned envelope, with '——gh——t P—plar' alone legible upon it. Here and there we found a bullet in the bulwarks, that must have been fired on board; and on one of the belaying-pins there was a bloody wisp of gray hair. The water-casks had been started, and we could find no stores. Before we looked for *them*, however, Largie had taken as much sail as he could manage off the brig, for the weather had changed, and the wind was freshening rather disagreeably. The men tried to catch the ape when they went aloft; but he swung himself from rope to rope, rested for a moment to jabber at them, and then again sought some unsociable nook of refuge. The blending of fear and ferocity in his eyes was something horrible to witness. 'The muckle beastie is na canny,' said a compatriot member of Largie's crew, sagely shaking his huge, gray-eyed, sandy-thatched, Aberdonian head. Before we hunted for the stores, too, we had been down into the cabin, and had seen a sight there which I shall not easily forget.

Upon the floor, under the table, lay a green-painted iron box, with the lid prised off the hinges. A cane-bottomed lounging-chair, with a taper white forefinger clinging, blood-glued, to a rail of the carved back, was overturned in one corner of the cabin. In another, on its back, lay the corpse of a man—a short, spare man, with a yellow 'goatee' beard: the upper part of his head was frightfully battered in; and his shirt and green grass-cloth hip-jacket were stiff with the blood that had gushed, and dribbled, and clotted from the score or so of stabs and shot-wounds with which he was riddled. The flesh on the back of his hands was slashed with knife-cuts; clenched in one there was a fragment of frayed black barege. Amongst the jumble of disordered furniture lay a battered barometer. The cabin had been sacked; lockers and boxes had both been forced open. We found no papers—nothing that could give us the least clue. The brig did not carry her name upon her stern; her quarter-boards had been wrenched off, and all her boats were gone. The only thing we did find that shed any additional light upon the awful tragedy that had plainly been enacted on that cramped stage, was a photograph in the sleeping-berth. It had fallen between the battens of a tumbled bunk; but the open lid of its case had kept it from dropping to the floor. It was the likeness of an exceedingly

Digitized by Google

beautiful young woman, nursing a plump baby, with a short, spare, goatee-bearded man leaning on the back of her chair. Interested—fleah-creepingly interested—as I could not help feeling in our gloomy search, I was very glad when Largie said that it was time to put an end to it. For some time, the brig had been pitching and rolling in a manner very alarming to a landsman, who remembered that he had to be tossed in a cockle-shell of a boat before he could once more feel himself homeward bound. Our ship was taking in reefs; it was high time to get on board. Accordingly, Largie ran the brig in as near as he durst; and then, lashing the helm to keep her clear, we went over the side. The pull back was not a very long one; but I, at anyrate, was very glad when it was over. The boat was nearly stove in when she got alongside. I never felt more thankful in my life than when I was pushed and hauled on deck, drenched to the skin. When safe back amongst cheerful faces and voices in our own good ship once more, I felt as if only in a nightmare dream could I ever have been on board the blood-stained floating hearse that was slanting away into the distance—left perforce to the wild will of the winds and waves; the murdered captain lying stiff in his cabin, with the jabbering ape in the rigging for sole mourner.

THE MONTH:

SCIENCE AND ARTS.

Endeavours towards improved education are certainly among the most prominent and encouraging signs of the times. Mr James Young, the well-known chemist, whose name is so intimately associated with paraffin, has given L.10,000 for the endowment of a School of Technology at Glasgow; a sum that will provide L.300 a year for a professor. A little farther south, the university of Durham, ceasing to confine its teaching to theology, is devising a way to start a school of physical science, and to teach during eight months in the year, instead of twenty-four weeks, as at present. The Owens College at Manchester, with its able staff of professors, is perhaps sufficient for Lancashire; but Yorkshire, lying between, feels that pace must be kept with it, and has taken steps towards the foundation of a Science College, in which her strenuous sons may acquire a knowledge of the materials on which they work, and of the natural phenomena by which they are surrounded. At the initiatory meeting held by the General Council of the Yorkshire Board of Education at Leeds, a good deal of common sense was uttered by the several speakers; and we heartily wish that a chair of Common Sense could be established in the new college. Among the hundreds of thousands of workers in the county of the Red Rose and of the White Rose, the majority are more in want of that, than of a knowledge of natural philosophy. Otherwise, they would not so willingly submit to the mischievous consequences of trades-unionism. Among these consequences is a self-imposed taxation. Those who call out for reciprocity, says Mr Ashworth, a Lancashire man, 'take no account of the heavy duties levied at home by trades-unions, far heavier than any foreign tariffs, except the American. We cannot have a hammer or nail for domestic use but it has paid its trade-union tribute. The national industry is so shackled and clogged by trades-unions and their hindering rules, that we need not be surprised that a free country like Belgium can fetch pig-iron from Scotland and cotton from England, and return cast-iron and calico back to London and Manchester, and undersell our British trades-unionists in their own market.' If the new schools and colleges will but clear away such obstructiveness as this, they will be a boon indeed.

Perhaps the most remarkable among the signs above referred to is the change made by act of parliament in the government of our public schools—the Grammar-schools of England. New 'governing bodies,' as they are termed, are to be appointed, and among those authorised to appoint are the President and Council of the Royal Society—the foremost scientific society in the world. They will naturally nominate scientific men to be members of the governing bodies, so that, as we may expect, science will henceforth become a part of the education given at seven schools—that is, Westminster, Charterhouse, Harrow, Eton, Winchester, Rugby, and Shrewsbury. This is an important change, at variance with tradition and practice, but it can hardly fail of benefit. Many a youth whom grammar repels, would be attracted by natural philosophy. We shall next see our middle-class schools taking up science.

The *Great Eastern*, with 2736 nautical miles of cable telegraph on board, is now on her way to India, round the Cape of Good Hope, to lay a line from Bombay to Aden and Suez, preparatory to a direct communication between England and her great empire in the east. But how little attention did the sailing of the great ship attract when compared with the excitement that attended her departure with the first Atlantic cable. It seems that we are grown familiar with deep-sea cables, regarding their laying as matters of course, and with more or less of indifference. Yet it is no trifling work on which the *Great Eastern* is now employed. With twelve hundred miles of cable on board attendant vessels, there will be length enough to establish a connection with the present Malta and Alexandria cable. By-and-by the projected line from Falmouth to Gibraltar and Malta will be laid, and then our Secretary of State for India will be able to flash messages direct from his office in Downing Street to Bombay and Calcutta. It seems inevitable that this achievement should be followed by an extension to Singapore, and thence to Australia, by which we shall get daily telegrams from our brethren at the antipodes. Moreover, we can look forward to round-the-world messages; for the Russian government have granted a 'concession' for extending their Siberian line to Japan and China: and so the 'highway of thought,' carried onwards from the east and from the west, will one day meet and form a continuous line, a triumph indeed of science and civilisation.

A small item of news from India has occasioned some sensation in the engineering world. The Governor-general, Lord Mayo, has sent to the United States for an engineer accustomed to the rough and ready way of constructing railways in that country, and at a cost far below that which an English engineer would consider possible. India is yet in want of thousands of miles of railway; and if, by Lord Mayo's experiment, they can be made cheaply, the benefit will be great to all

Digitized by Google

concerned, including English engineers, who may perhaps learn a useful lesson therefrom, and lay down cheap railways in Australia. By the way, Australia is seeking to develop a trade in another kind of live-stock as well as sheep and oxen, and has offered to supply the Indian government with all the horses required for their army at twenty-five pounds apiece.

A special series of Art and Industry Exhibitions is to be held at South Kensington, where permanent buildings for the purpose are now commenced. The first is to take place in 1871. In the same year, a World's Fair is to be held somewhere on the Mississippi, probably at Louisville. Another item from beyond the Atlantic is worth mentioning: the first census ever taken in the republic of Buenos Ayres has been made up, and it shews a total population of 1,200,000, or one to a square mile. Here is a fact for those who want to know where room can be found for emigrants. In the city of Buenos Ayres the number of inhabitants is 180,000.

There is talk of an international commission to sit in Paris to make another attempt towards the adoption of a uniform system of weights and measures. Meanwhile, the Central Chamber of Agriculture, at a recent meeting held in London, carried a unanimous resolution, 'that in their opinion all agricultural produce should be sold by weight only,' with a view to get rid of the present confusion of measures.

Geologists are much interested in the results of the exploration of the deep sea made last summer in H.M.S. *Porcupine* by Dr Carpenter, Professor Wyville Thomson, and Mr Gwyn Jeffreys. The *Porcupine* was lent for the purpose by the Admiralty, at the instance of the Council of the Royal Society. Chief among the physical facts discovered is, that while the surface of the sea may have a temperature of fifty-two degrees, there are cold tracts and warm tracts below, existing within a short distance of each other, and marked by characteristic differences. The bottom of the cold tract is formed of barren sandstone, mingled with fragments of older rock, inhabited but by a few animals, and those mostly of the arctic kinds. In the adjacent warm area, on the contrary, the bottom is cretaceous, and abounding with life. Now, suppose these two tracts upheaved, and become dry land. Geologists would naturally believe them to have been formed at different times, and under very different circumstances; and yet here we find them contemporaneous and almost conterminous. Here, then, is a fact which will have to be considered in all future discussions about what is called 'geological time.'

Another fact established by this exploration, and contrary to long-received opinion, is, that in the deepest seas yet examined, nearly 2500 fathoms, the bottom teems with animal life, the animals having perfect eyes. This at once upsets the long-received notion that the depths of the sea were devoid of life and of light. The life is now an established fact, and the light may be inferred, for if there be no light down in these abysses, why have the animals eyes? The whole account of the exploration above named, with its leading results, was given by Dr Carpenter at the first two evening meetings of the Royal Society for the present session. Interesting as it was, there is yet much more to come out of it; in the meantime, it suggests important questions. If ordinary daylight penetrates to the bottom of the sea, how does it penetrate? or is there at the bottom some kind of phosphorescent light? If a photograph could be taken deep down in the sea, that would testify to the presence of daylight. As to the breathing of the animals at the bottom, there is no difficulty; for the late Master of the Mint, Mr Graham, has shewn, by his liquid diffusion of gases, that air may be diffused downwards to the greatest depths.

Volume VI. of the Fourth Series of CHAMBERS'S JOURNAL *is now completed, price Nine Shillings.*

A Title-page and Index, price One Penny, have been prepared, and may be ordered through any bookseller.

An elegant cloth case for binding the whole of the numbers for 1869 *is also ready.*

Back numbers to complete sets may at all times be had.

Now Ready, in a wrapper, price 3d.

A Christmas Extra Double Number of *Chambers's Journal*, entitled

BEGUMBAGH,

Being an Episode of the Indian Mutiny.

The number will be included in the Monthly Part to be issued at the end of December.

Next week will be commenced

GWENDOLINE'S HARVEST.

By the Author of *Lost Sir Massingberd*, and *A Perfect Treasure.*

END OF SIXTH VOLUME.

Printed and Published by W. and R. Chambers,
47 Paternoster Row, London, and 339 High Street, Edinburgh.

BEGUMBAGH

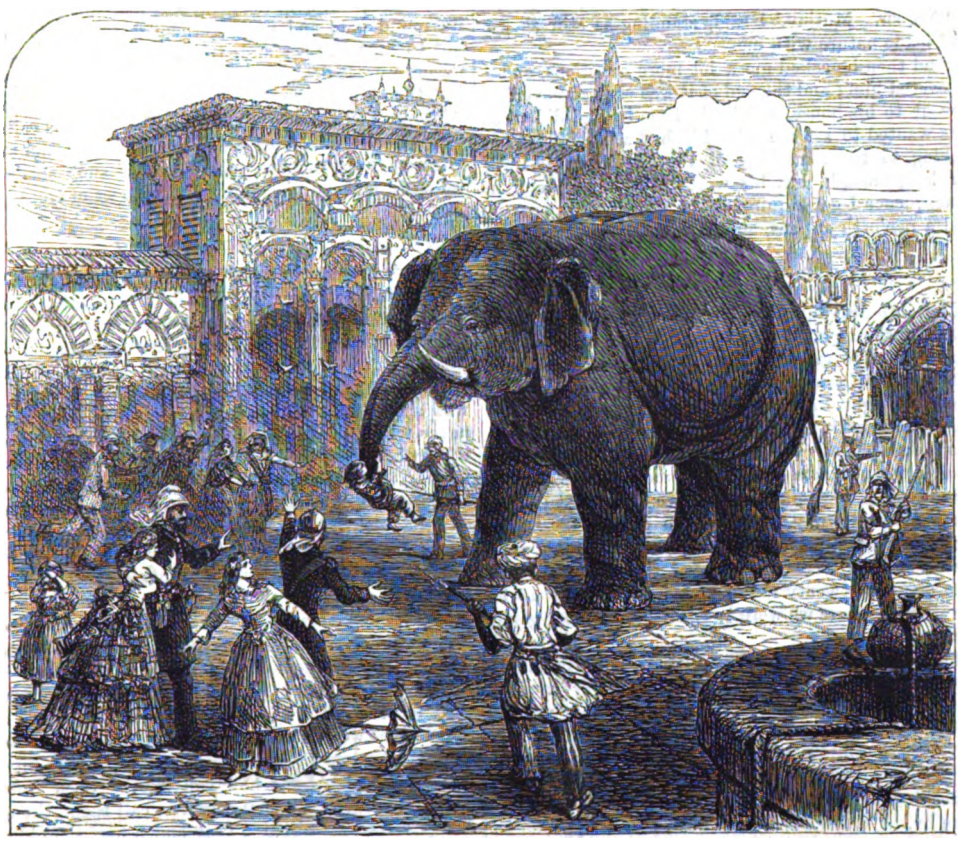
AN

EPISODE OF THE INDIAN MUTINY.

A CHRISTMAS EXTRA DOUBLE NUMBER OF

CHAMBERS'S JOURNAL.

CHRISTMAS, 1869. PRICE THREEPENCE.



BEGUMBAGH.

INTRODUCTION.

I'VE waited all these years, expecting some one or another would give a full and true account of it all; but little thinking it would ever come to be my task. For it's not in my way; but seeing how much has been said about other parts and other people's sufferings, while ours never so much as came in for a line of newspaper, I can't think it's fair; and as fairness is what I always did like, I set to, very much against my will; while, on account of my empty sleeve, the paper keeps slipping and sliding about, so that I can only hold it quiet by putting the lead inkstand on one corner, and my tobacco-jar on the other. You see, I'm not much at home at this sort of thing; and though, if you put a pipe and a glass of something

Digitized by Google

before me, I could tell you all about it, taking my time, like, it seems that won't do. I said: 'Why don't you write it down as I tell it, so as other people could read all about it?' But 'No,' he says; 'I could do it in my fashion, but I want it to be in your simple unadorned style; so set to and do it.'

I daresay a good many of you know me—seen me often in Bond Street, at Facet's door—Facet's, you know, the great jeweller, where I stand and open carriages, or take messages, or small parcels with no end of valuables in them, for I 'm trusted. Smith, my name is, Isaac Smith; and I 'm that tallish, grisly fellow with the seam down one side of my face, my left sleeve looped up to my button, and not a speck to be seen on that 'commissionnaire's' uniform, upon whose breast I 've got three medals.

I was standing one day, waiting patiently for something to do, when a tallish gentleman came up, nodded as if he knew me well, and I saluted.

'Lose that limb in the Crimea, my man?' he said.

'No, sir. Mutiny,' I said, standing as stiff as use had made nature with me.

And then he asked me a lot more questions, and I answered him; and the end of it was that one evening I went to his house, and he had me in, and did what was wanted to set me off. I 'd had a little bit of an itching to try something of the kind, I must own, for long enough, but his words started me; and in consequence I got a quire of the best foolscap paper, and a pen'orth of pens, and here 's my story.

I.

Dub-dub-dub-dub-dub-dub. Just one light beat given by the boys in front—the light sharp tap upon their drums, to give the time for the march; and in heavy order there we were, her Majesty's 156th Regiment of Light Infantry, making our way over the dusty roads with the hot morning sun beating down upon our heads. We were marching very loosely, though, for the men were tired, and we were longing for the halt to be called, so that we might rest during the heat of the day, and then go on again. Tents, baggage-wagons, women, children, elephants, all were there; and we were getting over the ground at the rate of about twenty miles a day, on our way up to the station, where we were to relieve a regiment going home.

I don't know what we should have done if it hadn't been for Harry Lant, the weather being very trying, almost as trying as our hot red coats and heavy knapsacks, and flower-pot bushies, with a round white ball like a child's plaything on the top; but no matter how tired he was, Harry Lant had always something to say or do, and even if the colonel was close by, he 'd say or do it. Now, there happened to be an elephant walking along by our side, with the captain of our company, one of the lieutenants, and a couple of women in the howdah; while a black nigger fellow, in clean white calico clothes, and not much of 'em, and a muslin turban, and a good deal of it, was striddling on the creature's neck, rolling his eyes about, and flourishing an iron toasting-fork sort of thing, with which he drove the great flap-eared patient beast. The men were beginning to grumble gently, and shifting their guns from side to side, and sneezing, and coughing, and choking in the kicked-up dust, like a flock of sheep, when Captain Dyer scrambles down off the elephant, and takes his place alongside us, crying out cheerily: 'Only another mile, my lads, and then breakfast.'

We gave him a cheer, and another half-mile was got over, when once more the boys began to flag terribly, and even Harry Lant was silent, which, seeing what Harry Lant was, means a wonderful deal more respecting the weather than any number of degrees on a thermometer, I can tell you; but I looked round at him, and he knew what it meant, and, slipping out, he goes up to the elephant. 'Carry your trunk, sir,' he says; and taking gently hold of the great beast's soft nose, he laid it upon his shoulder, and marched on like that, with the men roaring with laughter.

'Pulla-wulla. Ma-pa-na,' shouted the nigger who was driving, or something that sounded like it, for of all the rum lingoes ever spoke, theirs is about the rummest, and always put me in mind of the fal-lal-la or tol-de-rol chorus of a song.

'All right. I 'll take care!' sings out Harry; and on he marched, with the great soft-footed beast lifting its round pats and putting them down gently so as not to hurt Harry; and, trifling as that act was, it meant a great deal, as you 'll see if you read on, while just then it got our poor fellows over the last half-mile without one falling out; and then the halt was called; men wheeled into line; we were dismissed; and soon after we were lounging about, under such shade as we could manage to get in the thin topes of trees.

II.

That 's a pretty busy time, that first half-hour after a halt: what with setting loosely up a few tents, and getting a fire lighted, and fetching water; but in spite of our being tired, we soon had things right. There was the colonel's tent, Colonel Maine's—a little stout man, that we all used to laugh at, because he was such a little, round, good-tempered chap, who never troubled about anything, for we hadn't learned then what was lying asleep in his brave little body, waiting to be brought out. Then there was the mess tent for the officers, and the hospital tent for those on the sick-list, beside our bell tents, that we shouldn't have set up at all, only to act as sun-shades. But, of course, the principal tent was the colonel's.

Well, there they were, the colonel and his lady, Mrs Maine—a nice, kindly-spoken, youngish woman: twenty years younger than he, she was; but, for all that, a happier couple never breathed; and they two used to seem as if the regiment, and India, and all the natives were made on purpose to fall down and worship the two little golden idols they 'd set up—a little girl and a little boy, you know. Cock Robin and Jenny Wren, we chaps used to call them, though Jenny Wren was about a year and a half the oldest. And I believe it was from living in France a bit, that the colonel's wife had got the notion of dressing them so; but it would have done your heart good to see those two children—the boy with his little red tunic and his sword, and the girl with her red jacket and belt, and a little canteen of wine and water, and a tiny tin mug; and them little things driving the old black ayah half-wild with the way they used to dodge away from her to get amongst the men, who took no end of delight in bamboozling the fat old woman when she was hunting for them; sending them here, and there, and everywhere, till she 'd turn round and make signs with her hands, and spit on

Digitized by Google

the ground, which was her way of cursing us. For I must say that we English were very, very careless about what we did or said to the natives. Officers and men, all alike, seemed to look upon them as something very little better than beasts, and talked to them as if they had no feelings at all, little thinking what fierce masters the trampled slaves could turn out, if ever they had their day—the day that the old proverb says is sure to come for every dog; and there was not a soul among us then that had the least bit of suspicion that the dog—by which, you know, I mean the Indian generally—was going mad, and sharpening those teeth of his ready to bite.

Well, as a matter of course, there were other people in our regiment that I ought to mention: Captain Dyer I did name; but there was a lieutenant, a very good-looking young fellow, who was a great favourite with Mrs Colonel Maine; and he dined a deal with them at all times, besides being a great chum of Captain Dyer's—they two shooting together, and being like brothers, though there was a something in Lieutenant Leigh that I never seemed to take to. Then there was the doctor—a Welshman he was, and he used to make it his boast that our regiment was about the healthiest anywhere; and I tell you what it is, if you were ill once, and in hospital, as we call it—though, you know, with a marching regiment that only means anywhere till you get well—I say, if you were ill once, and under his hands, you'd think twice before you made up your mind to be ill again, and be very bad too before you went to him. Pestle, we used to call him, though his name was Hughes; and how we men did hate him, mortally, till we found out his real character, when we were lying cut to pieces almost, and him ready to cry over us at times as he tried to bring us round. 'Hold up, my lads,' he'd say, 'only another hour, and you'll be round the corner!' when what there was left of us did him justice. Then, of course, there were other officers, and some away with the major and another battalion of our regiment at Wallahbad; but they've nothing to do with my story.

I do not think I can do better than introduce you to our mess on the very morning of this halt, when, after cooling myself with a pipe, just the same as I should have warmed myself with a pipe if it had been in Canady or Nova Scotia, I walked up to find all ready for breakfast, and Mrs Bantem making the tea.

Some of the men didn't fail to laugh at us who took our tea for breakfast; but all the same I liked it, for it always took me home, tea did—and to the days when my poor old mother used to say that there never was such a boy for bread and butter as I was; not as there was ever so much butter that she need have grumbled, whatever I cost for bread; and though Mrs Bantem wasn't a bit like my mother, she brought up the homely thoughts. Mrs Bantem was, I should say, about the biggest and ugliest woman I ever saw in my life. She stood five feet eleven and a half in her stockings, for Joe Bantem got Sergeant Buller to take her under the standard one day. She'd got a face nearly as dark as a black's; she'd got a moustache, and a good one too; and a great coarse look about her altogether. Measles—I'll tell you who he was directly—Measles used to say she was a horse godmother; and they didn't seem to like one another; but Joe Bantem was as proud of that woman as she was of him; and if any one hinted about her looks, he used to laugh, and say that was only the outside rind, and talk about the juice. But all the same, though, no one couldn't be long with that woman without knowing her flavour. It was a sight to see her and Joe together, for he was just a nice middle size—five feet seven and a half—and as pretty a pink and white, brown-whiskered, open-faced man as ever you saw. We all got tanned and coppered over and over again, but Joe kept as nice and fresh and fair as on the day we embarked from Gosport years before; and the standing joke was that Mrs Bantem had a preparation for keeping his complexion all square.

Joe Bantem knew what he was about, though, for one day when a nasty remark had been made by the men of another regiment, he got talking to me in confidence over our pipes, and he swore that there wasn't a better woman living; and he was right, for I'm ready now at this present moment to take the Book in my hand, and swear the same thing before all the judges in Old England. For you see we're such duffers, we men: shew us a pretty bit of pink and white, and we run mad after it; while all the time we're running away from no end of what's solid and good, and true, and such as'll wear well, and shew fast colours, long after your pink and white's got faded and grimy. Not as I've much room to talk. But present company, you know, and setra. What, though, as a rule, does your pretty pink and white know about buttons, or darning, or cooking? Why, we had the very best of cooking; not boiled tag and rag, but nice stews and roasts and hashes, when other men were growling over a dog's-meat dinner. We had the sweetest of clean sheets, and never a button off; our stockings were darned; and only let one of us—Measles, for instance—take a drop more than he ought, just see how she'd drop on to him, that's all. If his head didn't ache before, it would ache then; and I can see as plain now as if it was only this minute, instead of years ago, her boxing Measles' ears, and threatening to turn him out to another mess if he didn't keep sober. And she would have turned him over too, only, as she said to Joe, and Joe told me, it might have been the poor fellow's ruin, seeing how weak he was, and easily led away. The long and short of it is, Mrs Bantem was a good motherly woman of forty; and those who had anything to say against her, said it out of jealousy, and all I have to say now is what I've said before: she only had one fault, and that is, she never had any little Bantems to make wives for honest soldiers to come; and wherever she is, my wish is that she may live happy and venerable to a hundred.

That brings me to Measles. Bigley his name was; but he'd had the small-pox very bad when a child, through not being vaccinated; and his face was all picked out in holes, so round and smooth that you might have stood peas in them all over his cheeks and forehead, and they wouldn't have fallen off; so we called him Measles. If any of you say 'Why?' I don't know no more than I have said.

He was a sour-tempered sort of fellow was Measles, who listed because his sweetheart laughed at him; not that he cared for her, but he didn't like to be laughed at, so he listed out of spite, as he said, and that made him spiteful. He was always grumbling about not getting his promotion, and sneering at everything and everybody, and quarrelling with Harry Lant, him, you know, as carried the elephant's trunk; while Harry was never happy without he was teasing

Digitized by Google

him, so that sometimes there was a deal of hot water spilled in our mess.

And now I think I've only got to name three of the drum-boys, that Mrs Bantem ruled like a rod of iron, though all for their good, and then I've done.

Well, we had our breakfast, and thoroughly enjoyed it, sitting out there in the shade. Measles grumbled about the water, just because it happened to be better than usual; for sometimes we soldiers out there in India used to drink water that was terrible lively before it had been cooked in the kettle; for though water insects out there can stand a deal of heat, they couldn't stand a fire. Mrs Bantem was washing up the things afterwards, and talking about dinner; Harry Lant was picking up all the odds and ends, to carry off to the great elephant, standing just then in the best bit of shade he could find, flapping his great ears about, blinking his little pig's eyes, and turning his trunk and his tail into two pendulums, swinging them backwards and forwards as regular as clockwork, and all the time watching Harry, when Measles says all at once: 'Here come some lunatics!'

III.

Now, after what I've told you about Measles' listing for spite, you will easily understand that the fact of his calling any one a lunatic did not prove a want of common reason in the person spoken about; but what he meant was, that the people coming up were half-mad for travelling when the sun was so high, and had got so much power.

I looked up and saw, about a mile off, coming over the long straight level plain, what seemed to be an elephant, and a man or two on horseback; and before I had been looking above a minute, I saw Captain Dyer cross over to the colonel's tent, and then point in the direction of the coming elephant. The next minute, he crossed over to where we were. 'Seen Lieutenant Leigh?' he says in his quick way.

'No, sir; not since breakfast.'

'Send him after me, if he comes in sight. Tell him Miss Ross and party are yonder, and I've ridden on to meet them.'

The next minute he had gone, taken a horse from a sycee, and in spite of the heat, cantered off to meet the party with the elephant, the air being that clear that I could see him go right up, turn his horse round, and ride gently back by the elephant's side.

I did not see anything of the lieutenant, and, to tell the truth, I forgot all about him, for I was thinking about the party coming, for I had somehow heard a little about Mrs Maine's sister coming out from the old country to stay with her. If I recollect right, the black nurse told Mrs Bantem, and she mentioned it. This party, then, I supposed contained the lady herself; and it was as I thought. We had had to leave Patna unexpectedly to relieve the regiment ordered home; and the lady, according to orders, had followed us, for this was only our second day's march.

I suppose it was my pipe made me settle down to watch the coming party, and wonder what sort of a body Miss Ross would be, and whether anything like her sister. Then I wondered who would marry her, for, as you know, ladies are not very long out in India without picking up a husband. 'Perhaps,' I said to myself, 'it will be the lieutenant;' but ten minutes after, as the elephant shambled up, I altered my mind, for Captain Dyer was ambling along beside the great beast, and his was the hand that helped the lady down—a tall, handsome, self-possessed girl, who seemed quite to take the lead, and kiss and soothe the sister, when she ran out of the tent to throw her arms round the new-comer's neck.

'At last, then, Elsie,' Mrs Colonel said out aloud. 'You've had a long dreary ride.'

'Not during the last ten minutes,' Miss Ross said, laughing in a bright, merry, free-hearted way. 'Lieutenant Leigh has been welcoming me most cordially.'

'Who?' exclaimed Mrs Colonel, staring from one to the other.

'Lieutenant Leigh,' said Miss Ross.

'I'm afraid I am to blame for not announcing myself,' said Captain Dyer, lifting his muslin-covered cap. 'Your sister, Miss Ross, asked me to ride to meet you, in Lieutenant Leigh's absence.'

'You, then'——

'I am only Lawrence Dyer, his friend,' said the captain smiling.

It's a singular thing that just then, as I saw the young lady blush deeply, and Mrs Colonel look annoyed, I muttered to myself, 'Something will come of this,' because, if there's anything I hate, it's for a man to set himself up for a prophet. But it looked to me as if the captain had been taking Lieutenant Leigh's place, and that Miss Ross, as was really the case, though she had never seen him, had heard him so much talked of by her sister, that she had welcomed him, as she thought, quite as an old friend, when all the time she had been talking to Captain Dyer.

And I was not the only one who thought about it; else why did Mrs Colonel look annoyed, and the colonel, who came paddling out, exclaim loudly: 'Why, Leigh, look alive, man! here's Dyer been stealing a march upon you. Why, where have you been?'

I did not hear what the lieutenant said, for my attention was just then taken up by something else, but I saw him go up to Miss Ross, holding out his hand, while the meeting was very formal; but, as I told you, my attention was taken up by something else, and that something was a little dark, bright, eager, earnest face, with a pair of sharp eyes, and a little mocking-looking mouth; and as Captain Dyer had helped Miss Ross down with the steps from the howdah, so did I help down Lizzy Green, her maid; to get, by way of thanks, a half-saucy look, a nod of the head, and the sight of a pretty little tripping pair of ankles going over the hot sandy dust towards the tent.

But the next minute she was back, to ask about some luggage—a bullock-trunk or two—and she was coming up to me, as I eagerly stepped forward to meet her, when she seemed, as it were, to take it into her head to shy at me, going instead to Harry Lant, who had just come up, and who, on hearing what she wanted, placed his hands, with a grave swoop, upon his head, and made her a regular eastern salaam, ending by telling her that her slave would obey her commands. All of which seemed to grit upon me terribly; I didn't know why, then, but I found out afterwards, though not for many days to come.

We had the route given us for Begumbagh, a town that, in the old days, had been rather famous for its grandeur; but, from what I had heard, it was likely to turn out a very hot, dry, dusty, miserable spot; and I used to get reckoning up how long we should be frizzling out there in India before we got the

Digitized by Google

orders for home; and put it at the lowest calculation, I could not make less of it than five years. At all events, we who were soldiers had made our own beds, and had to lie upon them, whether it was at home or abroad; and, as Mrs Bantem used to say to us, 'Where was the use of grumbling?' There were troubles in every life, even if it was a civilian's—as we soldiers always called those who didn't wear the Queen's uniform—and it was very doubtful whether we should have been a bit happier, if we had been in any other line. But all the same, government might have made things a little better for us in the way of suitable clothes, and things proper for the climate.

And so on we went: marching mornings and nights; camping all through the hot day; and it was not long before we found that, in Miss Ross, we men had got something else beside the children to worship.

But I may as well say now, and have it off my mind, that it has always struck me, that during those peaceful days, when our greatest worry was a hot march, we didn't know when we were well off, and that it wanted the troubles to come before we could see what good qualities there were in other people. Little trifling things used to make us sore—things such as we didn't notice afterwards, when great sorrows came. I know I was queer, and spiteful, and jealous, and no great wonder that, for I always was a man with a nastyish temper, and soon put out; but even Mrs Bantem used to shew that she wasn't quite perfect, for she quite upset me, one day, when Measles got talking at dinner about Lizzy Green, Miss Ross's maid, and, what was a wonderful thing for him, not finding fault. He got saying that she was a nice girl, and would make a soldier as wanted one a good wife; when Mrs Bantem fires up as spiteful as could be—I think, mind you, there 'd been something wrong with the cooking that day, which had turned her a little—and she says that Lizzy was very well, but looks weren't everything, and that she was raw as raw, and would want no end of dressing before she would be good for anything; while, as to making a soldier's wife, soldiers had no business to have wives till they could buy themselves off, and turn civilians. Then, again, she seemed to have taken a sudden spite against Mrs Maine, saying that she was a poor, little, stuck-up, fine lady, and she could never have forgiven her if it had not been for those two beautiful children; though what Mrs Bantem had got to forgive the colonel's wife, I don't believe she even knew herself.

The old black ayah, too, got very much put out about this time, and all on account of the two newcomers; for when Miss Ross hadn't got the children with her, they were along with Lizzy, who, like her mistress, was new to the climate, and hadn't got into that dull listless way that comes to people who have been some time up the country. They were all life, and fun, and energy, and the children were never happy when they were away; and of a morning, more to please Lizzy, I used to think, than the children, Harry Lant used to pick out a shady place, and then drive Chunder Chow, who was the mahout of *Nabob*, the principal elephant, half wild, by calling out his beast, and playing with him all sorts of antics.

Chunder tried all he could to stop it, but it was of no use, for Harry had got such influence over that animal that when one day he was coaxing him out to lead him under some trees, and the mahout tried to stop him, *Nabob* makes no more ado, but lifts his great soft trunk, and rolls Mr Chunder Chow over into the grass, where he lay screeching like a parrot, and chattering like a monkey, rolling his opal eyeballs, and shewing his white teeth with fear, for he expected that *Nabob* was going to put his foot on him, and crush him to death, as is the nature of those great beasts. But not he: he only lays his trunk gently on Harry's shoulder, and follows him across the open like a great flesh-mountain, winking his little pig's eyes, whisking his tiny tail, and flapping his great ears; while the children clapped their hands as they stood in the shade with Miss Ross and Lizzy, and Captain Dyer and Lieutenant Leigh close behind.

'There 's no call to be afraid, miss,' says Harry, saluting as he saw Miss Ross shrink back; and seeing how, when he said a few words in Hindustani, the great animal minded him, they stopped being afraid, and gave Harry fruit and cakes to feed the great beast with.

You see, out there in that great dull place, people are very glad to have any little trifle to amuse them, so you mustn't be surprised to hear that there used to be quite a crowd to see Harry Lant's performances, as he called them. But all the same, I didn't like his upsetting old Chunder Chow; and it seemed to me even then, that we 'd managed to make another black enemy—the black ayah being the first.

However, Harry used to go on making old *Nabob* kneel down, or shake hands, or curl up his trunk, or lift him up, finishing off by going up to his head, lifting one great ear, saying they understood one another, whispering a few words, and then shutting the ear up again, so as the words shouldn't be lost before they got into the elephant's brain, as Harry explained, because they 'd got a long way to go. Then Harry would lie down, and let the great beast walk backwards and forwards all over him, lifting his great feet so carefully, and setting them down close to Harry, but never touching him, except one day when, just as the great beast was passing his foot over Harry's breast, a voice called out something in Hindustani—and I knew who it was, though I didn't see—when *Nabob* puts his foot down on Harry's chest, and Lizzy gave a great scream, and we all thought the poor chap would be crushed; but not he: the great beast was took by surprise, but only for an instant, and, in his slow quiet way, he steps aside, and then touches Harry all over with his trunk; and there was no more performance that day.

'I 've got my knife into Master Chunder for that,' says Harry to me, 'for I 'll swear that was his voice.' And I started to find he had known it.

'I wouldn't quarrel with him,' I says quietly, 'for it strikes me he 's got his knife into you.'

'You 've no idea,' says Harry, 'what a nip it was. I thought it was all over; but all the same, the poor brute didn't mean it, I 'd swear.'

IV.

Who could have thought just then that all that nonsense of Harry Lant's with the elephant was shaping itself for our good; but so it was, as you shall by-and-by hear. The march continued, matters seeming to go on very smoothly—but only seeming, mind you, for let alone that we were all walking upon a volcano, there was a good deal of unpleasantry

Digitized by Google

brewing. Let alone my feeling that, somehow or another, Harry Lant was not so good a mate to me as he used to be, there was a good deal wrong between Captain Dyer and Lieutenant Leigh, and it soon seemed plain that there was much more peace and comfort in our camp a week earlier than there was at the time of which I am now writing.

I used to have my turns as sentry here and there; and it was when standing stock still with my piece, that I used to see and hear so much—for in a camp it seems to be a custom for people to look upon a sentry as a something that can neither see nor hear anything but what might come in the shape of an enemy. They know he must not move from his post, which is to say that he 's tied hand and foot, and perhaps from that they think that he 's tied as to his senses. At all events, I got to see that when Miss Ross was seated in the colonel's tent, and Captain Dyer was near her, she seemed to grow gentle and quiet, and her eyes would light up, and her rich red lips part, as she listened to what he was saying; while, when it came to Lieutenant Leigh's turn, and he was beside her talking, she would be merry and chatty, and would laugh and talk as lively as could be. Harry Lant said it was because they were making up matters, and that some day she would be Mrs Leigh; but I didn't look at it in that light, though I said nothing.

I used to like to be sentry at the colonel's tent, on our halting for the night, when the canvas would be looped up, to let in the air, and they 'd got their great globe-lamps lit, with the tops to them, to keep out the flies, and the draughts made by the punkahs swinging backwards and forwards. I used to think it quite a pretty sight, with the ladies and the three or four officers, perhaps chatting, perhaps having a little music, for Miss Ross could sing like—like a nightingale, I was going to say; but no nightingale that I ever heard could seem to lay hold of your heart and almost bring tears into your eyes, as she did. Then she used to sing duets with Captain Dyer, because the colonel wished it, though it was plain to see Mrs Maine didn't like it, any more than did Lieutenant Leigh, who, more than once, as I 've seen, walked out, looking fierce and angry, to strike off right away from the camp, perhaps not to come back for a couple of hours.

It was one night when we 'd been about a fortnight on the way, for during the past week the colonel had been letting us go on very easily, I was sentry at the tent. There had been some singing, and Lieutenant Leigh had gone off in the middle of a duet. Then the doctor, the colonel, and a couple of subs were busy over a game at whist, and the black nurse had beckoned Mrs Maine out, I suppose to see something about the two children; when Captain Dyer and Miss Ross walked together just outside the tent, she holding by one of the cords, and he standing close beside her.

They did not say much, but stood looking up at the bright silver moon and the twinkling stars; while he said a word now and then about the beauty of the scene, the white tents, the twinkling lights here and there, and the soft peaceful aspect of all around; and then his voice seemed to grow lower and deeper as he spoke from time to time, though I could hardly hear a word, as I stood there like a statue watching her beautiful face, with the great clusters of hair knotted back from her broad white forehead, the moon shining full on it, and seeming to make her eyes flash as they were turned to him.

They must have stood there full half an hour, when she turned as if to go back, but he laid his hand upon hers as it held the tent cord, and said something very earnestly, when she turned to him again to look him full in the face, and I saw that her hand was not moved.

Then they were silent for a few seconds before he spoke again, loud enough for me to hear.

'I must ask you,' he said huskily; 'my peace depends upon it. I know that it has always been understood that you were to be introduced to Lieutenant Leigh. I can see now plainly enough what are your sister's wishes; but hearts are ungovernable, Miss Ross, and I tell you earnestly, as a simple, truth-speaking man, that you have roused feelings that until now slept quietly in my breast. If I am presumptuous, forgive me—love is bold as well as timid—but at least set me at rest: tell me, is there any engagement between you and Lieutenant Leigh?'

She did not speak for a few moments, but met his gaze—so it seemed to me—without shrinking, before saying one word, so softly, that it was like one of the whispers of the breeze crossing the plain—and that word was 'No!'

'God bless you for that answer, Miss Ross—Elsie,' he said deeply; and then his head was bent down for an instant over the hand that rested on the cord, before Miss Ross glided away from him into the tent, and went and stood resting with her hand upon the colonel's shoulder, when he, evidently in high glee, began to shew her his cards, laughing and pointing to first one, and then another, for he seemed to be having luck on his side.

But I had no more eyes then for the inside of the tent, for Captain Dyer just seemed to awaken to the fact that I was standing close by him as sentry, and he gave quite a start as he looked at me for a few moments without speaking. Then he took a step forward.

'Who is this? Oh, thank goodness!' (he said those few words in an undertone, but I happened to hear them). 'Smith,' he said, 'I forgot there was a sentry there. You saw me talking to that lady?'

'Yes, sir,' I said.

'You saw everything?'

'Yes, sir.'

'And you heard all?'

'No, sir, not all; only what you said last.'

Then he was silent again for a few moments, but only to lay his hand directly after on my chest.

'Smith,' he said, 'I would rather you had not seen this; and if it had been any other man in my company, I should perhaps have offered him money, to insure that there was no idle chattering at the mess-tables; but you I ask, as a man I can trust, to give me your word of honour as a soldier to let what you have seen and heard be sacred.'

'Thank you, captain,' I said, speaking thick, for somehow his words seemed to touch me. 'You shan't repent trusting me.'

'I have no fear, Smith,' he said, speaking lightly, and as if he felt joyful, and proud, and happy.—'What a glorious night for a cigar;' and he took one out of his case, when we both started, for, as if he had that moment risen out of the ground, Lieutenant Leigh stood there close to us; and even to this day I can't

Digitized by Google

make out how he managed it, but all the same he must have seen and heard as much as I had.

'And pray, is my word of honour as a soldier to be taken, Captain Dyer? or is my silence to be bought with money?—Curse you! come this way, will you!' he hissed; for Captain Dyer had half turned, as if to avoid him, but he stepped back directly, and I saw them walk off together amongst the trees, till they were quite out of sight; and if ever I felt what it was to be tied down to one spot, I felt it then, as I walked sentry up and down by that tent watching for those two to return.

V.

Now, after giving my word of honour to hold all that sacred, some people may think I'm breaking faith in telling what I saw; but I made that right by asking the colonel's leave—he is a colonel now—and he smiled, and said that I ought to change the names, and then it would not matter.

I left off my last chapter saying how I felt being tied down to one spot, as I kept guard there; and perhaps everybody don't know that a sentry's duty is to stay in the spot where he has been posted, and that leaving it lightly might, in time of war, mean death.

I should think I watched quite an hour, wondering whether I ought to give any alarm; but I was afraid it might look foolish, for perhaps after all it might only mean a bit of a quarrel, and I could not call to mind any quarrel between officers ending in a duel.

I was glad, too, that I did not say anything, for at last I saw them coming back in the clear moonlight—clear-like as day; and then in the distance they stopped, and in a moment one figure seemed to strike the other a sharp blow, which sent him staggering back, and I could not then see who it was that was hit, till they came nearer, and I made out that it was Captain Dyer; while, if I had any doubts at first, I could have none as they came nearer and nearer, with Lieutenant Leigh talking in a big insolent way at Captain Dyer, who was very quiet, holding his handkerchief to his cheek.

So as to be as near as possible to where they were going to pass, I walked to the end of my tether, and, as they came up, Lieutenant Leigh says, in a nasty spiteful whisper: 'I should have thought you would have come into the tent to display the wound received in the lady's cause.'

'Leigh,' said Captain Dyer, taking down his white handkerchief—and in the bright moonlight I could see that his cheek was cut, and the handkerchief all bloody—'Leigh, that was an unmanly blow. You called me a coward; you struck me; and now you try to poison the wound with your bitter words. I never lift hand against the man who has taken that hand in his as my friend, but the day may come when I can prove to you that you are a liar.'

Lieutenant Leigh turned upon him fiercely, as though he would have struck him again; but Captain Dyer paid no heed to him, only walked quietly off to his quarters; while, with a sneering, scornful sort of laugh, the lieutenant went into the colonel's tent; though, if he expected to see Miss Ross, he was disappointed, for so long as I was on guard, she did not shew any more that night.

Off again the next morning, and over a hotter and dustier road than ever; and I must say that I began to wish we were settled down in barracks again, for everything seemed to grow more and more crooked, and people more and more unpleasant. Why, even Mrs Bantem that morning before starting must shew her teeth, and snub Bantem, and then begin going on about the colonel's wife, and the fine madam, her sister, having all sorts of luxuries, while poor hard-working soldiers' wives had to bear all the burden and heat of the day; while, by way of winding up, she goes up to Harry Lant and Measles, who were, as usual, squabbling about something, and boxes both their ears, as if they had been bad boys. I saw them both colour up fierce; but the next minute Harry Lant bursts out laughing, and Measles does the same, and then they two did what I should think they never did before—they shook hands; but Mrs Bantem had no sooner turned away with tears in her eyes, because she felt so cross, than the two chaps fell out again about some stupid thing or another, and kept on snarling and snapping at each other all along the march.

But there, bless you! that wasn't all: I saw Mrs Maine talking to her sister in a quick earnest sort of way, and they both seemed out of sorts; and the colonel swore at the tent-men, and bullied the adjutant, and he came round and dropped on to us, finding fault with the men's belts, and that upset the sergeants. Then some of the baggage didn't start right, and Lieutenant Leigh had to be taken to task by Captain Dyer, as in duty bound; while, when at last we were starting, if there wasn't a tremendous outcry, and the young colonel—little Cock Robin, you know—kicking, and screaming, and fighting the old black nurse, because he mightn't draw his little sword, and march alongside of Harry Lant!

Now, I'm very particular about putting all this down, because I want you to see how we all were one with the other, and how right through the battalion little things made us out of sorts with one another, and hardly friendly enough to speak, so that the difference may strike you, and you may see in a stronger light the alteration and the behaviour of people when trouble came.

All the same, though, I don't think it's possible for anybody to make a long march in India without getting out of temper. It's my belief that the grit does it, for you do have that terribly; and what with the heat, the dust, the thirst, the government boots, that always seem as if made not to fit anybody, and the grit, I believe even a regiment all chaplains would forget their trade.

Tramp, tramp, tramp, day after day, and nearly always over wide, dreary, dusty plains. Now we'd pass a few muddy paddy-fields, or come upon a river, but not often; and I many a time used to laugh grimly to myself, as I thought what a very different place hot, dusty, dreary India was, to the glorious country I used to picture, all beautiful trees and flowers, and birds with dazzling plumage. There are bright places there, no doubt, but I never came across one, and my recollections of India are none of the most cheery.

But at last came the day when we were crossing a great wide-spread plain, in the middle of which seemed to be a few houses, with something bright here and there shining in the sun; and as we marched on, the cluster of houses appeared to grow and grow, till we halted at last in a market square of a good-sized town; and that night we were once more in barracks.

Digitized by Google

But, for my part, I was more gritty than ever; for now we did not see the colonel's lady or her sister, though I may as well own that there was some one with them that I wanted to see more than either.

They were all, of course, at the colonel's quarters, a fine old palace of a place, with a court-yard, and a tank in the centre, and trees, and a flat roof, by the side of the great square; while on one side was another great rambling place, separated by a narrowish sort of alley, used for stores and hospital purposes; and on the other side, still going along by the side of the great market square, was another building, the very fellow to the colonel's quarters, but separated by a narrow footway, some ten feet wide, and this place was occupied by the officers.

Our barracks took up another side of the square; and on the others were mosques and flat-roofed buildings, and a sort of bazaar; while all round stretched away, in narrow streets, the houses of what we men used to call the niggers. Though, speaking for myself, I used to find them, when well treated, a nice, clean, gentle sort of people. I used to look upon them as a big sort of children, in their white muslin and calico, and their simple ways of playing-like at living; and even now I haven't altered my opinion of them in general, for the great burst of frenzied passion that ran through so many of them was just like a child's uncontrolled rage.

Things were not long in settling down to the regular life: there was a little drill of a morning, and then, the rest of the day, the heat to fight with, which seemed to take all the moisture out of our bodies, and make us long for night.

I did not get put on as sentry once at the colonel's quarters, but I heard a little now and then from Mrs Bantem, who used to wash some of Mrs Maine's fine things, the black women doing everything else; and she'd often have a good grumble about 'her fine ladyship,' as she called her, and she'd pity her children. She used to pick up a good deal of information, though, and, taking a deal of interest as I did in Miss Ross, I got to know that it seemed to be quite a settled thing between her and Captain Dyer; and Bantem, who got took on now as Lieutenant Leigh's servant, used to tell his wife about how black those two used to seem one towards the other.

And so the time went on in a quiet sleepy way, the men getting lazier every day. There was nothing to stir us, only now and then we'd have a good laugh at Measles, who'd get one of his nasty fits on, and swear at all the officers round, saying he was as good as any of them, and that if he had his rights he would have been made an officer before then. Harry Lant, too, used to do his bit to make time pass away a little less dull, singing, telling stories, or getting up to some of his pranks with old *Nabob*, the elephant, making Chunder, the mahout, more mad than ever, for, no matter what he did or said, only let Harry make a sort of queer noise of his, and, just like a great flesh-mountain, that elephant would come. It didn't matter who was in the way: regiment at drill, officer, rajah, anybody, old *Nabob* would come straight away to Harry, holding out his trunk for fruit, or putting it in Harry's breast, where he'd find some bread or biscuit; and then the great brute would smooth him all over with his trunk, in a way that used to make Mrs Bantem say, that perhaps, after all, the natives weren't such fools as they looked, and that what they said about dead people going into animal's bodies might be true after all, for, if that great overgrown beast hadn't a soul of its own, and couldn't think, she didn't know nothing, so now then!

VI.

But it was always the same; and though time was when I could have laughed as merrily as did that little Jenny Wren of the colonel's at Harry's antics, I couldn't laugh now, because it always seemed as if they were made an excuse to get Miss Ross and her maid out with the children.

A party of jugglers, or dancing-girls, or a man or two with pipes and snakes, were all very well; but I've known clever parties come round, and those I've named would hardly come out to look; and my heart, I suppose it was, if it wasn't my mind, got very sore about that time, and I used to get looking as evil at Harry Lant as Lieutenant Leigh did at the captain.

But it was a dreary time that, after all, one from which we were awakened in a sudden way, that startled us to a man.

First of all, there came a sort of shadowy rumour that something was wrong with the men of a native regiment, something to do with their caste; and before we had well realised that it was likely to be anything serious, sharp and swift came one bit of news after another, that the British officers in one native regiment had been shot down—here, there, in all directions; and then we understood that what we had taken for the flash of a solitary fire, was the firing of a big train, and that there was a great mutiny in the land. And not, mind, the mutiny or riot of a mob of roughs, but of men drilled and disciplined by British officers, with leaders of their own caste, all well armed and provided with ammunition; and the talk round our mess when we heard all this was, How will it end?

I don't think there were many who did not realise the fact that something awful was coming to pass. Measles grinned, he did, and said that there was going to be an end of British tyranny in India, and that the natives were only going to seize their own again; but the next minute, although it was quite clean, he takes his piece out of the rack, cleans it thoroughly all over again, fixes the bayonet, feels the point, and then stands at the 'present!'

'I think we can let 'em know what 's what, though, my lads, if they come here,' he says, with a grim smile; when Mrs Bantem, whose breath seemed quite taken away before by the way he talked, jumped up quite happy-like, laid her great hand upon his left side, and then, turning to us, she says: 'It 's beating strong.'

'What is?' says Bantem, looking puzzled.

'Measles' heart,' says Mrs Bantem; 'and I always knew it was in the right place.'

The next minute she gave Measles a slap on the back as echoed through the place, sending him staggering forward; but he only laughed and said: 'Praise the saints, I ain't Bantem.'

There was a fine deal of excitement, though, now. The colonel seemed to wake up, and with him every officer, for we expected not only news but orders every moment. Discipline, if I may say so, was buckled up tight with the tongue in the last hole; provisions and water were got in; sentries doubled, and a strange feeling of distrust and fear came upon all, for we soon saw that the people of the place hung

Digitized by Google

away from us, and though, from such an inoffensive-looking lot as we had about us, there didn't seem much to fear, yet there was no knowing what treachery we might have to encounter, and as he had to think and act for others beside himself, Colonel Maine—God bless him—took every possible precaution against danger, then hidden, but which was likely to spring into sight at any moment.

There were not many English residents at Begumbagh, but what there were came into quarters directly; and the very next morning we learned plainly enough that there was danger threatening our place by the behaviour of the natives, who packed up their few things and filed out of the town as fast as they could, so that at noonday the market-place was deserted, and, save the few we had in quarters, there was not a black face to be seen.

The next morning came without news; and I was orderly, and standing waiting in the outer court close behind the colonel, who was holding a sort of council of war with the officers, when a sentry up in the broiling sun, on the roof, calls out that a horseman was coming; and before very long, covered with sweat and dust, an orderly dragoon dashes up, his horse all panting and blown; and then coming jingling and clanking in with those spurs and that sabre of his, he hands despatches to the colonel.

I hope I may be forgiven for what I thought then, but, as I watched his ruddy face, while he read those despatches, and saw it turn all of a sickly, greeny white, I gave him the credit of being a coward; and I was not the only one who did so. We all knew that, like us, he had never seen a shot fired in anger; and something like an angry feeling of vexation came over me, I know, as I thought of what a fellow he would be to handle and risk the lives of the four hundred men under his charge there at Begumbagh.

'D'yer think I'd look like that?' says a voice close to my ear just then. 'D'yer think if I'd been made an officer, I'd ha' shewed the white feather like that?' And turning round sharp, I saw it was Measles, who was standing sentry by the gateway; and he was so disgusted, that he spat about in all directions, for he was a man who didn't smoke, like any other Christian, but chewed his tobacco like a sailor.

'Dyer,' says the colonel, the next moment, and they closed up together, but close to where we two stood—'Dyer,' he says, 'I never felt before that it would be hard to do my duty as a soldier; but, God help me, I shall have to leave Annie and the children.' There were a couple of tears rolling down the poor fellow's cheeks as he spoke, and he took Captain Dyer's hand.

'Look at him! Cuss him!' whispers Measles again; and I kicked out sharp behind, and hit him in the shin. 'He's a pretty sort of a'——

He didn't say any more just then, for, like me, he was staggered by the change that took place.

I think I've said Colonel Maine was a little, easy-going, pudgy man, with a red face; but just then, as he stood holding Captain Dyer's hand, a change seemed to come over him; he dropped the hand he had held, tightened his sword-belt, and then took a step forward, to stand thoughtful, with despatches in his left hand. It was then that I saw in a moment that I had wronged him, and I felt as if I could have gone down on the ground for him to have walked over me, for whatever he might have been in peace, easy-going, careless, and fond of idleness and good-living—come time for action, there he was with the true British officer flashing out of his face, his lips pinched, his eyes flashing, and a stern look upon his countenance that I had never seen before.

'Now then!' I says in a whisper to Measles. I didn't say anything else, for he knew what I meant. 'Now then—now then!'

'Well,' says Measles then, in a whisper, 'I s'pose women and children will bring the soft out of a man at a time like this; but, cuss him! what did he mean by humbugging us like that!'

I should think Colonel Maine stood alone thoughtful and still in that court-yard, with the sun beating down upon his muslin-covered forage-cap, while you could slowly, and like a pendulum-beat, count thirty. It was a tremendously hot morning, with the sky a bright clear blue, and the shadows of a deep purply black cast down and cut as sharp as sharp. It was so still, too, that you could hear the whirring, whizzy noise of the cricket things, and now and then the champ, champ of the horse rattling his bit as he stood outside the gateway. It was a strange silence, that seemed to make itself felt; and then the colonel woke into life, stuck those despatches into his sword-belt, gave an order here, an order there, and the next minute—Tantaran-tantaran, *Tantaran-tantaran*, TANTARAN-TANTARAN, *Tantaran-tay*—the bugle was ringing out the assemblée, men were hurrying here and there, there was the trampling of feet, the court-yard was full of busy figures, shadows were passing backwards and forwards, and the news was abroad that our regiment was to form a flying column with another, and that we were off directly.

Ay, but it was exciting, that getting ready, and the time went like magic before we formed a hollow square, and the colonel said a few words to us, mounted as he was now, his voice firm as firm, except once, when I saw him glance at an upper window, and then it trembled, but only for an instant. His words were not many; and to this day, when I think of the scene under that hot blue sky, they come ringing back; for it did not seem to us that our old colonel was speaking, but a new man of a different mettle, though it was only that the right stuff had been sleeping in his breast, ready to be wakened by the bugle.

'My lads,' he said, and to a man we all burst out into a ringing cheer, when he took off his cap, and waved it round—'My lads, this is a sharp call, but I've been expecting it, and it has not found us asleep. I thank you for the smart way in which you have answered it, for it shews me that a little easy-going on my part in the piping times of peace has not been taken advantage of. My lads, these are stern times; and this despatch tells me of what will bring the honest British blood into every face, and make every strong hand take a firm gripe of its piece as he longs for the order to charge the mutinous traitors to their Queen, who, taking her pay, sworn to serve her, have turned, and in cold blood butchered their officers, slain women, and hacked to pieces innocent babes. My lads, we are going against a horde of monsters; but I have bad news—you cannot all go'——

There was a murmur here.

'That murmur is not meant,' he continued; 'and I know it will be regretted when I explain myself. We have women here and children: mine—yours—and they must be protected' (it was here that his voice shook). 'Captain Dyer's company will garrison

the place till our return, and to those men many of us leave all that is dear to us on earth. I have spoken. God save the Queen!'

How that place echoed with the hearty 'Hurray!' that rung out; and then it was, 'Fours right. March!' and only our company held firm, while I don't know whether I felt disappointed or pleased, till I happened to look up at one of the windows, to see Mrs Maine and Miss Ross, with those two poor little innocent children clapping their hands with delight at seeing the soldiers march away; one of them, the little girl, with her white muslin and scarlet sash over her shoulder, being held up by Lizzy Green; and then I did know that I was not disappointed, but glad I was to stay.

But to shew you how a man's heart changes about when it is blown by the hot breath of what you may call love, let me tell you that only half a minute later, I was disappointed again at not going; and dared I have left the ranks, I'd have run after the departing column, for I caught Harry Lant looking up at that window, and I thought a handkerchief was waved to him.

Next minute, Captain Dyer calls out, 'Form four—deep. Right face. March!' and he led us to the gateway, but only to halt us there, for Measles, who was sentry, calls out something to him in a wild excited way.

'What do you want, man?' says Captain Dyer.

'O sir, if you 'll only let me exchange. 'Taint too late. Let me go, captain.'

'How dare you, sir!' says Captain Dyer sternly, though I could see plainly enough it was only for discipline, for he was, I thought, pleased at Measles wanting to be in the thick of it. Then he shouts again to Measles: ''Tention—present arms!' and Measles falls into his right position for a sentry when troops are marching past. 'March!' says the captain again; and we marched into the market-place, and—all but those told off for sentries—we were dismissed; and Captain Dyer then stood talking earnestly to Lieutenant Leigh, for it had fallen out that they two, with a short company of eight-and-thirty rank and file, were to have the guarding of the women and children left in quarters at Begumbagh.

VII.

It seemed to me that, for the time being, Lieutenant Leigh was too much of a soldier to let private matters and personal feelings of enmity interfere with duty; and those two stood talking together for a good half-hour, when, having apparently made their plans, fatigue-parties were ordered out; and what I remember then thinking was a wise move, the soldiers' wives and children in quarters were brought into the old palace, since it was the only likely spot for putting into something like a state of defence.

I have called it a palace, and I suppose that a rajah did once live in it, but, mind you, it was neither a very large nor a very grand place, being only a square of buildings, facing inward to a little court-yard, entered by a gateway, after the fashion of no end of buildings in the east.

Water we had in the tank, but provisions were brought in, and what sheep there were. Fortunately, there was a good supply of hay, and that we got in; but one thing we did not bargain for, and that was the company of the great elephant, *Nabob*, he having been left behind. And what does he do but come slowly up on those india-rubber cushion feet of his, and walk through the gateway, his back actually brushing against the top; and then, once in, he goes quietly over to where the hay was stacked, and coolly enough begins eating!

The men laughed, and some jokes were made about his taking up a deal of room, and I suppose, really, it was through Harry Lant that the great beast came in; but no more was said then, we all being so busy, and not one of us had the sense to see what a fearful strait that great inoffensive animal might bring us to.

I believe we all forgot about the heat that day as we worked on, slaving away at things that, in an ordinary way, we should have expected to be done by the niggers. Food, ammunition, wood, particularly planks, everything Captain Dyer thought likely to be of use; and soon a breastwork was made inside the gateway; such lower windows as looked outwards carefully nailed up, and loopholed for a shot at the enemy, should any appear; and when night did come at last, peaceful and still, the old palace was turned into a regular little fort.

We all knew that all this might be labour in vain, but all the same it seemed to be our duty to get the place into as good a state of defence as we could, and under orders we did it. But, after all, we knew well enough that if the mutineers should bring up a small field-piece, they could knock the place about our ears in no time. Our hope, though, was that, at all events while our regiment was away, we might be unmolested, for, if the enemy came in any number, what could eight-and-thirty men do, hampered as they were with half-a-dozen children, and twice as many women? Not that all the women were likely to hamper us, for there was Mrs Bantem, busy as a bee, working here, comforting there, helping women to make themselves snug in different rooms; and once, as she came near me, she gave me one of her tremendous slaps on the back, her eyes twinkling with pleasure, and the perspiration streaming down her face the while. 'Ike Smith,' she says, 'this is something like, isn't it? But ask Captain Dyer to have that breastwork strengthened—there isn't half enough of it. Glad Bantem hasn't gone. But, I say, only think of that poor woman! I saw her just now crying, fit to break her poor heart.'

'What poor woman?' I said, staring hard.

'Why, the colonel's wife. Poor soul, it 's pitiful to see her! it went through me like a knife.—What! are you there, my pretties?' she cried, flumping down on the stones as the colonel's two little ones came running out. 'Bless your pretty hearts, you 'll come and say a word to old Mother Bantem, won't you?'

'What's everybody tying about?' says the little girl, in her prattling way. 'I don't like people to ty. Has my ma been whipped, and Aunt Elsie been naughty?'

'Look, look!' cries the boy excitedly; 'dere's old *Nabob!*' And toddling off, the next minute he was close to the great beast, his little sister running after him, to catch hold of his hand; and there the little mites stood close to, and staring up at the great elephant, as he kept on amusing himself by twisting up a little hay in his trunk, and then lightly scattering it over his back, to get rid of the flies—for what nature could have been about to give him such a scrap of a tail, I can't understand. He 'd work it, and flip it about hard enough; but as to getting rid

Digitized by Google

of a fly, it's my belief that if insects can laugh, they laughed at it, as they watched him from where they were buzzing about the stone walls and windows in the hot sunshine.

The next minute, like a chorus, there came a scream from one of the upper windows, one from another, and a sort of howl from Mrs Bantem, and we all stood startled and staring, for what does Jenny Wren do, but, in a staggering way, lift up her little brother for him to touch the elephant's trunk, and then she stood laughing and clapping her hands with delight, seeing no fear, bless her! as that long, soft trunk was gently curled round the boy's waist, he was drawn out of his sister's arms; and then the great beast stood swinging the child to and fro, now up a little way, now down between his legs, and him crowing and laughing away all the while, as if it was the best fun that could be.

I believe we were all struck motionless; and it was like taking a hand away from my throat to let me breathe once more, when I saw the elephant gently drop the little fellow down on a heap of hay, but only for him to scramble up, and run forward shouting: 'Now 'gain, now 'gain;' and, as if *Nabob* understood his little prattling, half-tied tongue, he takes him up again, and swings him, just as there was a regular rush made, and Mrs Colonel, Miss Ross, Lizzy, and the captain and lieutenant came up.

'For Heaven's sake, save the child!' cries Mrs Maine.—'Mr Leigh, pray, do something.'

Miss Ross did not speak, but she looked at Captain Dyer; and those two young men both went at the elephant directly, to get the child away; but, in an instant, *Nabob* wheeled round, just the same as a stubborn donkey would at home with a lot of boys teasing it; and then, as they dodged round his great carcass, he trumpeted fiercely, and began to shuffle off round the court.

I went up too, and so did Mrs Bantem, brave as a lion; but the great beast only kept on making his loud snorting noise, and shuffled along, with the boy in his trunk, swinging him backwards and forwards; and it was impossible to help thinking of what would be the consequence if the elephant should drop the little fellow, and then set on him one of his great feet.

It seemed as if nothing could be done, and once the idea—wild enough too—rushed into my head that it would be advisable to get a rifle put to the great beast's ear, and fire, when Measles shouted out from where he was on guard: 'Here 's Chunder coming!' and, directly after, with his opal eye-balls rolling, and his dark, treacherous-looking face seeming to me all wicked and pleased at what was going on, came the mahout, and said a few words to the elephant, which stopped directly, and went down upon its knees. Chunder then tried to take hold of the child, but somehow that seemed to make the great beast furious, and, getting up again, he began to grunt and make a noise after the fashion of a great pig, going on now faster round the court, and sending those who had come to look, and who stood in his way, fleeing in all directions.

Mrs Maine was half fainting, and, catching the little girl to her breast, I saw her go down upon her knees and hide her face, expecting, no doubt, every moment, that the next one would be her boy's last; and, indeed, we were all alarmed now, for the more we tried to get the little chap away, the fiercer the elephant grew; the only one who did not seem to mind being the boy himself, though his sister now began to cry, and in her little artless way I heard her ask her mother if the naughty elephant would eat Clivey.

I've often thought since that if we'd been quiet, and left the beast alone, he would soon have set the child down; and I've often thought, too, that Mr Chunder could have got the boy away if he had liked, only he did nothing but tease and irritate the elephant, which was not the best of friends with him. But you will easily understand that there was not much time for thought then.

I had been doing my best along with the others, and then stood thinking what I could be at next, when I caught Lizzy Green's eye turned to me in an appealing, reproachful sort of way, that seemed to say as plainly as could be: 'Can't you do anything?' when all at once Measles shouts out: ''Arry, 'Arry!' and Harry Lant came up at the double, having been busy carrying arms out of the guard-room rack.

It was at one and the same moment that Harry Lant saw what was wrong, and that a cold dull chill ran through me, for I saw Lizzy clasp her hands together in a sort of thankful way, and it seemed to me then, as Harry ran up to the elephant, that he was always to be put before me, and that I was nobody, and the sooner I was out of the way the better.

All the same, though, I couldn't help admiring the way Harry ran up to the great brute, and did what none of us could manage. I quite hated him, I know, but yet I was proud of my mate, as he went up and says something to *Nabob*, and the elephant stands still. 'Put him down,' says Harry, pointing to the ground; and the great flesh-mountain puts the little fellow down. 'Now then,' says Harry, to the horror of the ladies, 'pick him up again;' and in a twinkling the great thing whips the boy up once more. 'Now, bring him up to the colonel's lady.' Well, if you 'll believe me, if the great thing didn't follow Harry like a lamb, and carry the child up to where, half fainting, knelt poor Mrs Maine. 'Now, put him down,' says Harry; and the next moment little Clive Maine —Cock Robin, as we called him—was being hugged to his mother's breast. 'Now, go down on your knees, and beg the ladies' pardon,' says Harry laughing. Down goes the elephant, and stops there, making a queer chuntering noise the while. 'Says he 's very sorry, ma'am, and won't do so no more,' says Harry, serious as a judge; and in a moment, half laughing, half crying, Mrs Maine caught hold of Harry's hand, and kissed it, and then held it for a moment to her breast, sobbing hysterically as she did so.

'God bless you! You're a good man,' she cried; and then she broke down altogether; and Miss Ross, and Mrs Bantem, and Lizzy got round her, and helped her in.

I could see that Harry was touched, for one of his lips shook; but he tried to keep up the fun of the thing; and turning to the elephant, he says out loud: 'Now, get up, and go back to the hay; and don't you come no more of those games, that's all.'

The elephant got up directly, making a grunting noise as he did so.

'Why not?' says Harry, making-believe that that was what the great beast said. 'Because, if you do, I 'll smash you. There!'

Officers and men, they all burst out laughing, to see little Harry Lant—a chap so little that he wouldn't have been in the regiment only that men were scarce, and the standard was very low when he listed—to see him standing shaking his fist at the great monster, one of whose legs was bigger than Harry altogether —stand shaking his fist in its face, and then take hold of the soft trunk and lead him away.

Perhaps I did, perhaps I didn't, but I thought I caught sight of a glance passing between Lizzy Green, now at one window, and Harry, leading off the elephant; but all the same I felt that jealous of him, and to hate him so that I could have quarrelled with

Digitized by Google

him about nothing. It seemed as if he was always to come before me in everything.

And I wasn't the only one jealous of Harry, for no sooner was the court pretty well empty, than he came slowly up towards me, in spite of my sour black looks, which he wouldn't notice; but before he could get to me, Chunder Chow, the mahout, goes up to the elephant, muttering and spiteful-like, with his hook-spear thing, that mahouts use to drive with; and being, I suppose, put out, and jealous, and annoyed at his authority being taken away, and another man doing what he couldn't, he gives the elephant a kick in the leg, and then hits him viciously with his iron hook thing.

Lord bless you! it didn't take an instant, and it seemed to me that the elephant only gave that trunk of his a gentle swing against Chunder's side, and he was a couple of yards off, rolling over and over in the hay scattered about.

Up he jumps, wild as wild; and the first thing he catches sight of is Harry laughing fit to crack his sides, when Chunder rushes at him like a mad bull.

I suppose he expected to see Harry turn tail and run; but that being one of those things not included in drill, and a British soldier having a good deal of the machine about him, Harry stands fast, and Chunder pulls up short, grinning, rolling his eyes, and twisting his hands about, just for all the world like as if he was robbing a hen-roost, and wringing all the chickens' necks.

'Didn't hurt much, did it, blacky?' says Harry coolly. But the mahout couldn't speak for rage; but he kept spitting on the ground, and making signs, till really his face was anything but pretty to look at. And there he kept on, till, from laughing, Harry turned a bit nasty, for there was some one looking out of a window; and from being half-amused at what was going on, I once more felt all cold and bitter. But Harry fires up now, and makes towards Mr Chunder, who begins to retreat; and says Harry: 'Now I tell you what it is, young man; I never did you any ill turn; and if I choose to have a bit of fun with the elephant, it 's government property, and as much mine as yours. But look ye here—if you come cussing, and spitting, and swearing at me again in your nasty heathen dialect, why, if I don't—— No,' he says, stopping short, and half-turning to me, 'I can't black his eyes, Isaac, for they 're black enough already; but let him come any more of it, and, jiggermaree, if I don't bung 'em!'

VIII.

Chunder didn't like the looks of Harry, I suppose, so he walked off, turning once to spit and curse, like that turn-coat chap, Shimei, that you read of in the Bible; and we two walked off together towards our quarters.

'I ain't going to stand any of his nonsense,' says Harry.

'It 's bad making enemies now, Harry,' I said gruffly. And just then up comes Measles, who had been relieved, for his spell was up now, and another party were on, else he would have had to be in the guard-room.

'There never was such an unlucky beggar as me,' says Measles. 'If a chance does turn up for earning a bit of promotion, it 's always some one else gets it. Come on, lads, and let 's see what Mother Bantem 's got in the pot.'

'You 'll perhaps have a chance before long of earning your bit of promotion without going out,' I says.

'Ike Smith 's turned prophet and croaker in ornary,' says Harry, laughing. 'I believe he expects we 're going to have a new siege of Seringapatam here, only back 'ards way on.'

'Only wish some of 'em would come this way,' says Measles grimly; and he made a sort of offer, and a hit out at some imaginary enemy.

'Here they are,' says Joe Bantem, as we walked in. 'Curry for dinner, lads—look alive.'

'What, my little hero!' says Mrs Bantem, fetching Harry one of her slaps on the back. 'My word, you 're in fine plume with the colonel's lady.'

Slap came her hand down again on Harry's back; and as soon as he could get wind: 'Oh, I say, don't,' says Harry. 'Thank goodness, I ain't a married man.—Is she often as affectionate as this with you, Joe?'

Joe Bantem laughed; and soon after we were all making, in spite of threatened trouble and disappointment, an uncommonly hearty dinner, for, if there ever was a woman who could make a good curry, it was Mrs Bantem; and many 's the cold winter 's day I 've stood in Facet's door there in Bond Street, and longed for a plateful. Pearls stewed in sunshine, Harry Lant used to call it; and really to see the beautiful, glistening, white rice, every grain tender as tender, and yet dry and ready to roll away from the others—none of your mosh-posh rice, if Mrs Bantem boiled it—and then the rich golden curry itself: there, I 've known that woman turn one of the toughest old native cocks into what you 'd have sworn was a delicate young Dorking chick—that is, so long as you didn't get hold of a drumstick, which perhaps would be a bit ropy. That woman was a regular blessing to our mess, and we fellows said so, many a time.

One, two, three days passed without any news, and we in our quarters were quiet as if thousands of miles from the rest of the world. The town kept as deserted as ever, and it seemed almost startling to me when I was posted sentry on the roof, after looking out over the wide, sandy, dusty plain, over which the sunshine was quivering and dancing, to peer down amongst the little ramshackle native huts without a sign of life amongst them, and it took but little thought for me to come to the conclusion that the natives knew of something terrible about to happen, and had made that their reason for going away. Though, all the same, it might have been from dread lest we should seek to visit upon them and theirs the horrors that had elsewhere befallen the British.

I used often to think, too, that Captain Dyer had some such feelings as mine, for he looked very, very serious and anxious, and he 'd spend hours on the roof with his glass, Miss Ross often being by his side, while Lieutenant Leigh used to watch them in a strange way, when he thought no one was observing him.

I 've often thought that when people get touched with that queer complaint folks call love, they get into a curious half-delirious way, that makes them fancy that people are nearly blind, and have their eyes shut to what they do or say. I fancy there was something of this kind with Miss Ross, and I 'm sure there was with me when I used to go hanging about, trying to get a word with Lizzy; and, of course, shut up as we all were then, often having the chance, but getting seldom anything but a few cold answers, and a sort of show of fear of me whenever I was near to her.

But what troubled me as much as anything, was the behaviour of the four Indians we had shut up with us—Chunder Chow, the old black nurse, and two more—for they grew more uppish and bounceable every day, refusing to work, until Captain Dyer had one of the men tied up to the triangles and flogged, down in a great cellar or vault place that there was under the north end of the palace, so that the ladies and women shouldn't hear his cries. He deserved all he got, as I can answer for, and that made the rest a little more civil, but not for long; and, just the day before something happened, I took

Digitized by Google

the liberty of saluting Captain Dyer, after he had been giving me some orders, and took that chance of speaking my mind.

'Captain,' I says, 'I don't think those black folks are to be trusted.'

'Neither do I, Smith,' he says. 'But what have you to tell me?'

'Nothing at all, captain, only that I have my eye on them; and I've been thinking that they must somehow or another have held communication outside; and I don't like it, for those people don't get what we call cheeky without cause.'

'Keep both eyes on them then, Smith,' says Captain Dyer, smiling; 'and, no matter what it is—if it is the most trivial thing in any way connected with them, report it.'

'I will, sir,' I says; and the very next day, much against the grain, I did have something to report.

IX.

The next morning was hotter, I think, than ever, with no prospect either of rain or change; and, after doing what little work I had to get over, it struck me that I might as well attend to what Captain Dyer advised—give two eyes to Chunder and his friends; so I left Mrs Bantem busy over her cooking, and went down into the court.

All below was as still as death—sunshine here, shadow there; but, through one of the windows, open to catch the least breeze that might be on the way, and taking in instead the hot, sultry air, came now and then the silvery laughter of the children—that pleasant cheery sound that makes the most rugged old face grow a trifle smoother.

I looked here, and I looked there, but could only see old *Nabob* amusing himself with the hay, a sentry on the roof to the east, and another on the roof to the west, and one in the gateway, broiling almost, all of them, with the heat.

The ladies and the children were seldom seen now, for they were in trouble; and Mrs Maine was worn almost to skin and bone with anxiety, as she sat waiting for tidings of the expedition.

Not knowing what to do with myself, I sauntered along by where there was a slip of shade, and entered the south side of the palace—an old half-ruinous part; and after going first into one, and then into another of the bare empty rooms, I picked out what seemed to be the coolest corner I could find, sat down with my back propped against the wall, filled and lit my pipe, and then putting things together in my mind, thoroughly enjoyed a good smoke.

There was something wonderfully soothing in that bit of tobacco, and it appeared to me cooling, comforting, and to make my bit of a love-affair seem not so bad as it was. So, on the strength of that, I refilled, and was about half-way through another pipe, when things began to grow very dim round about me, and I was wandering about in my dreams, and nodding that head of mine in the most curious and wild way you can think of. What I dreamed about most was about getting married to Lizzy Green; and in what must have been a very short space, that event was coming off at least half-a-dozen times over, only *Nabob*, the elephant, would come in at an awkward time and put a stop to it. But at last, in my dreamy fashion, it seemed to me that matters were smoothed over, and he consented to put down the child, and, flapping his ears, promised he'd say yes. But in my stupid, confused muddle, I thought that he'd no sooner put down the child with his trunk than he wheeled round and took him up with his tail; and so on, backwards and forwards, when, getting quite out of patience, I caught Lizzy's hand in mine, saying: 'Never mind the elephant—let 's have it over;' and she gave a sharp scream.

I jumped to my feet, biting off and swallowing a bit of pipe-shank as I did so, and then stood drenched with perspiration, listening to a scuffling noise in the next room; when, shaking off the stupid confused feeling, I ran towards the door just as another scream—not a loud, but a faint excited scream—rang in my ears, and the next moment Lizzy Green was sobbing and crying in my arms, and that black thief Chunder was crawling on his hands and knees to the door, where he got up, holding his fist to his mouth, and then he turned upon me such a look as I have never forgotten.

I don't wonder at the people of old painting devils with black faces, for I don't know anything more devilish-looking than a black's phiz when it is drawn with rage, and the eyes are rolling about, now all black flash, now all white, while the grinning ivories below seem to be grinding and ready to tear you in pieces.

It was after that fashion that Chunder looked at me as he turned at the door; but I was then only thinking of the trembling, frightened girl I held in my arms, trying at the same time to whisper a few gentle words, while I had hard work to keep from pressing my lips to her white forehead.

But the next minute she disengaged herself from my grasp, and held out her little white hand to me, thanking me as sweetly as thanks could be given.

'Perhaps you had better not say a word about it,' she whispered. 'He 's come under pretence of seeing the nurse, and been rude to me once or twice before. I came here to sit at that window with my work, and did not see him come behind me.'

I started as she spoke about that open window, for it looked out upon the spot where I sometimes stood sentry; but then, Harry Lant sometimes stood just in the same place, and I don't know whether it was a strange impression caused by his coming, that made me think of him, but just then there were footsteps, and, with his pipe in his mouth, and fatigue-jacket all unbuttoned, Harry entered the room.

'Beg pardon; didn't know it was engaged,' he says lightly, as he stepped back; and then he stopped, for Lizzy called to him by his name.

'Please walk back with me to Mrs Maine's quarters,' she said softly; and once more holding her hand out to me, with her eyes cast down, she thanked me; and the question I had been asking myself—Did she love Harry Lant better than me?—was to my mind answered, and I gave a groan as I saw them walk off together, for it struck me then that they had engaged to meet in that room, only Harry Lant was late.

'Never mind,' I says to myself; 'I've done a comrade a good turn.' And then I thought more and more of there being a feeling in the blacks' minds that their day was coming, or that ill-looking scoundrel would never have dared to insult a white woman in open day.

Ten minutes after, I was on my way to Captain Dyer, for, in spite of what Lizzy had said, I felt that, being under orders, it was my duty to report all that occurred with the blacks; for we might at any time have been under siege, and to have had unknown and treacherous enemies in the camp would have been ruin indeed.

'Well, Smith,' he said, smiling as I entered and saluted, 'what news of the enemy?'

'Not much, sir,' I said; what I had to tell, going, as I have before said, very much against the grain. 'I was in one of the empty rooms on the south side, when I heard a scream, and running up, I found it was Miss Ross'——

'What!' he roared, in a voice that would have startled a stronger man than I.

'Miss Ross's maid, sir, with that black fellow Chunder, the mahout, trying to kiss her.'

Digitized by Google

'Well?' he said, with a black angry look overspreading his face.

'Well, sir,' I said, feeling quite red as I spoke, 'he kissed my fist instead—that 's all.'

Captain Dyer began to walk up and down, playing with one of the buttons on his breast, as was his way when eager and excited.

'Now, Smith,' he said at last, stopping short before me, 'what does that mean?'

'Mean, sir?' I said, feeling quite as excited as himself. 'Well, sir, if you ask me, I say that if it was in time of peace and quiet, it would only mean that it was a bit of his damned black—— I beg your pardon, captain,' I says, stopping short, for, you see, it was quite time.

'Go on, Smith,' he said quietly.

'His black impudence, sir.'

'But, as it is not in time of peace and quiet, Smith?' he said, looking me through and through.

'Well, sir,' I said, 'I don't want to croak, nor for other people to believe what I say; but it seems to me that that black fellow's kicking out of the ranks means a good deal; and I take it that he is excited with the news that he has somehow got hold of—news that is getting into his head like so much green 'rack. I've thought of it some little time now, sir; and it strikes me that if, instead of our short company being Englishmen, they were all Chunder Chows, before to-morrow morning, begging your pardon, Captain Dyer and Lieutenant Leigh would have said "Right wheel" for the last time.'

'And the women and children!' he muttered softly: but I heard him.

He did not speak then for quite half a minute, when he turned to me with a pleasant smile.

'But you see, though, Smith,' he said, 'our short company is made up of different stuff; and therefore there 's some hope for us yet; but—— Ah, Leigh, did you hear what he said?'

'Yes,' said the lieutenant, who had been standing at the door for a few moments, scowling at us both.

'Well, what do you think?' said Captain Dyer.

'Think?' said Lieutenant Leigh contemptuously, as he turned away—'nothing!'

'But,' said Captain Dyer quietly, 'really I think there is much truth in what he, an observant man, says.'

There was a challenge from the roof just then; and we all went out to find that a mounted man was in sight; and on the captain making use of his glass, I heard him tell Lieutenant Leigh that it was an orderly dragoon.

A few minutes after, it was plain enough to everybody; and soon, man and horse dead beat, the orderly with a despatch trotted into the court.

It was a sight worth seeing, to look upon Mrs Maine clutching at the letter enclosed for her in Captain Dyer's despatch. Poor woman! it was a treasure to her—one that made her pant as she hurriedly snatched it from the captain's hand, for all formality was forgotten in those days; and then she hurried away to where her sister was waiting to hear the news.

X.

The orderly took back a despatch from Captain Dyer, starting at daybreak the next morning; but before then, we all knew that matters were getting to wear a terrible aspect. At first, I had been disposed to think that the orderly was romancing, and giving us a few travellers' tales; but I soon found out that he was in earnest; and more than once I felt a shiver as he sat with our mess, telling us of how regiment after regiment had mutinied and murdered their officers; how station after station had been plundered, collectors butchered, and their wives and daughters sometimes cut down, sometimes carried off by the wretches, who had made a sport of throwing infants from one to the other on their bayonets.

'I never had any children,' sobbed Mrs Bantem then; 'and I never wished to have any; for they 're not right for soldiers' wives; but only to think—the poor sweet, suffering little things. Oh, if I 'd only been a man, and been there!'

We none of us said anything; but I believe all thought as I did, that if Mrs Bantem had been there, she 'd have done as much—ah, perhaps more—than some men would have done. Bless my soul! as I think of it, and recall it from the bygone, there I can see Mother Bantem—though why we called her mother, I don't know, unless it was because she was like a mother to us—with her great strapping form; and think of the way in which she '——

Halt! Retire by fours from the left.

Just in time; for I find handling my pen 's like handling a commander-in-chief's staff, and that I've got letters which make words, which make phrases, which make sentences, which make paragraphs, which make chapters, which make up the whole story: and that is for all the world like the army with its privates made into companies, and battalions, and regiments, and brigades. Well, there you are: if you don't have discipline, and every private in his right place, where are you? Just so with me; my words were coming out in the wrong places, and in another minute I should have spoiled my story, by letting you know what was coming at the wrong time.

Well, we all felt very deeply the news brought in by that orderly, for soldiers are not such harum-scarum roughs as some people seem to imagine. For the most part, they 're men with the same feelings as civilians; and I don't think many of us slept very sound that night, feeling as we did what a charge we had, and that we might be attacked at any time; and a good deal of my anxiety was on account of Lizzy Green; for even if she wouldn't be my wife, but Harry Lant's, I could not help taking a wonderful deal of interest in her.

But all the same it was a terribly awkward time, as you must own, for falling in love; and I don't know hardly whom I pitied most, Captain Dyer or myself; but think I had more leanings towards number one, because Captain Dyer was happy; though, perhaps, I might have been; only like lots more hot sighing noodles, I never once thought of asking the girl if she 'd have me. As for Lieutenant Leigh, I never once thought of giving him a bit of pity, for I did not think he deserved it.

Well, the trooper started off at daybreak, so as to get well on his journey in the early morning; and about an hour after he was gone, I had a fancy to go into the old ruined room again, where there was the bit of a scene I've told you of. My orders from Captain Dyer were, to watch Chunder strictly, both as to seeing that he did not again insult any of the women, and also to see if he had any little game of his own that he was playing on the sly; for though Lieutenant Leigh, on being told, pooh-poohed it all, and advised a flogging, Captain Dyer had his suspicions—stronger ones, it seemed, than mine; and hence my orders and my being excused from mounting guard.

It was all very still, and cool, and quiet as I walked from room to room, slowly and thoughtfully, stopping to pick up my broken pipe, which lay where I had dropped it; and then going on into the next room, where, under the window, lay the bit of cotton cob-web and cat's-cradle work Lizzy had been doing, and had left behind. I gave a bit of a gulp as I picked that up, and I was tucking it inside my jacket when I stopped short, for I thought I heard a whisper.

I listened, and there it was again—a low, earnest whispering of first one and then another voice in the

Digitized by Google

next room, whose wide broken doorway stood open, for there wasn't a bit of woodwork left.

I have heard about people saying, that in some great surprise or fright, their hearts stood still; but I don't believe it, because it always strikes me that, when a person's heart does stand still, it never goes on again. All the same, though, my heart felt then as if it did stand still with the dead, dull, miserable feeling that came upon me. Only to think that on this, the second time, I had come through these ruined rooms, and they were here again! It was plain enough Harry Lant and Lizzy made this their meeting-place, and only they knew how many times they'd met before.

Time back, I could have laughed at the idea of me, a great strapping fellow, feeling as I did; but now I felt very wretched; and as I thought of Harry Lant kissing those bright red lips, and looking into those deep dark eyes, and being let pass his hand over the glossy hair, with the prospect of some day calling it all his own, I did not burn all over with a mad rage and passion, but it was like a great grief coming upon me, so that, if it hadn't been for being a man, I could have sat down and cried.

I should think ten minutes passed, and the whispering still went on, when I said to myself: 'Be a man, Isaac; if she likes him better, hasn't she a right to her pick?' But still I felt very miserable as I turned to go away, when a something, said a little louder than the rest, stopped me.

'That ain't English,' I says to myself. 'What! surely she's not listening to that black scoundrel?'

I was red-hot then in a moment; and as to thinking whether this or that was straightforward, or whether I was playing the spy, or anything of that sort, such an idea never came into my head. Chunder was evidently talking to Lizzy Green in that room; and for a few seconds I felt blind with a sort of jealous savage rage—against her, mind, now; and going on tip-toe, I looked round the doorway, so as to see as well as hear.

I was back in an instant, with a fresh set of sensations busy in my breast. It was Chunder, but he was alone; there was no Lizzy there; and I don't know whether my heart beat then for joy at knowing it, or for shame at myself for having thought such a thing of her.

What did it mean, then?

I did not have to ask myself the question twice, for the answer came—Treachery! And stealing to the slit of window in the room I was in, I peeped cautiously but in time to see Chunder throwing out what looked like a white packet. I could see his arm move as he threw it down to a man in a turban—a dark wiry-looking rascal; and in those few seconds I seemed to read that packet word for word, though no doubt the writing was in one of the native dialects, and my reading of it was, that it was a correct list of the defenders of the place, the women and children, and what arms and ammunition there were stored up.

It was all plain enough, and the villain was sending it by a man who must have brought him tidings of some kind.

What was I to do? That man ought to be stopped at all hazards; and what I ought to have done was to steal back, give the alarm, and let a party go round to try and cut him off.

That's what I ought to have done; but I never did have much judgment.

Now for what I did do.

Slipping back from the window, I went cautiously to the doorway, and entered the old room where Chunder was standing at the window; and I went in so quietly, and he was so intent, that I had crept close, and was in the act of leaping on to him before he turned round and tried to avoid me.

He was too late, though, for with a bound I was on him, pinioning his hands, and holding him down on the window-sill, with his head half out, as bearing down upon him, I leaned out as far as I could, yelling out:

'Sentry in the next roof, mark man below. Stop him, or fire.'

The black fellow below drew a long, awkward-looking pistol, and aimed at me, but only for a moment. Perhaps he was afraid of killing Chunder, for the next instant he had stuck the pistol back in his calico belt, and, with head stooped, was running as hard as he could run, when I could hardly contain myself for rage, knowing as I did how important it was for him to have been stopped.

'Bang!'

A sharp report from the roof, and the fellow made a bound.

Was he hit?

No: he only seemed to run the faster.

'Bang!'

Another report as the runner came in sight of the second sentry.

But I saw no more, for all my time was taken up with Chunder; for as the second shot rang out, he gave a heave, and nearly sent me through the open window.

It was by a miracle almost that I saved myself from breaking my neck, for it was a good height from the ground; but I held on to him tightly with a clutch such as he never had on his arms and neck before; and then, with a strength for which I shouldn't have given him credit, he tussled with me, now tugging to get away, now to throw me from the window, his hot breath beating all the time upon my cheeks, and his teeth grinning, and eyes rolling savagely.

It was only a spurt, though, and I soon got the better of him.

I don't want to boast, but I suppose our cold northern bone and muscle are tougher and stronger than theirs; and at the end of five minutes, puffing and blown, I was sitting on his chest, taking a paper from inside his calico.

That laid me open; for, like a flash, I saw then that he had a knife in one hand, while before another thought could pass through my mind, it was sticking through my jacket and the skin of my ribs, and my fist was driven down against his mouth for him to kiss for the second time in his life.

Next minute, Captain Dyer and a dozen men were in the room, Chunder was handcuffed and marched off, and the captain was eagerly questioning me.

'But is that fellow shot down or taken—the one outside?' I asked.

'Neither,' said Captain Dyer; 'and it is too late now: he has got far enough away.'

Then I told him what I had seen, and he looked at the packet, his brow knitting as he tried to make it out.

'I ought to have come round, and given the alarm, captain,' I said bitterly.

'Yes, my good fellow, you ought,' he said; 'and I ought to have had that black scoundrel under lock and key days ago. But it is too late now to talk of what ought to have been done; we must talk of what there is to do.—But are you hurt?'

'He sent his knife through my jacket, sir,' I said, 'but it's only a scratch on the skin;' and fortunately that's what it proved to be, for we had no room for wounded men, since we should have them soon enough.

XI.

An hour of council, and then another—our two leaders not seeming to agree as to the extent of the coming danger. Challenge from the west roof:

'Orderly in sight.'

Digitized by Google

Sure enough, a man on horseback riding very slowly, and as if his horse was dead beat.

'Surely it isn't that poor fellow come back, because his horse has failed? He ought to have walked on,' said Captain Dyer.

'Same man,' said Lieutenant Leigh, looking through his glass; and before very long, the poor fellow who had gone away at daybreak rode slowly up to the gate, was admitted, and then had to be helped from his horse, giving a great sobbing groan as it was done.

'In here, quick!' I said, for I thought I heard the ladies' voices; and we carried him in to where Mrs Bantem was, as usual, getting ready for dinner, and there we laid him on a mattress.

'Despatches, captain,' he says, holding up the captain's letter to Colonel Maine. 'They didn't get that. They were too many for me. I dropped one, though, with my pistol, and cut my way through the others.'

As he spoke, I untwisted his leather sword-knot, which was cutting into his wrist, for his hacked and blood-stained sabre was hanging from his hand.

'Wouldn't go back into the scabbard,' he said faintly; and then with a harsh gasp: 'Water—water!'

He revived then a bit; and as Captain Dyer and Mrs Bantem between them were attending to, and binding up his wounds, he told as how he had been set upon ten miles off, and been obliged to fight his way back; and, poor chap, he had fought; for there were no less than ten lance-wounds in his arms, thighs, and chest, from a slight prick up to a horrible gash, deep and long enough, it seemed to me, to let out half-a-dozen poor fellows' souls.

Just in the middle of it, I saw Captain Dyer start and look strange, for there was a shadow came across where we were kneeling; and the next instant he was standing between Miss Ross and the wounded man.

'Pray, go, dear Elsie; this is no place for you,' I heard him whisper to her.

'Indeed, Lawrence,' she whispered, 'am I not a soldier's daughter? I ought to say this is no place for you. Go, and make your arrangements for our defence.'

I don't think any one but me saw the look of love she gave him as she took sponge and lint from his hand, pressing it as she did so, and then her pale face lit up with a smile as she met his eyes; the next moment she was kneeling by the wounded trooper, and in a quiet firm way helping Mrs Bantem, in a manner that made her, poor woman, stare with astonishment.

'God bless you, my darling,' she whispered to her, as soon as they had done, and the poor fellow was lying still—a toss-up with him whether it should be death or life; and I saw Mrs Bantem take Miss Ross's soft white hand between her two great rough hard palms, and kiss it just once.

'And I'd always been abusing and running her down for a fine madam, good for nothing but to squeak songs, and be looked at,' Mrs Bantem said to me, a little while after. 'Why, Isaac Smith, we shall be having that little maid shewing next that there's something in her.'

'And why not?' I said gruffly.

'Ah, to be sure,' says she, with a comical look out of one eye; 'why not? But, Isaac, my lad,' she said sadly, and looking at me very earnestly, 'I'm afraid there's sore times coming; and if so, God in heaven help those poor bairns! Oh, if I'd been a man, and been there!' she cried, as she recollected what the trooper had told us; and she shook her fist fiercely in the air. 'It's what I always did say: soldiers' wives have no business to have children; and it's rank cruelty to the poor little things to bring them into the world.'

Mrs Bantem then went off to see to her patient, while I walked into the court, wondering what would come next, and whether, in spite of all the little bitternesses and grumbling, everybody, now some of the stern realities of life were coming upon us, would shew up the bright side of his or her nature; and somehow I got very hopeful that they would.

I felt just then that I should have much liked to have a few words with Lizzy Green, but I had no chance, for it was a busy time with us. Captain Dyer felt strongly enough his responsibility, and not a minute did he lose in doing all he could for our defence; so that after an anxious day, with nothing more occurring, when I looked round at what had been done in barricading and so on, it seemed to me, speaking as a soldier, that, as far as I could judge, there was nothing more to be done, though still the feeling would come home to me that it was a great place for forty men to defend, if attacked by any number. Captain Dyer must have seen that, for he had arranged to have a sort of citadel at the north end by the gateway, and this was to be the last refuge, where all the ammunition and food and no end of chatties of water were stowed down in the great vault-place, which went under this part of the building and a good deal of the court. Then the watch was set, trebled this time, on roof and at window, and we waited impatiently for the morning. Yes, we all of us, I believe, waited impatiently for the morning, when I think, if we had known all that was to come, we should have knelt down and prayed for the darkness to keep on hour after hour, for days, and weeks, and months, sooner than the morning should have broke as it did upon a rabble of black faces, some over white clothes, some over the British uniform that they had disgraced; and as I, who was on the west roof, heard the first hum of their coming, and caught the first glimpse of the ragged column, I gave the alarm, setting my teeth hard as I did so; for, after many years of soldiering, I was now for the first time to see a little war in earnest.

Captain Dyer's first act on the alarm being given was to double the guard over the three blacks, now secured in the strongest room he could find, the black nurse being well looked after by the women. Then, quick almost as thought, every man was at the post already assigned to him; the women and children were brought into the corner rooms by the gates, and then we waited excitedly for what should follow. The captain now ordered me out of the little party under a sergeant, and made me his orderly, and so it happened that always being with or about him, I knew how matters were going on, and was always carrying the orders, now to Lieutenant Leigh, now to this sergeant or that corporal; but at the first offset of the defence of the old place, there was a dispute between captain and lieutenant; and I'm afraid it was maintained by the last out of obstinacy, and just at a time when there should have been nothing but pulling together for the sake of all concerned. I must say, though, that there was right on both sides.

Lieutenant Leigh put it forward as his opinion that, short of men as we were, it was folly to keep four enemies under the same roof, who were likely at any time to overpower the one or two sentries placed over them; while, if there was nothing to fear in that way, there was still the necessity of shortening our defensive forces by a couple of valuable men.

'What would you do with them, then?' said Captain Dyer.

'Set them at liberty,' said Lieutenant Leigh.

'I grant all you say, in the first place,' said the captain; 'but our retaining them is a sheer necessity.'

'Why?' said Lieutenant Leigh, with a sneer; and I must say that at first I held with him.

'Because,' said the captain sternly, 'if we set them at liberty, we increase our enemies' power, not merely

Digitized by Google

with three men, but with scoundrels who can give them the fullest information of our defences, over and above that of which I am afraid they are already possessed. The matter will not bear further discussion.—Lieutenant Leigh, go now to your post, and do your duty to the best of your power.'

Lieutenant Leigh did not like this, and he frowned; but Captain Dyer was his superior officer, and it was his duty to obey, so of course he did.

Now, our position was such, that, say, a hundred men with a field-piece could have knocked a wing in, and then carried us by assault with ease; but though our enemies were full two hundred and fifty, and many of them drilled soldiers, pieces you may say of a great machine, fortunately for us, there was no one to put that machine together, and set it in motion. We soon found that out, for, instead of making the best of things, and taking possession of buildings—sheds and huts—here and there, from which to annoy us, they came up in a mob to the gate, and one fellow on a horse—a native chief, he seemed to be—gave his sword a wave, and half-a-dozen sowars round him did the same, and then they called to us to surrender.

Captain Dyer's orders were to act entirely on the defensive, and to fire no shot till we had orders, leaving them to commence hostilities.

'For,' said he, speaking to all the men, 'it may be a cowardly policy with such a mutinous set in front of us, but we have the women and children to think of; therefore, our duty is to hold the foe at bay, and when we do fire, to make every shot tell. Beating them off is, I fear, impossible, but we may keep them out till help comes.'

'Wouldn't it be advisable, sir, to try and send off another despatch?' I said; 'there's the trooper's horse.'

'Where?' said Captain Dyer, with a smile. 'That has already been thought of, Smith; and Sergeant Jones, the only good horseman we have, went off at two o'clock, and by this time is, I hope, out of danger. —Good heavens! what does that mean?' he said, using his glass.

It was curious that I should have thought of such a thing just then, at a time when four sowars led up Sergeant Jones tied by a piece of rope to one of their saddle-bows, while the trooper's horse was behind.

Captain Dyer would not shew, though, that he was put out by the failure of that hope: he only passed the word for the men to stand firm, and then sent me with a message to Mrs Colonel Maine, requesting that every one might keep right away from the windows, as the enemy might open fire at any time.

He was quite right, for just as I knocked at Mrs Maine's door, a regular squandering, scattering fire began, and you could hear the bullets striking the wall with a sharp pat, bringing down showers of white lime-dust and powdered stone.

I found Mrs Maine seated on the floor with her children, pale and trembling, the little things the while laughing and playing over some pictures. Miss Ross was leaning over her sister, and Lizzy Green was waiting to give the children something else when they were tired of the pictures.

As the rattle of the musketry began, it was soon plain enough to see who had the stoutest hearts; but I seemed to be noticing nothing, though I did a great deal, and listened to Mrs Bantem's voice in the next room, bullying and scolding a woman for crying out loud and upsetting everybody else.

I gave my message, and then Miss Ross asked me if any one was hurt, to which I answered as cheerfully as could be that we were all right as yet; and then, taking myself off, Lizzy Green came with me to the door, and I held out my hand to say 'good-bye,' for I knew it was possible I might never see her again. She gave me her hand, and said 'Good-bye,' in a faltering sort of way, and it seemed to me that she shrank from me. The next instant, though, there was the rattling crash of the firing, and I knew now that our men were answering.

XII.

As I went down into the court-yard, I found the smoke rising in puffs as our men fired over the breastwork at the mob coming at the gate. Captain Dyer in the thick of it the while, going from man to man, warning them to keep themselves out of sight, and to aim low.

'Take care of yourselves, my lads. I value every one of you at a hundred of those black scoundrels.—Tut, tut, whose that down?'

'Corporal Bray,' says some one.

'Here, Emson, Smith, both of you lend a hand here: we'll make Bantem's quarters hospital.—Now then, look alive, ambulance party.'

We were about lifting the poor fellow, who had sunk down behind the breastwork, all doubled up like, hands and knees; and head down; but as we touched him, he straightened himself out, and looked up at Captain Dyer.

'Don't touch me yet,' he says in a whisper. 'My stripes for some one, captain. Do for Isaac Smith there. Hooray!' he says faintly; and he took off his cap with one hand, gave it a bit of a wave—'God save the Quee'——

'Bear him carefully to the empty ground floor, south side,' says Captain Dyer sternly; 'and make haste back, my lads: moments are precious.'

'I'll do that with Private Manning's wife,' says a voice; and turning as we were going to lift our dead comrade, there was big, strapping Mrs Bantem, and another soldier's wife, and she then said a few words to the captain.

'Gone?' says Captain Dyer.

'Quarter of an hour ago, sir,' says Mrs Bantem; and then to me: 'Poor trooper, Isaac!'

'Another man here,' says Captain Dyer.—'No, not you, Smith.—Fill up here, Bantem.'

Joe Bantem waved his hand to his wife, and took the dead corporal's place, but not easily, for Measles, who was next man, was stepping into it, when Captain Dyer ordered him back.

'But there 's such a much better chance of dropping one of them mounted chaps, sir,' says Measles grumbling.

'Hold your tongue, sir, and go back to your own loophole,' says Captain Dyer; and the way that Measles kept on loading and firing, ramming down his cartridges viciously, and then taking long and careful aim, ah! and with good effect, too, was a sight to see.

All the while, we were expecting an assault, but none came, for the mutineers fell fast, and did not seem to dare to make a rush while we kept up such practice.

Then I had to go round and ask Lieutenant Leigh to send six more men to the gate, and to bring news of what was going on round the other sides.

I found the lieutenant standing at the window where I caught Chunder, and there was a man each at all the other four little windows which looked down at the outside—all the others, as I have said, looking in upon the court.

The lieutenant's men had a shot now and then at any one who approached; but the mutineers seemed to have determined upon forcing the gate, and, so far as I could see, there was very little danger to fear from any other quarter.

I knew Lieutenant Leigh was not a coward, but he seemed very half-hearted over the defence, doing his duty but in a sullen sort of way; and of course that was because he wanted to take the lead now held by Captain Dyer; and, perhaps it was misjudging

Digitized by Google

him, but I'm afraid just at that time he'd have been very glad if a shot had dropped his rival, and he could have stepped into his place.

Captain Dyer's plan to keep the rabble at bay till help could come, was of course quite right; and that night it was an understood thing, that another attempt should be made to send a messenger to Wallahbad, another of our corporals being selected for the dangerous mission.

The fighting was kept on, in an on-and-off way till evening, we losing several men, but a good many falling on the other side, which made them more cautious, and not once did we have a chance of touching a man with the bayonet. Some of our men grumbled a little at this, saying that it was very hard to stand there hour after hour to be shot down; and could they have done as they liked, they'd have made a sally.

Then came the night, and a short consultation between the captain and Lieutenant Leigh. The mutineers had ceased firing at sundown, and we were in hopes that there would be a rest till daylight, but all the same the strictest watch was kept, and only half the men lay down at a time.

Half the night, though, had not passed, when a hand was laid upon my shoulder, and in an instant I was up, piece in hand, to find that it was Captain Dyer.

'Come here,' he said quietly; and following him into the room underneath where the women were placed, he told me to listen, and I did, to hear a low, grating, tearing noise, as of something scraping on stone. 'That's been going on,' he said, 'for a good hour, and I can't make it out, Smith.'

'Prisoners escaping,' I said quietly.

'But they are not so near as that. They were confined in the next room but one,' he said in a whisper.

'Broke through, then,' I said.

Then we went—Captain Dyer and I—quietly up on to the roof, answered the challenge, and then walked to the edge, where, leaning over, we could hear the dull grating noise once more; then a stone seemed to fall out on to the sandy way by the palace walls.

It was all plain enough: they had broken through from one room to another, where there was a window no bigger than a loophole, and they were widening this.

'Quick, here, sentry,' says the captain.

The next minute the sentry hurried up, and we had a man posted as nearly over the window as we could guess, and then I had my orders in a minute:

'Take two men and the sentry at their door, rush in, and secure them at once. But if they have got out, join Sergeant Williams, and follow me to act as reserve, for I am going to make a sally by the gate to stop them from the outside.'

I roused Harry Lant and Measles, and they were with me in an instant. We passed a couple of sentries, and gave the countersign, and then mounted to the long stone passage which led to where the prisoners had been placed.

As we three privates neared the door, the sentry there challenged; but when we came up to him and listened, there was not a sound to be heard, neither had he heard anything, he said. The next minute the door was thrown open, and we found an empty room; but a hole in the wall shewed us which way the prisoners had gone.

We none of us much liked the idea of going through that hole to be taken at a disadvantage, but duty was duty, and running forward, I made a bold thrust through with my piece in two or three directions; then I crept through, followed by Harry Lant, and found that room empty too; but they had not gone by the doorway which led into the women's part, but enlarged the window, and dropped down, leaving a large opening—one that, if we had not detected it then, would no doubt have done nicely for the entrance of a strong party of enemies.

'Sentry here,' I said; and leaving the man at the window, followed by Harry Lant and Measles, I ran back, got down to the court-yard, crossed to where Sergeant Williams with half-a-dozen men waited our coming, and then we were passed through the gate, and went along at the double to where we could hear noise and shouting.

We had the narrow alley to go through—the one I have before mentioned as being between the place we had strengthened and the next building; and no sooner were we at the end, than we found we were none too soon, for there, in the dim starlight, we could see Captain Dyer and four men surrounded by a good score, howling and cutting at them like so many demons, and plainly to be seen by their white calico things.

'By your left, my lads, shoulder to shoulder—double,' says the sergeant.

Then we gave a cheer, and with hearts bounding with excitement, down we rushed upon the scoundrels to give them their first taste of the bayonet, cutting Captain Dyer and two more men out, just as the other two went down.

It was as fierce a fight that, as it was short; for we soon found the alarm spread, and enemies running up on all sides. It was bayonet-drill then, and well we shewed the practice, till we retired slowly to the entrance of the alley; but the pattering of feet and cries told that there were more coming to meet us that way; when, following Captain Dyer's orders, we retreated in good form in the other direction, so as to get round to the gate by the other alley, on the south side.

And now for the first time we gave them a volley, checking the advance for a few seconds, while we retreated loading, to turn again, and give them another volley, which checked them again; but only for a few seconds, when they came down upon us like a swarm of bees, right upon our bayonets; and as fast as half-a-dozen fell, half-a-dozen more were leaping upon the steel.

We kept our line, though, one and all, retiring in good order to the mouth of the second court, which ran down by the south side of the palace; when, as if maddened at the idea of losing us, a whole host of them came at us with a rush, breaking our line, and driving us anyhow, mixed up together, down the alley, which was dark as pitch; but not so dark but that we could make out a turban or a calico cloth, and those bayonets of ours were used to some purpose.

Half-a-dozen times over I heard the captain's voice cheering us on, and shouting: 'Gate, gate!' Then I saw the flash of his sword once, and managed to pin a fellow who was making at him, just as we got out at the other end with a fierce rush. Then I heard the captain shout 'Rally!' and saw him wave his sword; and then I don't recollect any more, for it was one wild fierce scuffle—stab and thrust, in the midst of a surging, howling, maddened mob, forcing us towards the gateway.

I thought it was all over with us, when there came a cheer, and the gate was thrown open, a dozen men formed, and charged down, driving the niggers back like sheep; and then, somehow or another, we were cut out, and, under cover of the new-comers, reached the gate.

A ringing volley was then given into the thick of the mutineers as they came pouring on again; but the next moment all were safely inside, and the gate was thrust to and barred; and, panting and bleeding, we stood, six of us, trying to get our breath.

'This wouldn't have happened,' says a voice, 'if my

Digitized by Google

advice had been taken. I wish the black scoundrels had been shot. 'Where's Captain Dyer?'

There was no answer, and a dead chill fell on me as I seemed to realise that things had come now to a bad pass.

'Where's Sergeant Williams?' said Lieutenant Leigh again; but it seemed to me that he spoke in a husky voice.

'Here!' said some one faintly, and, turning, there was the sergeant seated on the ground, and supporting himself against the breast-work.

'Any one know the other men who went out on this mad sally?' says the lieutenant.

'Where's Harry Lant?' I says.

There was no answer here either, and this time it was my turn to speak in a queer husky voice as I said again:

'Where's Measles? I mean Sam Bigley.'

'He's gone, too, poor chap,' says some one.

'No, he ain't gone neither,' says a voice behind me, and, turning, there was Measles tying a handkerchief round his head, muttering the while about some black devil. 'I ain't gone, nor I ain't much hurt,' he growled; 'and if I don't take it out of some on 'em for this chop o' the head, it's a rum un; and that's all I've got to say.'

'Load,' says Lieutenant Leigh shortly; and we loaded again, and then fired two or three volleys at the niggers as they came up towards the gate once more; when some one calls out:

'Ain't none of us going to make a sally party, and bring in the captain?'

'Silence there, in the ranks!' shouts Lieutenant Leigh; and though it had a bad sound coming from him as it did, and situated as he was, no one knew better than I did, how that it would have been utter madness to have gone out again; for even if he were alive, instead of bringing in Captain Dyer, now that the whole mob was roused, we should have all been cut to pieces.

It was as if in answer to the lieutenant's order that silence seemed to fall then, both inside and outside the palace—a silence that was only broken now and then by the half-smothered groan of some poor fellow who had been hurt in the sortie—though the way in which those men of ours did bear wounds, some of them even that were positively awful, was a something worth a line in history.

Yes, there was a silence fell upon the place for the rest of that night, and I remember thinking of the wounds that had been made in two poor hearts by that bad night's work; and I can say now, faithful and true, that there was not a selfish thought in my heart as I remembered Lizzy Green, any more than there was when Miss Ross came uppermost in my mind, for I knew well enough that they must have soon known of the disaster that had befallen our little party.

XIII.

Whatever those poor women suffered, they took care it should not be seen by us men, and indeed we had little time to think of them the next day. We had given ourselves the task to protect them, and we were fighting hard to do it, and that was all we could do then; for the enemy gave us but little peace; not making any savage attack, but harassing us in a cruel way, every man acting like for himself, and all the discipline the sepoys had learned seeming to be forgotten.

As for Lieutenant Leigh, he looked cold and stern, but there was no flinching with him now: he was in command, and he shewed it; and though I never liked the man, I must say that he shewed himself now a brave and clever officer; and but for his skilful arrangement of the few men under his charge, that place would have fallen half-a-dozen times over.

We had taken no prisoners, so that there was no chance of talking of exchange; though I believe to a man all thought that the captain and files missing from our company were dead.

The women now lent us their help, bringing down spare muskets and cartridges, loading too for us; so that when the mutineers made an attack, we were able to keep up a much sharper fire than we should have done under other circumstances.

It was about the middle of the afternoon, when, hot and exhausted, we were firing away, for the bullets were coming thick and fast through the gateway, flying across the yard, and making a passage in that direction nearly certain death, when I felt a strange choking feeling, for Measles says to me all at once:

'Look there, Ike.'

I looked, and I could hardly believe it, and rubbed my eyes, for just in the thickest of the firing there was the sound of merry laughter, and those two children of the colonel's came toddling out, right across the line of fire, turned back to look up at some one calling to them from the window, and then stood still, laughing and clapping their hands.

I don't know how it was, I only know that it wasn't to look brave, but, dropping my piece, I rushed to catch them, just at the same moment as did Miss Ross and Lizzy Green; while, directly after, Lieutenant Leigh rushed from where he was, caught Miss Ross round the waist, and dragged her away, as I did Lizzy and the children.

How it was that we were none of us hit, seems strange to me, for all the time the bullets were pattering on the wall beyond us. I only know I turned sick and faint as I just said to Lizzy: 'Thank God for that!' and she led off the children; Miss Ross shrinking from Lieutenant Leigh with a strange mistrustful look, as if she were afraid of him; and the next minute they were under cover, and we were back at our posts.

'Poor bairns!' says Measles to me, 'I ain't often glad of anything, Ike Smith, but I am glad they ain't hurt. Now my soul seemed to run and help them myself, but my legs seemed as if they couldn't move. You need not believe it without you like,' he added in his sour way.

'But I do believe it, old fellow,' I said warmly, as I held out my hand. 'Chaff's chaff, but you never knew me make light of a good act done by a true-hearted comrade.'

'All right,' says Measles gruffly. 'Now, see me pot that sowar.—Missed him, by Jove!' he exclaimed, as soon as he had fired. 'These pieces ain't true. No! hit him! He's down! That's one bairn-killer the less.'

'Sam,' I said just then, 'what's that coming up between the huts yonder?'

'Looks like a wagin,' says Measles. '"Tis a wagin, ain't it?'

'No,' I said, feeling that miserable I didn't know what to do; 'it isn't a wagon, Sam; but—— Why, there's another. A couple of field-pieces!'

'Nine-pounders, by all that's unlucky,' said Measles, slapping his thigh. 'Then I tell you what it is, Ike Smith—it's about time we said our prayers.'

I didn't answer, for the words would not come; but it was what had always been my dread, and it seemed now that the end was very near.

Troubles were coming upon us thick; for being relieved a short time after, to go and have some tea that Mrs Bantem had got ready, I saw something that made me stop short, and think of where we should be if the water supply was run out, for though we had the chatties down below in the vault under the north end, we wanted what there was in the tank, while there was *Nabob*, the great elephant,

Digitized by Google

drawing it up in his trunk, and cooling himself by squirting it all over his back!

I went to Lieutenant Leigh, and pointed it out to him; and the great beast was led away; when, there being nothing else for it, we opened a way through our breast-work, watched an opportunity, threw open the gate, and he marched out right straight in amongst the mutineers, who cheered loudly, after their fashion, as he came up to them.

There was no more firing in that night, and taking it in turns, we, some of us, had a sleep, I among the rest, all dressed as I was, and with my gun in my hand, ready for use at a moment's notice; and I remember thinking what a deal depended on the sentries, and how thoroughly our lives were in their hands; and then my next thought was of how was it possible for it to be morning, for I had only seemed to close my eyes, and then open them again on the light of day.

But morning it was; and with a dull, dead feeling of misery upon me, I got up and gave myself a shake, ran the ramrod down my piece, to see that it was charged all right, looked to the cap, and then once more prepared for the continuation of the struggle, low-spirited and disheartened, but thankful for the bit of refreshing rest I had had.

A couple of hours passed, and there was no movement on the part of the enemy; the ladies never stirred, but we could hear the children laughing and playing about, and how one did seem to envy the little light-hearted, thoughtless things! But my thoughts were soon turned into another direction, for Lieutenant Leigh ordered me up into one of the rooms commanding the gateway, and looking out on the square where the guns were standing, and came up with me himself.

'You'll have a good look-out from here, Smith,' he said; 'and being a good shot'——

He didn't say any more, for he was, like me, taken up with the movement in the square—a lot of the mutineers running the two guns forward in front of the gate, and then closing round them, so that we could not see what was going on; but we knew well enough that they were charging them, and there seemed nothing for it but to let them fire, unless by a bold sally we could get out and spike them.

Just then, Lieutenant Leigh looked at me, and I at him, when, touching my cap in salute, I said: 'Two good nails, sir, and a tap on each would do it.'

'Yes, Smith,' he said grimly; 'but who is to drive those two nails home?'

I didn't answer him for a minute, I should think, for I was thinking over matters, about life, and about Lizzy, and now that Harry Lant was gone, it seemed to me that there might be a chance for me; but still duty was duty, and if men could not in such a desperate time as this risk something, what was the good of soldiers?

'I'll drive 'em home, sir,' I says then quietly, 'or they shall drive me home!'

He looked at me for an instant, and then nodded.

'I'll get the men ready,' he says; 'it's our only chance; and with a bold dash we may do it. I'll see to the armourer's chest for hammers and spikes. I'll spike one, Smith, and you the other; but, mind, if I fail, help me, as I will you, if you fail; and God help us! Keep a sharp look-out till I come back.'

He left the room, and I heard a little movement below, as of the men getting ready for the sally; and all the while I stood watching the crowd in front, which now began hurraing and cheering; and there was a motion which shewed that the guns were being run in nearer, till they stopped about fifty yards from the gate.

'What makes him so long?' I thought, trembling with excitement; 'another minute, perhaps, and the gate will be battered down, and that mob rushing in.'

Then I thought that we ought all who escaped from the sortie, in case of failure, to be ready to take to the rooms adjoining where I was, which would be our last hope; and then I almost dropped my piece, my mouth grew dry, and I seemed choked, for, with a loud howl, the crowd opened out, and I saw a sight that made my blood run cold—those two nine-pounders standing with a man by each breech, smoking linstock in hand; while bound, with their heads against the muzzles, and their white faces towards us, were Captain Dyer and Harry Lant!

One spark—one touch of the linstock on the breech—and those two brave fellows' heads would be blown to atoms; and, as I expected that every moment such would be the case, my knees knocked together; but the next moment I was down on those shaking knees, my piece made ready, and a good aim taken, so that I could have dropped one of the gunners before he was able to fire.

I hesitated for a moment before I made up my mind which to try and save, and the thought of Lizzy Green came in my mind, and I said to myself: 'I love her too well to give her pain,' when, giving up Captain Dyer, I aimed at the gunner by poor Harry Lant.

'Don't fire,' said a voice just then, and, turning, there was Lieutenant Leigh. 'The black-hearted wretches,' he muttered. 'But we are all ready; though now, if we start, it will be the signal for the death of those two.—But what does this mean?'

What made him say that, was a chief, all in shawls, who rode forward and shouted out in good English, that they gave us one hour to surrender; but, at the end of that time, if we had not marched out without arms, they would blow their prisoners away from the mouth of the guns.

Then, for fear we had not heard it, he spurred his horse up to within ten yards of the gate, and shouted it out again, so that every one could hear it through the place; and, though I could have sent a bullet through and through him, I could not help admiring the bold daring fellow, riding up right to the muzzles of our pieces.

But all the admiration I felt was gone the next moment, as I thought of the cruelties practised, and of those bound there to those gun-muzzles.

There was nothing said for a few minutes, for I expected the lieutenant to speak; but as he did not, I turned to him and said:

'If all was ready, sir, I could drop one gunner; and I'd trust Measles—Sam Bigley—to drop the other, when a bold dash might do it. You see they've retired a good thirty yards, and we should only have twenty more to run than they; while the surprise would give us that start. A good sharp jack-knife would set the prisoners free, and a covering-party would perhaps check the pursuit while we got in.'

'We shall have to try it, Smith,' he said, his breath coming thick and fast with excitement; and then he seemed to turn white, for Miss Ross and Lizzy came into the room.

XIV.

I should think it must have been the devil tempting Lieutenant Leigh, or he would never have done as he did; for, as he looked at Miss Ross, the change that came over him was quite startling. He could read all that was passing in her heart; there was no need for her to lay her hand upon his arm, and point with the other out of the window, as in a voice that I didn't know for hers, she said:

'Will you leave those two brave men there to die, Lieutenant Leigh?'

He didn't answer for a moment, but seemed to be struggling with himself; then, speaking as huskily as she did, he said:

'Send away that girl!' and before I could go

Digitized by Google

to her—for I should have done it then, I know—and whisper a few words of hope, poor Lizzy went out, mourning for Harry Lant, wringing her hands; and I stood at my post, a sentry by my commander's orders, so that it was no spying on my part if I heard what followed.

I believe Lieutenant Leigh fancied he was speaking in an undertone, when he led Miss Ross away to a corner, and spoke to her; but this was perhaps the most exciting moment in his life, and his voice rose in spite of himself, so that I heard all; while she, poor thing, I believe forgot all about my presence; and, as a sentry—a machine almost—placed there, what right had I to speak?

'Will you leave him?' said Miss Ross again. 'Will you not try to save him?'

Lieutenant Leigh did not answer for a bit, for he was making his plans, and I felt quite staggered as I saw through them.

'You see how he is placed: what can I do?' said Lieutenant Leigh. 'If I go, it is the signal for firing. You see the gunners waiting. And why should I risk the lives of my men, and my own, to save him? He is a soldier, and it is the fortune of war: he must die.'

'Are you a man, or a coward?' said Miss Ross angrily.

'No coward,' he said fiercely; 'but a poor slighted man, whom you have wronged, jilted, and ill-used; and now you come to me to save your lover's life—to give mine for it. You have robbed me of all that is pleasant between you; and now you ask more. Is it just?'

'Lieutenant Leigh, you are speaking madly. How can you be so unjust?' she cried, holding tightly by his arm, for he was turning away, while I felt mad with him for torturing the poor girl, when it was decided that the attempt was to be made.

'I am not unjust,' he said. 'The hazard is too great; and what should I gain if I succeeded? Pshaw! Why, if he were saved, it would be at the expense of my own life.'

'I would die to save him,' she said hoarsely.

'I know it, Elsie; but you would not give a loving word to save me. You would send me out to my death without compunction—without a care; and yet you know how I have loved you.'

'You—you loved me; and yet stand and see my heart torn—see me suffer like this!' cried Miss Ross, and there was something half wild in her looks as she spoke.

'Love you!' he cried; 'yes, you know how I have loved you'——

His voice sank here; but he was talking in her ear excitedly, saying words that made her shrink from him up to the wall, and look at him as if he were some object of the greatest disgust.

'You can choose,' he said bitterly, as he saw her action; and he turned away from her.

The next moment she was on her knees before him, holding up her hands as if in prayer.

'Promise me,' he said, 'and I will do it.'

'Oh, some other way—some other way!' she cried piteously, her face all drawn the while.

'As you will,' he said coldly.

'But think—oh, think! You cannot expect it of me. Have mercy! Oh, what am I saying?'

'Saying!' he cried, catching her hands in his, and speaking excitedly and fast—'saying things that are sending him to his death! What do I offer you? Love, devotion, all that man can give. He would, if asked now, give up all for his life; and yet you, who profess to love him so dearly, refuse to make that sacrifice for his sake! You cannot love him. If he could hear now, he would implore you to do it. Think. I risk all. Most likely, my life will be given for his; perhaps we shall both fall. But you refuse. Enough: I must go; I cannot stay. There are many lives here under my charge; they must not be neglected for the sake of one. As I said before, it is the fortune of war; and, poor fellow, he has but a quarter of an hour or so to live, unless help comes.'

'Unless help comes,' groaned Miss Ross frantically, when, as Lieutenant Leigh reached the door, watching me over his shoulder the while, Miss Ross went down on her knees, stretched out her hands towards where Captain Dyer was bound to the gun, and then she rose, cold, and hard, and stern, and turned to Lieutenant Leigh, holding out her hand. 'I promise,' she said hoarsely.

'On your oath, before God?' he exclaimed joyfully, as he caught her in his arms.

'As God is my judge,' she faltered with her eyes upturned; and then, as he held her to his breast, kissing her passionately, she shivered and shuddered, and, as he released her, sank in a heap on the floor.

'Smith,' cried Lieutenant Leigh; 'right face—forward!' and as I passed Miss Ross, I heard her sob in a tone I shall never forget: 'O Lawrence, Lawrence!' and then a groan tore from her breast, and I heard no more.

XV.

'This is contrary to rule. As commandant, I ought to stay in the fort; but I've no one to give the leadership to, so I take it myself,' said Lieutenant Leigh; 'and now, my lads, make ready—present! That's well. Are all ready? At the word "Fire!" Privates Bigley and Smith fire at the two gunners. If they miss, I cry fire again, and Privates Bantem and Grainger try their skill; then, at the double, down on the guns. Smith and I spike them, while Bantem and Grainger cut the cords. Mind this: those guns must be spiked, and those two prisoners brought in; and if the sortie is well managed, it is easy, for they will be taken by surprise. Hush! Confound it, men; no cheering.'

He only spoke in time, for in the excitement the men were about to hurray.

'Now, then, is that gate unbarred?'

'Yes, sir.'

'Is the covering-party ready?'

'Yes, sir.'

My hand trembled as he spoke; but the next instant it was of a piece with my gunstock. There was the hot square, with the sun shining on the two guns that must have been hot behind the poor prisoners' heads; there stood the two gunners in white, with their smoking linstocks, leaning against the wheels, for discipline was slack; and there, thirty or forty yards behind, were the mutineers, lounging about, and smoking many of them. For all firing had ceased, and judging that we should not risk having the prisoners blown away from the guns, the mutineers came boldly up within range, as if defying us, and it was pretty safe practice at some of them now.

I saw all this at a glance, and while it seemed as if the order would never come; but come it did, at last.

'FIRE!'

Bang! the two rifles going off like one; and the gunner behind Captain Dyer leaped into the air, while the one I aimed at seemed to sink down suddenly beside the wheel he had leaned upon. Then the gate flew open, and with a rush and a cheer, we, ten of us, raced down for the guns.

Double-quick time! I tell you it was a hard race; and being without my gun now—only my bayonet stuck in my trousers' waist-band—I was there first, and had driven my spike into the touch-hole before Lieutenant Leigh reached his; but the next moment

Digitized by Google

his was done, the cords were cut, and the prisoners loose from the guns. But now we had to get back.

The first inkling I had of the difficulty of this was seeing Captain Dyer and Harry Lant stagger, and fall forward; but they were saved by the men, and we saw directly that they must be carried.

No sooner thought of than done.

'Hoist Harry on my back,' says Grainger; and he took him like a sack; Bantem acting the same part by Captain Dyer; and those two ran off, while we tried to cover them.

For don't you imagine that the mutineers were idle all this while; not a bit of it. They were completely taken by surprise, though, at first, and gave us time nearly to get to the guns before they could understand what we meant; but the next moment some shouted and ran at us, and some began firing; while by the time the prisoners were cast loose, they were down upon us in a hand-to-hand fight.

And in those fierce struggles there is such excitement, that, for my part, I've now but a very misty recollection of what took place; but I do recollect seeing the prisoners well on the way back, hearing a cheer from our men, and then, hammer in one hand, bayonet in the other, fighting my way backward along with my comrades. Then all at once a glittering flash came in the air, and I felt a dull cut on the face, followed directly after by another strange, numbing blow, which made me drop my bayonet, as my arm fell uselessly to my side; and then with a lurch and a stagger, I fell, and was trampled upon twice, when, as I rallied once, a black, savage-looking sepoy raised his clubbed musket to knock out my brains, but a voice I well knew cried: 'Not this time, my fine fellow. That's number three, that is, and well home;' and I saw Measles drive his bayonet with a crash through the fellow's breast-bone, so that he fell across my legs.—'Now, old chap, come along,' he shouts, and an arm was passed under me.

'Run, Measles, run!' I said as well as I could. 'It's all over with me.'

'No; 'taint,' he said; 'and don't be a fool. Let me do as I like, for once in a way.'

I don't know how he did it, nor how, feeling sick and faint as I did, I managed to get on my legs; but old Measles stuck to me like a true comrade, and brought me in. For one moment I was struggling to my feet; and the next, after what seemed a deal of firing going over my head, I was inside the breastwork, listening to our men cheering and firing away, as the mutineers came howling and raging up almost to the very gates.

'All in?' I heard Lieutenant Leigh ask.

'To a man, sir,' says some one; 'but Private Bantem is hurt.'

'Hold your tongue, will you!' says Joe Bantem. 'I ain't killed, nor yet half. How would you like your wife frightened if you had one?'

'How's Private Lant?'

'Cut to pieces, sir,' says some one softly.

'I'm thankful that you are not wounded, Captain Dyer,' then says Lieutenant Leigh.

'God bless you, Leigh!' says the captain faintly: 'it was a brave act. I've only a scratch or two when I can get over the numbness of my limbs.'

I heard all this in a dim sort of fashion, just as if it was a dream in the early morning; for I was leaning up against the wall, with my face laid open and bleeding, and my left arm smashed by a bullet, and nobody just then took any notice of me, because they were carrying in Captain Dyer and Harry Lant; while the next minute, the fire was going on hard and fast; for the mutineers were furious, and I suppose they danced round the guns in a way that shewed how mad they were about the spiking.

As for me, I did not seem to be in a great deal of pain; but I got turning over in my mind how well we had done it that morning; and I felt proud of it all, and glad that Captain Dyer and Harry Lant were brought in; but all the same what I had heard lay like a load upon me; and knowing, as I did, that poor Miss Ross had, as it were, sold herself to save the captain's life, and that she had, in a way of speaking, been cheated into doing so, I felt that when the opportunity came, I must tell the captain all I knew. When I had got as far as that with my thoughts, the dull numbness began to leave me, and everything else was driven out of my mind by the thought of my wound; and I got asking myself whether it was going to be very bad, for I thought it was, so getting up a little, I began to crawl along in the shade towards the ruined south end of the palace, nobody seeming to notice me.

XVI.

I daresay you who read this don't know what the sensation is of having one arm-bone shivered, and the dead limb swinging helplessly about in your sleeve, whilst a great miserable sensation comes over you that you are of no more use—that you are only a broken pitcher, fit to hold water no more, but only to be broken up to mend the road with. There were all those women and children wanting my help, and the help of hundreds more such as me, and instead of being of use, I knew that I must be a miserable burden to everybody, and only in the way.

Now, whether man—as some of the great philosophers say—did gradually get developed from the beast of the field, I'm not going to pretend to know; but what I do know is this—that, leave him in his natural state, and when he, for some reason or another, forgets all that has been taught him, he seems very much like an animal, and acts as such.

It was something after this fashion with me then, for feeling like a poor brute out of a herd that has been shot by the hunters, I did just the same as it would—crawled away to find a place where I might hide myself and lie down and die.

You'll laugh, I daresay, when I tell you my sensations just then, and I'm ready to laugh at them now myself; for, in the midst of my pain and suffering, it came to me that I felt precisely as I did when I was a young shaver of ten years old. One Sunday afternoon, when everybody but mother and me had gone to church, and she had fallen asleep, I got father's big clay-pipe, rammed it full of tobacco out of his great lead box, and then took it into the back kitchen, feeling as grand as a churchwarden, and set to and smoked it till I turned giddy and faint, and the place seemed swimming about me.

Now, that was just how I felt when I crawled about in that place, trying not to meet anybody, lest the women should see me all covered with blood; and at last I got, as I thought, into a room where I should be all alone.

I say I crawled; and that's what I did do, on one hand and my knees, the fingers of my broken arm trailing over the white marble floor, with each finger making a horrible red mark, when all at once I stopped, drew myself up stiffly, and leaned trembling and dizzy up against the wall, trying hard not to faint. For I found that I wasn't alone, and that in place of getting away—crawling into some hole to lie down and die, I was that low-spirited and weak—I had come to a place where one of the women was, for there, upon her knees, was Lizzy Green, sobbing and crying, and tossing her hands about in the agony of her poor heart.

I was misty, and faint, and confused, you know; but perhaps it was something like instinct made me crawl to Lizzy's favourite place, for it was not intended. She did not see me, for her back was my

Digitized by Google

way; and I did not mean her to know I was there; for in spite of my giddiness, I seemed to feel that she had learned all the news about our failure, and that she was crying about poor Harry Lant.

'And he deserves to be cried for, poor chap,' I said to myself, for I forgot all about my own pains then; but all the same something very dark and bitter came over me, as I wished that she had been crying instead for poor me.

'But then he was always so bright, and merry, and clever,' I thought, 'and just the man who would make his way with a woman; while I—— Please God, let me die now!' I whispered to myself directly after, 'for I'm only a poor, broken, helpless object, in everybody's way.'

It seemed just then as if the hot weak tears that came running out of my eyes made me clearer, and better able to hear all that the sobbing girl said, as I leaned closer and closer to the wall; while, as to the sharp pain every word she said gave me, the dull dead aching of my broken arm was nothing.

'Why—why did they let him go?' the poor girl sobbed: 'as if there were not enough to be killed without him; and him so brave, and stout, and handsome, and true. My poor heart's broken. What shall I do?'

Then she sobbed again; and I remember thinking that unless help soon came, if poor Harry Lant died of his wounds, she would soon go to join him in that land where there was to be no more suffering and pain.

Then I listened, for she was speaking again.

'If I could only have died for him, or been with, or—— Oh, what have I done, that I should be made to suffer so?'

I remember wondering whether she was suffering more then than I was; for, in spite of my jealous despairing feeling, there was something of sorrow mixed up with it for her.

For she had always seemed to like poor Harry's merry ways, when I never could get a smile from her; and she'd go and sit with Mrs Bantem for long enough when Harry was there, while if by chance I went, it seemed like the signal for her to get up, and say her young lady wanted her, when most likely Harry would walk back with her; and I went and told it all to my pipe.

'If he'd only known how I'd loved him,' she sobbed again, 'he'd have said one kind word to me before he went, have kissed me, perhaps, once; but no, not a look nor a sign! Ah! Isaac, Isaac! I shall never see you more!'

What—what? What was it choking me? What was it that sent what blood I had left gushing up in a dizzy cloud over my eyes, so that I could only gasp out once the one word 'Lizzy!' as I started to my feet, and stood staring at her in a helpless, half-blind fashion; for it seemed as though I had been mistaken, and that it was possible after all that she had been crying for me, believing me to be dead; but the next moment I was shrinking away from her, hiding my wounded face with my hand for fear she should see it, for leaping up, hot and flush-cheeked, and with those eyes of hers flashing at me, she was at my side with a bound.

'You cowardly, cruel, bad fellow!' she half-shrieked; 'how dare you stand in that mean deceitful way, listening to my words? Oh, that I should be such a weak fool, with a stupid, blabbing, chattering tongue, to keep on kneeling and crying there, telling lies, every one of them, and—— Get away with you!'

I think it was a smile that was on my face then, as she gave me a fierce thrust on the wounded arm, when I staggered towards her. I know the pain was as if a red-hot hand had grasped me; but I smiled all the same, and then, as I fell, I heard her cry out two words, in a wild agonised way, that went right to my heart, making it leap before all was blank; for I knew that those words meant that, in spite of all my doubts, I was loved.

'O Isaac!' she cried, in a wild frightened way, and then, as I said, all was blank and dark for I don't know how long; but I seemed to wake up to what was to me then like heaven, for my head was resting on Lizzy's breast, and, half-mad with fear and grief, she was kissing my pale face again and again.

'Try—try to forgive me for being so cruel, so unfeeling,' she sobbed; and then for a moment, as she saw me smile, she was about to fly out again, fierce-like, at having betrayed herself, and let me know how she loved me. Even in those few minutes I could read it all: how her passionate little heart was fighting against discipline, and how angry she was with herself; but I saw it all pass away directly, as she looked down at my bleeding face, and eagerly asked me if I was very much hurt.

I tried to answer, but I could not; for the same deathly feeling of sickness came on again, and I saw nothing.

I suppose, though, it only lasted a few minutes, for I woke like again to hear a panting hard breathing, as of some one using great exertion, and then I felt that I was being moved; but, for the life of me, for a few moments I could not make it out, till I heard the faint buzz of voices, when I found that Lizzy, the little fierce girl, who seemed to be as nothing beside me, was actually, in her excitement, carrying me to where she could get help, struggling along panting, a few feet at a time, beneath my weight, and me too helpless and weak to say a word.

'Good heavens! look!' I heard some one say the next moment, and I think it was Miss Ross; but it was some time before I came to myself again enough to find that I was lying with a rolled-up cloak under my head, and Lizzy bathing my lips from time to time, with what I afterwards learned was her share of the water.

But what struck me most now was the way in which she was altered: her sharp, angry way was gone, and she seemed to be changed into a soft gentle woman, without a single flirty way or thought, but always ready to flinch and shrink away until she saw how it troubled me, when she'd creep back to kneel down by my side, and put her little hand in mine; when, to make the same comparison again that I made before, I tell you that there, in that besieged and ruined place, half-starved, choked with thirst, and surrounded by a set of demons thirsting for our blood—I tell you that it seemed to me like being in heaven.

XVII.

I don't know how time passed then; but the next thing I remember is listening to the firing for a while, and then, leaning on Lizzy, being helped to the women's quarters, where, in spite of all they could do, those children would keep escaping from their mother to get to Harry Lant, who lay close to me, poor fellow, smiling and looking happy whenever they came near him; and I smiled, too, and felt as happy when Lizzy, after tending me with Mrs Bantem as long as was necessary, got bathing Harry's forehead with water and moistening his lips.

'Poor fellow,' I thought, 'it will do him good;' and I lay watching Lizzy moving about afterwards, and then I think I must have gone to sleep, or have fallen into a dull numb state, from which I was wakened by a voice I knew; and opening my eyes, I saw that Miss Ross, pale and scared-looking, was on her knees by the side of Harry Lant, and that Captain Dyer was there.

'Not one word of welcome,' he said, with a strange

Digitized by Google

drawn look on his face, which deepened, as Miss Ross rose and went close to him.

'Yes,' she said; 'thank God you have returned safe.—No, no; don't touch me,' she cried hoarsely. 'Here, take me away—lead me out of this!' she said, for at that moment Lieutenant Leigh came quietly in, and she put her hands in his. 'Take me out,' she said again hoarsely; and then like some one muttering in a dream: 'Take me away—take me away.'

I said that drawn strange look on Captain Dyer's face seemed to deepen as he stood watching whilst those two went out together; then he passed his hand over his eyes, as if to ask himself whether it was a dream; and then, with a groan, he leaned one hand against the wall, feeling his way out from the room, and something seemed to hinder me from calling out to him, and telling him what I knew. For I was reasoning with myself, what ought I to do? and then, sick and faint, I seemed to sleep again.

But this time I was waked up by a loud shrieking, and a rush of feet, and, confused as I was, I knew what it meant: the hole where the blacks escaped—Chunder and his party—had not been properly guarded, and the mutineers had climbed up and made an entrance.

The alarm spread fast enough, but not quick enough to save life; for, with a howl, half-a-dozen sepoys, with their scarlet and white coatees open, dashed in with fixed bayonets, and two women were borne to the ground in an instant, while a couple of wretches made a dash at those two children—Little Cock Robin and Jenny Wren, as we called them—standing there, wondering like, by Harry Lant's bed on the floor, whilst the golden light of the setting sun filled the room, and lit up their little angels' faces.

But with a howl, such as I never heard woman give, Mrs Bantem rushed between them and the children, caught a bayonet in each hand, and held them together, letting them pass under one arm, then with a spring forward she threw those great arms of hers round the black fellows' necks as they hung together, and held them in such a hug as they never suffered from before.

The next moment they were all rolling together on the floor; but that incident saved the lives of those poor children, for there came a cheer now, and Measles and a dozen more were led in by Lieutenant Leigh, and ——

There, I am telling you too many horrors. They beat them back step by step, at the point of the bayonet; and a fierce struggle it was, a long fight kept up from room to room, for our men were fierce now as the mutineers, and it was a genuine death-struggle; and the broken window being guarded, not a man of about a dozen mutineers who gained entrance lived to go back and relate their want of success.

And can you wonder, when two of those who fought had found their wives bayoneted: Grainger was one of them; and when the fight was over, during which, raging like a demon, he had bayoneted four men, the poor fellow sat down by his dead wife, took her head first in his lap, then to his breast, and rocked himself to and fro, crying like a child, till there was a bugle-call in the court-yard, when he laid her gently in a corner, carrying her like as if she had been a child, kneeled down, and said 'Our Father' right through by her side, kissed her lips two or three times, and then covered her face with a bit of an old red handkerchief; and him all the while covered with blood and dust and black of powder. Then, poor fellow, he got up and took his gun, and went out on the tips of his toes, lest he should wake her who would wake no more in this world.

Perhaps it was weakness, I don't know, but my eyes were very wet just then, and a soft little hand was laid on my breast, and Lizzy's head leant over me, and her tears, too, fell very fast on my hot and fevered face.

I felt that I should die, not then, perhaps, but before very long, for I knew that my arm was so shattered that it ought to be amputated just below the elbow, while for want of surgical assistance it would mortify; but somehow I felt very happy just then, and my state did not give me much pain, only that I wanted to have been up and doing; and at last Lizzy helping me, I got up, my arm being bandaged and in a sling, to find that I could walk about a little; and I made my way down into the court-yard, where I got near to Captain Dyer, who, better now, and able to limp about, was talking with Lieutenant Leigh, both officers now, and forgetful apparently of all but the present crisis.

'What wounded are there?' said Captain Dyer, as I walked slowly up.

'Nearly every man to some extent,' said Lieutenant Leigh; 'but this man and Lant are the worst.'

'The place ought to be evacuated,' said Captain Dyer; 'it is impossible to hold it another day.'

'We might hold out another day,' said Lieutenant Leigh, 'but not longer. Why not retreat under cover of the night?'

'It seems the only thing left,' said Captain Dyer. 'We might perhaps get to some hiding-place or other before our absence was discovered; but the gate and that back window will be watched of course: how are we to get away with two severely wounded men, the women, and children?'

'That must be planned,' said Lieutenant Leigh; and then the watch was set for the night, as far as could be done, and another time of darkness set in.

It was that which puzzled me, why a good bold attack was not made by night; why, the place must have been carried again and again; but no, we were left each night entirely at rest, and the attacks by day were clumsy and bad. There was no support; every man fought for himself, and after his own fashion, and I suppose that every man did look upon himself as an officer, and resented all discipline. At all events, it was our salvation, though at this time it seemed to me that the end must be coming on the next day, and I remember thinking, that if it did come to the end, I should like to keep one cartridge left in my pouch.

Then my mind went off wandering in a misty way upon a plan to get away by night, and I tried to make one, taking into consideration, that the quarters on the north side of us now, and only separated by ten feet of alley, were in the hands of the mutineers, who camped in them, the same being the case in the quarters on the south side, separated again by the ten feet of alley through which we returned when Captain Dyer and Harry Lant were taken. While on the east was the market plain or square, and on the west a wilderness of open country with huts and sheds. I felt, do you know, that a good plan of escape at this time was just what I ought to make, every one else being busy with duty, and me not able to either fight or stand sentry, so I worked on hard at it that night, trying to be useful in some way; and after a fashion, I worked one out.

But I have not told you what I meant to do with that last cartridge in my pouch; I meant that to be pressed to my lips once before I contrived with one hand to load my rifle, and then if the worst came to the very worst, and when I had waited to the last to see if help would come, then, when it seemed that there was no hope, I meant to do what I told myself it would be my duty, as a man and a soldier, to do, if I loved Lizzy Green—do what more than one man did, during the mutiny, by the woman for whom he had been shedding his heart's best blood; and in the dead of that night I did load that gun, after kissing the bullet; and a deal of pain that gave me,

Digitized by Google

mental as well as bodily, but I don't think that I need to tell you what that last cartridge was for.

XVIII.

I think by this time you pretty well understand the situation of our palace, and how our stronghold was on the north side, close to which was the gate, so hardly fought for: if you don't, I'm afraid it is my fault, and not yours.

At all events, being at liberty, I went over it here and there, and from floor to roof, as I tried to make out which would be the best way for trying to escape; but somehow I couldn't see it then. To go out from the gate was impossible; and the same related to the broken-out window, as both places were thoroughly watched.

As for the other windows about the place, they were such slips, that without they were widened, any escaping by them was impossible. To have let ourselves down, one by one, from the flat roof by a rope, might have done, but it was a clumsy unsuitable way, with all those children and women, so I gave that up, and then sat down as I was by a little window looking out on to the north alley.

Wearied out at last, I suppose that a sort of stupor came over me, from which I did not wake till morning, to find myself suffering a dull numb pain; but when I opened my eyes I forgot that, because of her who was kneeling beside me, driving away the flies that were buzzing about, as if they knew that I was soon to be for them to rest on, without a hand to sweep them away.

At last, though, as I lay there wondering what could be done to save us, the thought came all at once, and struggling to my feet, I held Lizzy to my heart a minute, and then went off to find Captain Dyer.

It quite took me aback to see his poor haggard face, and the way in which he took the trouble, for it was plain enough to see how he was cut to the heart by Miss Ross's treatment of him. But for all that, he was the officer and the gentleman; he had his duty to do, and he was doing it; so that, if even now, after losing so many men, and with so many more half disabled, if the enemy had made a bold assault now, they would have won the place dearly, though win it they must.

That did not seem their way, though they wanted the place for the sake of the great store of arms and ammunition it contained, but all the same they wanted to buy it cheap.

I found Captain Dyer ready enough to listen to my plan, though he shook his head, and said it was desperate. But after a little thought, he said: 'There are some hours now between this and night—help may come before then; if not, Smith, we must try it. My hands are full, so I leave the preparations with you: let every one carry food and a bottle of water—nothing more—all we want now is to save life.'

I promised I'd see to it; and I went and spoke cheerfully to the women, but Mrs Maine seemed quite hysterical. Miss Ross listened to what I had to say in a hard strange way; and really, if it had not been for Mrs Bantem putting a shoulder first to one wheel and then the other, nothing would have been done.

The next person I went to was Measles, who, during a cessation of the firing, was sitting, black and blood-smeared, with his head tied up, wiping out his gun with pieces he tore off the sleeves of his shirt.

'Well, Ike, mate,' he says, 'not dead yet, you see. If we get out of this, I mean to have my promotion; but I don't see how we're going to manage it. What bothers me most is, letting these black devils get all this powder and stuff we have here. Blow my rags if we shall ever use it all! I've been firing away till my old Bess has been so hot that I've been afraid to charge her; and I'll swear I've used twice as many cartridges as any other man. But I say, Ike, old fellow, do you think it's wrong to pot these niggers?'

'No,' I said—'not in a case like this.'

'Glad of it,' he says sincerely; 'because, do you know, old man, I've polished off such a thundering lot, that I've got to be quite narvous about getting killed myself. Only think having forty or fifty black-looking beggars rising up against you in kingdom come, and pointing at you, and saying: "That's the chap as shot me!"'

'I don't think any soldier, acting under orders, who does his duty in defence of women and children, need fear to lie down and die,' I said.

I never saw Measles look soft but that once, as, laying down his ramrod, he took my hand in his, and looked in my face for a bit; then he shook my hand softly, and nodded his head several times.

'How's Harry Lant?' he says at last.

'Very bad,' I said.

'Poor old chap. But tell him I've paid some of the beggars out for it. Mind you tell him—it'll make him feel comfortable like, and ease his mind.'

I nodded, and then told him about the plan.

'Well,' he said, as he slowly and thoughtfully polished his gun-barrel, 'it might do, and it mightn't. Seems a rum dodge; but, anyhow, we might try.'

'I shall want you to help make the bridge,' I says.

'All right, matey; but I don't, somehow, like leaving the beggars all that ammunition;' and then he loaded his rifle very thoughtfully, but only to rouse up directly after, for the mutineers began firing again; and Captain Dyer giving the order, our men replied swift and fast at every black face that shewed itself for an instant.

That was a day: hot, so that everything you went near seemed burning. The walls even sent forth a heat of their own; and if it hadn't been for the chatties down below, we should have had to give up, for the tank was now completely dried, and the flies buzzing about its mud-caked bottom. But the women went round from man to man with water and biscuit, so that no one left his post, and every time the black scoundrels tried to make a lodgment near the gate, half were shot down, and the rest glad enough to get back into shelter.

Towards that weary slow-coming evening, though, after we had beaten them back—or, rather, after my brave comrades had beaten them back half a score of times—I saw that something was up; and as soon as I saw what that something was, I knew that it was all over, for our men were too much cut up and disheartened for any more gallant sorties.

I've not said any more about the guns, only that we spiked them, and left them standing in the market plain, about fifty yards from the gates. I may tell you now, though, that the next morning they were gone, and we forgot all about them till the night I'm telling you of, when they were dragged out again, with a lot of noise and shouting, from a building in the far corner of the square.

We didn't want telling what that meant.

It was plain enough to all of us that the scoundrels had drilled out the touch-holes again, and that during the night they would be planted, and the first discharge would drive down all our defences, and leave us open to a rush.

'We must try your plan, Smith,' says Captain Dyer with a quiet stern look. 'It is time to evacuate the place now.'

Then he knelt down and took a look at the guns with his glass, and I knew he must have been thinking of how he stood tied to the muzzle of one of them, for he gave a sort of shudder as he closed his glass with a snap.

Just then, Miss Ross came round with Lizzy and

Digitized by Google

Mrs Bantem, with wine and water, and I saw a sort of quiet triumph in Lieutenant Leigh's face, as, avoiding Captain Dyer, Miss Ross went up to him, as he half-beckoned to her, and stood by him like a slave, giving him bottle and glass, and then standing by his side with her eyes fixed and strange-looking; while, though he fought against it bravely, and tried to be unmoved, Captain Dyer could not bear it, but walked away.

I was just then drinking some water given me by Lizzy, whose pale troubled little face looked up so lovingly in mine that I felt half-ashamed for me, a poor private, to be so happy—for I forgot my wounds then—while my captain was in pain and suffering. And then it was that it struck me that Captain Dyer was just in that state in which men feel despairing, and go and do desperate things. I felt that I ought before now to have told him all about what I had heard, but I was in hopes that things would right themselves, and always came to the conclusion that it was Miss Ross's duty to have given the captain some explanation of her treatment; anyhow, it did not seem to be mine; but when I saw the poor smitten fellow go off like he did, I followed him softly till I came up with him, my heart beating the while with a curious sense of fear.

There was nothing to fear, though: he had only gone up to the roof, and when I came up with him he was evidently calculating about our escape, for he finished off by pulling out his telescope, and looking right across the plain, towards where there was a tank and a small station.

'I think that ought to be our way, Smith,' he said. 'We could stay there for half an hour's rest, and then on again towards Wallahbad, sending a couple of the stoutest men on for help. By the way, we 'll try and start a man off to-night, as soon as it 's dark. Who will you have to help you?'

'I should like to have Bigley, sir,' I said.

'Will one be sufficient?'

'Quite, sir,' I said; for I thought Measles and I could manage it between us.

Half an hour after, Measles was busy at work, fetching up muskets, with bayonets fixed, from down in the vault, and laying them in order on the flat roof, taking care the while to keep out of sight; and I went to the room where the women were, under Mrs Bantem's management, getting ready for what was to come, for they had been told that we might leave the place all at once.

XIX.

I suppose it was my wound made me do things in a sluggish dreamy way, and made me feel ready to stop and look at any little thing which took my attention. Anyhow, that 's the way I acted; and going inside that room, I stopped short just inside the place, for there were those two little children of the colonel's sitting on the floor, with a whole heap of those numbers of the Bible—those that people take in shilling parts—and with two or three large pictures in each. Some one had given them the parts to amuse themselves with; and, as grand and old-fashioned as could be, they were shewing these pictures to the soldiers' children.

As I went in, they 'd got a picture open, of Jacob lying asleep, with his dream spread before you, of the great flight of steps leading up into heaven, and the angels going up and down.

'There,' says little Jenny Wren to a boy half as old again as herself; 'those are angels, and they 're coming down from heaven, and they 've got beautiful wings like birds.'

'Oh,' says little Cock Robin thoughtfully, and he leaned over the picture. Then he says quite seriously: 'If they 've dot wings, why don't they fly down?'

That was a poser; but Jenny Wren was ready with her answer, old-fashioned as could be, and she says:

'I should think it 's toz they were moulting.'

I remember wishing that the poor little innocents had wings of their own, for it seemed to me that they would be a sad trouble to us to get away that night, just at the time when a child 's most likely to be cross and fretful.

Night at last, dark as dark, save only a light twinkling here and there, in different parts where the enemy had made their quarters. There was a buzzing in the camp where the guns were, and as we looked over, once there came the grinding noise of a wheel, but only once.

We made sure that the gate and the broken window opening were well watched, for there was the white calico of the sentries to be seen; but soon the darkness hid them, and we should not have known that they were there but for the faint spark now and then which shewed that they were smoking, and once I heard, quite plain in the dead stillness, the sound made by a 'hubble-bubble' pipe.

We waited one hour, and then, with six of us on the roof, the plan I made began to be put into operation.

My idea was that if we could manage to cross the north alley, which as I told you was about ten feet wide, we might then go over the roof of the quarters where the mutineers were; then on to the next roof, which was a few feet lower; and from there get down on to some sheds, from which it would be easy to reach the ground, when the way would be open to us, to escape, with perhaps some hours before we were missed.

The plan was, I know, desperate, but it seemed our only chance, and, as you well know, desperate ventures will sometimes succeed when the most carefully arranged plots fail. At all events, Captain Dyer took it up, and the men under my directions, a couple of muskets were taken at a time, and putting them muzzle to muzzle, the bayonet of each was thrust down the other's barrel, which saved lashing them together, and gave us a sort of spar about ten feet long, and this was done with about fifty.

I told you that there was a tree grew up in the centre of the alley—a stunty, short-boughed tree, and to this Measles laid one of the double muskets, feeling for a bough to rest it on in the darkness, after listening whether there was any one below; then he laid more and more, till, with a mattress laid upon them, he formed a bridge, over which he boldly crept to the tree, where, with the lashings he had taken, he bound a couple more muskets horizontal, and then shifted the others. He arranged them all so that the butts of one end rested on the roof of the palace; the butts at the other end were across those he had bound pretty level in the tree. Then more and more were laid across, and a couple of thin straw mattresses on them; and though it took a tremendously long time, through Measles fumbling in the dark, it was surprising what a firm bridge that made as far as the tree.

The other half was made in just the same fashion, and much more easily. Mattresses were laid on it; and there, thirty feet above the ground, we had a tolerably firm bridge, one that, though very irregular, a man could cross with ease, creeping on his hands and knees; but then there were the women, children, and poor Harry Lant.

Captain Dyer thought it would be better to say nothing to them about it, but to bring them all quietly up at the last minute, so as to give them no time for thought and fear; and then, the last preparation being made, and a rough, short ladder, eight feet long, Measles and I had contrived, being carried over and planted at the end of the other quarters,

Digitized by Google

reaching well down to the next roof, we prepared for a start.

Measles and Captain Dyer went over with the ladder, and reported no sentries visible, the bridge pretty firm, and nothing apparently to fear, when it was decided that Harry Lant should be taken over first—Measles volunteering to take him on his back and crawl over—then the women and children were to be got over, and we were to follow.

I know it was hard work for him, but Harry Lant never gave a groan, but let them lash his hands together with a handkerchief, so that Measles put his head through the poor fellow's arms, for there was no trusting to Harry's feeble hold.

'Now then, in silence,' says Captain Dyer; 'and you, Lieutenant Leigh, get up the women and children. But each child is to be taken by a man, who is to be ready to gag the little thing if it utters a sound. Recollect, the lives of all depend on silence.—Now, Bigley, forward!'

'Wait till I spit in my hands, captain,' says Measles, though what he wanted to spit in his hands for, I don't know, without it was from use, being such a spitting man.

But spit in his hands he did, and then he was down on his hands and knees, crawling on to the mattress very slowly, and you could hear the bayonets creaking and gritting, as they played in and out of the musket-barrels; but they held firm, and the next minute Measles was as far as the tree, but only to get his load hitched somehow in a ragged branch, when there was a loud crack as of dead-wood snapping, a struggle, and Measles growled out an oath—he would swear, that fellow would, in spite of all Mrs Bantem said, so you mustn't be surprised at his doing it then.

We all stood and crouched there, with our hearts beating horribly; for it seemed that the next moment we should hear a dull, heavy crash; but instead, there came the sharp fall of a dead branch, and at the same moment there were voices at the end of the alley.

If Captain Dyer dared to have spoken, he would have called 'Halt!' but he was silent; and Measles must have heard the voices, for he never moved, while we listened minute after minute, our necks just over the edge of the roof, till what appeared to be three of the enemy crept cautiously along through the alley, till one tripped and fell over the dead bough that must have been lying right in their way.

Then there was a horrible silence, during which we felt that it was all over with the plan—that the enemy must look up and see the bridge, and bring down those who would attack us with renewed fury.

But the next minute, there came a soft whisper or two, a light rustling, and directly after we knew that the alley was empty.

It seemed useless to go on now; but after five minutes' interval, Captain Dyer determined to pursue the plan, just as Measles came back panting to announce Harry Lant as lying on the roof beyond the officers' quarters.

'And you've no idea what a weight the little chap is,' says Measles to me.—'Now, who's next?'

No one answered; and Lieutenant Leigh stepped forward with Miss Ross. He was about to carry her over; but she thrust him back, and after scanning the bridge for a few moments, she asked for one of the children, and so as to have no time lost, the little boy, fast asleep, bless him! was put in her arms, when brave as brave, if she did not step boldly on to the trembling way, and walk slowly across.

Then Joe Bantem was sent, though he hung back for his wife, till she ordered him on, to go over with a soldier's child on his back; and he was followed by a couple more.

Next came Mrs Bantem, with Mrs Colonel Maine, and the stout-hearted woman stood as if hesitating for a minute as to how to go, when catching up the colonel's wife, as if she had been a child, she stepped on to the bridge, and two or three men held the butts of the muskets, for it seemed as if they could not bear the strain.

But though my heart seemed in my mouth, and the creaking was terrible, she passed safely over, and it was wonderful what an effect that had on the rest.

'If it'll bear that, it'll bear anything,' says some one close to me; and we went on, one after the other, for the most part crawling, till it came to me and Lizzy Green.

'You'll go now,' I said; but she would not leave me, and we crept on together, till a bough of the tree hindered us, when I made her go first, and a minute after we were hand-in-hand upon the roof of the officers' quarters.

The others followed, Captain Dyer coming last, when, seeing me, he whispered: 'Where's Bigley?' of course meaning Measles.

I looked round, but it was too dark to distinguish one face from another. I had not seen him for the last quarter of an hour—not since he had asked me if I had any matches, and I had passed him half-a-dozen from my tobacco-pouch.

I asked first one, and then another, but nobody had seen Measles; and under the impression that he must have joined Harry Lant, we cautiously walked along the roof, right over the heads of our enemies; for from time to time we could hear beneath our feet the low buzzing sound of voices, and more than once came a terrible catching of the breath, as one of the children whispered or spoke.

It seemed impossible, even now, that we could escape, and I was for proposing to Captain Dyer to risk the noise, and have the bridge taken down, so as to hold the top of the building we were on as a last retreat; but I was stopped from that by Measles coming up to me, when I told him Captain Dyer wanted him, and he crept away once more.

We got down the short ladder in safety, and then crossed a low building, to pass down the ladder on to another, which fortunately for us was empty; and then, with a little contriving and climbing, we dropped into a deserted street of the place, and all stood huddled together, while Captain Dyer and Lieutenant Leigh arranged the order of march.

And that was no light matter; but a litter was made of the short ladder, and Harry Lant laid upon it; the women and children placed in the middle; the men were divided; and the order was given in a low tone to march, and we began to walk right away into the darkness, down the straggling street; but only for the advance-guard to come back directly, and announce that they had stumbled upon an elephant picketed with a couple of camels.

'Any one with them?' said Captain Dyer.

'Could not see a soul, sir,' said Joe Bantem, for he was one of the men.

'Grenadiers, half-left,' said Captain Dyer; 'forward!' and once more we were in motion, tramp, tramp, tramp, but quite softly; Lieutenant Leigh at the rear of the first party, so as to be with Miss Ross, and Captain Dyer in the rear of all, hiding, poor fellow, all he must have felt, and seeming to give up every thought to the escape, and that only.

XX.

I could just make out the great looming figure of an elephant, as we marched slowly on, when I was startled by a low sort of wimmering noise, followed directly after by a grunting on my right.

'What's that?' says Captain Dyer. Then in an instant: 'Threes right!' he cried to the men, and

Digitized by Google

they faced round, so as to cover the women and children.

There was no farther alarm, though, and all seemed as silent as could be; so once more under orders, the march was continued till we were out from amidst the houses, and travelling over the sandy dusty plain; when there was another alarm—we were followed—so said the men in the rear; and, sure enough, looming up against the darkness—a mass of darkness itself—we could see an elephant.

The men were faced round, and a score of pieces were directed at the great brute; but when within three or four yards, it was plain enough that it was alone, and Measles says aloud: 'Blest if it isn't old *Nabob!*'

The old elephant it was; and passing through, he went up to where Harry Lant was calling him softly, knelt down to order; and then climbing and clinging on as well as they could, the great brute's back was covered with women and children—the broad shallow howdah pretty well taking the lot—while the great beast seemed as pleased as possible to get back amongst his old friends, rubbing his trunk first on this one and then on that; and thankful we were for the help he gave us, for how else we should have got over that desert plain I can't say.

I should think we had gone a good eight miles, when Measles ranges up close aside me as I walked by the elephant, looking up at the riding-party from time to time, and trying to make out which was Lizzy, and pitying them too, for the children were fretful, and it was a sad time they had of it up there.

'They'll have it hot there sometime to-morrow morning, Ike,' says Measles to me.

'Where?' I said faintly, for I was nearly done for, and I did not take much interest in anything.

'Begumbagh,' he says. And when I asked him what he meant, he said: 'How much powder do you think there was down in that vault?'

'A good five hundredweight,' I said.

'All that,' says Measles. 'They'll have it hot, some of 'em.'

'What do you mean?' I said, getting interested.

'Oh, nothing perticklar, mate; only been arranging for promotion for some of 'em, since I can't get it myself. I took the head out of one keg, and emptied it by the others, and made a train to where I've set a candle burning; and when that candle's burnt out, it will set light to another; and that will have to burn out, when some wooden chips will catch fire, and they'll blaze a good deal, and one way and another there'll be enough to burn to last till, say, eight o'clock this morning, by which time the beauties will have got into the place; and then let 'em look out for promotion, for there's enough powder there to startle two or three of 'em.'

'That's what you wanted the matches for, then?' I said.

'That's it, matey; and what do you think of it, eh?'

'You've done wrong, my lad, I'm afraid, and'—— I didn't finish; for just then, behind us, there was a bright flashing light, followed by a dull thud; and looking back, we could see what looked like a little fire-work; and though plenty was said just then, no one but Measles and I knew what that flash meant.

'That's a dead failure,' growled Measles to me as we went on. 'I believe I am the unluckiest beggar that ever breathed. That oughtn't to have gone off for hours yet, and now it'll let 'em know we're gone, and that's all.'

I did not say anything, for I was too weak and troubled, and how I kept up as I did, I don't know to this day.

The morning broke at last with the knowledge that we were three miles to the right of the tank Captain Dyer had meant to reach. For a few minutes, in a quiet stern way, he consulted with Lieutenant Leigh as to what should be done—whether to turn off to the tank, or to press on. The help received from old *Nabob*, made them determine to press on; and after a short rest, and a better arrangement for those who were to ride on the elephant, we went on in the direction of Wallahbad, I, for my part, never expecting to reach it alive. Many a look back did I give to see if we were followed, but it was not until we were within sight of a temple by the roadside, that there was the news spread that there were enemies behind; and though I was ready enough to lay the blame upon Measles, all the same they must have soon found out our flight, and pursued us.

The sun could never have been hotter, nor the ground more parched and dusty than it was now. We were struggling on to reach that temple, which we might perhaps be able to hold till help came; for two men had been sent on to get assistance; though of all those sent, one and all were waylaid and cut down, long before they could reach our friends. But we did not know that then; and in the full hope that before long we should have help, we crawled on to the temple, but only to find it so wide and exposed, that in our weak condition it was little better than being in the open. There was a building, though, about a hundred yards farther on, and towards that we made, every one rousing himself for what was really the last struggle, for not a quarter of a mile off, there was a yelling crowd of blood-hounds in eager pursuit.

It was with a panting rush that we reached the place, to find it must have been the house of the collector of the district; but it was all one wrack and ruin—glass, tables, and chairs smashed; hangings and carpets burnt or ragged to pieces, and in one or two places, blood-stains on the white floor, told a terrible tale of what had taken place not many days before.

The elephant stopped and knelt, and the women and children were passed in as quickly as possible; but before all could be got in, about a dozen of the foremost mutineers were down upon us with a savage rush—I say *us*, but I was helpless, and only looking on from inside—two of our fellows were cut down in an instant, and the others borne back by the fierce charge. Then followed a desperate struggle, ending in the black fellows dragging off Miss Ross and one of the children that she held.

They had not gone many yards, though, before Captain Dyer and Lieutenant Leigh seemed to see the peril together, and shouting to our men, sword in hand they went at the black fiends, well supported by half-a-dozen of our poor wounded chaps.

There was a rush, and a cloud of dust; then there was the noise of yells and cheers, and Captain Dyer shouting to the men to come on; and it all acted like something intoxicating on me, for, catching up a musket, I was making for the door, when I felt an arm holding me back, and I did what I must have done as soon as I got outside—reeled and fainted dead away.

XXI.

It was a couple of hours after when I came to, and became sufficiently sensible to know that I was lying with my head in Lizzy's lap, and Harry Lant close beside me. It was very dim, and the heat seemed stifling, so that I asked Lizzy where we were, and she told me in the cellar of the house—a large wide vault, where the women, children, and wounded had been placed for safety, while the noise and firing above told of what was taking place.

I was going to ask about Miss Ross, but just then I caught sight of her trying to support her sister, and to keep the children quiet.

Digitized by Google

As I got more used to the gloom, I made out that there was a small iron grating on one side, through which came what little light and air we got; on the other, a flight of stone steps leading up to where the struggle was going on. There was a strong wooden door at the top of this, and twice that door was opened for a wounded man to be brought down; when, coolly as if she were in barracks, there was that noble woman, Mrs Bantem, tying up and binding sword-cuts and bayonet-thrusts as she talked cheerily to the men.

The struggle was very fierce still, the men who brought down the wounded hurrying away, for there was no sign of flinching; but soon they were back with another poor fellow, who was now whimpering, now muttering fiercely:

'If I'd only have had—curse them!—if I'd only had another cartridge or two, I wouldn't have cared,' he said as they laid him down close by me; 'but I always was the unluckiest beggar on the face of the earth. They've most done for me, Ike, and no wonder, for it's all fifty to one up there, and I don't believe a man of ours has a shot left.'

Again the door closed on the two men who had brought down poor Measles, hacked almost to pieces; and again it was opened, to bring down another wounded man, and this one was Lieutenant Leigh. They laid him down, and were off back up the steps, when there was a yelling, like as if all the devils in hell had broken loose, and as the door was opened, Captain Dyer and half-a-dozen more were beaten back, and I thought they would have been followed down—but no; they stood fast in that doorway, Captain Dyer and the six with him, while the two fellows who had been down leaped up the stairs to support them, so that, in that narrow opening, there were eight sharp British bayonets, and the captain's sword, making such a steel hedge as the mutineers could not pass.

They could not contrive either to fire at our party, on account of the wall in front, and every attempt at an entrance was thwarted; but we all knew that it was only a question of time, for it was impossible for man to do more.

There seemed now to be a lull, and only a buzzing of voices above us, mingled with a groan and a dying cry now and then, when I quite forgot my pain once more on hearing poor Harry Lant, who had for some time been quite off his head, and raving, commence talking in a quiet sort of way.

'Where's Ike Smith?' he said. 'It's all dark here; and I want to say good-bye to him.'

I was kneeling by his side the next minute, holding his hand.

'God bless you, Ike,' he said; 'and God bless her. I'm going, old mate; kiss her for me, and tell her that if she hadn't been made for you, I could have loved her very dearly.'

What could I do or say, when the next minute Lizzy was kneeling on his other side, holding his hand?

'God bless you both,' he whispered. 'You'll get out of the trouble after all; and don't forget me.'

We promised him we would not, as well as we could, for we were both choked with sorrow; and then he said, talking quickly:

'Give poor old Sam Measles my tobacco-box, Ike, the brass one, and shake hands with him for me; and now I want Mother Bantem.'

She was by his side directly, to lift him gently in her arms, calling him her poor gallant boy, her brave lad, and no end of fond expressions.

'I never had a bairn, Harry,' she sobbed; 'but if I could have had one, I'd have liked him to be like you, my own gallant, light-hearted soldier boy; and you were always to me as a son.'

'Was I?' says Harry softly. 'I'm glad of it, for I never knew what it was to have a mother.'

He seemed to fall off to sleep after that, when, no one noticing them, those two children came up, and the first I heard of it was little Clive crying: 'Ally Lant—Ally Lant, open eyes, and come and play wis elfant.'

I started, and looked up to see one of those little innocents—his face smeared, and his little hands all dabbled with blood, trying to open poor Harry Lant's eyes with his tiny fingers.

'Why don't Ally Lant come and play with us?' says the other; and just then he opened his eyes, and looked at them with a smile, when in a moment I saw what was happening, for that poor fellow's last act was to get those two children's hands in his, as if he felt that he should like to let his last grasp in this world be upon something innocent; and then there was a deepening of that smile into a stern look, his lips moved, and all was over; while I was too far off to hear his last words.

But there was one there who did hear them, and she told me afterwards, sobbing as though her heart would break.

'Poor Harry, poor light-hearted Harry,' Mother Bantem said. 'And did you see the happy smile upon his face as he passed away, clasping those two poor children's hands—so peaceful, so quiet, after all his suffering; forgetting all then, but what seemed like two angels' faces by his dying pillow, for he said, Ike, he said'——

Poor Mother Bantem broke down here, and I thought about what Harry's dying pillow had been—her faithful, old, motherly breast. But she forced back her sobs, and wiped the tears from her rough, plain face, as she said in low, reverent tones: 'Poor Harry! His last words: "Of such is the kingdom of Heaven."'

Death was very busy amongst our poor company, and one—two—three more passed away there, for they were riddled with wounds; and then I saw that, in spite of all that could be done, Lieutenant Leigh would be the next. He had received his death-wound, and he knew it too; and now he lay very still, holding tightly by Miss Ross's hand, while she knelt beside him.

Captain Dyer, with his eight men, all left, were still keeping the door; but of late they had not been interfered with, and the poor fellows were able to do one another a good turn in binding up wounds. But what all were now suffering for want of, was water; and beyond a few drops in one or two of the bottles carried by the women, there was none to be had.

As for me, I could only lie there helpless, and in a half-dreamy way, see and listen to all that was going on. The spirit in me was good to help; but think of my state—going for days with that cut on the face, and a broken arm, and in that climate.

I was puzzling myself about this time as to what was going to happen next, for I could not understand why the rebels were so quiet; but the next minute I was watching Lieutenant Leigh, and thinking about the morning when we saw Captain Dyer bound to the muzzle of the nine-pounder.

Could he have been thinking about the same thing? I say *yes*, for all at once he started right up, looking wild and excited. He had hold of Miss Ross's hand; but he threw it from him, as he called out: 'Now, my lads, a bold race, and a short one. We must bring them in. Spike the guns—cut the cords. Now, then—Elsie or death. Are you ready there? Forward!'

That last word rang through the vault we were in, and Captain Dyer ran down the steps, his hacked sword hanging from his wrist by the knot. But he was too late to take his messmate's hand in his, and say *farewell*, if that had been his intention, for Lieutenant Leigh had fallen back; and that senseless figure by his side was to all appearance as dead,

Digitized by Google

when, with a quivering lip, Captain Dyer gently lifted her, and bore her to where, half stupefied, Mrs Colonel Maine was sitting.

XXII.

I got rather confused, and am to this day, about how the time went; things that only took a few minutes seeming to be hours in happening, and what really did take a long time gliding away as if by magic. I think I was very often in a half-delirious state; but I can well remember what was the cause of the silence above.

Captain Dyer was the first to see, and taking a rifle in his hand, he whispered an order or two; and then he, with two more, rushed into the passage, and got the door drawn towards us, for it opened outwards; but in so doing, he slipped on the floor, and fell with a bayonet-thrust through his shoulder, when, with a yell of rage—it was no cheer this time—our men dashed forward, and dragged him in; the door was pulled to, and held close; and then those poor wounded fellows—heroes I call 'em—stood angrily muttering.

I think I got more excited over that scene than over any part of the struggle, and all because I was lying there helpless; but it was of no use to fret, though I lay there with the weak tears running down my cheeks, as that brave man was brought down, and laid near the grating, with Mother Bantem at work directly to tear off his coat, and begin to bandage, as if she had been brought up in a hospital.

The door was forsaken, for there was a new guard there, that no one would try to pass, for the silence was explained to us all: first, there was a loud yelling and shrieking outside; and then there was a little thin blue wreath of smoke beginning to curl under the door, crawling along the top step, and collecting like so much blue water, to spread very slowly; for the fiends had been carrying out their wounded and dead, and were now going to burn us where we lay.

I can recollect all that; for now a maddening sense of horror seemed to come upon me, to think that those few poor souls left were to be slain in such a barbarous way, after all the gallant struggle for life; but what surprised me was the calm, quiet way in which all seemed to take it.

Once, indeed, the men had a talk together, and asked the women to join them in a rush through the passage; but they gave up the thought directly, for they knew that if they could get by the flames, there were more cruel foes outside, waiting to thrust them back.

So they all sat down in a quiet, resigned way, listening to the crackle outside the door, watching the thin smoke filter through the crevices, and form in clouds, or pools, according to where it came through.

And you'd have wondered to see those poor fellows, how they acted: why, Joe Bantem rubbed his face with his handkerchief, smoothed his hair and whiskers, and then got his belts square, as if off out on parade, before going and sitting quietly down by his wife.

Measles lay very still, gently humming over the old child's hymn, *Oh! that 'll be joyful*, but only to burst out again into a fit of grumbling.

Another went and knelt down in a corner, where he stayed; the rest shook hands all round, and then, seeing Captain Dyer sitting up, and sensible, they went and saluted him, and asked leave to shake hands with him, quite upsetting him, poor fellow, as he called them, in a faint voice, his 'brave lads,' and asked their pardon, if he 'd ever been too harsh with them.

'God bless you! no, sir,' says Joe Bantem, jumping up, and shaking the hand himself, 'which *that* you 've never been, but always a good officer as your company loved. Keep a brave heart, my boys, it 'll soon be over. We've stood in front of death too many times now to shew the white feather. Hurray for Captain Dyer, and may he have his regiment in the tother land, and we be some of his men!'

Joe Bantem gave a bit of a reel as he said this, and then he 'd have fallen if it hadn't been for his wife; and though his was rather strong language, you see it must be excused, for, leave alone his wounds, and the mad feeling they 'd bring on, there was a wild excitement on the men then, brought on by the fighting, which made them, as you may say, half-drunk.

We must all have been choked over and over again, but for that grating; for the hotter the fire grew above, the finer current of air swept in. The mutineers could not have known of it, or one of their first acts must have been to seal it up. But it was half-covered by some creeping flower, which made it invisible to them, and so we were able to breathe.

And now it may seem a curious thing, but I 'm going to say a little more about love. A strange time, you 'll perhaps say, when those poor people were crouching together in that horrible vault, expecting their death moment by moment. But that 's why it was, and not from any want of retiring modesty. I believe that those poor souls wished to shew those they loved how true was that feeling; and therefore it was that wife crept to husband's side, and Lizzy Green, forgetting all else now, placed her arms round my neck, and her lips to mine, and kissed me again and again.

It was no time for scruples; and thus it was that, being close to them, I heard Miss Ross, kneeling by the side of Captain Dyer, ask him, sobbing bitterly the while—ask him to forgive her, while he looked almost cold and strange at her, till she whispered to him long and earnestly, when I knew that she must be telling him all about the events of that morning. It must have been, for with a cry of joy I saw him bend towards her, when she threw her arms round him, and clasped his poor bleeding form to her breast.

They were so when I last looked upon them, and every one seemed lost in his or her own suffering, all save those two children, one of whom was asleep on Mrs Maine's lap, and the other playing with the gold knot of Captain Dyer's sword.

Then came a time of misty smoke and heat, and the crackling of woodwork; but all the while there was a stream of hot pure air rushing in at that grating to give us life.

We could hear the black fiends running round and round the burning building, yelling, and no doubt ready to thrust back any one who tried to get out. But there seemed then to come another misty time, from which I was roused by Lizzy whispering to me: 'Is it very near now?'

'What?' I said faintly.

'Death,' she whispered, with her lips close to my ear. 'If it is, pray God that He will never let us part again in the land where all is peace!'

I tried to answer her, but I could not, for the hot, stifling, blinding smoke was now in my throat, when the yelling outside seemed to increase. There was a loud rushing sound; the trampling of horses; the jingling of cavalry sabres; a loud English hurray; and a crash; and I knew that there was a charge of horse sweeping by. Then came the hurried beating of feet, the ring of platoon after platoon of musketry, a rapid, squandering, skirmishing fire; more yelling, and more English cheers; the rush, again, of galloping horses; and, by slow degrees, the sound of a fierce skirmish, growing more and more distant, till there came another rapid beating of hoofs, a sudden halt, the jingle and rattle of harness, and a moment after, bim—bom—bom—bom! at regular intervals; and I waved my hand, and gave a faint cheer, for I could

mentally see it all: a troop of light-horse had charged twice; the infantry had come up at the double; and now here were the horse-artillery, with their light six-pounders, playing upon the retreating rebels where the cavalry were not cutting them up.

That faint cheer of mine brought out some more; and then there was a terrible silence, for the relief seemed to have come too late; but a couple of our men crawled to the grating, where the air reviving them, they gave another 'Hurray!' which was answered directly.

And then there was a loud shout, the excited buzz of voices, the crashing of a pioneer's axe against the framework of the grating; and after a hard fight, from which our friends were beaten back again and again, we poor wretches, nearly all insensible, were dragged out about a quarter of an hour before the burning house fell with a crash. Then there was a raging whirlwind of flame, and smoke, and sparks, and the cellar was choked up with the burning ruin.

XXIII.

How well I remember coming to myself as I lay there on the grass, with our old surgeon, Mr Hughes, kneeling by my side; for it was our own men that formed the infantry of the column, with a troop of lancers, and one of horse-artillery. 'There was Colonel Maine kneeling by his wife, who, poor soul, was recovering fast, and him turning from her to the children, and back again; while it was hard work to keep our men from following up the pursuit, now kept up by the lancers and horse-artillery, so mad and excited were they, to find only eight wounded men out of the company they had left.

But, one way and another, the mutineers paid dear for what suffering they caused us. I can undertake to say that, for every life they took, half-a-dozen of their own side fell—the explosion swept away, I suppose, quite fifty, just as they had attempted a surprise, and came over from the south side in a night-attack; while the way in which they were cut up in the engagement was something awful.'

For, anxious beyond measure at not hearing news of the party left in Begumbagh, Colonel Maine had at length obtained permission to go round by that station, reinforce the troops, and then join the general by another route.

They were making forced marches, when they caught sight of the rebels yelling round the burning building, fully a couple of hundred being outside; when, not knowing of the sore strait of those within, they had charged down, driving the murderous black scoundrels before them like so much chaff.

But you must not think that our pains were at an end. Is it not told in the pages of history how for long enough it was a hard fight for a standing in India, and how our troops were in many places sore put to it; while home after home was made desolate by the most cruel outrages! It was many a long week before we could be said to be in safety; but I don't know that I suffered much beyond the pains of that arm, or rather that stump, for our surgeon, Mr Hughes, when I grumbled a little at his taking it off, told me I might be very thankful that I had escaped with life, for he had never known of such a case before.

But it was rather hard lying alone there in the temporary hospital, missing the tender hands that one loved.

And yet I have no right to say quite alone, for poor old Measles was on one side, and Joe Bantem on the other, with Mrs Bantem doing all she could for us three, as well as five more of our poor fellows.

More than once I heard Mr Hughes talk about the men's wounds, and say it was wonderful how they could live through them; but live they all seemed disposed to, except poor Measles, who was terrible bad and delirious, till one day, when he could hardly speak above a whisper, he says to me—being quite in his right mind:

'I daresay some of you chaps think that I'm going to take my discharge; but all the same, you're wrong, for I mean to go in now for promotion!'

He said 'now;' but what he did then was to go in for sleep—and sleep he did for a good four-and-twenty hours—when he woke up grumbling, and calling himself the most unlucky beggar that ever breathed.

Time went on; and one by one we poor fellows got out of hospital cured; but I was the last; and it was many months after, that, at his wish, I called upon Captain—then Major—Dyer, at his house in London. For, during those many months, the mutiny had been suppressed, and our regiment had been ordered home.

I was very weak and pale, and I hadn't got used to this empty sleeve, and things looked very gloomy ahead; but, somehow, that day when I called at Major Dyer's seemed the turning-point; for, to a poor soldier there was something very soothing for your old officer to jump up, with both hands outstretched to catch yours, and to greet you as warmly as did his handsome, bonny wife.

They seemed as if they could hardly make enough of me; but the sight of their happiness made me feel low-spirited; and I felt no better when Mrs Dyer—God bless her!—took my hand in hers, and led me to the next room, where she said there was an old friend wanted to see me.

I felt that soft jewelled hand holding mine, and I heard the door close as Mrs Dyer went out again, and then I stood seeing nothing—hearing nothing—feeling nothing, but a pair of clinging arms round my neck, and a tear-wet face pressed to mine.

And did that make me feel happy?

No! I can say it with truth. For as the mist cleared away from my eyes, and I looked down on, to me, the brightest, truest face the sun ever shone on, there was a great sorrow in my heart, as I told myself that it was a sin and a wrong for me, a poor invalided soldier, to think of taking advantage of that fine handsome girl, and tying her down to one who was maimed for life.

And at last, with the weak tears running down my cheeks, I told her of how it could not be: that I should be wronging her, and that she must think no more of me, only as a dear friend; when there is that amount of folly in this world, that my heart swelled, and a great ball seemed rising in my throat, and I choked again and again, as those arms clung tighter and tighter round my neck, and Lizzy called me her hero, and her brave lad who had saved her life again and again; and asked me to take her to my heart, and keep her there; for her to try and be to me a worthy loving wife—one that would never say a bitter word to me as long as she lived.

I said that there was so much folly in this world, so how can you wonder at me catching it of her, when she was so close that I could feel her breath upon my cheeks, my hair, my eyes, as once more, forgetting all in her love, she kissed me again and again. How, then, could I help, but with that one hand press her to my heart, and go the way that weak heart of mine wished.

I know it was wrong; but how can one always fight against weakness. And, to tell you the truth, I had fought long enough—so long that I wished for peace. And I must say this, too, you must not be hard on Lizzy, and think that it would have been better for her to have let me do a little more of

the courting: there are exceptional cases, and this was one.

I had a true friend in Major Dyer, and to him I owe my present position—not a very grand one; but speaking honestly as a man, I don't believe, if I had been a general, some one at home could think more of me; while, as to this empty sleeve, she's proud of it, and says that all the country is the same.

Wandering about as a regiment is, one does not often have a chance to see one's old messmates; but Sergeant and Mrs Bantem, and Sergeant Measles did have tea and supper with us one night here in London, Mrs Bantem saying that Measles was as proud of his promotion as a dog with two tails, though Measles did say he was an unlucky beggar, or he'd have been a captain. And, my! what a night we did have of that, without one drawback, only Measles would spit on my wife's Brussels carpet; and so we did have a night last year when the old regiment was stationed at Edinburgh, and the wife and me had a holiday, and went down and saw Colonel and Mrs Maine, and those children grown up a'most into a man and woman. But Colonel Dyer had exchanged into another regiment, and they say he is going to retire on half-pay, on account of his wound troubling him.

We fought our old battles over again on those nights; and we did not forget the past and gone; for Mrs Bantem stood up after supper, with her stiff glass of grog in her hand—a glass into which I saw a couple of tears fall—as she spoke of the dead—the brave men who fell in defence of the defenceless and innocent, hoping that the earth lay lightly on the grave of Lieutenant Leigh, while she proposed the memory of brave Harry Lant.

We drank that toast in silence; and more than one eye was wet as the old scenes came back—scenes such as I hope may never fall to the lot of men again to witness; for if there is ever a fervent prayer sent up to the Maker of All, by me, an old soldier, who has much to answer for, it is contained in those words, so familiar to you all at the season of Christmas:

'Peace on Earth!' *Amen.*
